Contents

Questions within the Workbook should be treated as preparation questions, providing you with a firm foundation before you attempt the exam-standard questions. The exam-standard questions are found in the Question Bank.

CA OVERVIEW

The ICAB chartered accountancy qualification, the CA, is one of the most advanced learning and professional development programmes available. Its integrated components provide an in-depth understanding across accountancy, finance and business. Combined, they help build the technical knowledge, professional skills and practical experience needed to become an ICAB Chartered Accountant.

Each component is designed to complement each other, which means that students can put theory into practice and can understand and apply what they learn to their day-to-day work. The four components are:

ICAB constantly reviews the content of the CA qualification to reflect real life business challenges. Today's most urgent business challenges range from sustainability, to rapid changes in technology and the role of ethics in the profession. We work closely with employers, tuition providers, academics and examiners to ensure that the CA equips the chartered accountants of the future with the skills and knowledge they need to meet these challenges and to be successful.

THE CA QUALIFICATION AND SUSTAINABILITY

Finance and accounting professionals need to move beyond simply measuring and reporting the impact of climate change, environmental regulation, supply chain pressure and rising energy costs. They must focus on understanding those implications and integrating them into financial management and business planning. ICAB has been at the forefront of this movement over the past decade and has adapted the CA qualification to reflect that. We see its role as not simply integrating knowledge and understanding the broader implications of environmental, social and governance issues into organisations, but also seeding this thinking into the mindset of our members.

Our syllabus and ethical and professional development framework contribute towards creating ICAB Chartered Accountants who recognise that sustainability is at the core of what they do and are capable of actively using their business skills to analyse how to make the new sustainable economy work for their business.

THE CA QUALIFICATION AND TECHNOLOGY

Rapid growth in technology has automated many compliance elements of accountancy. But, with technology also comes complexity and risk. Accountants need to adapt and develop new skills to manage these technological changes such as data analytics, automation and cyber security.

While there are many new technology capabilities that have broad application across the business and consumer environment, four trends have the greatest potential to transform the accountancy profession: **A**rtificial intelligence, **B**lockchain, **C**yber security and **D**ata (ABCD of technology).

These and other innovations are likely to have a significant impact on the way that accountants access, move and manage business finances.

Technology can provide information more quickly and often more accurately than humans, but it cannot replicate human intelligence and quality decision making. Therefore, chartered accountants hold a key role in data analytics, in validating the source of the data, interpreting and analysing the outputs. Technology provides opportunities for chartered accountants to use their professional skills to add value to their clients and/or the businesses in which they work.

As routine and compliance work reduces, there is greater focus on the development of skills which equip professionals to work with the outputs of automated processes, with other specialists, and in a changing world.

We believe that skills such as analysis, interpretation, professional scepticism, communication, collaboration, adaptability, resilience, and commerciality are essential for tomorrow's business leaders; these are imbedded throughout the CA exams and professional development framework.

THE CA QUALIFICATION AND ETHICS

Culture and values are central to long-term success. How a business adopts an ethical approach towards its staff, shareholders, customers and regulators, as well as within its own operations, has a bigger impact than any performance measure or operational improvement.

Demonstrating a clear commitment to ethical behaviour is one of the main drivers of better performance; it delivers an advantage when recruiting, it adds value to a brand, and it instils trust and confidence in partners, suppliers and others that the organisation is well run and resilient.

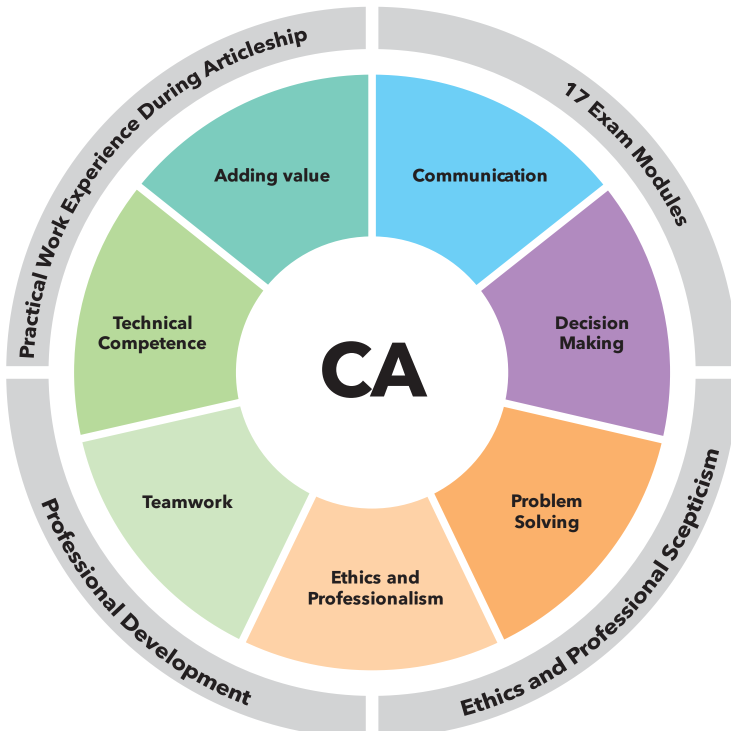
Achieving that is not a matter of simple knowledge. Few ethical challenges will have simple right and wrong responses. They require technical understanding, rigorous appraisal and skillful handling. Accountants must have the necessary skills to apply professional judgement in a given situation, taking into account what has been learned as a CA student about their ethical responsibilities as a Chartered Accountant.

There will be unique ethical challenges throughout any Chartered Accountant's process of learning and career. They serve a variety of masters: senior management, external stakeholders, regulators; and above all the public interest responsibility of their profession. Because of the rigorous and effective training (and continued professional development) chartered accountants can speak up and take a lead.

None of this can happen without one critical element: professionalism. That goes beyond merely knowing the Code of Ethics: it means embodying the right behaviours and having the ability and willingness to push back against those who might compromise the integrity of the business.

That confidence comes from a qualification that prioritises not only technical knowledge of the ethical framework but also challenges accountants with scenarios that accurately reflect the ethical dilemmas a Chartered Accountant may face in business.

PROFESSIONAL DEVELOPMENT



ICAB Chartered Accountants are known for their professionalism and expertise. Professional development prepares students to successfully handle a variety of different situations that they encounter throughout their career. The CA qualification improves students' ability and performance in seven key areas:

- Adding value – add value to the organisation, team or role in order to achieve objectives
- Communication – communicate effectively at all levels, using oral, written and presentational skills to achieve positive outcomes
- Decision making – gather, interpret and evaluate data to make effective decisions
- Ethics and professionalism – behave ethically and sustainably while respecting others to uphold the values of the organisation and the accountancy profession
- Problem solving – analyse a problem, generate options and make recommendations to arrive at appropriate solutions
- Teamwork – work collaboratively as a member or leader of a team to achieve shared goals
- Technical competence – seek, learn and use technology and technical information to support the achievement of organisation or team goals
- There are 17 exams over three levels – Certificate, Professional and Advanced.

CERTIFICATE LEVEL

There are seven exams at this level that introduce the fundamentals of accountancy, finance and business. Students may be eligible for credit for some exams if they have studied a qualification we recognise.

The Certificate Level exams are each 1.5 hours long except Business Laws and Information Technology which are 1 hour long and can be sat four times in the year.

PROFESSIONAL LEVEL

The next seven exams build on the fundamentals and test students' understanding and ability to use technical knowledge in real-life scenarios. The exams are taken in three times in the year.

The Professional Level exams are 3.5 hours long.

The Professional Level exams are flexible and can be taken in any order to fit with a student's day-to-day work. The Business Planning: Taxation & Compliance and Business Strategy and Technology exams in particular help students to progress to the Advanced Level.

The suite of Business Planning: Taxation & Compliance and Business exams is based on the same syllabus structure and skills frameworks, and will give students the opportunity to demonstrate their learning and use this in the context of taxation.

Financial Accounting and Reporting is in the contexts of IFRS Standards.

ADVANCED LEVEL

The Corporate Reporting and Strategic Business Management & Leadership exams test students' understanding and strategic decision-making at a senior level. They present real-life scenarios, with increased complexity and implications from the Professional Level exams.

The Case Study tests all the knowledge, skills and experience gained so far. It presents a complex business issue which challenges students' ability to problem solve, identify the ethical implications and provide an effective solution.

The Advanced Level exams are taken three times in the year.

The Corporate Reporting and Strategic Business Management & Leadership exams are 3.5 hours long. The Case Study exam is 4.5 hours long.

If a student is studying the CA independently, they should consider their future ambitions while selecting which exams to sit.

FLEXIBILITY

There are no regulations stipulating the order in which students must attempt the exams, allowing CA Firms to design Articleship programmes according to business needs. The exception to this rule is the Case Study. For attempting Case Study, students must be attempted the other subjects of Advanced Level.
Students have the unlimited attempts at all levels of exams.

CREDIT FOR PRIOR LEARNING (CPL)

Students with previous qualifications may be eligible to apply for CPL for modules which have been allowed by ICAB. For more information, visit **https://www.icab.org.bd/page/credit-for-prior-learning-cpl-exemption**.

DATA ANALYTICS

Chartered Accountants are increasingly using more advanced approaches to interrogate client data. To respond to this, ICAB has incorporated data analytics software within the Audit and Assurance and Corporate Reporting modules.

Embedding data analytic techniques within our exams ensures that we continue to reflect the current and future workplace and will also help to develop students' judgement, professional scepticism and critical thinking skills.

Corporate Reporting

If you are studying this exam as part of the CA qualification go to icab.org.bd website.

Module aim

To enable you to apply technical knowledge, analytical techniques and professional skills to resolve compliance and business issues that arise in the context of the preparation and evaluation of corporate reports and from providing audit services.

You will be required to use technical knowledge and professional judgement to identify, explain and evaluate alternatives and to determine the appropriate solutions to compliance issues, giving due consideration to the needs of clients and other stakeholders. The commercial context and impact of recommendations and ethical issues will also need to be considered in making such judgements.

On completion of this module, you will be able to:

- formulate, implement and evaluate corporate reporting policies for single entities and groups of varying sizes and in a variety of industries. You will be able to discern and formulate the appropriate financial reporting treatment for complex transactions and complex scenarios. You will be able to evaluate and apply technical knowledge from individual accounting standards and apply professional skills to integrate knowledge where several accounting standards are simultaneously applicable and interact.
- analyse, interpret, evaluate and compare financial statements of entities both over time and across a range of industries.
- explain the processes involved in planning an audit, evaluate internal controls, appraise risk including analysing quantitative and qualitative data, gather evidence including using data analytics software to draw conclusions in accordance with the terms of the engagement. In addition, you will be able to perform a range of assurance engagements and related tasks.
- evaluate corporate reporting policies, estimates and disclosures in a scenario in order to be able to assess whether they are in compliance with accounting standards and are appropriate in the context of audit objectives.
- identify and explain ethical issues. Where ethical dilemmas arise, you will be able to recommend and justify and determine appropriate actions and ethical safeguards to mitigate threats.

Method of assessment

The Corporate Reporting exam is 3.5 hours long. Each exam will contain questions requiring integration of knowledge and skills, including ethics. The exam will consist of three or four questions. Ethical issues and problems could appear in any of the three questions.

Specification grid

This grid shows the relative weightings of subjects within this module and should guide the relative study time spent on each. Over time the marks available in the assessment will be within the ranges of weightings below, but some variations may occur in individual examinations to enable suitably rigorous questions to be set.

	Weighting (%)
1 Corporate Reporting – Compliance	45 - 55
2 Corporate Reporting – Financial statement analysis	10 - 15
3 Audit and assurance	30 - 40
4 Ethics	5 - 10

Key Resources

Whether you're studying the CA qualification with an employer, at university, independently, or as part of an apprenticeship, we provide a wide range of resources and services to help you in your studies. Take a look at the ICAB website (icab.org.bd) for exam resources.

Skills within the CA

Professional skills are essential to accountancy and your development of them is embedded throughout the CA qualification. The level of competency required in each of the professional skills areas to pass each module exam increases as CA trainees progress upwards through each Level of the CA qualification. The skills progression embedded throughout the CA qualification ensures CA trainees develop the knowledge and professional skills necessary to successfully operate in the modern workplace and which are expected by today's forward-thinking employers.

The following professional skills areas are present throughout the CA qualification.

Skill area	Overall objective
Assimilating and using information	Understand a business or accounting situation, prioritise by determining key drivers, issues and requirements and identify any relevant information.
Structuring problems and solutions	Structure information from various sources into suitable formats for analysis and provide creative and pragmatic solutions in a business environment.
Applying judgement	Apply professional scepticism and critical thinking to identify faults, gaps, inconsistencies and interactions from a range of relevant information sources and relate issues to a business environment.
Concluding, recommending and communicating	Apply technical knowledge, skills and experience to support reasoning and conclusion and formulate opinions, advice, plans, solutions, options and reservations based on valid evidence and communicate clearly in a manner suitable for the recipient.

The following provides further detail on the professional skills that you will develop in this particular module. To see the full skills development grids, please go to icab.org.bd.

Assimilating and using information

Understand the situation and the requirements

- Demonstrate understanding of the business context
- Identify and understand the requirements
- Recognise new and complex ideas within a scenario
- Identify the needs of customers and clients
- Explain different stakeholder perspectives and interests
- Identify and explain risks within a scenario
- Identify elements of uncertainty within a scenario
- Identify ethical issues including public interest and sustainability issues within a scenario

Identify and use relevant information

- Interpret information provided in various formats
- Evaluate the relevance of information provided
- Use multiple information sources
- Filter information provided to identify critical facts

Identify and prioritise key issues and stay on task

- Identify business and financial issues from a scenario
- Prioritise key issues
- Work effectively within time constraints
- Operate to a brief in a given scenario

How skills are assessed: you may be required to:

- have a detailed knowledge and understanding of relevant regulations in financial reporting, auditing and ethics, which will need to be related to practical business scenarios and applied to any data provided. The data provided will focus on technical compliance and understanding;
- respond to instructions from a line manager, a client request or from other senior personnel. The requests may be specific, or they may be more general requiring interpretation and judgement to be applied by the student;
- evaluate the quality and relevance of information provided in the context of a particular assignment;
- evaluate inconsistencies in information provided from multiple sources;
- use different sources and types of evidence, including data analytics software and statistical tools including spreadsheets, to confirm, or question, financial statement assertions applying professional scepticism; and
- evaluate the ethical implications of making information available including confidentiality and transparency.

Structuring problems and solutions Structure data

- Structure information from various sources into suitable formats for analysis
- Identify any information gaps
- Frame questions to clarify information
- Use a range of data types and sources to inform analysis and decision making
- Structure and analyse financial and non-financial data to enhance understanding of business issues and their underlying causes
- Present analysis in accordance with instructions and criteria

Develop solutions

- Identify and apply relevant technical knowledge and skills to analyse a specific problem
- Use structured information to identify evidence-based solutions
- Identify creative and pragmatic solutions in a business environment
- Identify opportunities to add value
- Identify and anticipate problems that may result from a decision
- Identify a range of possible solutions based on analysis
- Identify ethical dimensions of possible solutions
- Select appropriate courses of action using an ethical framework
- Identify the solution which is the best fit with acceptance criteria and objectives
- Define objectives and acceptance criteria for solutions

How skills are assessed: you may be required to:

- apply technical knowledge, analytical techniques and professional skills to resolve compliance and business issues that arise in the context of the preparation and evaluation of corporate reports and from providing audit services;

- structure problems and solutions in scenario based questions which may be presented in the following forms:
  - Mini case – using data analytics software in the context of auditing but with significant corporate reporting emphasis. This may be technical, compliance or interpretive (for example including analytical procedures)
  - Financial statement analysis – including technical aspects of corporate reporting
  - Technical question on aspects of audit and corporate reporting (which may include assurance, internal audit);
- evaluate ethical problems in reporting, assurance and business scenarios;
- formulate, evaluate and implement accounting and reporting policies;
- measure and recognise assets and obligations on reported financial performance;
- assess the impact and interaction of applicable accounting principles, bases and standards;
- evaluate the impact of remuneration policies on reported performance; and
- evaluate reporting issues in relation to group scenarios and overseas activities.

Applying judgement

Apply professional scepticism and critical thinking

- Recognise bias and varying quality in data and evidence
- Identify assumptions or faults in arguments
- Identify gaps in evidence
- Identify inconsistencies and contradictory information
- Assess interaction of information from different sources
- Exercise ethical judgement

Relate issues to the environment

- Appreciate when more expert help is required
- Identify related issues in scenarios
- Assess different stakeholder perspectives when evaluating options
- Retain an overview of the business issue or scenario
- Appraise corporate responsibility and sustainability issues
- Appraise the effects of alternative future scenarios
- Appraise ethical, public interest and regulatory issues

How skills are assessed: you may be required to:

- use technical knowledge and professional judgement to identify, explain and evaluate alternatives and to determine the appropriate solutions to compliance issues, giving due consideration to the needs of clients and other stakeholders. The commercial context and impact of recommendations and ethical issues will also need to be considered in making such judgements.
- Demonstrate judgement in the following ways:
  - selecting between technical choices;
  - filtering data to identify critical elements;
  - prioritising information, issues or tasks;
  - identifying omissions in the information;
  - evaluating inconsistencies in information;

- distinguishing between the various qualities of the data provided;
- evaluating the impact of economic and political factors;
- evaluating the effects of known events;
- evaluating the appropriateness of accounting policy choice and estimation selection;
- evaluating options;
- comparing the effects of a range of estimates, outcomes or financial treatments;
- assessing the materiality of errors;
- exercising ethical judgement;
- identifying key linkages; and
- drawing appropriate conclusions from data provided to satisfy specified objectives and assessing the materiality of errors and omissions.

Concluding, recommending and communicating Conclusions

- Apply technical knowledge to support reasoning and conclusions
- Apply professional experience and evidence to support reasoning
- Use valid and different technical skills to formulate opinions, advice, plans, solutions, options and reservations

Recommendations

- Present recommendations in accordance with instructions and defined criteria
- Make recommendations in situations where risks and uncertainty exist
- Formulate opinions, advice, recommendations, plans, solutions, options and reservations based on valid evidence
- Make evidence-based recommendations which can be justified by reference to supporting data and other information
- Develop recommendations which combine different technical skills in a practical situation

Communication

- Present a basic or routine memorandum or briefing note in writing in a clear and concise style
- Present analysis and recommendations in accordance with instructions
- Communicate clearly to a specialist or non-specialist audience in a manner suitable for the recipient
- Prepare the advice, report, or notes required in a clear and concise style

How skills are assessed: you may be required to:

- draw conclusions from data, facts, calculations, judgments and own analysis;
- draw conclusions from complex assurance engagements;
- identify weaknesses in financial information systems and their potential consequences;
- distinguish between the qualities of data provided or other evidence generated;
- develop risk management solutions in an audit and corporate reporting environment;
- create report/memorandum in response to a specific technical issue and in accordance with client requirements;
- draft reasoned, practicable advice that is clear and concise, supported by calculations or analysis of technical/business issues identified;
- use judgement to select the most appropriate audit procedures in the context of risks identified;

- justify a specific recommended action when a variety of options are available; and
- explain the limitations of their conclusions or recommendations.

To help you develop your ability to demonstrate competency in each professional skills area, each chapter of this Workbook includes up to four Professional Skills Guidance points.

Each Professional Skills Guidance point focuses on one of the four CA Professional Skills areas and explains how to demonstrate a particular aspect of that professional skill relevant to the topic being studied. You are advised to refer back to the Professional Skills Guidance points while revisiting specific topics and during question practice.

Chapter 1

Introduction

Introduction

Learning outcomes

- Comment on and critically appraise the nature and validity of financial and non-financial information included in published financial statements including how these correlate with an understanding of the entity
- Appraise and explain the role and context of auditing
- Produce appropriate audit documentation
- Explain the nature and purpose of quality assurance (both at the level of the firm and the individual audit) and assess how it can contribute to risk management

Chapter study guidance

Use this schedule and your study timetable to plan the dates on which you will complete your study of this chapter.

Topic	Practical significance	Study approach	Exam approach	Interactive questions
1	**Using this Workbook** So far you will have studied corporate reporting and audit as separate (single silo) subjects. However, in real life, audit and corporate reporting are closely linked. Your Corporate Reporting exam is an integrated exam. As you learn the financial reporting topics, you will also learn how to audit that particular area.	**Approach** The key point to take in is that many of the financial reporting chapters have a separate 'audit focus' section, which deals with the auditing aspects of the financial reporting area you have just studied. **Stop and think** Remember that this is an integrated subject so you should always consider corporate reporting and auditing aspects together.	While the majority of the marks will always be awarded for demonstrating your corporate reporting knowledge, you will still need to explain how the audit is conducted if required. This gives guidance on how to approach the integrated material. This is the first time you have tackled an integrated exam. Two out of the three questions in the exam combine audit and financial reporting.	N/A
2	**The importance of corporate reporting** There has never been a better time to focus on the bigger picture of reporting and this section reminds you why corporate reporting matters. This section explains	**Approach** This will be mainly revision so only focus on the areas you are unfamiliar with. **Stop and think** Corporate reporting is not just a more advanced form of	This is unlikely to be examined in its entirety but the conceptual framework could always be tested.	**IQ1: Management decisions** A quick, straight forward question to get you thinking about the interaction of management accounting and external reporting.

Topic	Practical significance	Study approach	Exam approach	Interactive questions
	what corporate reporting is and how it differs from financial reporting and management accounting.	financial reporting. It is broader, going beyond the financial statements and covering auditors' reports and environmental reports.		This ties in with the importance of reporting when making decisions.
3	**The role and context of modern auditing** Clarification of what an audit is and why it is important.	**Approach** Check off in your head where you have met these points before. **Stop and think** Has anything changed since you last studied auditing?	There may be a need to explain why audit is necessary and how it works in broad terms so make sure you fully understand these points.	N/A
4	**Legal responsibilities of directors and auditors** There are some areas of legislation that you just need to know!	**Approach** Commit these to memory. **Stop and think** Can you differentiate between the various responsibilities of directors and auditors?	Be prepared to apply this knowledge if you are required to communicate any shortcomings in the auditor's report.	N/A
5	**International standards on auditing** Standards are there to guide the auditor and ensure best practice is maintained. This section also describes how the business world is currently in a state of considerable flux, with changes to the regulatory regime and the audit itself (also unchanged for now) mirrored by the generally volatile nature of the current global outlook.	**Approach** Make sure you have a good working knowledge of the regulations behind the audit. **Stop and think** Do you know what's currently happening to the regulation of the auditing profession?	Due to the significant amount of change in the profession (ironically, change is the only constant) you could definitely get a question on the current developments in the profession, so make sure you understand the various reports and their implications. Keep up to speed via ongoing research.	N/A

Topic	Practical significance	Study approach	Exam approach	Interactive questions
6	**Audit quality management** Auditing is always facing a dilemma of commercial versus ethical aspects and quality is usually the victim when corners are cut to keep hold of clients. You need to know what sound quality is and what a firm needs to do to maintain it.	**Approach** There is a lot of content to remember – where will you be able to find this content in the exam if you need to know it? **Stop and think** Make sure you are familiar with the standards on audit quality. Note that these standards have been updated.	Exam questions could get you to either appraise the quality displayed by the auditor in a given scenario or recommend suitable policies and procedures. Quality management issues have generally been tested in Question 3 but may also arise in Question 1.	**IQ2: Addystone Fish** What are the issues here and how do they relate to the standards? **IQ3: Documentation (Revision)** As the title suggests, this should be revision from your earlier studies so use it as a good brainstorming activity. **IQ4: TrucksToGo Ltd** Spotting the issues here will not be a problem – you need to explain WHY and this may cause more of an issue.
7	**Laws and regulations** Although not required to be a legal expert, the auditor does need to understand enough to know when any kind of non-compliance could have an effect on the financial statements being audited.	**Approach** Review the content with the auditing standards. **Stop and think** Can you distinguish between the responsibilities of the directors and the auditor here?	Exam questions might ask you to consider the impact of non-compliance on the audit but you also need to be able to explain when (and how) you can disclose any non-compliance without the permission of the client (compare and contrast this with the responsibilities that are discussed in the various ethical standards in place).	N/A

Once you have worked through this guidance you are ready to attempt the further question practice included at the end of this chapter.

Learning Topics

1 Using this Workbook

Section overview

- This section gives a brief outline of how this Workbook is structured and why.
- The key point is that the Corporate Reporting exam is integrated, so financial reporting and auditing must be studied together.

1.1 The importance of integration

The aim of the Corporate Reporting module is as follows:

"To enable students to apply technical knowledge, analytical techniques and professional skills to resolve compliance and business issues that arise in the context of the preparation and evaluation of corporate reports and from providing audit services.

Students will be required to use technical knowledge and professional judgement to identify, explain and evaluate alternatives and to determine the appropriate solutions to compliance issues, giving due consideration to the needs of clients and other stakeholders. The commercial context and impact of recommendations and ethical issues will also need to be considered in making such judgements."

It is clear from this that the **application** of technical knowledge (financial reporting, audit, assurance and ethics) is **integrated**, so it is appropriate that these areas are **studied together** where possible.

At earlier levels you will have tended to study subjects in isolation, but this is no longer appropriate at Advanced Level, and indeed in the real world.

Professional skills focus: Structuring problems and solutions

Although there will be a reasonably consistent structure to your exam, it is still important that you can identify the parts that relate to auditing and those that relate to corporate reporting. Start considering how you will address these two disciplines in the same question.

1.2 How this Workbook is structured

1.3.1 Principles and regulations in financial reporting and auditing

This chapter and Chapter 2 cover the role and context of auditing and general principles of corporate reporting. This will largely be revision, but some of the regulations and standards will have changed since your earlier studies. The aim is to set the more specialised topics, and the integrated areas, in context.

1.3.2 Ethics and governance

Chapters 3 and 4 look at ethics and corporate governance. These topics underpin corporate reporting and auditing, and ethical matters come up in all kinds of contexts, both in the exam and in your working life as a professional. It is necessary to cover all relevant audit principles first because, in the later chapters on reporting performance and position, the principles are applied in audit focus sections.

1.3.3 The modern audit process

In Chapters 5 to 8 we revise and build on the auditing material covered at the Professional Level. This will put you in the position where you can consider the audit and assurance issues in relation to specific financial reporting topics, the aim being to study financial reporting and auditing together.

1.3.4 Financial reporting chapters

Chapters 9 to 22 deal with the financial reporting and auditing of specific areas:

- Reporting performance
- Assets and liabilities
- Financing
- Remuneration
- Business combinations
- Reporting foreign activities
- Taxation

The financial reporting aspects are covered first, followed by an 'audit focus' section for each topic, looking at the specific audit issues arising from the financial reporting of that area, generally with examples and/or questions. For example, the chapter on share-based payment has at the end a section on auditing share-based payment.

Audit focus sections may in turn be split into general and specific sections. For example, Chapter 9 Reporting Financial Performance covers general issues, including creative accounting, for which auditors need to be alert. However, a more specific section will refer back to standards and the auditing of, for example, related party disclosures, which has its own designated ISA and particular risks. These sections allow scope for integrated examples or questions covering both corporate reporting and auditing elements.

Finally the Self-test questions for each chapter will contain integrated questions where relevant.

1.3.5 Financial analysis chapters

Once you have a thorough understanding of the financial reporting and related auditing issues, including analytical procedures, you will be in a position to analyse and interpret the financial statements. You will not have studied financial analysis before, so Chapter 23 provides an introduction, and Chapter 24 deals with more advanced topics.

1.3.6 Assurance and other related services

The Workbook concludes with coverage of assurance and related services, which can more easily be understood in the context of the knowledge you have gained in the earlier chapters.

2 The importance of corporate reporting

Section overview

- Corporate reporting embraces financial reporting, and both are different from management accounting.
- Financial statements are used to make economic decisions by a wide range of users.
- All users require information regarding:
  - financial position

- financial performance
- changes in financial position

2.1 What is corporate reporting?

2.1.1 Financial reporting

Financial reporting is the process of identifying, measuring and communicating economic information to others so that they may make decisions on the basis of that information and assess the stewardship of the entity's management.

Financial reporting involves:

- recording transactions undertaken by a business entity;
- grouping similar transactions together which are appropriate to the business; and
- presenting periodic results.

Financial reporting focuses on the preparation of published financial information. Typically, this information is made available annually or half-yearly (sometimes quarterly) and is presented in formats laid down or approved by governments in each national jurisdiction.

2.1.2 Corporate reporting

Corporate reporting is a broader term than financial reporting, although the two are often used interchangeably. As will be evident from this Workbook and the exam it prepares you for, **corporate reporting covers reports other than financial statements,** in particular auditors' reports, but also assurance, internal audit and environmental reports. The definition of corporate reporting varies and could include integrated reporting, corporate governance, corporate social responsibility and other narrative reporting such as the Management Commentary.

In the context of professional accountancy examinations, a corporate reporting exam is generally higher level than a financial reporting exam. In the context of your examination, Corporate Reporting is a more appropriate title because the exam is not just on financial reporting.

General principles relating to corporate reporting are set out in the IASB *Conceptual Framework for Financial Reporting* (Conceptual Framework), which is covered in Chapter 2, together with regulatory matters and selected IFRS® Standards that set out principles and frameworks.

2.1.3 Management accounting

By contrast, **management accounting** or reporting is **internal reporting** for the use of the management of a business itself. Internal management information can be tailored to management's own needs and provided in whatever detail and at whatever frequency (eg, continuous real-time information) management decides is best suited to the needs of their business.

The distinction is not so clear-cut, in that management decisions may be affected by external reporting issues, for example, if a director's bonus depends on profit. These matters are covered in Chapter 24 on the more advanced aspects of financial analysis.

Interactive question 1: Management decisions

Can you think of another example of a way in which management decisions may be influenced by external reporting requirements?

See **Answer** at the end of this chapter.

2.2 Entity

Most accounting requirements are written with a view to use by any type of accounting entity, including companies and other forms of organisation, such as a partnership. In this Workbook, the term 'company' is often used, because the main focus of the syllabus is on the accounts of companies and groups of companies, but IFRS generally refer to entities.

2.3 Financial statements

The principal means of providing financial information to external users is the annual financial statements. Financial statements provide a summary of the performance of an entity over a particular period and of its position at the end of that period.

A complete set of financial statements prepared under IFRS comprises the following:

- The statement of financial position
- The statement of profit or loss and other comprehensive income or two separate statements being the statement of profit or loss and the statement that presents the other comprehensive income (statements of financial performance)
- The statement of changes in equity (another statement of financial performance)
- The statement of cash flows
- Notes to the financial statements

The notes to the financial statements include the following:

- Accounting policies ie, the specific principles, conventions, rules and practices applied in order to reflect the effects of transactions and other events in the financial statements
- Detailed financial and narrative information supporting the information in the primary financial statements
- Other information not reflected in the financial statements, but which is important to users in making their assessments (an example of this would be the disclosures relating to contingent assets or liabilities)

  The individual elements that are included in the financial statements are covered in detail later in this chapter.

2.4 Requirement to produce financial statements

Limited liability companies are **required by law** to prepare and publish financial statements annually. The form and content may be regulated primarily by national legislation, and in most cases must also comply with Financial Reporting Standards.

In Bangladesh, **all companies** must comply with the provisions of the **Companies Act 1994 (Amended) (CA1994).** The key impact of this is as follows:

- Every registered company is required to prepare **financial statements** for each financial year which give a **true and fair view in accordance with the International Financial Reporting Standards (IFRSs).**

2.5 Financial reporting standards

Company financial statements must also comply with relevant reporting standards. In Bangladesh these are as follows.

- **IFRS**
- The Financial Reporting Act, 2015 requires Public Interest Entities (PIE) to prepare financial statements in accordance with the IFRSs.

Important note

These learning materials assume the preparation of financial statements in accordance with IFRS.

2.6 Fair presentation

IAS 1, *Presentation of Financial Statements* requires financial statements to 'present fairly' the financial position and performance of an entity.

'Present fairly' is explained as representing faithfully the effects of transactions. In general terms this will be the case if IFRS are adhered to.

IAS 1 states that **departures** from international standards are only allowed:

- in extremely rare cases; and
- where compliance with IFRS would be so misleading as to conflict with the objectives of financial statements as set out in the *Conceptual Framework*, that is to provide information about financial position, performance and changes in financial position that is useful to a wide range of users.

2.7 Judgements and financial statements

Although IFRS narrow down the range of acceptable alternative accounting treatments, there are still many areas which are left to the discretion of the directors of the company. On the whole, the concept of faithful representation should result in transactions being 'presented fairly'. However, commercial and financial considerations may result in pressure being brought to bear to account for and report transactions in accordance with their strict legal form rather than their true substance. This can raise ethical questions for a professional accountant.

Professional skills focus: Applying judgement

In the exam, as in real life, you will come across a situation where the directors have applied their own judgement about a financial reporting treatment in a way that may be influenced by self-interest, for example showing a higher profit in order to receive a higher bonus. You will need to challenge this judgement by applying your own judgement and knowledge. Questions may not always have one definitive answer. Make sure you are able to consider the best outcome for the situation as it is presented.

2.8 Users of financial statements

The form and content of financial statements must be influenced by the use to which they are put. Financial statements are used to make economic decisions, such as:

- to decide when to **buy, hold or sell an equity investment**
- to assess the **stewardship or accountability of management**
- to assess an entity's ability to pay and **provide other benefits to employees**
- to assess **security** for amounts lent to the entity
- to determine **taxation policies**
- to determine **distributable profits and dividends**
- to prepare and use **national income statistics**
- to **regulate** the activities of entities

Much of the information needed for these different decisions is in fact common to them all. Financial statements aimed at meeting these common needs of a wide range of users are known as '**general purpose**' financial statements.

We can identify the following **users** of financial statements:

- Present and potential investors
- Employees
- Lenders
- Suppliers and other trade payables
- Customers
- Governments and their agencies
- The public

Their specific information needs and how these needs may be addressed are covered in Chapter 23, the first of two chapters on financial analysis. In most cases the users will need to analyse the financial statements in order to obtain the information they need. This might include the calculation of accounting ratios.

2.9 Objective of financial statements

The objective of financial statements is to provide information about the reporting entity's **financial position and financial performance that is useful to a wide range of users in making economic decisions**.

This objective can usually be met by focusing exclusively on the information needs of present and potential investors. This is because much of the financial information that is relevant to investors will also be relevant to other users.

2.10 Accountability of management

Management also has a **stewardship role**, in that it is accountable for the safekeeping of the entity's resources and for their proper, efficient and profitable use. Providers of risk capital are interested in information that helps them to assess how effectively management has fulfilled this role, but again this assessment is made only as the basis for economic decisions, such as those about investments and the reappointment/replacement of management.

It is also the case that in a smaller entity the owner and manager can be the same individual.

Financial reporting helps management to meet its need to be accountable to shareholders, and also to other stakeholders (eg, employees or lenders), by providing information that is useful to the users in making **economic decisions**.

However, financial statements cannot provide the complete set of information required for assessing the stewardship of management.

2.11 Financial position, performance and changes in financial position

All economic decisions are based on an evaluation of an entity's ability to generate cash and of the timing and certainty of its generation. Information about the entity's financial position, performance and changes in financial position provides the foundation on which to base such decisions.

2.11.1 Financial position

An entity's financial position covers:

- the **economic resources** it controls;
- its **financial structure** (ie, debt and share finance);
- its **liquidity and solvency**; and
- its **capacity to adapt to changes** in the environment in which it operates.

Investors require information on financial position because it helps in assessing:

- the entity's ability to **generate cash in the future**;
- how **future cash flows will be distributed** among those with an interest in, or claims on, the entity;
- requirements for **future finance** and ability to raise that finance; and
- the ability to meet **financial commitments** as they fall due.

  Information about financial position is primarily provided in a **statement of financial position**.

2.11.2 Financial performance

The profit and the comprehensive income earned in a period are used as the key measures of an entity's financial performance. Information about performance and variability of performance is useful in:

- assessing **potential changes in the entity's economic resources** in the future;
- **predicting the entity's capacity to generate cash** from its existing resource base; and
- **forming judgements** about the effectiveness with which additional resources might be employed.

Information on financial performance is provided by:

- the **statement of profit or loss and other comprehensive income**
- the **statement of changes in equity**

2.11.3 Changes in financial position

Changes in financial position can be analysed under the headings of **investing, financing** and **operating activities** and are presented in a **statement of cash flows**.

Cash flow information is largely free from the more **judgemental allocation and measurement issues** (ie, in which period to include things and at what amount) that arise when items are included in the statement of financial position or performance statements. For example, depreciation of non-current assets involves judgement and estimation as to the period over which to charge depreciation. Cash flow information excludes non-cash items, such as depreciation.

Cash flow information is therefore seen as being **factual in nature**, and hence more reliable than other sources of information.

Information on the generation and use of cash is useful in evaluating the entity's ability to generate cash and its need to use what is generated.

These issues are treated more formally in the *Conceptual Framework,* discussed in Chapter 2.

3 The role and context of modern auditing

Section overview

- The audit provides assurance to shareholders.
- The audit enables the auditor to form an opinion as to whether the financial statements give a true and fair view.
- An expectation gap may exist between what stakeholders expect the audit to achieve and what it is actually designed to achieve. Despite recent efforts to narrow this gap, it remains wider than it should be due to a number of factors.

- You should be familiar with the audit process from your earlier studies.
- All companies, except those meeting exemption criteria, must have an annual external audit.
- The Companies Act sets down the responsibilities of the directors and auditors.

3.1 Purpose of the audit

The audit provides a mechanism for shareholders to help ensure that directors are acting in the company's best interests and therefore plays a fundamental **stewardship role**.

ISA 200 *Overall Objectives of The Independent Auditor and the Conduct of an Audit in Accordance with International Standards on Auditing* sets out the purpose of an audit as follows:

"The purpose of an audit is to enhance the degree of confidence of intended users in the financial statements. This is achieved by the expression of an opinion by the auditor on whether the financial statements are prepared, in all material respects, in accordance with an applicable financial reporting framework. (ISA 200: para.3)"

3.2 Part of the economic infrastructure

The audit is also a vital function of economic activity. For that economic activity to continue to flourish there has to be trust.

While the audit has a crucial role to play in providing assurance to shareholders, it cannot be seen in isolation. For example, the directors of the company have a role to play in the preparation of financial statements that show a true and fair view. The audit has to be seen in the context of a range of interwoven laws, regulations and guidance, all of which promote good corporate governance. (We will look at corporate governance in detail in Chapter 4.)

3.3 The audit opinion and the expectation gap

The primary role of the auditor is to perform an independent examination of the financial statements and to form an opinion. You should be very familiar with this concept from your earlier studies. The audit opinion will provide **reasonable assurance** (a high but not absolute level of assurance) that the financial statements give a true and fair view; it does not provide a certificate that they are completely accurate and free from every error or fraud, no matter how small. ISA 200 explains that absolute assurance is not possible due to inherent limitations of the audit, including those resulting from the following factors:

- The nature of financial reporting; many items involve judgement and assessments of uncertainties
- The use of selective testing
- Inherent limitations of internal control
- The fact that most evidence is persuasive rather than conclusive
- The impracticability of examining all items within a class of transactions or account balance
- The possibility of collusion or misrepresentation for fraudulent purposes
- The fact that the work undertaken by the auditor is permeated by judgement

In some instances an '**expectation gap**' can lead to difficulties arising from the difference between what shareholders and other stakeholders expect an audit to achieve and what it is actually designed to achieve. The public increasingly expect the audit to address a number of issues (such as whether that company will continue trading, or if it is a good investment) but in practical terms, the auditor cannot always make these judgements beyond the requirements of the accounting framework.

Recent changes to the auditor's report have attempted to make such communication more meaningful (such as including details of key audit matters) but the continuing trend of corporate casualties such as Carillion has only served to make the public sceptical of the auditor's work, and the expectation gap remains as wide as ever.

The key judgement made by the auditor is whether the financial statements give a true and fair view. While there is no legal definition for these terms, 'true' and 'fair' are normally taken to mean the following:

Definition

True: The information in the financial statements is not false and conforms to reality.

In practical terms this means that the information is presented in accordance with **accounting standards and law**. The financial statements have been correctly **extracted from the underlying records** and those records reflect the **actual transactions** which took place.

Definition

Fair: The financial statements reflect the commercial substance of the company's underlying transactions and the information is free from bias.

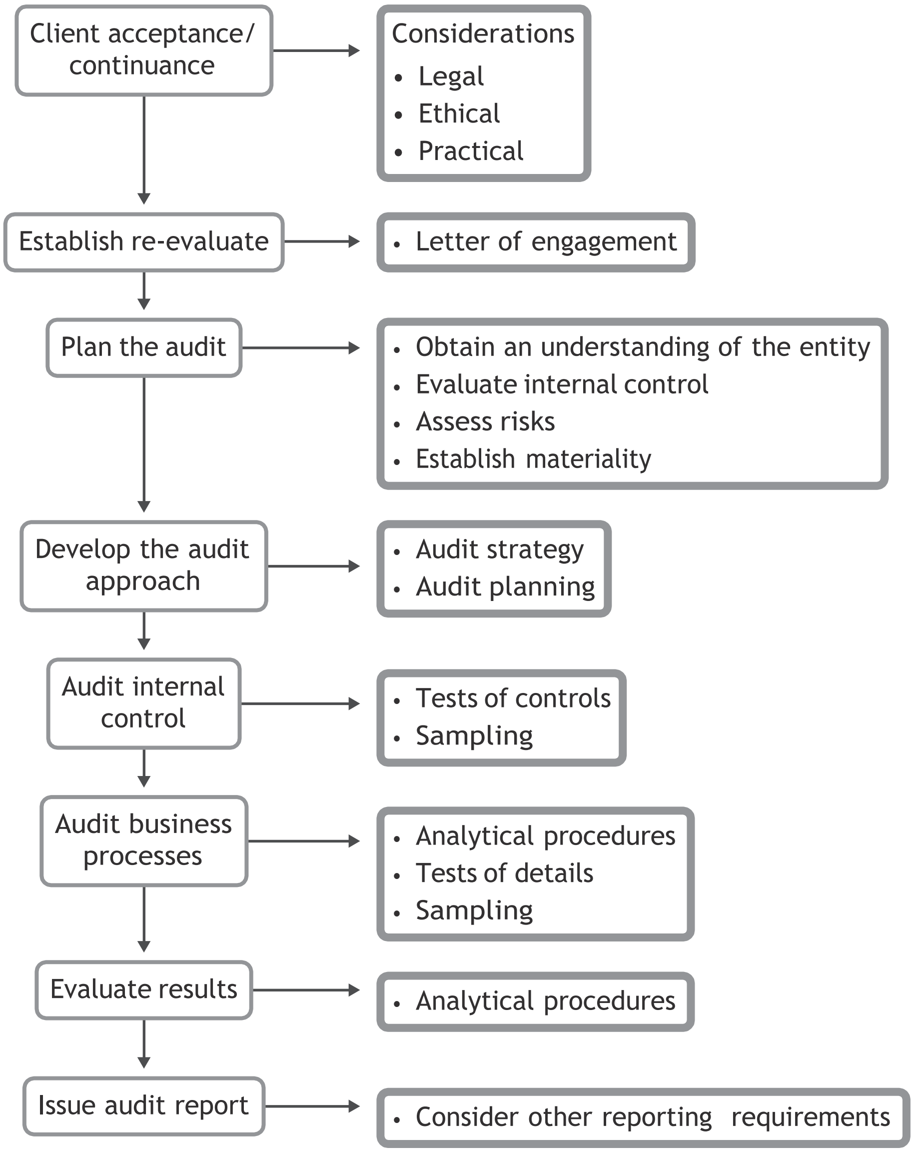
You will have come across examples of the application of **substance over form** in your financial reporting studies.

The problem with making judgements such as these is that they can be called into question, particularly where others have the benefit of hindsight. The major defence that the auditor has in this situation is to show that the work was performed with **due skill and care** and that the judgements made about truth and fairness were reasonable based on the evidence available at the time. We will look at quality management in section 6 of this chapter.

3.4 The audit process

You will have covered the audit process in your earlier studies. The following diagram summarises the key points you should be familiar with. Chapters 5 to 8 of this Workbook cover the audit in more detail.

Figure 1.1: The audit process



Note: ISA 200 requires that the audit should be planned and performed with an attitude of professional scepticism. Professional scepticism is covered in detail in Chapter 5.

Professional skills focus: Assimilating and using information

What stage are you at within the audit process? Remember what you have been told in the scenario (and therefore, by definition, what you still do not know).

3.5 Statutory audit requirement

All Bangladeshi companies must have an audit.

The basic principle is that all companies registered in Bangladesh should be audited.

4 Legal responsibilities of directors and auditors

Section overview

- The Companies Act 1994 contains many responsibilities for both directors and auditors.
- Directors must consider their role carefully, being mindful of the impact that their actions could have on many other stakeholders.
- As well as the financial statements and trading issues, there are also strict rules governing the way that directors interact financially with the company.
- Auditors need to form an independent opinion on the truth and fairness of the financial statements, as well as consider their preparation including any other information that the Companies Act requires.

4.1 Companies Act 1994

The legal responsibilities regarding directors and auditors are currently contained in the Companies Act 1994 (CA 1994). However, the corporate governance guidelines of Bangladesh Securities and Exchange Commission, the issue of capital by the companies listed with any stock exchange in Bangladesh shall be subject to certain further conditions in order to enhance corporate governance in the interest of investors and the capital market.

4.2 Directors' responsibilities

These duties as per CA 1994 are as follows:

(1) There shall be attached to every balance sheet laid before a company in general meeting a report by its board of directors, with respect to-

a) the state of the company's affairs;

b) the amount, if any, which the board proposes to carry to any reserve in such balance sheet;

c) the amount, if any, which the board recommends should be paid by way of dividend;

d) material changes and commitments, if any, affecting the financial position of the company which have occurred between the end of the financial year of the company to which the balance sheet related and the date of the report.

(2) The board's report shall, so far as is material for the appreciation of the state of company's affairs by its members, deal with any changes which have occurred during the financial years:

a) in the nature of the company's business;

b) in the company's subsidiaries or in the nature of the business carried on by them; and

c) generally in the classes of business in which the company has an interest.

(3) The board shall also be bound to give the fullest information and explanations in its report aforesaid on every reservation, qualification or adverse remark contained in the auditor's report.

(4) The board report and any addendum thereto shall be signed by its chairman if the chairman is authorised in that behalf by the board, and where the chairman is not so authorised and, shall be signed by such number of directors as are required to sign the balance sheet and the profit and loss account or the income and expenditure account, of the company by virtue of sub-section (1) and (2) of section 189.

(5) If any person, being a director of a company, fails to take all reasonable steps to comply with the provision of sub-section (1) to (3) or being the chairman, signs the boards report

otherwise than in conformity with the provisions of sub-section (4), he shall, in respect of each offence, be liable to fine which may extend to five thousand aka

These duties as per the corporate governance guideline of Bangladesh Securities and Exchange Commission re as follows:

(i) Industry outlook and possible future developments in the industry.

(ii) Segment-wise or product-wise performance.

(iii) Risks and concerns.

(iv) A discussion on Cost of Goods sold, Gross Profit Margin and Net Profit Margin.

(v) Discussion on continuity of any Extra-Ordinary gain or loss.

(vi) Basis for related party transactions- a statement of all related party transactions should be disclosed in the annual report.

(vii) Utilization of proceeds from public issues, rights issues and/or through any others instruments.

(viii) An explanation if the financial results deteriorate after the company goes for Initial Public Offering (IPO), Repeat Public Offering (RPO), Rights Offer, Direct Listing, etc.

(ix) If significant variance occurs between Quarterly Financial performance and Annual Financial Statements the management shall explain about the variance on their Annual Report.

(x) Remuneration to directors including independent directors.

(xi) The financial statements prepared by the management of the issuer company present fairly its state of affairs, the result of its operations, cash flows and changes in equity.

(xii) Proper books of account of the issuer company have been maintained.

(xiii) Appropriate accounting policies have been consistently applied in preparation of the financial statements and that the accounting estimates are based on reasonable and prudent judgment.

(xiv) International Accounting Standards (IAS)/International Financial Reporting Standards (IFRS), as applicable in Bangladesh, have been followed in preparation of the financial statements and any departure there-from has been adequately disclosed.

(xv) The system of internal control is sound in design and has been effectively implemented and monitored.

(xvi) There are no significant doubts upon the issuer company's ability to continue as a going concern. If the issuer company is not considered to be a going concern, the fact along with reasons thereof should be disclosed.

(xvii) Significant deviations from the last year’s operating results of the issuer company shall be highlighted and the reasons thereof should be explained.

(xviii) Key operating and financial data of at least preceding 5 (five) years shall be summarized.

(xix) If the issuer company has not declared dividend (cash or stock) for the year, the reasons thereof shall be given.

(xx) The number of Board meetings held during the year and attendance by each director shall be disclosed.

(xxi) The pattern of shareholding shall be reported to disclose the aggregate number of shares (along with name wise details where stated below) held by:-

   a) Parent/Subsidiary/Associated Companies and other related parties (name wise details);

   b) Directors, Chief Executive Officer, Company Secretary, Chief Financial Officer, Head of Internal Audit and their spouses and minor children (name wise details);

   c) Executives;

   d) Shareholders holding ten percent (10%) or more voting interest in the company (name wise details).

Explanation: For the purpose of this clause, the expression "executive" means top 5 (five) salaried employees of the company, other than the Directors, Chief Executive Officer, Company Secretary, Chief Financial Officer and Head of Internal Audit.

(xxii) In case of the appointment/re-appointment of a director the company shall disclose the following information to the shareholders:

a) a brief resume of the director;

b) nature of his/her expertise in specific functional areas;

c) names of companies in which the person also holds the directorship and the membership of committees of the board.

CHAPTER 1

4.3 Loan to Director

(1) No company, hereinafter in this section referred to as the lending company, shall make any loan or give any guarantee or provide any security in connection with a loan made by a third party to- (a) any director of the lending company (b) any firm in which any director of the lending company is a partner; (c) any private company of which any director of the lending company is a director or member; or (d) any public company, the managing agent manager or director where of is accustomed to act in accordance with the directions or instruction of any director of the lending company:

Provided that nothing in this section shall apply to the making of a loan or giving of any guarantee or providing any security by a lending company. if-- (i) such company is a banking company or a private company not being a subsidiary of a public company, or if such company as a holding company makes the loan or gives the guarantee or provide the security to its subsidiary; and (ii) the loan is sanctioned by the board of directors of any company and approved by the general meeting and, in the balance sheet, there is a specific mention of the loan, guarantee or security, as the case may be:

Provided further that, in no case the total amount of the loan shall exceed 50% of the paid up value of the shares held by such director in his own name

(2) In the event of any contravention of sub-section (1) every person who is a party to such contravention including in particular any person to whom a loan is made or on whose behalf a guarantee is given to or security provided shall be punishable with the fine which extend to five thousand taka or simple imprisonment for six months in lieu of fine and shall be liable jointly and severally to the lending company for the repayment of such loan or for making good any sum which the lending company may be called up to pay under the guarantee given or security provided by the lending company.

(3) this section shall apply to any transaction represented by a book debt which was from its inception in the nature of a loan

4.4 Auditors' responsibilities

Under the Companies Act 1994, it is the external auditor's responsibility to:

Form an independent opinion on the truth and fairness of the financial statements Confirm that the financial statements have been properly prepared in accordance with the relevant financial reporting framework and the Companies Act 1994

As per section 213 of Companies Act 1994 followings are the power and duties of auditors:

(1) Every auditor of a company shall have a right of access at all times to the books and accounts and vouchers of the company, whether kept at the head office of the company or elsewhere and shall be entitled to require from the officers of the company such information and explanation as the auditor may think necessary for the performance of his duties as auditor.

(2) Without prejudice to the provisions of sub-section (1), the auditor shall, in particular inquire into following namely:

a) whether loans and advances made by the company on the basis of security have been properly secured and whether the terms on which they have been made are not prejudicial to the interests of the company or its members:

b) whether transactions of the company which are represented merely as book-entries are prejudicial to the interests of the company;

c) where the company is not an investment company or a banking company, whether so much of the assets of the company as consist of shares, debentures and other securities, have been sold at a price less than at which they were purchased by the company;

d) whether loans and advances made by the company have been shown as deposits;

e) whether personal expenses have been charged to revenue account;

f) where it is stated in the books and paper of the company that any shares have been allotted for cash, whether cash has actually been received in respect of such allotment, and if no cash has actually been so received, whether the position as stated in the account books and the balance sheet is correct, regular and not misleading.

(3) The auditor shall make a report to be presented in the annual general meeting of the company on the accounts, examined by him, and on every balance sheet and profit and loss account and on every other document declared by CA 1994 to be part of or annexed to the balance sheet or profit and loss accounts which are laid before the company in general meeting during his tenure of office and the report shall state whether, in his opinion and to the best of his information and according to the explanation given to him, the said accounts give the information required by the CA 1994 in the manner so required and give a true and fair view-

a) in the case of the balance sheet, of the state of the company's affairs as at the end of its financial year;

b) in the case of the profit and loss account, of the profit or loss for its financial year.

(4) The auditors' report shall also state-

a) whether he has obtained all the information and explanation which to the best of his knowledge and belief were necessary for the purposes of his audit;

b) whether, in his opinion, proper books of account as required by law have been kept by the company so far as appears from his examination of those books and proper returns adequate for the purposes of his audit have been received from branches not visited by him;

c) whether the company's balance sheet and profit and loss account dealt with by the report are in agreement with the books of account and returns.

(5) There any of the matters referred to in clauses(a) and (b) of sub- section (3) or in clauses (a), (b) and (c) of sub-section (4) are answered in the negative or with a qualification, the auditors' report shall state the reason for the answer.

(6) The Government may, be general or special order, direct that in the case of such class or description of companies as may be specified in the order, the auditors' report shall also include a statement on such matters as may be specified therein.

(7) The accounts of a company shall not be deemed as not having been and the auditors' report shall not state that those accounts have not been, properly drawn up on the ground merely that the company has not disclosed certain matters, of-

a) those matters are such as the company is not required to disclose by virtue of any provision contained in the CA 1994 or any other law for the time being in force; and

b) those provisions are specified in the balance sheet and loss account of the company.

The auditor also has a duty towards other information in documents containing audited financial statements in accordance with ISA 720. The Auditor's Responsibilities Relating to Other Information in Documents Containing Audited Financial Statements.

5 International standards on auditing

Section overview

- The FRC is responsible for Bangladesh auditing standards, known as ISA.
- The International Auditing and Assurance Standards Board (IAASB) issues ISAs.

The FRC adopts and revises ethical standards and auditing standards in response to current developments Ethical standards and guidance are also issued by the ICAB.

5.1.1 Codes and Standards Committee

5.1.2 Current issues from UK market

Despite the UK FRC's mandate to oversee corporate reporting and auditing in the UK, corporate scandals have continued to occur. The most recent significant collapse relates to UK construction company Carillion plc, which went into liquidation in January 2018. It owed over £1 billion to various stakeholders, despite its last audited financial statements indicating no sign of its impending demise. In response to widespread allegations that financial regulation has not improved almost 20 years on from Enron, the UK Government decided to review the UKFRC and in December 2018, the Kingman review of the UK FRC was published.

In his review, Sir John Kingman concluded that the UK FRC was no longer fit for purpose and could not deliver the regulation required to ensure effective corporate reporting, governance and audit. He recommended the replacement of the UK FRC with a new, stronger body (the Audit, Reporting and Governance Authority or ARGA) that would deliver a service that is focused on "consumers of financial information, not producers" (Kingman, 2018).

In conjunction with investigations by the UK Competition and Markets Authority (CMA) into the current state of the UK audit market, the UK Government also commissioned former Chair of the London Stock Exchange, Sir Donald Brydon, to conduct a review of the quality and effectiveness of UK audits. On appointment, Sir Donald was quoted as saying that: "Most people will never read an auditor's opinion on a company's accounts. But tens of millions of people depend on robust and high-quality audits" (Doherty, 2019). The following table shows an overview of the recommendations made by the Brydon Review which carried the title 'Assess, assure and inform - improving audit quality and effectiveness' (Brydon, 2019).

Audit
There should be a new definition of the purpose of an audit: to provide confidence in a company, its officers and its financial statements
Audit should be a separate profession, not seen as part of the accounting profession
Professional judgement should be redefined to include suspicion as well as scepticism
The auditor's report
The term 'true and fair' should no longer be used as it ignores the reliance on estimates and the use of materiality: the term 'present fairly in all material respects' should now only be used
There should be greater continuity between successive reports and greater emphasis given to estimates, other information and any external negative signals

Directors
There should be a rolling three-year audit programme presented by directors to shareholders
A Resilience Statement should be used to report the following: • Short term - similar to the current going concern assessment • Medium term - similar to the existing viability statement • Long term - strategic issues, such as climate change impacts
A Public Interest Statement should report how companies serve the public interest
Stakeholders
Greater shareholder involvement in the audit programme
The audit should more actively consider the role of stakeholders
Greater responsibilities for directors to consult with employees when preparing the financial statements
Auditor to be considered a suitable individual for whistle-blowers to approach
Anti-fraud measures
A directors' statement on the work they have done to prevent and detect fraud
Assurance on this statement by the auditors, including a review of relevant internal controls
Greater use of forensic and fraud training for auditors
Auditor Fraud Panel to consider whether enough has been done to combat fraud
Other steps
Attestation by CEO and CFO on internal controls for financial reporting (similar to the US SOX legislation)
Controls on capital maintenance and dividend levels
Greater transparency by auditors on fees, profitability of engagements, time spent and the circumstances leading to no longer being employed as auditor
Greater use of technology within audits
More responsible use of liability limitation agreements (LLAs) when considering auditor liability and directors' responsibilities
Greater scrutiny of data used in executive remuneration
Reinforcement of the Kingman recommendations on ARGA (such as defining 'high quality audit', a 'Plain English' guide to auditing available online, publicising good audits as well as criticism of bad ones and more formal mechanisms for shareholders and stakeholders to raise concerns.

(Source: Brydon, D. (2019) Assess, assure and inform: Improving audit quality and effectiveness. [Online] Available at: https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/ 852960/brydon-review-final-report.pdf [Accessed 27 May 2022])

In March 2021, the Department for Business, Energy and Industrial Strategy (BEIS) issued a white paper called *Restoring trust in audit and corporate governance: proposals on reforms* seeking views from stakeholders on the CMA, Brydon and Kingman proposals in relation to audit, financial reporting, governance and regulation with the aim of improving the overall regulatory landscape for all these essential areas. Inevitably, the structure and operation of the audit market would also be addressed by this process.

Consultation on the BEIS white paper ran from March to July 2021. In March 2022, the FRC published their three-year plan which indicated that ARGA would be fully operational by 2025. This was followed soon after by confirmation from the UK Government that ARGA (now fully funded by a mandatory levy) would play a key part in its overall regulatory framework for audit, reporting and governance that would reduce the risks of further damaging corporate collapses like Carillion and BHS – some of the key changes planned are as follows:

- greater control over auditors, including a ban on failing audit firms from being able to review the financial statements of large companies and the separation of their audit and non-audit functions;
- minimising the reporting burdens for many companies, especially those at the smaller end, while allowing more companies to fall under the scope and protection of ARGA;
- greater scrutiny over directors as well as the power to fine them for any lack of transparency over a company's performance and prospects;
- highlighting the need for clawbacks from directors and shareholders when companies are in financial difficulty and cannot afford to pay out bonuses and dividends; and
- greater representation of audit firms from outside of the Big Four for FTSE 350 listed companies (plus a market share cap for auditors that the Business Secretary can impose if required).

Clearly there is **significant change ahead**: for the purposes of your exam, while you can assume that the regulator is still the FRC, it is expected that you will also have knowledge of these ongoing developments.

There is also an ongoing debate about the way that going concern should be assessed with the ongoing effects of the COVID-19 pandemic and other geo-political influences in mind to avoid future losses that could have been foreseen with clearer levels of disclosure about the risk of corporate failure. This will no doubt require greater input from auditors, directors and audit committees as well as guidance from regulators and governments to reach a solution that protects all stakeholders.

One of the key challenges facing the UK FRC as the regulator of financial reporting and governance in the UK is striking the right balance between the need to impose controls on businesses in order to protect stakeholders and the need to support how businesses thrive and generate economic benefits to those same stakeholders. This is illustrated by the way that going concern is currently under scrutiny – too much scepticism of an entity's prospects and it is destined to fail, but insufficient scrutiny of possible red flags and we could have another Carillion on our hands. You will cover the way that both audits and reviews of financial information are currently being influenced by this ongoing debate in subsequent chapters.

Given the impact of global turbulence on the UK and its partners, uncertainty for both preparers and users of financial statements continues, although it still seems certain that the FRC and its successor will face radical change.

5.1 Interaction between FRC and IAASB Standards

The IAASB was set up by the International Federation of Accountants (IFAC), which nominates a majority of its members – others are nominated by the Forum of Firms – to issue professional standards (such as those related to audits, reviews, related services and quality management). ISAs are used for the audit of **historical financial information**.

In **exceptional circumstances**, an auditor may judge it necessary to **depart from an ISA** in order to more effectively achieve the objective of an audit. When such a situation arises, the auditor should be prepared to justify the departure. In Bangladesh ISAs are adopted by the FRC.

The system for creating an ISA (UK) currently works as follows:

5.2 IAASB Projects

The IAASB regularly makes improvements to its standards as a result of a number of ongoing projects.

For example, in 2015, a series of new and revised standards were issued on auditor reporting. The most notable change was the introduction of ISA 701, *Communicating Key Audit Matters in the Independent Auditor's Report* which requires auditors of listed companies to communicate Key Audit Matters.

More recently, changes have been made in relation to the auditor's responsibilities for other information accompanying financial statements and the audit of accounting estimates and related disclosures.

At the time of writing the IAASB is conducting projects that consider the identification and assessment of risks of material misstatement, group auditing, and audit evidence.

Definition

Public interest entity:

The definition of a Public Interest Entity (PIE) in Bangla is outlined in section 2(8) of the Financial Reporting Act, 2015 (referred to as the "Act"). Additionally, the FRC has established the criteria for PIE through four official Gazette Notifications. It is important to note that an official English translation of the PIE definition by the FRC has not been released yet. As a result, the following represents an unofficial English translation of the definition of PIE in Bangladesh, which is based on the provisions of the Act and the Gazette Notifications issued by the FRC.

Public Interest Entity means –

A. An entity which shall meet any one of the following criteria, namely:

1. Bank-Company as defined in the Banking-Companies Act, 1991;
2. any entity that is involved in issuing securities and that is required to file a report with the Securities and Exchange Commission in accordance with the Bangladesh Securities and Exchange Commission Act of 1993;
3. Financial Institution as defined in the Financial Institutions Act, 1993;
4. Microfinance Institution as defined in the Microcredit Regulatory Authority Act, 2006;
5. Insurer as defined in the Insurance Act, 2010;
6. any entity that has surpassed the threshold of Tk500 million in annual revenue during the preceding fiscal year, as determined by the Council through an official Gazette notification (as per SRO-34 PIE, based on revenue).
7. any entity that meets either of the following two conditions at the conclusion of the prior fiscal year, provided that:
    a) it appoints at least 50 individuals as specified in the Rule 2023 issued in this regard.
    b) its total assets surpass the Tk300 million threshold established by the Council through an official Gazette notification (as per SRO-35 PIE based on total assets) and
    c) the total liability, excluding shareholder equity, goes beyond the Tk100 million limit determined by the Council through an official Gazette notification (as per SRO-36 PIE based on liability).

B. The following institutions fulfilling the criteria mentioned in (A) above shall also be included, namely:

8. state-owned companies or commercial entities;
9. statutory authority;
10. a non-governmental organization conducting voluntary activities in the private sector; and
11. any other similar organization or institution;

Following recent developments in ethical standards (see Chapter 3) the term other entity of public interest (OEPI) has emerged. While still subject to interpretation, the term essentially refers to entities which do not meet the definition of a public interest entity but which are still considered to have public interest aspects (such as a pension fund).

5.3 The global outlook

Every generation will feel that they are living in the most interesting of times, but as we navigate the third decade of the 21st century, the global outlook is becoming increasingly uncertain and volatile, not least due to the COVID-19 pandemic and various wars. For example:

Political	Economic
• The rise of populist, nationalist politics and a push against the status quo (such as the rise of far-right politics in certain countries) • Greater calls for independence and self-determination	• A global realignment following the financial crash of 2008, which has stifled growth, eroded confidence and encouraged trade wars • Stagnation on global efforts to close the gap between rich and poor leading to social unrest
Social	**Technological**
• The increasing impact of climate change and the need to respond effectively regardless of the costs • Shifting demographics (eg, the rise of the #MeToo movement) highlighting the importance of diversity	• A shift towards a more digital age, with the associated disruption to traditional industries (including accountancy) • The adoption of new technologies (eg, big data, blockchain and artificial intelligence) and the opportunities they create

What does this mean for accountants? The issues presented here paint a challenging picture, but the profession has always been able to respond to the world around it, so demonstrating skills such as awareness and adaptability will be crucial for the survival of the profession.

Professional skills focus: Concluding, recommending and communicating

You may be asked to discuss the ongoing developments in both corporate reporting and auditing. You should ensure you have not only studied these developments but that you can also communicate your thoughts in an effective and efficient manner.

6 Audit quality management

Section overview

- Quality management procedures should be adopted:
  - at the firm level; and
  - on an individual audit.
- Audit quality should be actively managed by the engagement partner.
- Professional bodies also have a responsibility to develop quality management standards and monitor compliance.
- Audit documentation is an important part of quality management.
- It provides evidence of work done to support the audit opinion.
- Significant matters must be documented.
- Audit working papers should be reviewed.

6.1 Principles and purpose

Audit quality is not defined in law or through regulations, nor do auditing standards provide a simple definition.

Although each stakeholder in the audit will give a different meaning to audit quality, at its heart it is about delivering an appropriate professional opinion supported by the necessary evidence and objective judgements.

Many principles contribute to audit quality including good leadership, experienced judgement, technical competence, ethical values and appropriate client relationships, proper working practices and effective quality management and monitoring review processes.

The standards on audit quality provide guidance for firms on how to achieve these principles.

6.2 Quality management at a firm level

The fact that auditors follow ISAs provides a general quality management framework within which audits should be conducted. There are also specific quality management standards. ISQM 1, *Quality Management for Firms that Perform Audits or Reviews of Financial Statements, or other Assurance or Related Services Engagements* deals with quality management at a firm level. You may have studied ISQM 1 in Audit and Assurance at the Professional Level.

ISQM 1 identifies the following **eight components** of the firm's system of quality management.

- **The firm's risk assessment process**

  A system of quality management must be established by the firm in order to be able to achieve its quality objectives and manage quality risks (in other words, the risk that the firm's quality may be under threat). This is usually achieved by implementing a series of policies and procedures that serve as a system of quality management.

- **Governance and leadership responsibilities for quality within the firm**

  The standard requires that the firm implements policies such that the internal culture of the firm is one where quality is considered essential. Such a culture must be inspired by the leaders of the firm, who must sell this culture in their actions and messages. In other words, the entire business strategy of the audit firm should be driven by the need for quality in its operations. Overall responsibility for quality within the firm rests with the senior leadership (such as a managing partner) while operational responsibilities fall within the remit of other personnel (so the engagement partner or key audit partner is responsible for quality on any given engagement).

- **Ethical requirements**

  Policies and procedures should be designed to provide the firm with reasonable assurance that the firm and its personnel comply with relevant ethical requirements and in particular independence requirements. Firms can decide to adopt their own ethical guidance that goes beyond the minimum standards laid down by the current regulatory regime.

- **Acceptance and continuance of client relationships and specific engagements**

  A firm should only accept, or continue with, a client where it has considered the **integrity** of the client, it is **competent** to perform the engagement and has the capabilities, including time and resources, to do so, and it can **comply with ethical requirements**, including appropriate independence from the client.

  ISQM 1 does not expect acceptance and continuance decisions to be based on commercial priorities.

  For the audit of a public interest entity the firm must assess whether the firm complies with the FRC Revised Ethical Standard requirements on audit fees and prohibition of the provision of non- audit services requirements.

- **Engagement performance**

  The firm should take steps to ensure that engagements are performed correctly; that is, in accordance with standards and guidance. Ensuring good engagement performance involves a number of issues, such as direction, supervision and review, consultation and resolution of disputes.

  The firm should have policies and procedures to determine when an **engagement quality review** will be necessary for an engagement. This will include all audits of financial statements for listed companies and in Bangladesh also applies to public interest entities and other higher risk engagements. When required, such a review must be completed **before the report is signed**.

  For audits of financial statements of public interest entities the **engagement quality reviewer** must be an individual who possesses the competence, capabilities, authority and independence necessary to make this process effective. **ISQM 2 *Engagement Quality Reviews*** is the applicable standard here and specifies the following objectives:

  - appoint an eligible engagement quality reviewer who is not part of the engagement team; and
  - perform an objective evaluation of the significant judgements made by the engagement team and the conclusions they reached from those judgements.

  The engagement quality review is expected to apply legal, professional and regulatory standards and requirements and determine any areas of non-compliance (including any that do not comply with the firm's own system of quality management). The review will be conducted throughout the course of the engagement and include issues such as:

  - reviewing documentation produced by both the engagement team and the firm in relation to the engagement and any possible deficiencies identified;
  - discussing significant matters and judgements from the engagement;
  - evaluating decisions made for evidence of logic, scepticism, ethical compliance, consultation and sufficient involvement of the engagement partner; and
  - reviewing audit documentation to ensure it satisfactorily reflects the work necessary to support the successful implementation of ISQM 2.

- **Resources**

  The firm needs to have policies and procedures in place regarding the resources necessary for engagements to support quality management systems, including **human resources** (including all staff and the engagement partner), **technological resources** (such as data analytics software), **intellectual resources** (such as prescribed audit methodologies) and the use of **service providers** (for example, anyone involved in a consultative or expert capacity).

- **Information and communication**

  The firm needs to have a system in place that supports quality management for effective assurance work in terms of data storage and retrieval, information security, communication across and between teams and maintaining appropriate levels of confidentiality.

- **Monitoring and remediation**

  The standard states that firms must have policies in place to ensure that their quality management procedures are relevant, adequate, and operating effectively. In other words, they must **monitor their system of quality management**. Monitoring activity should be reported on to the management of the firm on an annual basis. **Remedial action**, if required, should be implemented to address any deficiency promptly.

  There are two types of monitoring activity, an **ongoing evaluation** of the system of quality management and **cyclical inspection** of a selection of completed engagements. An ongoing evaluation might include such questions as "has it kept up to date with regulatory requirements?".

  An inspection cycle would usually fall over a period such as three years, in which time at least one engagement per engagement partner would be reviewed.

6.3 Quality management on an individual audit

You will have studied this issue in the previous Audit and Assurance exam. A summary of the key points in ISA 220 (Revised), *Quality Management for an Audit of Financial Statements* is provided below.

6.3.1 Policies and procedures

ISA 220 (Revised) states that the objective of the auditor is to implement quality management procedures at the individual engagement level. The **engagement partner** is ultimately responsible for quality management on an individual engagement.

The policies and procedures for quality management on individual audits parallel those for the firm outlined above. For example, ethical requirements must be considered. In addition, however, of particular significance for individual audits are the procedures of **direction, supervision and review**.

(a) Direction

At the planning stage, but also during the audit, the engagement partner ensures that the members of the engagement team are informed of:

- their responsibilities
- the objectives of the work to be performed
- the nature of the entity's business
- risk issues
- problems that may arise
- detailed approach to the audit engagement

(b) **Supervision**

Supervision includes:

- tracking the progress of the audit engagement;
- considering the capabilities of individual members of the engagement team and that they understand their instructions;
- addressing issues that arise and modifying the audit approach if appropriate; and
- identifying matters for consultation or consideration by more experienced members of the audit engagement.

(c) **Review**

Reviewing concerns the inspection of work by engagement members by more senior members of the same engagement. This includes ensuring that:

- the work has been carried out in accordance with professional and regulatory requirements;
- significant matters have been raised for further consideration;
- appropriate consultations have taken place and have been documented;
- where appropriate the planned audit work is revised;
- the work performed supports the conclusions;
- the evidence obtained is sufficient and appropriate to support the audit opinion; and
- the objectives of the engagement have been achieved.

The revised ISA also includes specific guidance in relation to the **engagement quality review** for audits of the financial statements of public interest entities. The purpose of the engagement quality review is to provide an objective evaluation, on or before the date of the auditor's report, of the significant judgments the engagement team made and the conclusions it reached in formulating the auditor's report. As part of their responsibilities for the engagement overall, the engagement partner needs to confirm that they have dedicated sufficient time to the engagement in order to be able to be considered responsible enough to sign off on that engagement: agreeing with the outcome of the engagement quality review is one such example of this. In particular the review must consider the following:

(1) The independence of the firm from the entity

(2) The significant risks and measures taken to manage them

(3) Reasoning in relation to materiality and significant risks

(4) Any request for advice from external experts and the implementation of the advice

(5) The nature and scope of corrected and uncorrected misstatements

(6) The subjects discussed with the audit committee/management/supervisory bodies/competent authorities/third parties

(7) Whether information on the audit file supports the opinion in the auditor's report and additional report to the audit committee

(d) **Hot and cold reviews**

Hot file reviews are carried out before the auditor's report is issued. Their purpose is to identify any weaknesses in the application of audit procedures or to assess if results from audit procedures have been misinterpreted. They can be done for higher risk audits. Such reviews are usually undertaken by an audit partner not connected with the audit.

Cold file reviews are carried out after the auditor's report has been issued. Their primary purpose is to determine compliance with ethical and auditing standards and relevant legislation, and to consider whether the audit work has been carried out in accordance with the firm's own procedures, thereby identifying any weaknesses in the firm's quality management procedures, and how these can be improved upon. Cold reviews are carried out by suitably qualified individuals who are independent of the client and have had no involvement in the audit work.

Small firms and sole practitioners may be required to arrange external reviews at least once every three years if there is no suitable reviewer available from within the organisation. A cold file review will result in identification of any areas of non-compliance and the formulation of a suitable action plan with the firm.

6.4 UK FRC Audit Quality Thematic Reviews

The following section represents audit quality related notable events from UK market.

In March 2017, the FRC issued *Audit Quality Thematic Review: Firms' audit quality control procedures and other quality initiatives* to support the continuous improvement in audit quality in the UK. Some new areas of best practice were identified (such as adopting different 'lines of defence' for a firm's procedures to interact effectively) but also some areas for further work (such as more senior members of the audit team reviewing audit work) arose too.

Note: The term 'quality control' was superseded when ISQM (UK) 1 and 2 and ISA (UK) 220 (Revised) were all published in the UK in July 2021 and 'quality management' was subsequently adopted across the profession. Throughout this Workbook, although you may come across guidance published prior to this date that contains reference to the term 'quality control', you can assume that it means the same thing as 'quality management'.

This was followed in May 2018 by another Thematic Review called *Firms' activities to establish, promote and embed a culture that is committed to delivering consistently high quality audits*. In this publication, the FRC defined culture as "a combination of the values, attitudes and behaviours manifested by an organisation in its operations and relations with its stakeholders".

While many might seem sceptical about the role that the FRC in particular could play in addressing something as complex as culture among different firms, the messages contained within these reports have outlined the need for a greater awareness of the following cultural factors that can improve the scope and quality of audits in the UK:

- Prioritising values such as the fundamental ethical principles
- Recognising that good audits are necessary to support society in general
- Promoting good quality work practices in auditing as much as punishing poor quality work
- Using root cause analysis to identify cultural factors that led to good and bad quality audit work
- Using independent non-executives to monitor the successful adoption of desired culture (FRC, 2018)

The FRC continues to address quality as part of its regulatory role. In July 2020 it published its *Annual enforcement review* which found that both ethical and auditing standards were not always being followed, contributing to some instances of audit failure due to not obtaining sufficient appropriate audit evidence and displaying inadequate levels of professional scepticism. This was echoed in November 2020 by *Developments in audit 2020* when the FRC reported inconsistent levels of audit quality on higher risk audits, predominantly due to insufficient challenge of management in the following areas:

- complex and forward-looking judgements (such as goodwill impairment)
- assessment of an entity's going concern status and plans to address perceived uncertainties

In addition, the FRC raised concern over several instances when group audit teams had failed to demonstrate how they had assessed the work undertaken by component audit teams. There were also concerns over the approach adopted by firms when reviewing audit work as part of their own internal quality control processes (FRC, 2020).

The FRC *Developments in audit 2021* report concluded that the number of audits inspected which required either improvement or significant improvement had not improved and was still at a level that was not considered acceptable by the FRC.

Interactive question 2: Addystone Fish

You are an audit senior working for the firm Addystone Fish. You are currently carrying out the audit of Wicker Ltd, a manufacturer of waste paper bins. You are unhappy with Wicker's inventory valuation policy and have raised the issue several times with the audit manager. He has dealt with the client for a number of years and does not see what you are making a fuss about. He has refused to meet you on site to discuss these issues.

The former engagement partner to Wicker retired two months ago. As the audit manager had dealt with Wicker for so many years, the other partners have decided to leave the audit of Wicker largely in his hands.

Requirement

Comment on the situation outlined above. See **Answer** at the end of this chapter.

6.5 Audit documentation

Audit documentation is a key part of the overall quality management framework during the course of an audit. All audit work must be documented: the working papers are the **tangible evidence of all work done in support of the audit opinion**. ISA 230 (Revised June 2016), *Audit Documentation* provides guidance on this issue.

In your previous studies, you have learnt the practical issues surrounding how audit working papers should be completed. The key general rule to remember concerning what to include in a working paper is:

"What would be sufficient to enable an experienced auditor, having no previous connection with the audit to understand the nature, timing, and extent of the audit procedures performed to comply with the ISAs and applicable legal and regulatory requirements and the results of the audit procedures and the audit evidence obtained, and significant matters arising during the audit and the conclusions reached thereon, and significant professional judgements made in reaching those conclusions." (ISA 230 para.8)

Review of audit working papers is important, as it allows a more senior auditor to **evaluate the evidence obtained** during the course of the audit for sufficiency and reliability, so that more evidence can be obtained to support the audit opinion, if required. It is an important quality management procedure. ISA 500 *Audit Evidence* is relevant here.

Interactive question 3: Documentation (revision)

Viewco is a manufacturer of TVs and Blu-ray players. It carries out a full physical inventory count at its central warehouse every year on 31 December, its financial year end. Finished goods are normally of the order of £3 million, with components and work in progress normally approximately £1 million.

You are the audit senior responsible for the audit of Viewco for the year ending 31 December 20X1. Together with a junior member of staff, you will be attending Viewco's physical inventory count.

Requirements

3.1 Explain why it is necessary for an auditor to prepare working papers.

3.2 State, giving reasons, what information the working papers relating to this inventory count attendance should contain.

See **Answer** at the end of this chapter.

Interactive question 4: TrucksToGo Ltd

You are the audit senior on the audit of TrucksToGo Ltd. You are supervising the work of a relatively inexperienced audit junior. The junior has been carrying out audit procedures on the assertions of completeness and existence of non-current assets. According to the junior, audit procedures have been completed and the memo below has been produced outlining some of the issues found during the audit.

Memo: Issues identified during audit

The directors have confirmed that there are no further non-current assets to include in the financial statements. This representation was received in a meeting with the Finance Director and recorded on the audit file at this time.

Part of the existence work on non-current assets included obtaining a sample of assets from the asset register and then physically verifying those assets. Unfortunately, a significant number of assets were not available for verification – the vehicles were in use by the company and therefore not on the premises. As an alternative, vehicles on the premises were agreed back to the asset register.

A number of vehicles were noted on the company premises in a poor state of repair; for example, engines missing. On inquiry, the vehicle manager confirmed that the vehicles were under repair. I am therefore happy that the vehicles belonged to the company and no further action is necessary.

I have reached the conclusion that all non-current assets are correctly stated and valued in the financial statements.

Requirement

Explain to the junior why the evidence collected is insufficient, and detail the action necessary to complete the audit procedures. Refer to your objectives in reviewing audit documentation as a format for your answer.

See **Answer** at the end of this chapter.

7 Laws and regulations

Section overview

The auditor is responsible for obtaining sufficient appropriate audit evidence regarding compliance with laws and regulations that have a direct effect on the financial statements

7.1 Revision

The responsibilities of the auditor for laws and regulations are covered in ISA 250 (Revised), Consideration of Laws and Regulations in an Audit of Financial Statements. You have covered the principles contained in this standard in your earlier studies. A summary of the key points is included below.

The objectives of the auditor are:

(a) To obtain sufficient appropriate audit evidence regarding compliance with the provisions of those laws and regulations generally recognised to have a direct effect on the determination of material amounts and disclosures in the financial statements;

(b) To perform specified audit procedures to help identify instances of non-compliance with other laws and regulations that may have a material effect on the financial statements; and

(c) To respond appropriately to non-compliance or suspected non-compliance with laws and regulations identified during the audit.

(ISA 250.11)

An audit **cannot** detect non-compliance with **all** laws and regulations.

Definition

Non-compliance: Refers to acts of omission or commission by the entity, either intentional or unintentional, which are contrary to the prevailing laws or regulations. Such acts include transactions entered into by, or in the name of, the entity, or on its behalf, by those charged with governance, management or employees. Non-compliance does **not** include personal misconduct (unrelated to the business activities of the entity) by those charged with governance, management or employees of the entity. (ISA 250.12)

7.2 Responsibility of management for compliance

Management are responsible for ensuring that a client's operations are conducted in accordance with laws and regulations.

The following policies and procedures, among others, may assist management in discharging its responsibilities for the prevention and detection of non-compliance.

- **Monitor legal requirements** and ensure that operating procedures are designed to meet these requirements.
- **Institute and operate** appropriate systems of **internal control**, including internal audit and an audit committee.
- **Develop, publicise and follow a code of conduct**.
- Ensure that **employees** are properly **trained** and **understand the code of conduct**.
- **Monitor compliance** with the code of conduct and act appropriately to **discipline** employees who fail to comply with it.
- **Engage legal advisers** to assist in monitoring legal requirements.
- **Maintain a register** of significant laws with which the entity has to comply within its particular industry and a record of complaints.

7.3 Responsibility of the auditors

The auditor's responsibilities depend on whether or not the law or regulation has a direct effect on the financial statements as follows:

"The auditor shall obtain sufficient appropriate audit evidence regarding compliance with the provisions of those laws and regulations generally recognised to have a direct effect on the determination of material amounts and disclosures in the financial statements." (ISA 250.14)

These laws and regulations may relate to:

- the form and content of financial statements;
- accounting for transactions under government contracts;
- laws determining the circumstances under which a company is prohibited from making a distribution except out of available profits; and
- laws which require auditors expressly to report non-compliance, such as not keeping proper records.

For other laws and regulations the auditor is required to perform audit procedures to help identify instances of non-compliance. Procedures would include inquiring of management and those charged with governance and inspecting correspondence with relevant licensing or regulatory authorities.

Written representations from management are also important. The standard requires the auditor to obtain written representations. (ISA 250.17)

7.4 Procedures when non-compliance is discovered

The ISA requires the following approach.

If the auditor becomes aware of information concerning an instance of non-compliance or suspected non-compliance, the auditor shall obtain:

- understanding of the nature of the act and the circumstances in which it has occurred; and
- further information to evaluate the possible effect on the financial statements. (ISA 50.19)

When evaluating the possible effect on the financial statements, the auditor should consider:

- the **potential financial consequences**, such as fines, penalties, damages, threat of expropriation of assets, enforced discontinuation of operations and litigation;
- whether the **potential financial consequences** require **disclosure**; and
- whether the potential financial consequences are so serious as to call into question the **true and fair view** (fair presentation) given by the financial statements.

If the auditors suspect there may be non-compliance they should discuss the matter with management and those charged with governance.

Such discussions are subject to the laws concerning 'tipping off'. If information provided by management is not satisfactory, the auditor should consult the entity's lawyer and, if necessary, their own lawyer on the application of the laws and regulations to the particular circumstances.

7.5 Reporting of non-compliance

7.5.1 To management

ISA 250 requires the following:

Unless all of those charged with governance are involved in management of the entity, and therefore are aware of matters involving suspected non-compliance already communicated by the auditor, the auditor shall communicate with those charged with governance matters involving non-compliance with laws and regulations that come to the auditor's attention during the course of the audit, other than when the matters are clearly inconsequential.

If, in the auditor's judgement, the non-compliance is believed to be intentional and material, the auditor shall communicate the matter to those charged with governance as soon as practicable.

If the auditor suspects that management or those charged with governance are involved in non- compliance, the auditor shall communicate the matter to the next higher level of authority at the entity, if it exists, such as an audit committee or supervisory board. Where no higher authority exists, or if the auditor believes that the communication may not be acted upon or is unsure as to the person to whom to report, the auditor shall consider the need to obtain legal advice.

(ISA 250.23–.25)

7.5.2 To the users of the auditor's report

If the auditor concludes that the non-compliance has a material effect on the financial statements, and has not been adequately reflected in the financial statements, the auditor shall, in accordance with ISA 705, express a qualified opinion or an adverse opinion on the financial statements.

If the auditor is precluded by management or those charged with governance from obtaining sufficient appropriate audit evidence to evaluate whether non-compliance that may be material to the financial statements has, or is likely to have, occurred, the auditor shall express a qualified opinion or disclaim an opinion on the financial statements on the basis of a limitation on the scope of the audit in accordance with ISA 705.

If the auditor is unable to determine whether non-compliance has occurred because of limitations imposed by the circumstances rather than by management or those charged with governance, the auditor shall evaluate the effect on the auditor's opinion in accordance with ISA 705. (ISA 250.26–.28)

7.5.3 To regulatory and enforcement authorities

Confidentiality is an issue again here, but it may be overridden by the law, statute or the courts of law. The auditor should obtain legal advice. If the auditor has a statutory duty to report, a report should be made without delay.

Alternatively, it may be necessary to make disclosures in the public interest. In practice it will often be extremely difficult for an auditor to decide whether making a disclosure in the public interest is warranted. The auditor should obtain professional advice.

7.6 Withdrawal from the engagement

As is the case for fraud or error, withdrawal may be the only option if the entity does not take the remedial action the auditor thinks is necessary, even for non-material matters.

Further question practice

1 Knowledge diagnostic

Before you move on to question practice, confirm you are able to answer the following questions having studied this chapter. If not, you are advised to revisit the relevant learning from the topic indicated.

	Confirm your learning
1.	Do you understand what is meant by the term 'corporate reporting'?
2.	Can you remember the various phases of an audit and explain what each one is for?
3.	Can you distinguish between the responsibilities of directors and auditors?
4.	Can you discuss current issues that affect both corporate reporting and auditing right now?
5.	Can you describe and explain the various quality management mechanisms that should be present in an audit firm?
6.	Do you know how to report various instances of non-compliance with laws and regulations and to whom this reporting should be directed?

2 Question practice

Aim to complete all self-test questions at the end of this chapter. The following self-test questions are particularly helpful to further topic understanding and guide skills application before you proceed to the next chapter.

Question	Learning benefit from attempting this question
LaFa plc	This is useful practice for you in two ways: firstly, it is testing your knowledge of the subject matter on quality management which you need to understand, and secondly, it is presented in the form of a scenario which you will need to apply your knowledge to.
Bee5	You can test your understanding of the audit approach by applying what you have learned to this short scenario. What changes might cause you concern?

Once you have completed these self-test questions, it is beneficial to attempt the following questions from the Question Bank for this module. These questions have been selected to introduce exam style scenarios that will help you improve your knowledge application and professional skills development before you start the next chapter.

Question	Learning benefit from attempting this question
Vacance plc	Sometimes the question contains so much information it is difficult to know where to start. Use this question to practise interrogating the exhibits for matters that relate to the audit quality on show.
Newpenny	Exhibit 1 asks for a change to the audit approach. Do you think this is a good idea?
Jupiter	Consider the issue of non-compliance with laws and regulations from Exhibit 3 – what are the potential implications of this for the audit?

Refer back to the learning in this chapter for any questions which you did not answer correctly or where the suggested solution has not provided sufficient explanation to answer all your queries. Once you have attempted these questions, you can continue your studies by moving on to the next chapter.

Kingman, J. (2018) Independent Review of the Financial Reporting Council. London, The Stationery Office.

1 What is financial reporting?

- Financial reporting is the provision of financial information about a reporting entity that is useful to existing and potential investors, lenders and other creditors in making decisions about providing resources to the entity.

  Corporate reporting is a broader concept, which covers other reports, such as audit or environmental reports – **Conceptual Framework for Financial Reporting (OB2)**
- Financial statements comprise statement of financial position, statement of profit or loss and other comprehensive income, statement of changes in equity, statement of cash flows and notes. – **IAS 1 (10)**

2 Purpose and use of financial statements

- Users' core need is for information for making economic decisions. – **Concept Frame (OB2)**
- Objective is to provide information on financial position (the entity's economic resources and the claims against it) and about transactions and other events that change those resources and claims. – **Concept Frame (OB12**)
- Financial position: – **Concept Frame (OB13)**
  - Resources and claims

  - Help identify entity's strengths and weaknesses
  - Liquidity and solvency
- Changes in economic resources and claims: – **Concept Frame (OB15-16)**
  - Help assess prospects for future cash flows
  - How well have management made efficient and effective use of the resources
- Financial performance reflected by accrual accounting. – **Concept Frame (OB17)**
- Financial performance reflected by past cash flows. – **Concept Frame (OB20)**

3 ISA 200

- Purpose of an audit – **ISA 200.3**
- General principles of an audit – **ISA 200.14–.24**

4 ISQM 1

- Objective – **ISQM 1.14**
- Components of a system of quality management – **ISQM 1.6**
- The firm's risk assessment process – **ISQM 1.23-.27**
- Governance and leadership – **ISQM 1.28**
- Relevant ethical requirements – **ISQM 1.29**
- Acceptance and continuance issues – **ISQM 1.30**
- Engagement performance – **ISQM 1.31**
- Resources – **ISQM 1.32**
- Information and communication – **ISQM 1.33**
- Monitoring and remediation – **ISQM 1.35–.56**

5 ISQM 2

- Objective – **ISQM 2.12**
- Requirements – **ISQM 2.14-.16**
- Engagement quality reviewers – **ISQM 2.17-.23**
- Performance of the review – **ISQM 2.24-.27**
- Documentation – **ISQM 2.28-.30**

6 ISA 230

- Purposes of audit documentation. – **ISA 230.2–.3**
- Should enable an experienced auditor to understand the procedures performed, the results and evidence obtained and significant matters identified. – **ISA 230.8–.8-1**
- Auditors must document discussions of significant matters with management. – **ISA 230.10**
- Inconsistencies regarding significant matters must be documented. – **ISA 230.11**
- Departures from relevant requirements in ISAs must be documented. – **ISA 230.12**
- The identity of the preparer and reviewer must be documented. – **ISA 230.9**

7 ISA 250

- Categories of laws and regulations – **ISA 250.6**
- Objectives – **ISA 250.11**
- Auditor's responsibilities – **ISA 250.13–.14**
- Reporting – **ISA 250.23**

Self-test questions

Answer the following questions.

1 Performance and position

Explain the terms 'performance' and 'position', and identify which of the financial statements will assist the user in evaluating performance and position.

2 LaFa plc

The WTR audit firm has 15 partners and 61 audit staff. The firm has offices in three cities in one country and provides a range of audit, assurance, tax and advisory services. Clients range from sole traders requiring assistance with financial statement production to a number of small plcs – although none is a quoted company.

LaFa plc is one of WTR's largest clients. Due to the retirement of the engagement partner from ill health last year, LaFa has been appointed a new engagement partner. WTR provides audit services as well as preparation of taxation computations and some advisory work on the maintenance of complicated costing and inventory management systems. The audit and other services engagement this year was agreed on the same fee as the previous year, although additional work is required on the audit of some development expenditure which had not been included in LaFa's financial statements before. Information on the development expenditure will be made available a few days before audit completion 'due to difficulties with cost identification' as stated by the Finance Director of LaFa. LaFa's management were insistent that WTR could continue to provide a similar level of service for the same fee.

Part way through the audit of WTR, Mr W, WTR's quality management partner, resigned to take up a position as Finance Director in SoTee plc, LaFa's parent company. SoTee is audited by a different firm of auditors. Mr W has not yet been replaced, as the managing board of WTR has yet to identify a suitable candidate. Part of the outstanding work left by Mr W was the implementation of a system of ethical compliance for all assurance staff whereby they would confirm in writing adherence to the Code of Ethics and confirm lack of any ethical conflict arising from the code.

Requirement

Identify and explain the risks which will affect the quality management of the audit of LaFa. Suggest how the risks identified can be reduced.

3 Bee5

You are the audit manager in charge of the audit of Bee5, a construction company. The client is considered to be low risk; control systems are generally good and your assurance firm, Sheridan & Co, has normally assisted in the production of the financial statements providing some additional assurance of the accuracy and completeness of the statements.

During the initial planning meeting with the client you learn that a new Finance Director has been appointed and that Bee5 will produce the financial statements this year; the services of your firm's accounts department will therefore not be required. However, Bee5 has requested significant assurance work relating to a revision of its internal control systems. The current accounting software has become less reliable (increased processing time per transaction and some minor data loss due to inadequate field sizes). The client will replace this software with the new Leve system in the next financial year but requires advice on amending its control systems ready for this upgrade.

Requirement

Discuss the impact on the audit approach for Bee5 from the above information. Make specific reference to any quality management issues that will affect the audit.

Now go back to the Introduction and ensure that you have achieved the Learning outcomes listed for this chapter.

Answers to Interactive questions

Answer to Interactive question 1

Where IFRS allows a choice of accounting policy, directors may wish to select the policy that gives the most favourable picture, rather than the one which is most useful to users of financial statements. For example, they may wish to adopt the direct, rather than the indirect, method of preparing a statement of cash flows if they believe that gives a more favourable view of the company's liquidity and solvency in the eyes of a lender, such as a bank. Auditors need to be on the lookout for this kind of manipulation.

Answer to Interactive question 2

Several quality management issues are raised in the scenario.

Engagement partner

An engagement partner is usually appointed to each audit engagement undertaken by the firm, to take responsibility for the engagement and its quality management on behalf of the firm. Assigning the audit to the experienced audit manager is not sufficient.

The lack of audit engagement partner also means that several of the requirements of ISA 220 (Revised) about ensuring that arrangements in relation to independence and directing, supervising and reviewing the audit are not in place.

Conflicting views

In this scenario the audit manager and senior have conflicting views about the valuation of inventory. This does not appear to have been handled well, with the manager refusing to discuss the issue with the senior.

ISA 220 (Revised) requires that the audit engagement partner takes responsibility for settling disputes in accordance with the firm's policy in respect of resolution of disputes required by ISQM 1. In this case, the lack of engagement partner may have contributed to this failure to resolve the disputes. In any event, at best, the failure to resolve the dispute is a breach of the firm's policy under ISQM 1. At worst, it indicates that the firm does not have a suitable policy concerning such disputes as required by ISQM 1.

Answer to Interactive question 3

3.1 Working papers are necessary for the following reasons:

- To assist the engagement team to plan and perform the audit
- To assist members of the engagement team responsible for supervision to direct and supervise the audit procedures, and to discharge their review responsibilities in accordance with ISA 220 (Revised)
- To enable the engagement team to be accountable for its work
- As a record of matters of continuing significance to future audits
- To enable the conduct of engagement quality reviews and inspections in accordance with ISQM 1
- To enable the conduct of external inspections in accordance with applicable legal, regulatory or other requirements

3.2 Information/reasons

Information	Reasons
(1) **Administration**	
Client name Year end Title	Enables an organised file to be produced
Date prepared	Enables papers to be traced if lost
Initials of preparer	Any questions can be addressed to the appropriate person
	Seniority of preparer is indicated
Initials of senior to indicate review of junior's work	Evidence that guidance on planning, controlling and recording is being followed
	Evidence of adherence to auditing standards
(2) **Planning**	
Summary of different models of TVs and Blu- ray players held and the approximate value of each	Enables auditors to familiarise themselves with different types of inventory lines
Summary of different types of raw material held and method of counting small components	
Summary of different stages of WIP identified by client	
Time and place of count	Audit team will not miss the count
Personnel involved	Auditor aware who to address questions/ problems to
Copy of client's inventory count instructions and an assessment of them	Enables an initial assessment of the likely reliability of Viewco's count Assists in determining the amount of procedures audit team need to do Enables compliance work to be carried out; that is, checking Viewco staff follow the instructions
Plan of warehouse	To ensure all areas covered at count Clear where to find different models/components Location of any third party/moving inventory clear
Details of any known old or slow moving lines	Special attention can be given to these at count; for example, include in test counts
Scope of test counts to be performed that is, number/value of items to be counted and method of selection. For Viewco probably more counting of higher value finished goods	Ensures appropriate amount of procedures performed based on initial assessment Clear plan for audit team

Information	Reasons
(3) **Objectives of attendance**; that is, to ensure that the quantity and quality of inventory to be reflected in the financial statements is materially accurate	Reporting partner can confirm if appropriate/adequate procedures performed
(4) **Details of procedures performed**	Provides evidence for future reference and documents adherence to auditing standards Enables reporting partner to review the adequacy of the procedures and establish whether it meets the stated objective
(a) **Details of controls testing procedures performed** – observing Viewco's counters and ensuring they are following the instructions and conducting the count effectively, for example: • Note of whether the area was systematically tidied • Note of whether or how counted goods are marked	
Enable reassessment of likely reliability of Viewco's count Enables assessment of chances of items being double-counted or omitted	
Note of how Viewco records and segregates any goods still moving on count day	
Note of adequacy of supervision and general impression of counters	Enables assessment of overall standard of count and hence likely accuracy
Note whether counters are in teams of two and whether any check counts are performed	Evidence of independent checks may enhance reliability
(b) **Details of substantive procedures performed**: Details of items of raw materials or finished goods test counted:	
From physical inventory to client's count sheet	Evidence to support the accuracy and completeness of Viewco's count sheets
From Viewco's count sheets to physical inventory	Evidence to support the existence of inventory recorded by Viewco
For both of the above note inventory code, description, number of units and quality. Use a symbol to indicate agreement with Viewco's records	
Details of review for any old/obsolete inventory, for example dusty/damaged boxes. Note code, description, number of units and problem	Details can be followed up at final audit and the net realisable value investigated

Information	Reasons
Details of review of WIP	
Assessment of volume of part complete items of each stage Assessment of appropriateness of degree of completion assigned to each stage by Viewco (could describe items at various stages)	Evidence in support of accuracy of quantity of WIP Details can be followed through at final audit to final inventory sheets Basis for discussion of any description
Copies of: • Last few despatch notes • Last few goods received notes • Last few material requisitions • Last few receipts to finished goods	Enables follow up at final audit to ensure cut- off is correct; that is, goods despatched are reflected as sales, goods received as purchases and items in WIP are not also in raw materials and finished goods
Copies of client's inventory count sheets (where number makes this practical)	Enables follow up at final audit to ensure that Viewco's final sheets are intact and no alterations have occurred
(5) **Summary of results** In particular: • Details of any problems encountered • Details of any test count discrepancies and notes of investigation into their causes • Details of any representations by the management of Viewco	Senior/manager can assess any consequences for audit risk and strategy and decide any further procedures needed Provides full documentation of issues that could require a judgemental decision and could ultimately be the basis for a qualified opinion
(6) **Conclusion** The auditor will state their overall audit conclusions from the procedures completed.	Indicates whether or not the initial objective has been met and whether there are any implications for the audit opinion

Answer to Interactive question 4

Explanation as follows:

- Has the work been **performed** in **accordance with the audit programme**?

  The non-current asset procedure of agreeing non-current asset details from the asset register to the actual asset is to confirm the existence of the asset – in other words, that the asset should be included in the register. Agreeing physical asset details back to the register tests for the assertion of completeness, not existence; that is, all assets that should be recorded in the register are recorded – not that assets in the register do exist. The audit procedure has therefore not been completed in accordance with the audit programme.

  I recommend that the existence test is completed as specified. However, where physical existence of the asset cannot be determined by seeing the asset, then alternative evidence such as the log book is obtained.

- Have the work performed and the results obtained been **adequately documented**?

Adequate documentation normally means that written representations by management are recorded in writing, either in a paper document or through use of email or other electronic communication system that can be traced back to the client. Regarding the completeness of non- current assets, it is unclear how the representation from the director was received – although it appears that this was only verbal. The difficulty with verbal evidence is that it can be disputed at a later date.

I recommend that the director's representation is obtained in writing.

- Have any **significant matters** been **resolved** or are reflected in audit conclusions?

  The fact that some vehicles were found obviously not in working order is cause for concern. While your primary task was satisfying the assertions of existence and completeness, where assets are obviously unusable, this fact needs to be recorded. The issue is that assets may well be overvalued in the financial statements; in practice the asset values need to be compared to the carrying amounts in the asset register and, where the asset will no longer be used, complete write-off or disposal considered.

  While no further action may be necessary on completeness and existence, I recommend that you prepare a list of the assets which are in a poor state of repair so additional valuation procedures can be performed on them.

- Have the **objectives** of the audit procedures been achieved?

  As already noted, the objectives of audit procedures have not been achieved. There is still insufficient evidence to confirm the existence and completeness of non-current assets.

  I recommend that the procedures you were carrying out are completed as detailed in the audit programme.

- Are the **conclusions** expressed **consistent** with the results of the work performed and do they support the audit opinion?

  The conclusion on the assertions of completeness and existence is incorrect. Your memo states that assets were correctly stated and valued.

  The point is not valid for two reasons.

  First, audit procedures have not been completed correctly (see the point on completeness testing for example) which means that the assertion of completeness cannot be confirmed.

  Second, the audit procedures carried out do not relate to the valuation of those assets. Valuation procedures include the auditing of depreciation and not simply ascertaining the condition of those assets at the end of the reporting period.

  I recommend that when audit procedures are complete that the conclusion is amended to match the assertions being audited.

Answers to Self-test questions

1 Performance and position

Performance

The financial performance of a company comprises the return it obtains on the resources it controls. Performance can be measured in terms of the profits and comprehensive income of the company and its ability to generate cash flows.

Management will be assessed on their skill in achieving the highest level of performance, given the resources available to them.

Information on performance can be found in:

- the statement of profit or loss and other comprehensive income;
- the statement of changes in equity; and
- the statement of cash flows.

Position

The financial position of the company is evaluated by reference to:

- its economic resources and claims;
- its capital structure ie, its level of debt finance and shareholders' funds; and
- its liquidity and solvency.

The user of the financial statements can then make assessments on the level of risk, ability to generate cash, the likely distribution of this cash and the ability of the company to adapt to changing circumstances.

The statement of financial position is the prime source of information on a company's position but the statement of cash flows will also indicate a company's cash position over a period of time.

2 LaFa plc

Culture of WTR

The quality management standard, ISQM 1, requires that the firm implements policies and procedures such that the internal culture of the firm is one where quality is considered essential. Such a culture must be inspired by the leaders of the firm, who must sell this culture in their actions and messages. In other words, the entire business strategy of the audit firm should be driven by the need for quality in its operations.

In the WTR audit firm, there appears to be a lack of leadership on quality management leading to the risk that the firm's quality objectives may not be achieved. Two issues give rise for concern:

(1) First, the partner responsible for quality management resigned during the audit of LaFa plc and has not been replaced. This means that there is no one person in charge of maintaining quality standards within the audit firm. There is the risk that deficiencies of quality management will go undetected. It is also unclear whether the senior leadership team of the firm has taken any responsibility for quality as required by ISQM 1 para. 20.

(2) Second, WTR is under fee pressure from LaFa plc to complete the audit and provide other services for the same fee as last year, even though the scope of the audit has increased.

There is the risk that audit procedures will not be fully carried out to ensure that the tight budget is met. Lack of a comprehensive engagement quality review (exacerbated by the quality management partner resigning as noted above) increases the risk of poor quality work.

The quality management partner should be replaced as soon as possible and in the interim, the senior leadership team of the firm must take temporary responsibility for quality, while the fee situation with LaFa should be monitored – any potential cost overrun must be discussed with the client and where necessary additional fees agreed.

Ethical requirements

Policies and procedures should be designed to provide the firm with reasonable assurance that the firm and its personnel comply with relevant ethical requirements.

In WTR, it is not clear that staff will comply with the code. While professional staff will be members of ICAB or a similar body, and therefore subject to the ethical requirements of their professional body, precise implementation has not been confirmed within WTR. While it is unlikely that staff will knowingly break the ethical code, there is still room for inadvertent breaches. For example, partners may not be aware of the full client list of WTR and hold shares in an audit client. Similarly, audit staff may not be aware of WTR's policy on entertainment and therefore accept meals, for example, over these guidelines.

The guidelines should be circulated and confirmed by all staff as soon as possible.

Client acceptance

A firm should only accept, or continue with, a client where it:

- has considered the integrity of the client and does not have information that the client lacks integrity;
- is competent to perform the engagement and has the necessary time and resources; and
- can comply with ethical requirements including appropriate independence from the client.

While there is little indication that LaFa lacks integrity, the client is placing fee pressure on WTR. The client has also indicated that information regarding development expenditure may not be available during the audit and will be subject to a separate audit check just before the signing of the financial statements and auditor's report. There could be an attempt to 'force' an unmodified auditor's report when WTR should take more time (and money) auditing development expenditure. There is therefore a risk that LaFa management is losing some integrity and WTR need to view other management evidence with increased scepticism.

The audit of LaFa plc this year includes development expenditure. As this is a new audit area, the audit partner of LaFa should have ensured that the audit team, and WTR as a whole, had staff with the necessary experience to audit this item. Lack of competence increases audit risk, as the area may not be audited correctly or completely.

Mr W accepting the position of Finance Director at SoTee appears to place the independence of WTR with LaFa in jeopardy. As Finance Director of the parent company, Mr W will be in a position to influence the management of LaFa, and potentially the financial information being provided by that company. While SoTee is not an audit client, the audit partner in WTR must ensure that no undue influence is being placed on LaFa. If, however, this is the case, then WTR must consider resignation from the audit of LaFa.

Monitoring of audit

The audit firm must have policies in place to ensure that quality management policies and procedures are implemented and maintained.

Regarding the audit of LaFa, there is some risk that quality standards regarding audit monitoring will be compromised because:

- the audit partner is new, and may therefore not have extensive knowledge of the audit client; and
- there appears to be a tight audit deadline for auditing development expenditure.

To decrease audit risk, it will be appropriate to maintain similar audit staff from last year (eg, retain the audit senior and manager) and WTR could consider an engagement quality review using ISQM 2 to ensure WTR quality management standards have been followed.

3 Bee5

Client acceptance

In previous years Bee5 has required a standard audit from your assurance firm. However, this year there is a request for additional assurance regarding the internal control systems. This work will not only raise the amount of income generated from the client but will also require the use of specialist staff to perform the work.

Before accepting the engagement for this year Sheridan & Co must ensure the following:

(1) That income from Bee5 is not approaching 15% of the firm's total income. If income is approaching this level then additional independence checks may be required, such as an engagement quality review.

(2) That staff familiar with the Bee5 internal control system are available to provide the assurance work. If these skills are not available then Sheridan & Co must either hire staff with those skills or decline the work on internal control systems. Sheridan & Co must also ensure that they will not be taking responsibility for designing, implementing or maintaining internal control as under the Ethical Standard this would be a management decision-making activity.

Plan the audit – evaluate internal control

The current internal control system is due to be upgraded in the next financial year. There is therefore no impact on the current year's audit as a result of this change. However, the reason given by the client for the upgrade relates to reliability issues with the current control systems.

The control system used by Bee5 must still be evaluated to determine the extent to which the system is still reliable. Where deficiencies are identified then control risk will increase. There will be consequent impact on the audit approach as noted below.

Develop the audit approach

An increase in control risk will cause detection risk to increase. The impact on the audit will be an increased level of substantive testing to obtain sufficient confidence on assertions such as completeness and accuracy.

There will be a further impact on the quality management of the audit. Commencing the audit with the expectation of finding control deficiencies means that audit staff must be selected carefully. It may not be appropriate to send junior trainees with restricted experience to the client unless their work is closely monitored and carefully reviewed.

Audit internal control – tests of controls

As noted above, detailed tests of control on the accounting system will be limited. However, reliance will still be obtained from the overall control environment.

Evaluate results

The higher risk associated with the audit this year means that an engagement quality review will be appropriate for this client. Sheridan & Co needs to maintain the integrity of work performed as well as ensuring that the proposed audit opinion is appropriate. Part of the planning process will be to book the time of the quality management partner.

Chapter 2

Principles of corporate reporting

Introduction

Learning outcomes

- Explain and appraise the impact of accounting principles and bases of measurement in corporate reporting, for example fair value measurement
- Appraise corporate reporting regulations, and related legal requirements, with respect to presentation, disclosure, recognition and measurement
- Explain and appraise accounting standards that relate to the impact of changes in accounting policies and estimates
- Explain and evaluate the impact of underlying assumptions on financial statements
- Identify and explain current and emerging issues in corporate reporting
- Formulate and evaluate accounting and reporting policies for single entities and groups of varying sizes and in a variety of industries
- Explain and evaluate how different methods of recognising and measuring assets and liabilities can affect reported financial position and explain the role of data analytics in financial asset and liability valuation
- Explain and evaluate corporate reporting and assurance issues in respect of social responsibility, sustainability and environmental matters for a range of stakeholders
- Evaluate accounting policies choices and estimates, identifying issues of earnings manipulation and creative accounting

Chapter study guidance

Use this schedule and your study timetable to plan the dates on which you will complete your study of this chapter.

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
1	**The regulatory framework** This short section revises the regulatory framework and the standard-setting process.	**Approach** Read through quickly – this should be familiar to you from your earlier studies. **Stop and think** The process of setting IFRS® Standards is an open dialogue involving co- operation between national and international standard setters.	You are unlikely to be tested directly on this material – it is background knowledge.	N/A

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
2	**The IASB *Conceptual Framework*** Before launching into the detail of financial reporting and auditing standards, it is important to understand the principles that underpin them.	**Approach** *Conceptual Framework* forms the basis of the approach followed in developing IFRS® Standards. It can also be used to establish the accounting treatment where there is no IFRS on the subject. Study in detail – this version of the *Conceptual Framework* was revised in 2018 and may be different from the one you studied earlier. **Stop and think** Can you think of any advantages and disadvantages of a conceptual framework?	You may encounter a scenario where no IFRS is directly applicable or there is no obvious answer. Application of the *Conceptual Framework* will assist you in determining the appropriate financial reporting treatment by going back to first principles.	**IQ1: Asset or liability?** It is essential you do this short question in which you must **apply** the *Conceptual Framework* definition of asset and liability.
4	**IFRS 13, *Fair Value Measurement*** IFRS 13, *Fair Value Measurement* (section 4) brings together guidance on fair value and requires disclosures. It defines fair value as 'the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date'. IFRS 13 will crop up throughout the manual in all kinds of contexts.	**Approach** Work through this section as if learning the IFRS from scratch. This is essential, as it comes up regularly in the manual and in the exam. **Stop and think** Why is fair value not adjusted for transaction costs?	If you look at the table in Section 4.5.2, you will see a range of contexts in which fair value could come up in the exam: Share valuation Intangible assets Impairment PPE Financial instruments	N/A

CHAPTER 2

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
5	***IAS 8, Accounting Policies, Changes in Accounting Estimates and Errors*** This material should be familiar from your earlier studies.	**Approach** Treat this as revision. The key points are that changes in accounting policies are rare, and allowed only if required by statute/standard-setting body/results in reliable and more relevant information. Changes in accounting estimates are more common because of the judgement required in making estimates. **Stop and think** Why are changes in accounting estimates not accounted for by retrospective application?	IAS 8 could come up in any context, particularly where the directors are trying to change the accounting policy to give a more favourable view. This also raises ethical issues.	**IQ2: Accounting errors** Revision question on correction of a prior period error.
6	**Current issues in corporate reporting** This section summarises the key current issues and points to where they are treated in more detail. The most important current issues are the revised *Conceptual Framework*, covered in Section 2 and sustainability, covered in Section 6.	**Approach** Current issues are covered in this Workbook within the chapters in which the topic appears, so that the changes/proposed changes appear in context. **Stop and think** Which recent document deals with a concept also dealt with in the revised *Conceptual Framework?*	While exams test IFRS that are already in force (Blue Book), if published revised IFRS is not yet examinable, part of a question may ask for a brief explanation as to how the accounting treatment may change.	N/A

1 The regulatory framework

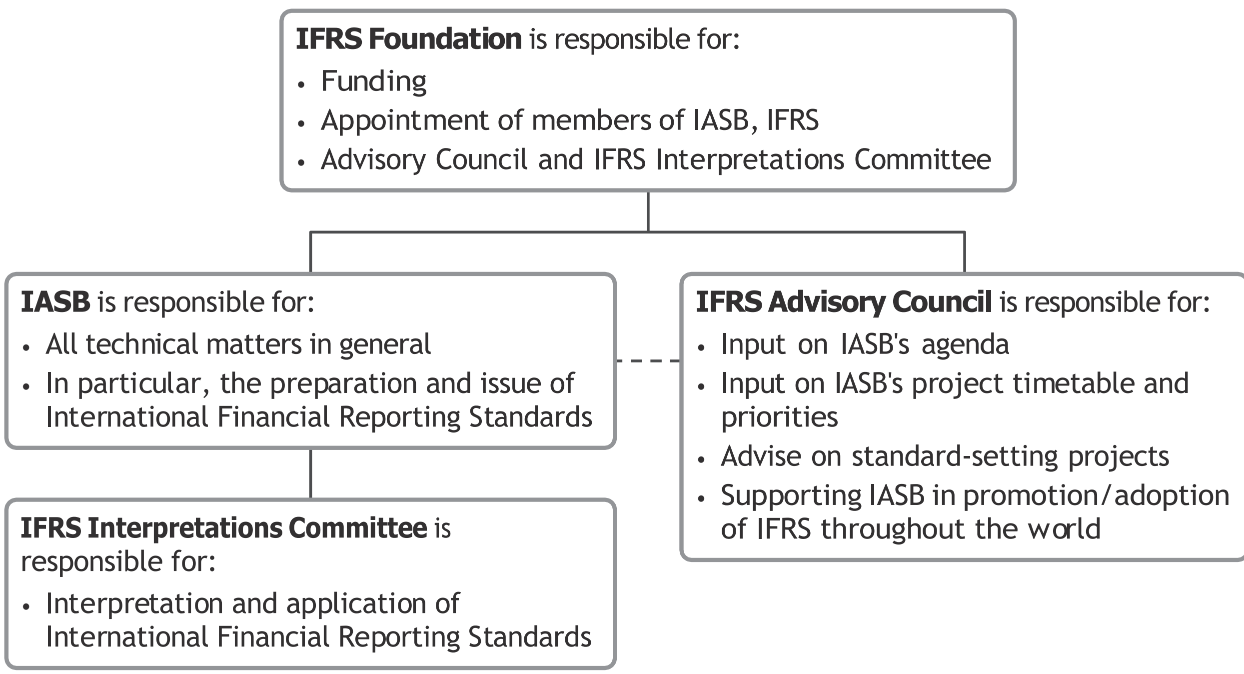
Section overview

- Financial reporting is the provision of financial information to those outside the entity.
- The organisation responsible for setting IFRS® Standards comprises the International Financial Reporting Standards Foundation (IFRS Foundation), the Monitoring Board, the International Accounting Standards Board (IASB), the IFRS Advisory Council (Advisory Council) and the IFRS Interpretations Committee (Interpretations Committee).
- The process of setting IFRS is an open dialogue involving co-operation between national and international standard setters.

1.1 The IFRS Foundation

IASCF was formed in 2001 as a not-for-profit corporation and was the parent entity of the **IASB**. In 2010 it was renamed as the **IFRS Foundation**. The IFRS Foundation is an independent organisation and its trustees **exercise oversight** and raise necessary **funding** for the IASB to carry out its role as standard setter. It also oversees the work of the IFRS Interpretations Committee (formerly called the **International Financial Reporting Interpretations Committee** (IFRIC)) and the IFRS Advisory Council (formerly called the **Standards Advisory Council** (SAC)). These are organised as follows:

Figure 2.1: IFRS Foundation



IFRS Foundation is responsible for:

- Funding
- Appointment of members of IASB, IFRS
- Advisory Council and IFRS Interpretations Committee

IASB is responsible for:

- All technical matters in general
- In particular, the preparation and issue of International Financial Reporting Standards

IFRS Interpretations Committee is responsible for:

- Interpretation and application of International Financial Reporting Standards

IFRS Advisory Council is responsible for:

- Input on IASB's agenda
- Input on IASB's project timetable and priorities
- Advise on standard-setting projects
- Supporting IASB in promotion/adoption of IFRS throughout the world

1.2 Membership

Membership of the IFRS Foundation has been designed so that it represents an international group of preparers and users, who become IFRS Foundation trustees. The selection process of the **22 trustees** takes into account geographical factors and professional background. IFRS Foundation trustees **appoint the IASB members**.

The **Monitoring Board** ensures that the trustees carry out their duties in accordance with the IFRS Foundation Constitution.

1.3 The IASB

The IASB is responsible for setting accounting standards. It is made up of 15 full-time members and has no particular geographical dominance.
Members have a variety of backgrounds and include the following:

- Auditors
- Preparers of financial statements
- Users of financial statements
- Academics

1.4 Objectives of the IASB

The *Preface to IFRS Standards* states that the objectives of the IASB are as follows:

(a) To develop, in the public interest, **a single set of high quality, understandable, enforceable and globally accepted financial reporting standards** based on clearly articulated principles. These standards should require high quality, transparent and comparable information in financial statements and other financial reporting to help investors, other participants in the various capital markets of the world and other users of the information to make economic decisions.

(b) To promote the **use and rigorous application** of those standards.

(c) In fulfilling the above objectives to take account of, as appropriate, the needs of a range of sizes and types of entities in diverse economic settings.

(d) To promote and facilitate the adoption of IFRS Standards through the **convergence** of national accounting standards and IFRS Standards.

1.5 The purpose of accounting standards

The overall purpose of accounting standards is to identify **proper accounting practices** for the preparation of financial statements.

Accounting standards create a **common understanding** between users and preparers on how particular items, for example the valuation of property, are treated. Financial statements should therefore comply with all applicable accounting standards.

1.6 Application of IFRS

Within each individual country **local regulations govern**, to a greater or lesser degree, the issue of financial statements. These local regulations include accounting standards issued by the national regulatory bodies or professional accountancy bodies in the country concerned.

Over the last 25 years, however, the **influence of IFRS on national accounting requirements and practices has been growing**. For example: Since 2005, all EU companies whose securities are traded on a regulated public market such as the London Stock Exchange **must prepare their consolidated accounts in accordance with IFRS**. (Note that although **group** financial statements must follow IFRS the **individual** financial statements do not need to.)

1.7 Setting of IFRS

The overall agenda of the IASB is initially set by discussion with the IFRS Advisory Council. The process for developing an individual standard involves the following steps.

Chapter 1: The objective of general purpose financial reporting

Chapter 2: Qualitative characteristics of useful financial information

Chapter 3: Financial statements and the reporting entity

Chapter 4: The elements of financial statements

Chapter 5: Recognition and derecognition

Chapter 6: Measurement

Chapter 7: Presentation and disclosure

Chapter 8: Concepts of capital and capital maintenance

During the early stages of a project, the IASB may establish an **Advisory Committee or working group** to give advice on issues arising in the project. Consultation with the Advisory Committee and the Advisory Council occurs throughout the project.

The IASB may develop and publish a **Discussion Paper** for public comment.

Following the receipt and review of comments, the IASB would develop and publish an **Exposure Draft** for public comment.

Following the receipt and review of comments, the IASB would issue a final **International Financial Reporting Standard**.

The period of exposure for public comment is normally 120 days. However, in some circumstances, proposals may be issued with a comment period of not less than 30 days. Draft IFRS Interpretations are exposed for a 60-day comment period.

1.8 Scope and authority of IFRS

The *Preface to IFRS Standards* makes the following points:

(a) IFRS Standards apply to **all general purpose financial statements** ie, those directed towards the common information needs of a wide range of users.

(b) The IASB's objective is to **require like transactions and events to be accounted for and reported in a like way. The IASB intends not to permit choices in accounting treatment.** The IASB is reconsidering those transactions and events for which IFRS Standards permit a choice of accounting treatment with the objective of reducing the number of those choices.

(c) Standards include paragraphs in bold and plain type. **Bold type paragraphs** indicate the **main principles**, but **both types have equal authority.**

(d) Any limitation of the applicability of a specific IFRS is made clear in that standard.

2 The IASB *Conceptual Framework*

Section overview

The *Conceptual Framework for Financial Reporting* determines:

- how financial statements are prepared; and
- the information they contain.

2.1 *Conceptual Framework*

A conceptual framework is a statement of generally accepted theoretical principles which form the frame of reference for financial reporting.

These theoretical principles provide the basis for the IASB's development of new accounting standards and the evaluation of those already in existence. The financial reporting process is concerned with providing information that is useful in the business and economic decision-making process. Therefore a conceptual framework will form the theoretical basis for determining which events should be accounted for, how they should be measured and how they should be communicated to the user. Although it is theoretical in nature, a conceptual framework for financial reporting has highly practical final aims.

The *Conceptual Framework* consists of eight chapters.

Chapter 1: The objective of general purpose financial reporting

Chapter 2: Qualitative characteristics of useful financial information

Chapter 3: Financial statements and the reporting entity

Chapter 4: The elements of financial statements

Chapter 5: Recognition and derecognition

Chapter 6: Measurement

Chapter 7: Presentation and disclosure

Chapter 8: Concepts of capital and capital maintenance

2.2 Purpose and status

The purpose of the *Conceptual Framework* is to (para. SP1.1):

- Assist the IASB to develop IFRS Standards that are based on consistent concepts;
- Assist preparers of accounts to develop accounting policies in cases where there is no IFRS applicable to a particular transaction, or where a choice of accounting policy exists; and
- Assist all parties to understand and interpret IFRS Standards.

The instances in which a preparer will use the Conceptual Framework to develop an accounting policy are expected to be **rare.** Therefore the Conceptual Framework will primarily be used by the IASB to develop IFRS Standards.

The *Conceptual Framework* is not a Standard. It **does not override any IFRS**, but instead forms the conceptual basis for the development of IFRS Standards.

However, IAS 1, *Presentation of Financial Statements* states that in order to achieve fair presentation, an entity must comply with both:

- IFRS; and
- The *Conceptual Framework for Financial Reporting*.

Many of the IASB's standards have been strongly influenced by the ideas set out in the *Conceptual Framework*.

Professional skills focus: Assimilating and using information

When considering the appropriate financial reporting treatment, it is important to consider all the information in order to determine which IFRS to apply. In the absence of an applicable IFRS, the *Conceptual Framework* will assist.

2.3 Chapter 1: The objective of general purpose financial reporting

The *Conceptual Framework* states (para. 1.2) that:

"The objective of general purpose financial reporting is to provide information about the reporting entity that is useful to existing and potential investors, lenders and other creditors in making decisions relating to providing resources to the entity."

- The types of economic decisions for which financial statements are likely to be used include the following.
- Buying, selling or holding equity and debt instruments;
- Providing or settling loans and other forms of credit; or
- Exercising rights to vote on, or otherwise influence, management's actions that affect the use of the entity's economic resources (*Conceptual Framework,* para.1.2)

Existing and potential investors, lenders and other creditors are referred to as the '**primary users**' of financial statements (para. 1.5). These users need information about (para 1.5):

- The **economic resources of the entity**;
- The **claims against the entity**; and
- How efficiently and effectively the entity's management have discharged their responsibilities relating to the entity's resources (**stewardship**)

Three aspects are relevant to users of financial statements (paras. 1.17–1.21):

- Financial performance reflected by accrual accounting
- Financial performance reflected by past cash flows
- Changes in economic resources and claims not resulting from financial performance, eg a share issue

The *Conceptual Framework* makes it clear that this information should be prepared on an **accruals basis**.

Definition

Accrual accounting: The effects of transactions and other events and circumstances on a reporting entity's economic resources and claims are recognised in the periods in which they occur, even if the resulting cash receipts and payments occur in a different period. (*Conceptual Framework*: para 1.17)

Financial statements prepared using accrual accounting (the accruals basis) show users' past transactions.

Information about a reporting entity's cash flows during a period also helps users assess the entity's ability to generate future net cash inflows and gives users a better understanding of its operations.

The *Conceptual Framework* also mentions several other, secondary, users that are interested in the financial information (*Conceptual Framework,* Chapter 1: para. 1.9, 1.10).

This includes:

- Management
- Regulators
- Members of the public

While users may gain most of their information from the financial statements, it is important that they obtain relevant information from other sources too.

2.4 Chapter 2: Qualitative characteristics of useful financial information

2.4.1 Overview

Qualitative characteristics are the attributes that make the information provided in financial statements useful to users.

The two **fundamental qualitative characteristics** are **relevance** and **faithful representation**.

There are then four **enhancing qualitative characteristics** which enhance the usefulness of information that is relevant and faithfully represented. These are: **comparability, verifiability, timeliness** and **understandability**.

The key issues can be summarised as follows.

Fundamental qualitative characteristics

Relevance

Relevant financial information is capable of making difference in the decisions made by users (*Conceptual Framework*, paras. 2.6 – 2.7), ie if it has:

- Predictive value; and/or
- Confirmatory value.

Materiality

Information is material if omitting, misstating or obscuring it could influence decisions that the primary users of general purpose financial statements make on the basis of financial information (*Conceptual Framework*, para. 2.11)

Faithful representation

To be useful, financial information must not only represent the relevant phenomena but must also faithfully represent the substance of the phenomena that it purports to represent (*Conceptual Framework*, para. 2.12).

A perfect faithful representation would be:

- Complete;
- Neutral; and
- Free from error.

Prudence

Prudence is exercising caution, particularly with areas where judgement or estimation is required. Supports the concept of neutrality.

Enhancing qualitative characteristics

Comparability

Information is more useful if it can be compared with similar information about:

- Other entities; and
- Other periods.

Consistency helps achieve comparability.

Verifiability

Assures users that information faithfully represents the economic phenomenon it purports to represent (*Conceptual Framework*, para. 2.30)

Verification can be direct or indirect.

Timeliness

Having information available to decision makers in time to be capable of influencing their decisions (*Conceptual Framework*, para. 2.33)

Balance between timeliness and accuracy of information.

Understandability

Classifying, characterising and presenting information clearly and concisely (*Conceptual Framework*, para. 2.34).

The cost constraint on useful financial reporting

Consideration of whether the benefits of reporting particular information justify the costs incurred to provide and use that information.

CHAPTER 2

2.5 Chapter 3: Financial statements and the reporting entity

2.5.1 Overview

Chapter 3 of the *Conceptual Framework* covers the objectives and scope of the financial statements, including the definition of the reporting period and the main perspective adopted in the financial statements: the financial statements should provide information about transactions from the perspective of the reporting entity, not that of the investors. This is to try to avoid investor bias when reporting on the entity.

2.5.2 Objective and scope of financial reporting

The objective of financial statements is to provide financial information about the reporting entity's assets, liabilities, equity, income and expenses that is useful to users of financial statements in assessing the prospects for future net cash inflows to the reporting entity and in assessing management's stewardship of the entity's economic resources. (*Conceptual Framework,* Chapter 3: para. 3.2).

2.5.3 Reporting period

Financial statements are prepared for a specific period of time (the reporting period) and provide information about assets and liabilities, and income and expenses. Comparative information must also be provided.

The financial statements should provide information about transactions from the perspective of the reporting entity, not that of the investors. This is to try to avoid investor bias when reporting on the entity.

(*Conceptual Framework,* Chapter 3: para. 3.4, 3.5).

2.5.4 Underlying assumption: going concern

Definition

Going concern: Financial statements are normally prepared on the assumption that the reporting entity is a going concern, and will continue in operation for the foreseeable future. Hence, it is assumed that the entity has neither the intention nor the necessity of liquidation nor the need to cease trading.

(*Conceptual Framework*: para. 3.9)

It is assumed that the entity has no intention to liquidate or curtail major operations. If it did, then the financial statements would be prepared on a **different (disclosed) basis** for example, the 'break up' basis.

2.5.5 The reporting entity

Definition

Reporting entity: An entity that is required, or chooses, to prepare financial statements. A reporting entity can be a single entity or a portion of an entity or can comprise more than one entity. A reporting entity is not necessarily a legal entity (para. 3.10).

2.5.6 Consolidated and unconsolidated financial statements

If a reporting entity comprises both the parent and its subsidiaries, the reporting entity's financial statements are referred to as 'consolidated financial statements'. If a reporting entity is the parent alone, the reporting entity's financial statements are referred to as 'unconsolidated financial statements').

(*Conceptual Framework,* Chapter 3: para. 3.15 – 3.17).

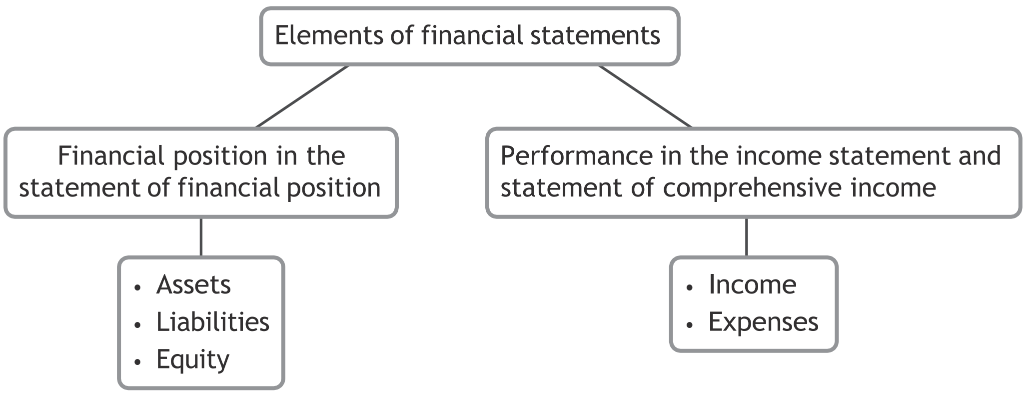
2.6 Chapter 4: The elements of financial statements

2.6.1 Overview

Transactions and other events are grouped together in broad **classes** and in this way their financial effects are shown in the financial statements. These broad classes are the elements of financial statements.

The *Conceptual Framework* lays out these elements as follows.

Figure 2.2: Elements of financial statements



Contributions from equity participants and distributions to them are shown in the statement of changes in equity.

2.6.2 Definitions of elements

Element	Definition	Comment
Asset	A present economic resource controlled by the entity as a result of past events. An economic resource is a right that has the potential to produce economic benefits.	Technically, the asset is the potential to produce economic benefits (eg, cash generation), not the underlying item of property itself (eg, a machine).
Liability	A present obligation of the entity to transfer an economic resource as a result of past events.	An essential characteristic of a liability is that the entity has an obligation. An obligation is 'a duty or responsibility that the entity has no practical ability to avoid'
Equity	The residual amount found by deducting all the entity's liabilities from all the entity's assets.	Equity = ownership interest = net assets. For a company, this usually comprises shareholders' funds (ie, capital and reserves).
Income	Increases in assets, or decreases in liabilities, that result in increases in equity, other than those relating to contributions from equity participants.	Income comprises revenue and gains, including all recognised gains on non-revenue items (eg, revaluations of non-current assets).
Expenses	Decreases in assets, or increases in liabilities, that result in decreases in equity, other than those relating to distributions to equity participants.	Expenses include losses, including all recognised losses on non-revenue items (such as write downs of non- current assets).

Note the way that the changes in economic benefits resulting from asset and liability increases and decreases are used to define:

- Income
- Expenses

This arises from the '**balance sheet approach**' adopted by the *Conceptual Framework* which treats performance statements, such as the statement of profit or loss and other comprehensive income, as a means of reconciling changes in the financial position amounts shown in the statement of financial position.

IFRS 16, *Leases* requires a lessee to recognise a right-of-use asset for each lease they enter into (with limited exceptions). A right-of-use asset is consistent with the definition of an asset in the *Conceptual Framework:* as a result of entering into the lease agreement (past event), the lessee can direct the use of the leased asset (control) in the course of business in order to directly or indirectly generate economic benefits.

IFRS 16 also requires the recognition of a lease liability, equivalent to the present value of future lease payments. The lease liability meets the *Conceptual Framework* definition of a liability: the lessee has a responsibility (present obligation) as a result of entering into the lease agreement (past event) to pay the lease rentals (transfer of economic benefits) as they become due.

These key definitions of 'asset' and 'liability' will be referred to again and again in these learning materials, because they form the foundation on which so many accounting standards are based. It is very important that you can reproduce these definitions accurately and quickly.

2.6.3 Assets

We can look in more detail at the components of the definitions given above.

Assets must give rise to **future economic benefits**, either alone or in conjunction with other items.

Definition

Potential to produce economic benefit: An economic resource is a right that has the potential to produce economic benefits. *(Conceptual Framework,* para.4.14)

In simple terms, an item is an asset if:

- it is **cash** or the **right to cash** in future eg, a receivable, or a **right to services** that may be used to generate cash eg, a prepayment; or
- it can be used to **generate cash** or **meet liabilities** eg, a tangible or intangible non-current asset.

The **existence** of an asset, particularly in terms of **control**, is **not reliant** on:

- **physical form** (hence intangible assets such as patents and copyrights may meet the definition of an asset and appear in the statement of financial position – even though they have no physical substance); or
- **legal ownership** (hence some leased assets, even though not legally owned by the company, may be included as assets in the statement of financial position (see Chapter 14).

Transactions or events in the **past** give rise to assets. Those expected to occur in future do not in themselves give rise to assets.

2.6.4 Liabilities

Again we look more closely at some aspects of the definition.

For a liability to exist, three criteria must all be satisfied (para. 4.27):

- The entity has an obligation
- The obligation is to transfer an economic resource
- The obligation is a present obligation that exists as a result of past events

Definition

Obligation: A duty or responsibility that the entity has no practical ability to avoid (para.4.29)

A present obligation exists as a result of past events if the entity has already obtained economic benefits or taken an action, and as a consequence, the entity will or may have to transfer an economic resource that it would not otherwise have had to transfer (para.4.43)

As seen above, obligations may be:

(a) **legally enforceable** as a consequence of a binding contract or statutory requirement. This is normally the case with amounts payable for goods and services received; or

(b) the result of **business practice**. For example, even though a company has no legal obligation to do so, it may have a policy of rectifying faults in its products even after the warranty period has expired.

A **management decision** (to acquire an asset, for example) **does not in itself create an obligation**, because it can be reversed. But a management decision implemented in a way which creates expectations in the minds of customers, suppliers or employees becomes an obligation. This is sometimes described as a **constructive obligation**. This issue is covered more fully in Chapter 13 in the context of the recognition of provisions.

Liabilities must arise from **past transactions or events**. For example, the sale of goods is the past transaction which allows the recognition of repair warranty provisions.

Settlement of a present obligation will involve the entity **giving up resources** giving rise to economic benefits in order to satisfy the claim of the other party. In practice, most liabilities will be met in **cash** but this is not essential.

Interactive question 1: Asset or liability?

Question	Answer
Oak plc has purchased a patent for £40,000. The patent gives the company sole use of a particular manufacturing process which will save £6,000 a year for the next five years.	
Elm plc paid John Brown £20,000 to set up a car repair shop, on condition that priority treatment is given to cars from the company's fleet.	
Sycamore plc provides a warranty with every washing machine sold.	

See **Answer** at the end of this chapter.

2.6.5 Equity

Equity is the **residual of assets less liabilities**, so the amount at which it is shown is dependent on the measurement of assets and liabilities. It has nothing to do with the market value of the entity's shares.

Equity may be **sub-classified** in the statement of financial position providing information which is relevant to the decision-making needs of the users. This will indicate legal or other restrictions on the ability of the entity to distribute or otherwise apply its equity.

In practical terms, the important distinction between liabilities and equity is that creditors have the **right** to insist that the transfer of economic resources is made to them regardless of the entity's financial position, but owners do not. All decisions about payments to owners (such as dividends or share capital buyback) are at the discretion of management.

2.6.6 Performance

Profit is used as a **measure of performance**, or as a basis for other measures (eg, earnings per share (EPS)). It depends directly on the measurement of **income and expenses**, which in turn depend (in part) on the concepts of capital and capital maintenance adopted.

Income and expenses can be **presented in different ways** in the statement of profit or loss and other comprehensive income, to provide information relevant for economic decision-making. For example, a statement of profit or loss and other comprehensive income could distinguish between income and expenses which relate to continuing operations and those which do not.

Items of income and expense can be **distinguished** from each other or **combined** with each other.

Income

Both **revenue** and **gains** are included in the definition of income. **Revenue** arises in the course of ordinary activities of an entity. (We will look at revenue in more detail in Chapter 10.)

Definition

Gains: Increases in economic benefits. As such, they are no different in nature from revenue.

Gains include those arising on the disposal of non-current assets. The definition of income also includes **unrealised gains** eg, on **revaluation** of non-current assets.

A **revaluation** gives rise to an increase or decrease in equity.

These increases and decreases appear in the statement of profit or loss and other comprehensive income.

(Gains on revaluation, which are recognised in a revaluation surplus, are covered in Chapter 12.)

Expenses

As with income, the definition of expenses includes **losses** as well as those expenses that arise in the course of ordinary activities of an entity.

Definition

Losses: Decreases in economic benefits. As such, they are no different in nature from other expenses.

Losses will include those arising on the disposal of non-current assets. The definition of expenses will also include **unrealised losses**.

2.7 Chapter 5: Recognition and derecognition of the elements of financial statements

2.7.1 Meaning of recognised

An item is recognised when it is included in the statement of financial position or statement of profit or loss and other comprehensive income.

Items which meet the definition of assets or liabilities may still not be recognised in financial statements because they must also meet certain **recognition criteria**.

Definition

Recognition: The process of capturing for inclusion in the statement of financial position or statement(s) of profit or loss and other comprehensive income an item that meets the definition of one of the elements of financial statements – an asset, a liability, equity, income or expenses. (*Conceptual Framework*: para. 5.1)

An asset or liability should be recognised if it will be both:

- **Relevant;** and
- Provide users of the financial st**atements with a faithful representation** of the transactions of that entity

---

The *Conceptual Framework* takes, therefore, these fundamental qualitative characteristics along with the definitions of the elements of the financial statements as the key components of recognition.

Even if an item is not recognised, then the preparers of the financial statements should consider whether, in order to meet the faithful representation requirement, there should be a description in the notes to the financial statements.

2.7.2 Derecognition

Definition

Derecognition: The removal of all or part of a recognised asset or liability from an entity's statement of financial position. Derecognition normally occurs when that item no longer meets the definition of an asset or liability. (*Conceptual Framework*: para. 5.26)

The *Conceptual Framework* considers derecognition to be a factor when the following occurs:

(a) Loss of control of or all or part of the recognised asset; or

(b) The entity no longer has an obligation for a liability

This is covered in more detail in the following chapters covering the specific elements, such as recognition and derecognition of financial instruments and non- current tangible assets. The IASB has brought these concepts of recognition and derecognition into the *Conceptual Framework* so that they can be revisited when issuing new standards or revising existing ones.

2.8 Chapter 6: Measurement of the elements of financial statements

2.8.1 Overview

A number of different measurement bases are used in financial statements. They include:

- Historical cost
- Value in use
- Fair value
- Current cost

In the *Conceptual Framework*, the guidelines surrounding the measurement of elements are clarified and given more substance.

Definition

Measurement: Elements recognised in the financial statements are quantified in monetary terms. This requires the selection of a measurement basis. (*Conceptual Framework*: para. 6.1)

This involves the selection of a particular **basis of measurement**. A number of these are used to different degrees and in varying combinations in financial statements. They include the following.

Definitions

Historical cost: The price paid for an asset or for the event which gave rise to the liability. The price will not change.

Current value: The price paid for an asset or the liability value will be updated to reflect any changes since it was acquired or incurred. There are three main bases recognised by the *Conceptual Framework* that make up current value:

Fair value: Price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. (IFRS 13, Appendix A)

Value in use: The present value of the cash flows, or other economic benefits, that an entity expects to derive from the use of an asset and its ultimate disposal (*Conceptual Framework*, para.6.17).

Current cost: Current cost, like historical cost, is an entry value: it reflects prices in the market in which the entity would acquire assets or incur the liability.

2.8.2 Historical cost

Historical cost is the most commonly adopted measurement basis, but this is usually combined with other bases, eg inventory is carried at the lower of cost and net realisable value.

Recent standards use the concept of fair value, which is defined by IFRS 13 as 'the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date' (IFRS 13: para. 9).

2.8.3 Current value

Current value accounting reflects the valuation of the assets or liabilities based on conditions and information available at the measurement date. The *Conceptual Framework* discusses the bases of measurement, and the factors to be considered when choosing the appropriate measurement method. The three bases that make up current value are fair value, value in use and current cost.

2.8.4 Fair value

The definition of fair value, as stated in IFRS 13 is 'the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date' (IFRS 13, Appendix A).

The specifics of fair value in relation to tangible non-current assets (IAS 16), business combinations (IFRS 3), biological assets (IAS 41) and non-current assets held for sale and discontinued operations (IFRS 5) are covered in the relevant chapters.

Fair value is most commonly calculated by taking the open market value. Where there is no active market for the asset or liability, then the following should be used as a basis.

- Estimates of future cash flows
- Time value of money (discounting the future cash flows)

In each case, it will be taking into consideration the uncertainty of the market. Fair value looks at the potential future value of the asset or liability.

2.8.5 Value in use

This is calculated by taking the present value of the cash flows or other benefits that the entity will receive during the lifetime of the asset or liability, and deducting any disposal costs. The value of the asset or liability considers the future cash flows (therefore, it does not include the costs of acquiring the item in the first place).

At first glance this seems similar to the fair value basis, however, value in use considers entity specific factors affecting it, and the fair value basis looks at the market perspective.

Value in use looks at the likely future value of the entity using the asset or liability.

2.8.6 Current cost

Current cost, like historical cost, is an entry value: it reflects prices in the market in which the entity would acquire assets or incur the liability (*Conceptual Framework,* para.6.21). Essentially the replacement cost of an asset or liability.

2.9 Chapter 7: Presentation and disclosure

2.9.1 Overview

Chapter 7 of the *Conceptual Framework* covers the high level principles behind the need for a consensus on presentation and disclosure, not just between periods for the entity, but also across different entities.

2.9.2 Principles of presentation and disclosure

Rather than relying on prescriptive rules regarding presentation and disclosure, the main principles are established which include:

- Classification of assets and liabilities of a similar nature together (whilst keeping dissimilar ones separated), according to their nature, function or method of measurement. This is also to avoid the issue of 'offsetting' whereby items of a dissimilar nature are grouped together, for example an asset and a liability offset to provide a much smaller number in the financial statements.
- Avoiding unnecessary detail which can obscure the important facts
- Equally, avoiding a standardised approach (often referred to as 'boilerplate') but instead giving the entity an opportunity to provide details relevant to the organisation and its business
- Specific details regarding the classification of assets, liabilities, equity, income and expenses

2.9.3 Interaction with IAS 1

Financial statements should **present fairly** the financial position, financial performance and cash flows of an entity. **Compliance with IFRS** is presumed to result in financial statements that achieve a fair presentation. (IAS 1: para. 15)

IAS 1 stipulates that financial statements shall present fairly the financial position, financial performance and cash flows of an entity. Fair presentation requires the faithful representation of the effects of transactions, other events and conditions in accordance with the definitions and recognition criteria for assets, liabilities, equity, income and expenses set out in the *Conceptual Framework*.

The following points made by IAS 1 expand on this principle.

(a) **Compliance with IFRS** should be disclosed

(b) **All relevant IFRS** must be followed if compliance with IFRS is disclosed

(c) Use of an **inappropriate accounting treatment** cannot be rectified either by disclosure of accounting policies or notes/explanatory material

IAS 1 states what is required for a fair presentation.

(a) Selection and application of suitable **accounting policies**

(b) **Presentation of information** in a manner which provides relevant, reliable, comparable and understandable information

(c) **Additional disclosures** where required

(IAS 1: para. 17)

Professional skills focus: Applying judgement

Judgement is particularly important in the context of disclosure. A balance has to be struck between providing the necessary information for a full understanding and 'information overload', where the important information gets buried.

2.10 Chapter 8: Concepts of capital and capital maintenance

The final section of the *Conceptual Framework* is devoted to a brief discussion of the different concepts of capital and capital maintenance, pointing out that:

- the choice between them should be made on the basis of the needs of users of financial statements; and
- the IASB has no present intention of prescribing a particular model.

2.10.1 Financial capital and capital maintenance

Definition

Financial capital maintenance: Under a financial concept of capital maintenance, such as invested money and invested purchasing power, capital is synonymous with the net assets or equity of the entity.

The financial concept of capital is adopted by most entities.

This concept measures capital as the **equity in the statement of financial position**. Profit is only earned in an accounting period **if the equity at the end of the period is greater than it was at the start**, having excluded the effects of distributions to or contributions from the owners during the period.

Monetary measure of capital

Financial capital is usually measured in **monetary terms** eg, the pound sterling or the euro. This is the concept applied in historical cost accounting. This measure can be quite stable over short periods of years, but is debased by quite low rates of general inflation over longer periods, such as 20 years. So comparisons between capital now and capital 20 years ago are invalid, because the measurement instrument is not constant.

Constant purchasing power

A variant on the monetary measure of financial capital is the constant purchasing power measure. On this basis, **the opening capital (ie, equity) is uprated by the change in a broadly based price index**, often a retail prices index, over the year. Also, the transactions during the year are uprated by the change in the same index. A profit is only earned if **the capital at the end of the year exceeds these uprated values**. (The value of the uprating is taken to equity, but is not regarded as a profit, merely a 'capital maintenance' adjustment.) So this capital maintenance adjustment can be thought of as an additional expense. Comparisons over a 20-year period will be more valid if the capital 20 years ago is uprated for general inflation over that 20-year period.

However, there is no reason why inflation measured by a retail prices index should be at all close to the inflation experienced by an individual company. The physical capital maintenance concept (see below) seeks to address this.

2.10.2 Physical capital and capital maintenance

Definition

Physical capital maintenance: Under a physical concept of capital, such as operating capability, capital is regarded as the productive capacity of the entity based on, eg, units of output per day.

This concept looks behind monetary values, to the underlying **physical productive capacity of the entity**. It is based on the approach that an entity is nothing other than a means of producing saleable outputs, so a profit is earned only after that productive capacity has been maintained by a 'capital maintenance' adjustment. (Again, the capital maintenance adjustment is taken to equity and is treated as an additional expense in the statement of profit or loss and other comprehensive income.) Comparisons over 20 years should be more valid than under a monetary approach to capital maintenance.

The difficulties in this approach lie in making the capital maintenance adjustment. It is basically a current cost approach, normal practice being to use industry-specific indices of movements in non- current assets, rather than to go to the expense of annual revaluations by professional valuers. The difficulties lie in finding indices appropriate to the productive capacity of a particular entity.

Context example: Capital maintenance concepts

Meercat plc purchased 20,000 electrical components on 1 January 20X7 for £10 each. They were all sold on 31 December 20X7 for £250,000. On that date the replacement cost of an electrical component was £11.50. The general rate of inflation as measured by the general price index was 12% during the year. Profit could be calculated as follows:

	Financial cap. maint'nce (monetary terms) £	Financial cap. maint'nce (constant purchasing power) £	Physical cap. maint'nce £
Revenue	250,000	250,000	250,000
Cost of sales			
20,000 × 10	(200,000)		
20,000 × 11.2		(224,000)	
20,000 × 11.5			(230,000)
Profit	50,000	26,000	20,000

3 Other reporting frameworks

Section overview

- This Workbook (and your exam) focuses on IFRS, but there are other reporting frameworks you need to know about, particularly those that relate to smaller entities.
- The IASB's IFRS for small and medium-sized entities (SMEs) is designed to facilitate financial reporting by small and medium-sized entities in a number of ways.

3.1 Small and medium-sized enterprises (SMEs)

3.1.1 Scope and application of IFRS

Any limitation of the applicability of a specific IFRS is made clear within that standard. IFRS are **not intended to be applied to immaterial items, nor are they retrospective**. Each individual IFRS lays out its scope at the beginning of the standard.

Within each individual country **local regulations** govern, to a greater or lesser degree, the issue of financial statements. These local regulations include accounting standards issued by the national regulatory bodies and/or professional accountancy bodies in the country concerned.

IFRS **concentrates on essentials** and is designed not to be too complex, otherwise the standards would be impossible to apply on a worldwide basis.

IFRS does not override local regulations on financial statements. Entities should simply disclose whether IFRS is complied with in all material respects. Entities in individual countries will attempt to persuade local authorities, where current regulations deviate from IFRS, that the benefits of harmonisation make local change worthwhile.

3.1.2 Application of IFRS to smaller entities Big GAAP/little GAAP divide

In most countries the majority of companies or other types of entity are **very small**. They are generally owned and managed by one person or a family. The owners have invested their own money in the business and there are no outside shareholders to protect.

Large entities, by contrast, particularly companies listed on a stock exchange, may have shareholders who have invested their money, possibly through a pension fund, with no knowledge whatsoever of the company. These shareholders need protection and the regulations for such companies need to be more stringent.

It could therefore be argued that company accounts should be of two types.

(a) 'Simple' ones for small companies with fewer regulations and disclosure requirements

(b) 'Complicated' ones for larger companies with extensive and detailed requirements

This is sometimes called the **big GAAP/little GAAP divide**.

Possible solutions

There are two approaches to overcoming the big GAAP/little GAAP divide:

(a) Differential reporting ie, producing new reduced standards specifically for smaller companies, such as the IFRS for SMEs (see below)

(b) Providing exemptions for smaller companies from some of the requirements of existing standards

Differential reporting

Differential reporting may have drawbacks in terms of reducing comparability between small and larger company accounts.

Furthermore, problems may arise where entities no longer meet the criteria to be classified as small.

Exemptions from IFRS

Some IFRS Standards do not have any bearing on small company accounts; for example, a company with equity not quoted on a stock exchange has no need to comply with IAS 33, *Earnings per Share*. Also, an entity with a small local market may find IFRS 8, *Operating Segments* to be superfluous.

Other standards always have an impact. In particular, almost all small companies will be affected by the IFRS Standards on the following:

- Property, plant and equipment
- Inventories
- Presentation of financial statements
- Events occurring after the reporting period
- Taxes on income
- Revenue
- Provisions and contingencies

Does this mean that companies below a certain size should be exempt from other IFRS? An alternative approach would be to reduce the exposure of small companies to IFRS on a **standard by standard basis**. For those 'core' standards listed above, small companies would be required to follow all or most of their provisions. For more complicated standards, small companies would face nothing but very brief general obligations.

It is difficult to see how the IASB could impose any kind of specific size limits to define small companies if such an approach were adopted. Instead, it might specify that size limits which are already given in national legislation or standards could be adopted for the purpose.

Cost of compliance

If the cost of compliance exceeds the benefits to users, an entity may decide not to follow an IFRS. This applies to all reporting entities, not just smaller ones. However, smaller entities are more likely to make use of this exception.

For example, impairment reviews can be time consuming and a smaller entity may not have sufficient staff to spare to carry out these reviews.

Materiality

Another point to note is that IFRS Standards apply to **material** items. In the case of smaller entities, the amount that is material may be very small in monetary terms. However, the effect of not reporting that item may be material in that it would mislead users of the financial statements. A case in point is IAS 24, *Related Party Disclosures*. Smaller entities may well rely on trade with relatives of the directors/shareholders and this needs to be disclosed.

3.1.3 International Financial Reporting Standard for Small and Medium-sized Entities

The *IFRS for Small and Medium-Sized Entities* (IFRS for SMEs) was published in 2009 and revised in 2015 and 2018. It is relatively short, and has simplifications that reflect the needs of users of SMEs' financial statements and cost-benefit considerations.

It is designed to facilitate financial reporting by SMEs in a number of ways.

- It provides significantly less guidance than full IFRS.

- Many of the principles for recognising and measuring assets, liabilities, income and expenses in full IFRS are simplified.
- Where full IFRS allows accounting policy choices, the IFRS for SMEs allows only the easier option.
- Topics not relevant to SMEs are omitted.
- Significantly fewer disclosures are required.
- The standard has been written in clear language that can easily be translated.

3.1.4 Scope

The IFRS is suitable for all entities except those whose securities are publicly traded and financial institutions such as banks and insurance companies. It is the first set of international accounting requirements developed specifically for SMEs. Although it has been prepared on a similar basis to full IFRS, it is a standalone product and will be updated on its own timescale.

There are no quantitative thresholds for qualification as an SME; instead, the scope of the IFRS is determined by a test of public accountability. As with full IFRS, it is up to legislative and regulatory authorities and standard setters in individual jurisdictions to decide who is permitted or required to use the IFRS for SMEs.

3.1.5 Effective date

The IFRS for SMEs does not contain an effective date; this is determined in each jurisdiction. The IFRS will be revised only once every three years. It is hoped that this will further reduce the reporting burden for SMEs.

3.1.6 Accounting policies

For situations where the IFRS for SMEs does not provide specific guidance, it provides a hierarchy for determining a suitable accounting policy. An SME must consider, in descending order:

- The guidance in the IFRS for SMEs on similar and related issues
- The definitions, recognition criteria and measurement concepts in section 2 *Concepts and Pervasive Principles* of the standard

The entity also has the option of considering the requirements and guidance in full IFRS dealing with similar topics. However, it is under no obligation to do this, or to consider the pronouncements of other standard setters.

3.1.7 Overlap with full IFRS

In the following areas, the recognition and measurement guidance in the IFRS for SMEs is like that in the full IFRS.

- Provisions and contingencies
- Hyperinflation accounting
- Events after the end of the reporting period
- Taxation
- Property, plant and equipment

3.1.8 Omitted topics

The IFRS for SMEs does not address the following topics that are covered in full IFRS.

- Earnings per share
- Interim financial reporting
- Segment reporting
- Classification for non-current assets (or disposal groups) as held for sale

3.1.9 Examples of options in full IFRS not included in the IFRS for SMEs

- Revaluation model for intangible assets and property, plant and equipment
- Financial instrument options, including investments in equity interests, held-to-maturity and fair value options
- Choice between cost and fair value models for investment property (measurement depends on the circumstances)
- Options for government grants

3.1.10 Principal recognition and measurement simplifications

(a) **Financial instruments**

Financial instruments meeting specified criteria are measured at cost or amortised cost. All others are measured at fair value through profit or loss. The procedure for derecognition has been simplified, as have hedge accounting requirements.

(b) **Goodwill and other indefinite-life intangibles**

These are always amortised over their estimated useful life (or 10 years if it cannot be estimated).

(c) **Investments in associates and joint ventures**

These can be measured at cost, but fair value must be used if there is a published price quotation.

(d) **Research and development costs and borrowing costs** must be expensed.

(e) **Held-for-sale assets**

There is no separate held-for-sale classification; holding an asset or group of assets for sale is an indicator of impairment.

(f) **Biological assets**

SMEs are to use the cost less depreciation and impairment model unless the fair value is readily determinable, in which case the fair value through profit or loss model is required.

(g) **Equity-settled share-based payment**

If observable market prices are not available to measure the fair value of the equity-settled share-based payment, the directors' best estimate is used.

3.1.11 The future of the IFRS for SMEs

Because there is no supporting guidance in the IFRS for SMEs, differences from the full IFRS have arisen, even where the principles are the same. Most of the exemptions in the IFRS for SMEs are on grounds of cost or undue effort. However, despite the practical advantages of a simpler reporting framework, there will be costs involved for those moving to the IFRS – even a simplified IFRS – for the first time.

3.1.12 Advantages and disadvantages of the IFRS for SMEs Advantages

- It is virtually a '**one stop shop**'.
- It is **structured according to topics**, which should make it practical to use.
- It is written in an **accessible style**.
- There is **considerable reduction in disclosure requirements**.
- Guidance **not relevant** to private entities is **excluded**.

Disadvantages

- It does not focus on the smallest companies.
- The scope extends to 'non publicly accountable' entities. Potentially, the scope is too wide.

- The standard will be onerous for small companies.
- Further simplifications could be made. These might include the following:
  - Amortisation for goodwill and intangibles
  - No requirement to value intangibles separately from goodwill on a business combination
  - No recognition of deferred tax
  - No measurement rules for equity-settled share-based payment
  - No requirement for consolidated accounts (as for EU SMEs currently)
  - Fair value measurement when readily determinable without undue cost or effort

3.2 Auditing smaller entities

3.2.1 International standards on auditing for small companies

Unlike the IFRS Standards, there are no separate auditing standards applying specifically to smaller entities. This is based on the view that 'an audit is an audit' and that users who receive auditors' reports need to have confidence in the auditor's opinions, whether they are in relation to large or small entity financial statements.

However, there is an acknowledgement that small and medium enterprises do pose specific challenges to the auditor in certain areas. Some of the ISAs that you have already studied highlight how their requirements should be applied to small company audits.

Note: Recent revisions to auditing standards have moved away from stating **considerations relevant to smaller entities** and instead introduced the idea of **scalability** which is designed to allow ISAs to be applied proportionately to the **scale** and **complexity** of risks presented by a particular audit engagement, **regardless of its size**. In other words, large engagements may not be considered as complex as some comparatively smaller engagements, perhaps as a result of the absence of robust systems of internal control. The following guidance reflects the current position of how ISAs advise auditors to address the challenges of auditing smaller entities.

3.2.2 ISA 210, *Agreeing the Terms of Audit Engagements*

The owner of a small company may not be aware of directors' and auditors' responsibilities, particularly if the accounts preparation is outsourced. A primary purpose of the **engagement letter** is to clarify these responsibilities. ISA 210.A21 states that it may be useful in this situation to remind management that the preparation of the financial statements remains their responsibility.

3.2.3 ISA 220 (Revised), *Quality Management for an Audit of Financial Statements*

The audit of a smaller entity must still be compliant with ISAs. However, many smaller engagements may be conducted by smaller firms that are unable to meet the specific requirements of ISQM 1 and 2 and ISA 220 (Revised), such as supervision and review, due to insufficient staffing in the firm. In such cases, quality management may be undertaken on a more ad-hoc basis.

3.2.4 ISA 230, *Audit Documentation*

A small audit team may have an excellent understanding of the audit client, but it is important to ensure that working papers **meet the standard required by the ISA** and to prepare audit documentation that can be understood by an experienced auditor, as the documentation may be subject to review by external parties for regulatory or other purposes.

The standard (ISA 230.A16–.A17) does allow for the following:

(a) The documentation being less extensive than for the audit of a larger entity

(b) Where the engagement partner performs all the audit work, matters that are normally documented solely to instruct or inform members of the team, or to provide evidence of review, will not be included

(c) Various aspects of the audit may be recorded together in a single document

3.2.5 ISA 240, *The Auditor's Responsibilities Relating to Fraud in an Audit of Financial Statements*

Within small companies, the **lack of control procedures** can contribute to a higher risk of employee fraud and error. On the other hand, a smaller entity may not have a written code of conduct but may have developed a culture of integrity and ethical behaviour through oral communication and management example.

The presence of a dominant owner-manager can be an important factor in the overall control environment, with the need for management authorisation compensating for the lack of other controls. However, this can be a potential deficiency in internal control, due to the opportunity for management to override controls.

ISA 240 requires discussion among the audit team of the **susceptibility of the entity to material frauds or errors**. This discussion is still required for a small entity but is often overlooked due to the size of the audit team.

In addition, ISA 240 requires auditors to ask management about their assessment of risk of fraud and error. Even if management do not have a system of assessing risk, the enquiry should still be made, as it provides valuable information about the control environment, although in smaller entities management's assessment may only focus on the risks of employee fraud or misappropriation of assets. (ISA 240.A14)

3.2.6 ISA 300, *Planning an Audit of Financial Statements*

Due to the lack of complexity, **audit planning documentation** may be **scaled back** for a small entity. With a smaller team, co-ordination and communication are easier. A planning meeting or general conversation may be sufficient, and notes made about future issues during last year's audit will be particularly useful.

Standard audit programmes or checklists may be used, provided that they are tailored to the circumstances of the engagement, including the auditor's risk assessments.

In the smallest audits, carried out entirely by the audit partner, questions of direction, supervision and review do not arise. Forming an objective view on the appropriateness of judgements made in the course of the audit can present problems in this case and, if particularly complex or unusual issues are involved, it may be desirable to consult with other suitably experienced auditors or the auditor's professional body. (ISA 300.A11, A13, A14, A23)

3.2.7 ISA 320, *Materiality in Planning and Performing an Audit*

The standard highlights that in an owner-managed business the profit before tax for the year may be consistently nominal, as the owner may take most of the profits as remuneration, so it may be more appropriate to use profit before remuneration as the basis for estimating materiality. (ISA 320.A9)

Another practical issue is that at the planning stage it is often difficult to calculate materiality as a percentage of key figures eg, of assets, revenue or profit, as the draft accounts may be unavailable for a small business. Trial balance figures may have to be used instead.

The auditor will need to use **judgement** in applying materiality when evaluating results.

3.2.8 ISA 550, *Related Parties*

In a small entity, related party transactions between the company and its directors and their families may be **significant** but smaller entities may have no documented processes or controls for dealing with related party relationships and transactions. The auditor will have to obtain an understanding of the related party relationships and transactions through enquiry of management and observation of management's oversight and review activities. (ISA 550.A20)

The auditor's in-depth knowledge of the smaller entity will assist in identification of related parties (for example, other entities controlled by the owner management) which will also help the auditor to assess the risk of any transactions being unrecorded or undisclosed.

3.2.9 ISA 570 (Revised), Going Concern

The size of an entity may affect its ability to withstand adverse conditions. Small entities may be able to respond quickly to exploit opportunities, but may lack reserves to sustain operations.

Risks of particular relevance to small entities are:

- that banks and other lenders may cease to support the entity; and
- the possible loss of a principal supplier, major customer or key employee, or of the right to operate under a licence, franchise or other legal agreement. (ISA 570.A5–.A6)

It is unlikely that budgets and forecasts will be available for the auditor to review. In many businesses the principal source of finance may be a loan from the owner-manager.

If an entity is in difficulty, its survival may depend on the owner-manager subordinating their loan in favour of banks or other financial institutions. In this case, the auditor would inspect sufficient, appropriate evidence of the subordination.

If an entity depends on funds from the owner-manager, the auditor will consider their current financial position and may ask for a written representation to confirm the owner-manager's understanding. (ISA 570.A12-.A13)

4 IFRS 13, *Fair Value Measurement*

Section overview

- IFRS 13, *Fair Value Measurement* gives extensive guidance on how the fair value of assets and liabilities should be established.
- IFRS 13 aims to:
  - define fair value
  - set out in a single IFRS a framework for measuring fair value
  - require disclosures about fair value measurements
- IFRS 13 defines fair value as "**the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date**".
- Fair value is a market-based measurement, not an entity-specific measurement. It focuses on assets and liabilities and on exit (selling) prices. It also takes into account market conditions at the measurement date.
- IFRS 13 states that valuation techniques must be those which are appropriate and for which sufficient data are available. Entities should maximise the use of relevant **observable inputs** and minimise the use of **unobservable inputs**.

4.1 Background

IFRS 13, *Fair Value Measurement* was published in 2011.The project arose as a result of the Memorandum of Understanding between the IASB and FASB (2006) reaffirming their commitment to the convergence of IFRS and US GAAP. With the publication of IFRS 13, IFRS and US GAAP now have the same definition of fair value and the measurement and disclosure requirements are now aligned. A standard on fair value measurement is particularly important in the context of a worldwide move towards IFRS.

4.2 Objective

IFRS 13 aims to:

- define fair value
- set out in a single IFRS a framework for measuring fair value
- require disclosures about fair value measurements

The previous definition used in IFRS was "the amount for which an asset could be exchanged, or a liability settled, between knowledgeable, willing parties in an arm's length transaction".

The price which would be received to sell the asset or paid to transfer (not settle) the liability is described as the 'exit price' and this is the definition used in US GAAP. Although the concept of the 'arm's length transaction' has now gone, the market-based current exit price retains the notion of an exchange between unrelated, knowledgeable and willing parties.

4.3 Scope

IFRS 13 applies when another IFRS requires or permits fair value measurements or disclosures. The measurement and disclosure requirements do not apply in the case of:

(a) share-based payment transactions within the scope of IFRS 2, *Share-based Payment;*

(b) leasing transactions within the scope of IFRS 16, *Leases*; and

(c) net realisable value as in IAS 2, *Inventories* or value in use as in IAS 36, *Impairment of Assets.*

Disclosures are not required for:

(a) plan assets measured at fair value in accordance with IAS 19, *Employee Benefits;*

(b) plan investments measured at fair value in accordance with IAS 26, *Accounting and Reporting by Retirement Benefit Plans*; and

(c) assets for which the recoverable amount is fair value less disposal costs under IAS 36, *Impairment of Assets*.

4.4 Measurement

Fair value is a market-based measurement, not an entity-specific measurement. It focuses on assets and liabilities and on exit (selling) prices. It also takes into account market conditions at the measurement date. In other words, it looks at the amount for which the holder of an asset could sell it and the amount which the holder of a liability would have to pay to transfer it. It can also be used to value an entity's own equity instruments.

Because it is a market-based measurement, fair value is measured using the assumptions that market participants would use when pricing the asset, taking into account any relevant characteristics of the asset.

It is assumed that the transaction to sell the asset or transfer the liability takes place either:

(a) in the **principal market** for the asset or liability; or

(b) in the absence of a principal market, in the **most advantageous** market for the asset or liability.

The principal market is the market which is the most liquid (has the greatest volume and level of activity) for that asset or liability. In most cases the principal market and the most advantageous market will be the same.

IFRS 13 acknowledges that when market activity declines, an entity must use a valuation technique to measure fair value. In this case the emphasis must be on whether a transaction price is based on an **orderly transaction**, rather than a forced sale.

Fair value is **not adjusted for transaction costs.** Under IFRS 13, these are **not a feature of the asset or liability**, but may be taken into account when **determining the most advantageous market**.

Fair value measurements are based on an asset or a liability's **unit of account**, which is specified by each IFRS where a fair value measurement is required. For most assets and liabilities, the unit of account is the individual asset or liability, but in some instances may be a group of assets or liabilities.

Context example: Unit of account

A premium or discount on a large holding of the same shares (because the market's normal daily trading volume is not sufficient to absorb the quantity held by the entity) is not considered when measuring fair value: the quoted price per share in an active market is used.

However, a control premium is considered when measuring the fair value of a controlling interest, because the unit of account is the controlling interest. Similarly, any non-controlling interest discount is considered where measuring a non-controlling interest.

Context example: Principal (or most advantageous) market

An asset is sold in two active markets, Market X and Market Y, at £58 and £57 respectively. Valor Co does business in both markets and can access the price in those markets for the asset at the measurement date as follows.

	Market X	**Market Y**
	£	**£**
Price	58	57
Transaction costs	(4)	(3)
Transport costs (to transport the asset to that market)	(4)	(2)
	50	52

Remember that fair value is not adjusted for transaction costs. Under IFRS 13, these are not a feature of the asset or liability, but may be taken into account when determining the most advantageous market.

If Market X is the principal market for the asset (ie, the market with the greatest volume and level of activity for the asset), the fair value of the asset would be £54, measured as the price that would be received in that market (£58) less transport costs (£4) and ignoring transaction costs.

If neither Market X nor Market Y is the principal market for the asset, Valor must measure the fair value of the asset using the price in the most advantageous market. The most advantageous market is the market that maximises the amount that would be received to sell the asset, after taking into account both transaction costs and transport costs (ie, the net amount that would be received in the respective markets).

The maximum net amount (after deducting both transaction and transport costs) is obtainable in Market Y (£52, as opposed to £50). But this is not the fair value of the asset. The fair value of the asset is obtained by deducting transport costs but not transaction costs from the price received for the asset in Market Y: £57 less £2 = £55.

4.4.1 Non-financial assets

For **non-financial assets** the fair value measurement looks at the use to which the asset can be put. It takes into account the ability of a market participant to generate economic benefits by using the asset in its **highest and best** use.

4.5 Valuation techniques

IFRS 13 states that valuation techniques must be those which are appropriate and for which sufficient data are available. Entities should maximise the use of relevant **observable inputs** and minimise the use of **unobservable inputs**.

The standard establishes a three-level hierarchy for the inputs that valuation techniques use to measure fair value:

- **Level 1** Quoted prices (unadjusted) in active markets for identical assets or liabilities that the reporting entity can access at the measurement date.
- **Level 2** Inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly or indirectly eg, quoted prices for similar assets in active markets or for identical or similar assets in non-active markets or use of quoted interest rates for valuation purposes.
- **Level 3** Unobservable inputs for the asset or liability ie, using the entity's own assumptions about market exit value.

Professional skills focus: Structuring problems and solutions

This hierarchy is a starting place for structuring the problem of fair value. If the input is level 1, there should not be much of a problem.

4.5.1 Valuation approaches

The IFRS identifies **three valuation approaches**.

(a) **Income approach.** Valuation techniques that convert future amounts (eg, cashflows or income and expenses) to a single current (ie, discounted) amount. The fair value measurement is determined on the basis of the value indicated by current market expectations about those future amounts.

(b) **Market approach.** A valuation technique that uses prices and other relevant information generated by market transactions involving identical or comparable (ie, similar) assets, liabilities or a group of assets and liabilities, such as a business.

(c) **Cost approach.** A valuation technique that reflects the amount that would be required currently to replace the service capacity of an asset (often referred to as current replacement cost).

Entities may use more than one valuation technique to measure fair value in a given situation. A change of valuation technique is considered to be a change of accounting estimate in accordance with IAS 8, and must be disclosed in the financial statements.

4.5.2 Examples of inputs used to measure fair value

	Asset or liability	Input
Level 1	Equity shares in a listed company	Unadjusted quoted prices in an active market

	Asset or liability	Input
Level 2	Licensing arrangement arising from a business combination	Royalty rate in the contract with the unrelated party at inception of the arrangement
	Cash generating unit	Valuation multiple (eg, a multiple of earnings or revenue or a similar performance measure) derived from observable market data eg, from prices in observed transactions involving comparable businesses
	Finished goods inventory at a retail outlet	Price to customers adjusted for differences between the condition and location of the inventory item and the comparable (ie, similar) inventory items
	Building held and used	Price per square metre derived from observable market data eg, prices in observed transactions involving comparable buildings in similar locations
Level 3	Cash generating unit	Financial forecast (eg, of cash flows or profit or loss) developed using the entity's own data
	Three-year option on exchange- traded shares	Historical volatility ie, the volatility for the shares derived from the shares' historical prices
	Interest rate swap	Adjustment to a mid-market consensus (non-binding) price for the swap developed using data not directly observable or otherwise corroborated by observable market data

4.6 Measuring liabilities

Fair value measurement of a liability assumes that the liability is transferred at the measurement date to a market participant, who is then obliged to fulfil the obligation. The obligation is not settled or otherwise extinguished on the measurement date.

4.6.1 Entity's own credit risk

The fair value of a liability reflects the effect of **non-performance risk,** which includes but is not limited to **the entity's own credit risk.** This may be different for different types of liability.

Context example: Entity's own credit risk

Black Co and Blue Co both enter into a legal obligation to pay £20,000 cash to Green Co in seven years.

Black Co has a top credit rating and can borrow at 4%. Blue Co's credit rating is lower and can borrow at 8%.

Black Co will receive approximately £15,200 in exchange for its promise. This is the present value of £20,000 in seven years at 4%.

Blue Co will receive approximately £11,700 in exchange for its promise. This is the present value of £20,000 in seven years at 8%.

4.7 IFRS 13 and business combinations

Fair value generally applies on a business combination. This topic is covered in Chapter 20, together with some further examples.

4.8 Disclosure

An entity must disclose information that helps users of its financial statements assess both of the following:

(a) For assets and liabilities that are measured at fair value on a recurring or non-recurring basis, the valuation techniques and inputs used to develop those measurements

(b) For recurring fair value measurements using significant **unobservable inputs** (Level 3), the effect of the measurements on profit or loss or other comprehensive income for the period. Disclosure requirements will include:

- reconciliation from opening to closing balances
- quantitative information regarding the inputs used
- valuation processes used by the entity
- sensitivity to changes in inputs

Professional skills focus: Concluding, recommending and communicating

Particularly with Level 3 inputs, it is important to explain why you came to the conclusion that you did. The disclosures above help to do this.

5 IAS 8, *Accounting Policies, Changes in Accounting Estimates and Errors*

Section overview

This is an overview of material covered in earlier studies

5.1 Fair accounting policies

(a) Accounting policies are determined by **applying the relevant IFRS or IFRIC** and considering any relevant Implementation Guidance issued by the IASB for that IFRS/IFRIC.

(b) Where there is no applicable IFRS or IFRIC management should use its **judgement** in developing and applying an accounting policy that results in information that is **relevant** and **reliable**. Management should refer to:

(1) the requirements and guidance in IFRS Standards and IFRICs dealing with **similar** and **related issues**; and

(2) the definitions, recognition criteria and measurement concepts for assets, liabilities and expenses in the *Framework*. Management may also consider the most recent pronouncements of other standard-setting bodies that use a similar conceptual framework to develop standards, other accounting literature and accepted industry practices if these do not conflict with the sources above.

(3) An entity shall select and apply its accounting policies for a period **consistently** for similar transactions, other events and conditions, unless an IFRS or an IFRIC specifically requires or permits categorisation of items for which different policies may be appropriate. If an IFRS or an IFRIC requires or permits categorisation of items, an appropriate accounting policy shall be selected and applied consistently to each category.

5.2 Changes in accounting policies

(a) These are **rare**: only if required by statute/standard-setting body/results in reliable and more relevant information.

(b) **Adoption of new IFRS**: follow transitional provisions of IFRS. If no transitional provisions: **retrospective** application.

(c) **Other changes in policy**: **retrospective** application. Adjust opening balance of each affected component of equity ie, as if new policy has always been applied.

(d) **Prospective** application: this is **not allowed** unless it is **impracticable** to determine the cumulative effect of the change.

(e) **Disclosure**: an entity should **disclose** information relevant to assessing the **impact of new IFRS Standards/IFRICs** on the financial statements where these have been **issued but have not yet come into force**.

5.3 Changes in accounting estimates

- Estimates arise because of **uncertainties inherent within them**; judgement is required but this does not undermine reliability.
- Effect of a change in accounting estimate should be included in profit or loss in:
  - period of change, if change affects only current period; or
  - period of change and future periods, if change affects both.

5.4 Errors

(a) Prior period errors: correct retrospectively where material.

(b) This involves:

(1) either restating the comparative amounts for the prior period(s) in which the error occurred; or

(2) when the error occurred before the earliest prior period presented, restating the opening balances of assets, liabilities and equity for that period so that the financial statements are presented as if the error had never occurred.

(c) Only where it is **impracticable** to determine the cumulative effect of an error on prior periods can an entity correct an error **prospectively**.

Interactive question 2: Accounting errors

During 20X7 Lubi Co discovered that certain items had been included in inventory at 31 December 20X6, valued at £4.2 million, which had in fact been sold before the year end. The following figures for 20X6 (as reported) and 20X7 (draft) are available.

	20X6	20X7 (draft)
	£'000	£'000
Sales	47,400	67,200
Cost of goods sold	(34,570)	(55,800)
Profit before taxation	12,830	11,400
Income taxes	(3,880)	(3,400)
Net profit	8,950	8,000

Retained earnings at 1 January 20X6 were £13 million. The cost of goods sold for 20X7 includes the £4.2 million error in opening inventory. The income tax rate was 30% for 20X6 and 20X7.

Requirement

Show the profit or loss section of the statement of profit or loss and other comprehensive income for 20X7, with the 20X6 comparative, and retained earnings.

See **Answer** at the end of this chapter.

5.5 Recent development: definition of material

IAS 8 was amended to align the definitions of material in IAS 8 and IAS 1. This definition was extended to the *Materiality Practice Statement* (see below) and to the *Conceptual Framework*.

Definition

Material: Information is material if omitting, misstating or obscuring it could reasonably be expected to influence decisions that the primary users of general purpose financial statements make on the basis of those financial statements, which provide financial information about a specific reporting entity. In other words, materiality is an entity-specific aspect of relevance based on the nature or magnitude, or both, of the items to which the information relates in the context of an individual entity's financial report.' (IAS 1: para. 7)

6 Current issues in corporate reporting

Section overview

This section covers several areas in which both the IASB and IFRS Foundation are developing new accounting standards. Recent changes are ripe for examination if they are the subject of a full IFRS. While proposed changes (EDs, Discussion Papers) will not be examined in detail, it is important to show an awareness of them.

Important note

Current issues are covered in this Workbook within the chapters in which the topic appears, so that the changes/proposed changes appear in context. Sustainability has been introduced here, but you will find further examples of how it is relevant to corporate reporting in subsequent chapters.

6.1 Better communication in financial reporting

Since 2015, a major theme of the IASB's work has been to improve communication in financial reporting. This is in response to feedback from users of financial statements that financial statements can be poorly presented, making it time-consuming and difficult for users to identify useful information. This topic is covered in more detail in Chapter 24 in the context of the Management Commentary.

6.2 Sustainability

It is extremely likely that you will have heard of this topic – the idea of sustainability has existed in various forms for many years – but perhaps the most straightforward definition comes from the United Nations (UN) in its 1987 Brundtland Commission report:

Definition

Sustainability: Meeting the needs of the present without compromising the ability of future generations to meet their own needs (UN, 2021).

Many argue that environmental issues, embracing both **sustainability** and other related issues such as **climate change**, are the single most important threat to the world. The acronym ESG is therefore becoming more prevalent for all organisations to be aware of and to engage with – although it stands for Environmental, Social and Governance, the topic extends to consider things from an **ethical** and **sustainability** perspective as well. With so many issues to address and the global stakes so high, agreement on how to deal with ESG issues is challenging.

Recent progress has been mixed, with many different solutions to what is clearly a global issue, but there is hope that progress is being made. From the **Paris Agreement** at the UN climate change conference COP 21 in 2015, which introduced a legal requirement signed by almost 200 countries to keep global warming to between 1.5 and 2 degrees Celsius, to the emergence of more militant responses, such as the **Extinction Rebellion** movement, this issue continues to dominate the public narrative.

ICAB Chartered Accountants need to recognise that sustainability is at the **core** of what they do and analyse how to make the sustainable economy work for **business**, for **clients** and the **public interest**.

To achieve this, ICAB Chartered Accountants and Assurance professionals need to move beyond simply measuring and reporting the impact of climate change, environmental regulation, supply chain pressure and rising energy costs. They will be expected to focus on understanding those implications and advising on the broader implications of ESG issues for organisations.

Sustainability impacts across all modules of the ACA qualification. For **Corporate Reporting**, this impacts the following five areas:

(a) Reporting

(b) Risk management

(c) Strategy

(d) Governance

(e) Metrics and targets

As well as the impact on companies, ICAB Chartered Accountants need to work with a wide range of other **stakeholders** to deliver solutions to the issues related to sustainability, including boards of directors, business partners, employees, market analysts, suppliers, customers, governments, lenders, the general public and local communities. From an assurance perspective, in the future, stakeholders may require or be entitled to verified information disclosed by companies, which may need to be audited or undergo a specific assurance engagement.

Reporting

The purpose of a set of financial statements is to **inform users** of the position, performance and prospects of an organisation, mainly in financial terms but also in more qualitative terms if such information is best conveyed in that manner. ESG disclosures can obviously fall into this qualitative category, but there is now a greater need for the implications of an organisation's ESG matters to be considered when determining its **value** and any relevant **investment decisions**. Consequently, being able to understand which ESG matters should be disclosed and what they might mean are now a prime focus for both preparers and auditors of published corporate information.

Risk management

Climate change is clearly giving rise to significant risks for businesses. Whether those risks arise from more frequent and severe weather events or the transition to a net-zero carbon economy, expectations are growing that companies appropriately embed climate-related financial risk into their governance and risk management processes. **Scenario analysis** is key to better understanding and managing future risks today, as well as supporting the transition to a net-zero carbon economy. The accountancy and assurance profession has a particular interest in the topic of risk, notably the identification, measurement and management of business and financial risk, including reputation risks that may threaten the survival of an enterprise. A mature company is now expected to recognise that environmental and social matters are recognised and integrated into its risk management and reporting infrastructures.

Strategy

As a matter of strategy, the **assessment** of business initiatives should take account of environmental, social and economic impacts. Conversely, the **impact** of business initiatives on the environment, society and the economy also needs to be considered. Enhancing sustainability is an essential part of running a good business and the impacts of each dimension need to be managed in an **integrated way** so that social, environmental and economic decisions contribute to the development of the business in delivering long-term benefits.

The increasing demands of the disclosure framework, coupled with the undeniable impacts of sustainability and climate-related risks, mean that a company can no longer just **assume** that ESG factors will be taken care of automatically. Directors therefore need to consider the impact of the company's operations, policies, products and procurement practices on the environment and on social and community issues, including impacts of its operations on the communities affected.

Governance

Effective stakeholder engagement is dependent on **reliable information**. This is likely to be a matter of increasing concern with the demand for transparency of information to support the process of feedback with stakeholders. Preparing for, and responding to, stakeholder engagement will often call for social, environmental and economic data. Assurance engagements may be particularly useful in advising on governance required to provide social, environmental and economic data both within the company and to external stakeholders.

Metrics and targets

Effective measuring of ESG performance data and benchmarking requires the **timely publication of information**.

Assurance experts may be expected to:

- Take a role in **advising** on future supporting measurement of climate change and its consequences by providing relevant and reliable information in an accessible, meaningful and comparable way.
- **Interpret** the results of ESG related performance measures against targets. This is likely to include understanding the different bases used to be able to compare and analyse the results.

6.2.1 Sustainability and reporting

We will return to the topic of sustainability later in these materials when we consider environmental and social considerations. For now, it is important to frame **sustainability** and **climate change** in the context of **corporate reporting**.

In recent years, we have seen a number of developments in this area, driven by the formation and amalgamation of a number of organisations. Here are the key players you need to know about and how they fit together:

The **Climate Disclosure Standards Board** (CDSB) was set up in 2007 to address the need to understand how both natural and financial capital could be disclosed under the existing corporate reporting framework.
The **International Integrated Reporting Council** (IIRC) was formed in 2010 to promote a reporting framework that used six interlocking capitals to identify how organisations use various resources in order to create value.
The **Sustainability Accounting Standards Board** (SASB) was formed in 2011 to help entities understand the impact of sustainability on finance.
In 2021, the IIRC and SASB merged to become the **Value Reporting Foundation** (VRF) with the remit of supporting a more complete view of how value is created by organisations.
The **International Sustainability Standards Board** (ISSB) was formed by the IFRS Foundation after the UN COP 26 towards the end of 2021 using the **Taskforce on Climate-related Financial Disclosures** (TCFD) reporting approach (see below) which is mandatory for premium listed entities in the UK.
During 2022, the VRF and CDSB were both consolidated into the IFRS Foundation under the banner of the ISSB.

According to the IFRS Foundation website:

"The intention is for the ISSB to deliver a comprehensive global baseline of sustainability-related disclosure standards that provide investors and other capital market participants with information about companies' sustainability-related risks and opportunities to help them make informed decisions." (IFRS Foundation, 2021)

Since its inception at the start of 2022, the ISSB has hit the ground running. Between March and July 2022, the ISSB sought **consultation** on its first two standards (IFRS S1 and S2) by issuing **exposure drafts** supported by other documentation (including a basis for conclusions and illustrative guidance). In June 2023 the standards were promulgated to be effective from 1 January 2024. **IFRS S1 *General Requirements for Disclosure of Sustainability-related Financial Information***

Sustainability-related financial **disclosures** is defined as:

A particular form of general purpose financial reports that provide information about the reporting entity's sustainability related risks and opportunities that could reasonably be expected to affect the entity's cash flows, its access to finance or cost of capital over the short, medium or long term, including information about the entity's governance, strategy and risk management in relation to those risks and opportunities, and related metrics and targets.

IFRS S1: Appendix A

An entity need not disclose information otherwise required by an IFRS Sustainability Disclosure Standard if the information is not material. This is the case even if the IFRS Sustainability Disclosure Standard contains a list of specific requirements or describes them as minimum requirements (IFRS S1: para.B26).

Objective

The objective of IFRS S1 is:

To require an entity to disclose information about its significant sustainability-related risks and opportunities that is useful to the primary users of general purpose financial reporting when they assess enterprise value and decide whether to provide resources to the entity.

IFRS S1: para.1

So, in other words, how do sustainability-related risks and opportunities affect the **value** of an entity and do they make it **more or less attractive to investors**?

Risks and opportunities are driven by the consideration of factors such as whether an organisation or its stakeholders depends on a particular natural resource (eg, water) which may have an adverse effect on value if there are issues with the supply, quality or price of that resource; similarly the value of an entity may also be affected if it generates adverse impacts (such as affecting a local community) which open it up to more stringent regulation or reputational damage. These dependencies and impacts might give rise to sustainability-related risks and opportunities that could reasonably be expected to affect an entity's cashflows, its access to finance and cost of capital over the short, medium and long term (IFRS S1: para.B2).

Scope

Sustainability-related risks and opportunities that could not reasonably be expected to affect an entity's prospects are outside the scope of this Standard.

Core content

These adapt the core elements of climate-related financial disclosures recommended by the TCFD to allow consideration of sustainability-related risks and opportunities instead. The TCFD methodology is covered again later in this Workbook but in overview, the four categories are as follows:

Governance

The organisation's governance around climate-related risks and opportunities

Strategy

The actual and potential impacts of climate-related risks and opportunities on the organisation's businesses, strategy and financial planning

Risk management

The processes used by the organisation to identify, assess, and manage climate- related risks

Metrics and targets

The metrics and targets used to assess and manage relevant climate-related risks and opportunities

General features

(a) **Reporting entity** – this should be the same as the entity reporting general purpose financial statements.

(b) **Connected information** – both sustainability-related and general purpose financial information should be connected to allow users to understand the reporting entity as a whole (so any decisions made will disclose both financial and sustainability-based impacts).

(c) **Fair presentation** – information should be "relevant, representationally faithful, comparable, verifiable, timely and understandable" (ED IFRS S1: para.47) with additional disclosure if either strict adoption or the absence of an appropriate reporting standard leads to users being inadequately informed about sustainability-related risks and opportunities and their impacts on the entity's value.

(d) **Materiality** – sustainability-related financial information is considered material if omitting, misstating or obscuring it would reasonably be expected to affect the decisions made by users of the information.

(e) **Comparative information** – any metrics used as part of sustainability-related financial information should cover both current and previous periods, including qualitative disclosures for both periods if it helps to support users' understanding.

(f) **Frequency of reporting** – this should be equivalent to the reporting timetable for general purpose financial statements.

(g) **Location of information** – unless specifically required by laws or regulations, sustainability-related financial information can be reported in a variety of locations but must form an obvious component of the entity's general purpose financial statements.

(h) **Sources of estimation and outcome uncertainty** – all financial information, whether general purpose or sustainability-related, can contain aspects where there is estimation uncertainty, so disclosure of relevant assumptions and estimation uncertainty is required (this extends to uncertainty over the possible outcome of any risks or opportunities).

(i) **Errors** – should any prior period sustainability-related financial information be found to have contained misstatements or omissions, they should be restated unless it is impractical to do so.

(j) **Statement of compliance** – an explicit and unqualified statement that sustainability-related financial information complies with the IFRS sustainability disclosure standards is required unless prohibited by local laws or regulations (IFRS S1: paras.25-86).

Appendices

The standard contains appendices that provide a **definition** of the terms used throughout, the proposed **effective date** and the **qualitative characteristics** of useful sustainability-related financial information, split into two categories:

- **Fundamental** qualitative characteristics (relevance, materiality and faithful representation)
- **Enhancing** qualitative characteristics (comparability, verifiability, timeliness and understandability)

6.2.2 IFRS S2 *Climate-related Disclosures*

In addition to the general guidance on disclosing sustainability-related financial information required by IFRS S1, entities are also required to consider climate-related disclosures under IFRS S2. At various points in these standards, entities are directed to **avoid unnecessary duplication of effort** when attempting to implement **both standards** by adopting practices that provide an **efficient solution** to the requirements of both standards.

Objective

The objective of IFRS S2 is is to require an entity to disclose information about its climate-related risks and opportunities that is useful to primary users of general purpose financial reports in making decisions relating to providing resources to the entity. This Standard requires an entity to disclose information about climate-related risks and opportunities that could reasonably be expected to affect the entity's cash flows, its access to finance or cost of capital over the short, medium or long term (IFRS S2: para.1-2).

Scope

The scope of IFRS S2 requires a **definition** of climate-related risks and opportunities. **Opportunities** refer to "…potentially positive climate-change generated outcomes for an entity…"

Climate-related risks refer to the "…potential negative effects of climate change on an entity…" and can be considered from different perspectives:

- **Physical risks**, which consist of:
  - **Event-driven** or **acute risks** arising from specific events such as a drought, flood and fire which can mean an entity is more prone to damage from such risks; and
  - **Longer-term** or **chronic risks** driven by more permanent shifts in the climate, such as rising sea- levels, which can affect the longer-term financial position and performance of an entity as it attempts to adapt to such risks
- **Transition risks** which arise when an entity attempts to **adapt** to participating in a lower-carbon economy – this may require policy, legal, technology or market changes in order to be able to facilitate this adaptation and may lead to financial or reputational risks emerging (IFRS S2: Appendix A).

Governance

Disclosures should inform users of the financial statements about the various governance controls in place to **monitor** and **manage** climate-related risks and opportunities. Examples of these should include:

- The individual or body with **overall responsibility** for climate-related risks and opportunities within the entity and how their **terms of reference** support this responsibility.
- **Policies and procedures** relating to the individual or body regarding their **skills**, **competence** and how they are **informed** in order to support this responsibility.
- How those responsible for managing climate-related risks and opportunities also consider the entity's **strategy**, **targets** and the **involvement of management** (IFRS S2: paras.5-7).

Strategy

Disclosures need to inform users of the financial statements about the entity's strategy for dealing with significant climate-related risks and opportunities. IFRS S2 provides further details on what strategy disclosures an entity should consider:

- Relevant significant climate-related risks and opportunities that could **influence** the entity's strategy and business model, as well as its financial performance, position and prospects.
- These significant climate-related risks and opportunities are expected to be presented within **industry-specific disclosure topics** (for example, those that are relevant to apparel, accessories & footwear, oil & gas services and medical equipment & supplies).
- The effects of significant climate-related risks and opportunities on the entity's **value chain**, **decision-making** and any **transition plans** it may have.
- The **resilience** of the entity's strategy to significant climate-specific risks (both physical and transition) including the results of any climate-related **scenario analysis** used to evaluate this resilience (IFRS S2: paras.8-9; Appendix B).

Risk management

Users of financial statements need to be able to understand how the entity **identifies**, **assesses** and **manages climate-related risks and opportunities** including the **maturity** of the **processes used** to assist with this evaluation (IFRS S2: para.B10). The standard requires disclosure of these risk management processes, including an assessment of **likelihood and impact**, methods of **prioritisation** and the use of **data** and other **assumptions** as part of the process (IFRS S2: para 25).

Metrics and targets

As with IFRS S1, an entity is expected to disclose **how** it uses metrics and targets to manage its significant climate-related risks and opportunities, including an assessment of the way it determines what **progress** it has made towards its chosen targets (IFRS S2: paras.27-28).

The disclosures are expected to include both **industry-specific metrics** and those that are **generic across all industries** – the generic metrics include the following:

- **Greenhouse gas emissions** across all activities and the entity's internal carbon price (such as the price per tonne of greenhouse gas emissions).
- The **proportion** of the entity's assets or activities that relate to both **transition** and **physical** climate- related risks and climate-related opportunities.
- The amount of **capital deployed** and **executive remuneration** linked to climate-related risks and opportunities (IFRS S2: para.29).

Targets are expected to be **justified** in terms of how **progress** against them can be **reported**, whether they are **absolute targets** (eg, an airline may propose a 5% reduction in CO2 emissions by a specific year) or **intensity targets** (eg, the airline may instead specify a 5% reduction in the amount of CO2 emissions per mile travelled by a specific year) plus relevant **timescales**, **milestones** and **starting positions** as well as how they **compare** with any international agreements currently in force. The entity should also disclose whether they have obtained any **third party assurance** on their target information (IFRS S2: para.33).

Appendices

The standard also contains appendices with definitions, industry-based disclosure requirements and the effective date of the proposed new standard.

6.3 Insurance

The IASB project to develop a comprehensive framework for insurance contracts culminated in the publication of IFRS 17, *Insurance Contracts* in 2017. IFRS 17 introduces a comprehensive reporting framework for insurance contracts that is intended to result in insurance companies producing financial statements which are more comparable, consistent and transparent. IFRS 17 is covered as a current issue in later chapters.

6.4 Disclosure initiative

6.4.1 Overview

The IASB's disclosure initiative is a broad-based undertaking exploring how disclosures in IFRS financial reporting can be improved. It is made up of a number of projects, the third of which, a Practice Statement on materiality was completed in September 2017.

6.4.2 Current status

Three projects, the amendments to IAS 1 and IAS 7, and a Practice Statement on materiality, are complete. The remainder are at the ED stage or the research stage.

6.5 Practice Statement on materiality

The IASB issued Practice Statement 2: *Making Materiality Judgements* in 2017. This is a tool to aid management in using judgement to decide what information is material and what is not; it is a non- mandatory document and does not have the status of an IFRS.

6.5.1 General characteristics of materiality

The Statement refers to the definition of materiality contained within the 2010 *Conceptual Framework:*

> "Information is material if omitting it or misstating it could influence decisions that users make on the basis of financial information about a specific reporting entity. In other words, materiality is an entity-specific aspect of relevance based on the nature or magnitude, or both, of the items to which the information relates in the context of an individual entity's financial report."

(*Conceptual Framework for Financial Reporting,* para QC11)

Materiality is pervasive to the preparation of financial statements and affects recognition, measurement, presentation and disclosure.

When considering whether information is material, a company should consider its own circumstances and the needs of primary users of its financial statements ie, investors, lenders and other creditors.

6.5.2 Interaction with local laws and regulations

The Practice Statement clarifies that a company's financial statements must comply with requirements of IFRS, including those relating to materiality.

Providing additional information to meet local legal or regulatory requirements is allowed by IFRS, even if that information is not material, provided that it does not obscure material information.

6.5.3 Making materiality judgements

The Practice Statement includes a four-step process that entities may find useful in making materiality judgements:

Step 1 Identify information that has the potential to be material. This step requires consideration of IFRS requirements and the common information needs of primary users.

Step 2 Assess whether the information identified is material. Both quantitative and qualitative factors should be considered.

Step 3 Organise the information within the draft financial statements so that it supports clear and concise communication.

Step 4 Review the information provided as a whole, considering whether it is material individually and in combination with other information. At this stage information may need to be added or removed.

Identify information that has the potential to be material. This step requires consideration of IFRS requirements and the common information needs of primary users.

Assess whether the information identified is material. Both quantitative and qualitative factors should be considered.

Organise the information within the draft financial statements so that it supports clear and concise communication.

Review the information provided as a whole, considering whether it is material individually and in combination with other information. At this stage information may need to be added or removed.

6.5.4 Specific topics

Specific guidance is provided on how to make materiality judgements on prior period information, errors, covenants and in interim reporting.

6.6 Pointing forward to the future: approach to current issues

Current issues, as indicated above, are dealt with within the context of the topics. For a useful overview of what is to come, below is an extract from the IASB Work Plan, as at October 2022.

Project	Next milestone	Expected date
Business Combinations under Common Control	Decide Project Direction	
Cash Received via Electronic Transfer as Settlement for a Financial Assets(IFRS 9)	Decide Project Direction	
Climate-related Disclosure	IFRS Sustainability Disclosure Standard	
Contractual Cash Flow Characteristics of Financial Assets (Amendments to IFRS 9)	Exposure Draft	
Disclosure Initiative–Subsidiaries without Public Accountability: Disclosures	IFRS Accounting Standard	
Disclosure Initiative–Targeted Standards-level Review of Disclosures (IAS 1, 19, IFRS 13)	Decide project direction	October 2022
Dynamic Risk Management	Exposure Draft	
Equity Method	Decide project direction	
Extractive Activities	Decide project direction	H1 2023
Financial Instruments with Characteristics of Equity	Exposure Draft	
General Sustainability-related Disclosures	IFRS Sustainability Disclosure Standard	
Goodwill and Impairment	Decide Project Direction	November 2022
IFRS Accounting Taxonomy Update - Amendments to IAS 1 and IFRS 16	Proposed IFRS Taxonomy Update	November 2022
IFRS Sustainability Disclosure Taxonomy	Feedback on Staff Request for Feedback	November 2022
IFRS Accounting Taxonomy Update - 2022 General Improvements and	Proposed IFRS Taxonomy Update	
Common Practice		
Demand Deposits with Restrictions on Use (IAS 7)	Tentative Agenda Decision Feedback	Q1 2022
ISSB Consultation on Agenda Priorities		
Lack of Exchangeability (Amendments to IAS 21)	Decide Project Direction	
Lessor Forgiveness of Lease Payments (IFRS 9 and IFRS 16)	Agenda Decision	
Management Commentary	Decide Project	

Project	Next milestone	Expected date
	Direction	
Multi-currency Groups of Insurance Contracts (IFRS 17 and IAS 21)		
Non-current Liabilities with Covenants (Amendments to IAS 1)		
Post-implementation Review of IFRS 15 Revenue from Contracts with Customers		
Post-implementation Review of IFRS 9- Classification and Measurement	Feedback Statement	December 2022
Post-implementation Review of IFRS 9- Impairment	Request for Information	H1 2023
Primary Financial Statements	IFRS Accounting Standard	
Provisions - Targeted Improvements (Conceptual Framework, IAS 37, IFRIC 21)	Decide Project Direction	
Rate-regulated Activities	IFRS Accounting Standard	
Second Comprehensive Review of the IFRS for SMEs Standard	Exposure Draft Feedback	H1 2023
Post-implementation Review of IFRS 9– Classification and Measurement	Request for Information Feedback	H1 2022
Primary Financial Statements	IFRS Standard	-
Provisions–Targeted Improvements	Decide Project Direction	-
Special Purpose Acquisition Companies (SPAC): Accounting for Warrants at Acquisition	Agenda Decision	
Supplier Finance Arrangements	Decide Project Direction	November 2022

(Source: www. ifrs.org/projects/work-plan/)

Other potential current issues

Other topical issues which do not yet have their own specific IFRS include:

Effects of a natural disaster

The financial effects of a natural disaster, such as an earthquake or a hurricane, or indeed a pandemic such as the coronavirus pandemic, should be reflected in the financial statements of entities that are affected. Potential IFRS that could apply include:

(a) IAS 10, *Events After the Reporting Period*. If the event occurs after the year end, it will be non- adjusting. If the event spans the year end date, it may not always be straightforward to determine whether the event is adjusting or non-adjusting. Going concern may also be an issue.

(b) Compensation, clean-up costs and onerous contracts (IAS 37).

(c) Impairment of assets, including intangibles (IAS 36).

Digital assets. These include digital photos, music, film and documents, as well as digital currency, also known as **cryptocurrency.**

There are no accounting standards that specifically deal with cryptocurrencies.

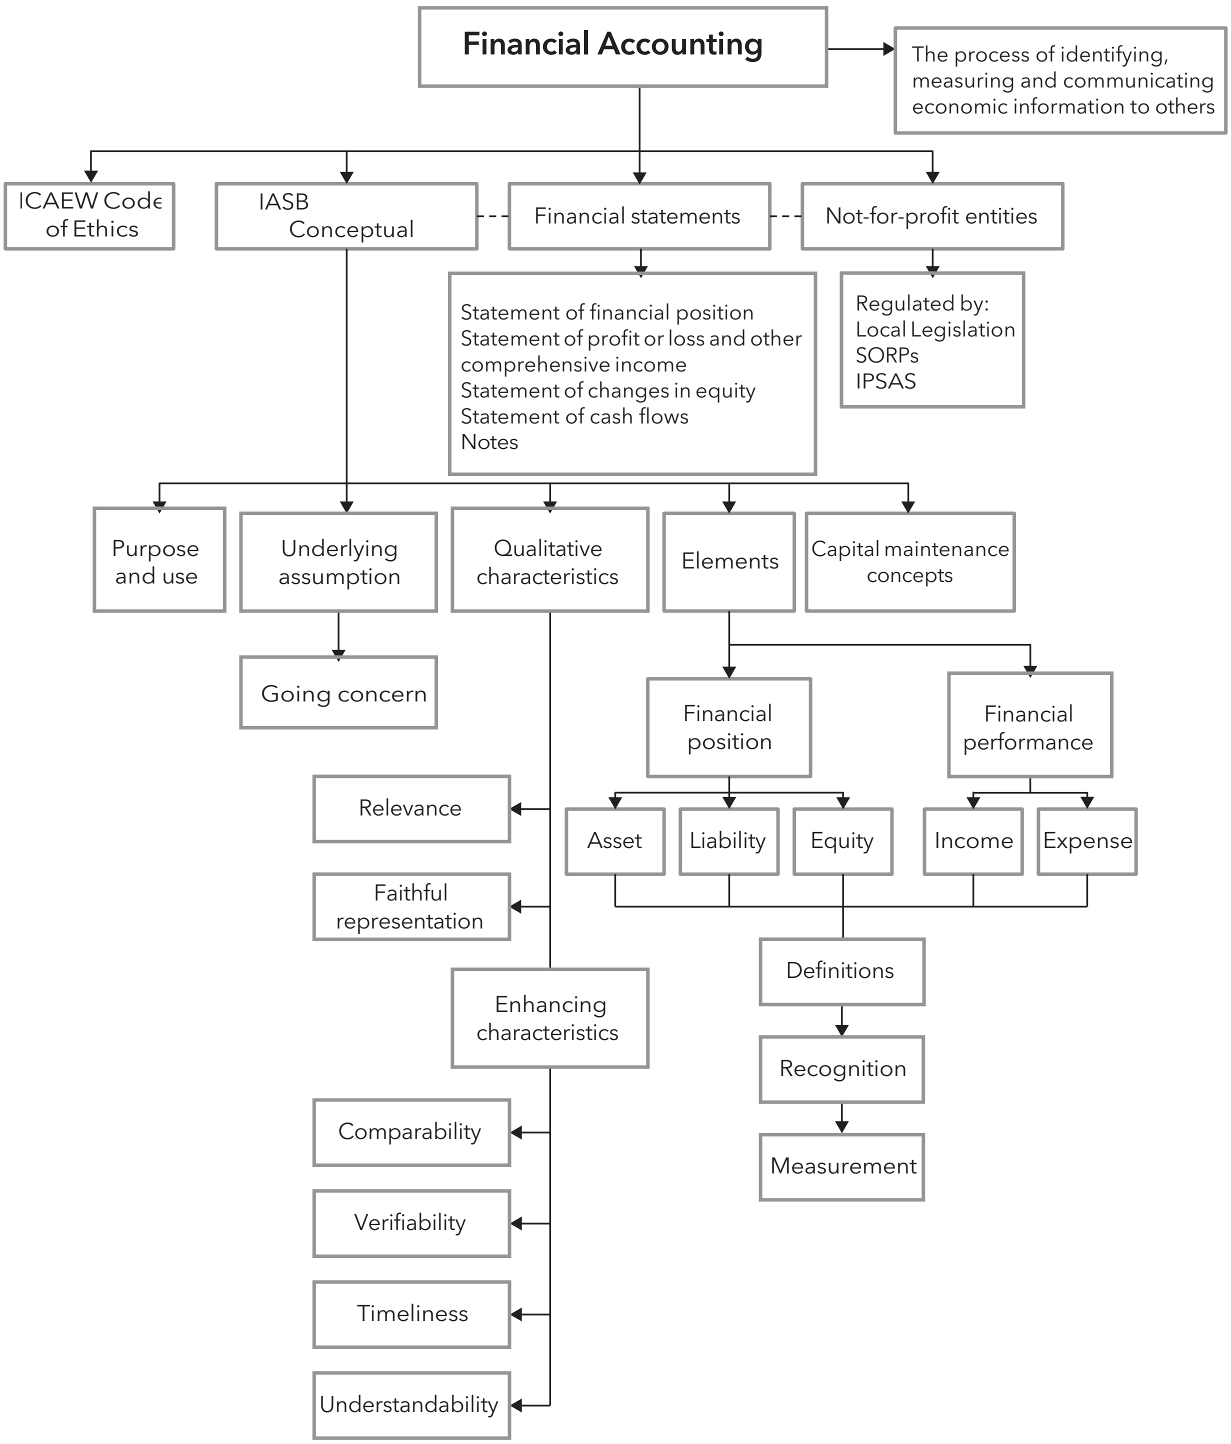
In developing the policy, IAS 8 *Accounting Policies, Accounting Estimates and Errors* requires that the directors consider the following hierarchy:

(a) IFRS Standards dealing with similar issues

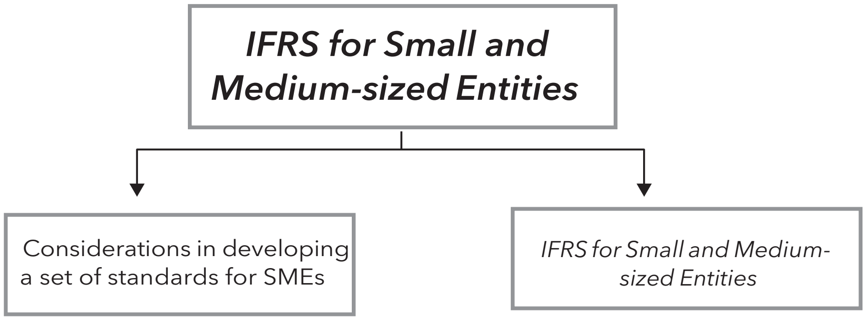
(b) The *Conceptual Framework*

(c) The most recent pronouncements of other national GAAPs based on a similar conceptual framework and accepted industry practice

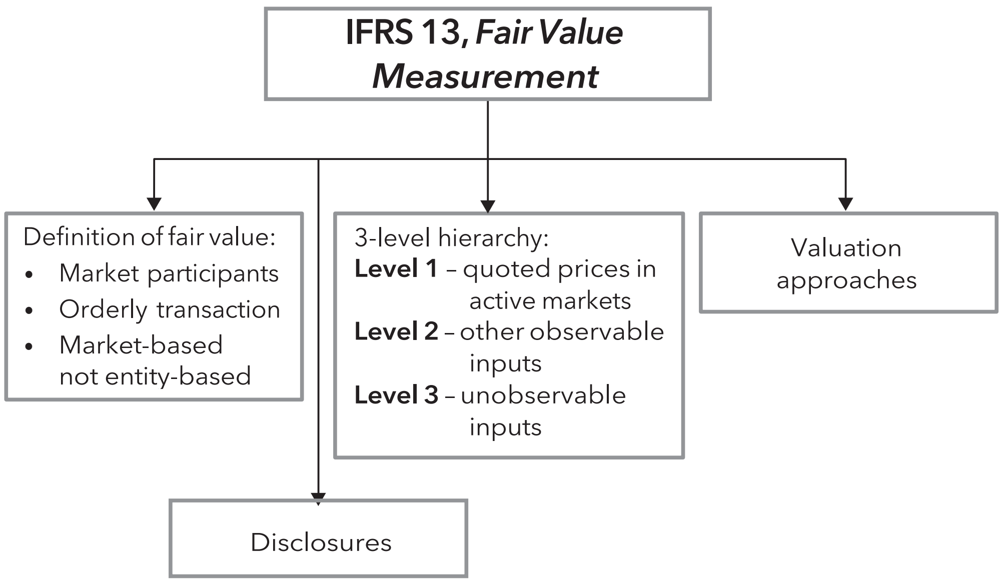
Summary



CHAPTER 2



IFRS for Small and Medium-sized Entities
Considerations in developing a set of standards for SMEs
IFRS for Small and Medium-sized Entities



IFRS 13, *Fair Value Measurement*
Definition of fair value:
• Market participants
• Orderly transaction
• Market-based not entity-based
3-level hierarchy:
Level 1 – quoted prices in active markets
Level 2 – other observable inputs
Level 3 – unobservable inputs
Valuation approaches
Disclosures

Further question practice

1 Knowledge diagnostic

Before you move on to question practice, confirm you are able to answer the following questions having studied this chapter. If not, you are advised to revisit the relevant learning from the topic indicated.

	Confirm your learning
1.	Can you list the two fundamental and four enhancing qualitative characteristics of financial information? (Topic 1)
2.	How does the Conceptual Framework define a liability? (Topic 2)
3.	How should goodwill be accounted for under the IFRS for SMEs? (Topic 3)
4.	Have you understood what IFRS 13 means by the principal market? (Topic 4)
5.	Can you define and explain materiality? (Topic 5)
6.	What is the most recent IFRS? (Topic 6)

2 Question practice

Aim to complete all self-test questions at the end of this chapter. The following self-test questions are particularly helpful to further topic understanding and guide skills application before you proceed to the next chapter.

Question	**Learning benefit from attempting this question**
IASB *Conceptual Framework*	This short, straightforward question is included because this is the first time the revised *Conceptual Framework* has been tested.
IFRS 13, *Fair Value Measurement*	Fair value comes up so often in Corporate Reporting questions that it is important to do this comprehensive question to get a firm grasp of it at this early stage.
Polson	This is a full question covering most aspects of IAS 8 that you are likely to encounter.

Refer back to the learning in this chapter for any questions which you did not answer correctly or where the suggested solution has not provided sufficient explanation to answer all your queries. Once you have attempted the self-test questions, you can continue your studies by moving onto the next chapter. In later chapters, we will recommend questions from the Question Bank for you to attempt.

Technical reference

The whole of the *Conceptual Framework for Financial Reporting* and *Preface to International Financial Reporting Standards* is examinable. The paragraphs listed below are the key references you should be familiar with.

1 What is financial reporting?

- Financial reporting is the provision of financial information about a reporting entity that is useful to existing and potential investors, lenders and other creditors in making decisions relating to providing resources to the entity – **Conceptual Framework for Financial Reporting (Concept Frame) (1.2)**
- Financial statements comprise statement of financial position, statement of profit or loss and other comprehensive income, statement of changes in equity, statement of cash flows and notes – **IAS 1 (10**)

2 Purpose and use of financial statements

- Users' core need is for information for making economic decisions – **Concept Frame (1.2)**
- Objective is to provide information on financial position (the entity's economic resources and the claims against it) and about transactions and other events that change those resources and claims – **Concept Frame (1.4)**
- Financial position: – **Concept Frame (1.4**)
- Resources and claims
- Help identify entity's strengths and weaknesses
- Liquidity and solvency
- Changes in economic resources and claims: – **Concept Frame (1.18)**
- Help assess prospects for future cash flows
- How well have management made efficient and effective use of the resources
- Financial performance reflected by accrual accounting – **Concept Frame (1.17**)
- Financial performance reflected by past cash flows – **Concept Frame (1.21)**

3 Qualitative characteristics of useful financial information

- Two fundamental qualitative characteristics are relevance and faithful representation – **Concept Frame (2.5)**
- Relevance = capable of making a difference to decisions – **Concept Frame (2.6**)
- Predictive and confirmatory values – **Concept Frame (2.7)**
- Materiality – **Concept Frame (2.11)**
- Faithful representation – **Concept Frame (2.12**)
- Complete, neutral and free from error
- Four enhancing qualitative characteristics – **Concept Frame (2.25-2.34)**
- Comparability, verifiability, timeliness and understandability

4 Cost constraint on useful financial reporting

- Costs of (preparing and analysing) financial information must be justified by the benefits of reporting it – **Concept Frame (2.39-2.41)**

5 Reporting entity

- Underlying assumption: going concern – **Concept Frame (3.9)**
- Reporting period – **Concept Frame (3.4 - 3.7)**
- Perspective: entity as a whole, not a group of users – **Concept Frame (3.4 - 3.7)**
- Consolidated versus unconsolidated – **Concept Frame (3.15 - 3.17)**

6 Elements of financial statements

- **Asset:** A present economic resource controlled by the entity as a result of past events. An economic resource is a right that has the potential to produce economic benefits – **Concept Frame (4.3, 4.4**)
- **Liability:** A present obligation of the entity to transfer an economic resource as a result of past events **– Concept Frame (4.26)**
- **Equity:** The residual interest in assets less liabilities; that is, net assets – **Concept Frame (4.63)**
- **Income** (comprising revenue and gains): Increases in assets, or decreases in liabilities, that result in increases in equity, other than those relating to contributions from holders of equity claims – **Concept Frame (4.68)**
- **Expenses** (including losses): Decreases in assets, or increases in liabilities, that result in decreases in equity other than those relating to distributions to holders of equity claims – **Concept Frame (4.69)**

7 Recognition

- An asset or liability should be recognised if it will be both **relevant** and provide users of the financial statements with a **faithful representation** of the transactions of that entity – **Concept Frame (4.38)**

8 Derecognition

Derecognition occurs (**Concept Frame (4.38)**) when:

- The entity loses control of all or part of the recognised asset; or
- The entity no longer has an obligation for a liability

9 Measurement

- Historical cost – **Concept Frame (6.17)**
- Current value
  - Fair value
  - Value in use
  - Current cost

10 Presentation and disclosure

- Focuses on principles not rules
- Classify by grouping similar items
- Aggregate to avoid unnecessary detail (**Concept Frame (7.2)**

11 Capital maintenance

- Financial capital: – **Concept Frame (4.57)**
- Monetary
- Constant purchasing power
- Physical capital

12 IASB

- Objectives of IASB – **Preface (6)**
- Scope and authority of IFRS – **Preface (7–16)**
- Due process re IFRS development – **Preface (17)**

13 IFRS for SMEs

- There are many considerations as to whether the same or a different set of IFRS Standards should apply to SMEs. The IFRS for SMEs applies to companies without public accountability (rather than using a size test).
- The IFRS for SMEs retains the core principles of 'full' IFRS, but reduces choice of accounting treatments and introduces a number of simplifications to reduce the reporting burden on SMEs.

14 IFRS 13, *Fair Value Measurement*

- Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date – **IFRS 13.9**
- Market-based measure – **IFRS 13.2**
- Three-level hierarchy – **IFRS 13.72**

15 IAS 8, *Accounting Policies, Changes in Accounting Estimates and Errors*

16 Accounting policies IAS 8.7–13

17 Change in accounting policies

- Retrospective application is applying a new accounting policy as if that policy had always been applied
- If impracticable to determine the period-specific effects, apply prospectively

18 Changes in accounting estimates IAS 8.32–40

19 Prior period errors IAS 8.5, IAS 8.42 and IAS 8.49

Self-test questions

Answer the following questions.

1 IASB Conceptual Framework

1.1 What are the conditions which the *Conceptual Framework* identifies as necessary if the going concern basis is to be used for the preparation of financial statements?

1.2 According to the *Conceptual Framework,* what are the characteristics of information which is **faithfully represented**?

2 IFRS for Small and Medium-sized Enterprises – Smerk

Smerk is a private pharmaceuticals company that meets the definition of an SME under national legislation and wishes to comply with the IFRS for Small and Medium-sized Entities for the year ended 31 December 20X6 (with one year of comparative data). The directors are seeking advice on how to address the following accounting issues. The entity currently prepares its financial statements under full IFRS.

(1) Smerk has significant amounts of capitalised development expenditure in its financial statements, £3.2 million at 31 December 20X5 (£2.8 million at 31 December 20X4), relating to investigation of new pharmaceutical products. The amount has continued to rise during the current year even after the amortisation commenced relating to some products that began commercial production.

(2) Smerk purchased a controlling interest (60%) of the shares of a quoted company in a similar line of business, Rock, on 1 July 20X6. Smerk paid £7.7 million to acquire the investment in Rock and the fair value of Rock's identifiable assets and liabilities has been calculated as £9.5 million at the date of acquisition. The value on the stock market of the non-controlling interests that Smerk did not purchase was £4.9 million. The directors do not feel in a position to estimate reliably the useful life of the goodwill due to the nature of the business acquired.

(3) Smerk purchased some properties for £1.7 million on 1 January 20X6 and designated them as investment properties under the cost model. No depreciation was charged, as a real estate agent valued the properties at £1.9 million at the year end.

Requirement

Discuss how the above transactions should be dealt with in the financial statements of Smerk for the year ending 31 December 20X6, with reference to the *IFRS for SMEs*.

3 IFRS 13, Fair Value Measurement

Vitaleque, a public limited company, is reviewing the fair valuation of certain assets and liabilities in light of the introduction of IFRS 13, *Fair Value Measurement*.

It carries an asset that is traded in different markets and is uncertain as to which valuation to use. The asset has to be valued at fair value under International Financial Reporting Standards. Vitaleque currently only buys and sells the asset in the African market. The data relating to the asset are set out below.

Year to 30 November 20X2	North American market	European market	African market
Volume of market – units	4m	2m	1m
Price	£19	£16	£22
Costs of entering the market	£2	£2	£3
Transaction costs	£1	£2	£2

Additionally, Vitaleque had acquired an entity on 30 November 20X2 and is required to fair value a decommissioning liability. The entity has to decommission a mine at the end of its useful life, which is in three years' time. Vitaleque has determined that it will use a valuation technique to measure the fair value of the liability. If Vitaleque were allowed to transfer the liability to another market participant, then the following data would be used.

Input	Amount
Labour and material cost	£2m
Overhead	30% of labour and material cost
Third-party mark-up – industry average	20%
Annual inflation rate	5%
Risk adjustment – uncertainty relating to cash flows	6%
Risk-free rate of government bonds	4%
Entity's non-performance risk	2%

Vitaleque needs advice on how to fair value the liability.

Requirement

Discuss, with relevant computations, how Vitaleque should fair value the above asset and liability under IFRS 13

4 IAS 8, Accounting Policies, Changes in Accounting Estimates and Errors

Statement of financial position extracts for the Kamao Company show the following.

	31 December 20X7	31 December 20X6
	£'000	£'000
Development costs	812	564
Amortisation	(180)	(120)
	632	444

The capitalised development costs related to a single project that commenced in 20X4. It has now been discovered that one of the criteria for capitalisation has never been met.

Requirement

According to IAS 8, *Accounting Policies, Changes in Accounting Estimates and Errors*, by what amount should retained earnings be adjusted to restate them as at 31 December 20X6?

5 Hookbill

The Hookbill Company was updating its inventory control system during 20X7 when it discovered that it had, in error, included £50,000 in inventories in its statement of financial position as at the year end 31 December 20X6 relating to items that had already been sold at that date. The 20X6 profit after tax shown in Hookbill's financial statements for the year to 31 December 20X6 was £400,000.

In the draft financial statements for the year to 31 December 20X7, before any adjustment for the above error, the profit after tax was £500,000.

Hookbill pays tax on profits at 25%.

Requirement

According to IAS 8, *Accounting Policies, Changes in Accounting Estimates and Errors*, what figures should be disclosed for profit after tax in the statement of profit or loss and other comprehensive income of Hookbill for the year ended 31 December 20X7, for both 20X7 and the comparative year 20X6?

6 Carduus

The Carduus Company manufactures motorboats. It has invested heavily in developing a new engine design. As a result, by 1 January 20X2 it had capitalised £72 million of development costs, which it was amortising over 10 years on a straight-line basis from that date.

Until 1 January 20X7, Carduus's new engine had been selling well and making substantial profits. However, a new competitor then entered the market, such that revised estimates were that the new engine would cease to generate any economic benefits after 31 December 20X9 and that the remaining amortisation period should be to this date on a straight-line basis. The entry of the new competitor led to an impairment review, but no impairment loss was identified.

Retained earnings at 31 December 20X6 were £400 million. Profit before tax and any amortisation charges was £70 million for the year ended 31 December 20X7

Requirement

Ignoring tax, determine the retained earnings figure for Carduus at 1 January 20X7 in the financial statements for the year to 31 December 20X7 and the profit before tax for the year then ended after adjusting for the change in amortisation according to IAS 8, *Accounting Policies, Changes in Accounting Estimates and Errors.*

7 Aspen

The Aspen Company was drawing up its draft financial statements for the year to 31 December 20X7 and was reviewing its cut-off procedures. It discovered that it had, in error, at the previous year end, omitted from inventories in its statement of financial position a purchase of inventories amounting to
£100,000 made on the afternoon of 31 December 20X6. The related purchase transaction and the trade payable had been correctly recorded.

The retained earnings of Aspen at 31 December 20X6 as shown in its 20X6 financial statements were
£4,000,000. In the draft financial statements for the year to 31 December 20X7, before any adjustment of the above error, the profit after tax was £800,000. Aspen pays tax on profits at 30%.

Requirement

According to IAS 8, *Accounting Policies, Changes in Accounting Estimates and Errors*, what figures should be disclosed in the financial statements of Aspen for the year ended 31 December 20X7 for profit after tax for the year and for retained earnings at 1 January 20X7?

8 Polson

The Polson Company appointed Rayner as finance director late in 20X7. One of Rayner's initial tasks was to ensure that a thorough review was carried out of Polson's accounting policies and their application in the preparation of Polson's consolidated financial statements for the year ended 31 December 20X6. This review identified the following issues in relation to the 20X6 consolidated financial statements which were approved for publication early in 20X7.

(1) The £840,000 year-end carrying amount of a major item of plant in a wholly-owned subsidiary comprised costs incurred up to 31 December 20X6. Depreciation was charged from 1 January 20X7 when the item was for the first time working at normal capacity. The depreciation charge takes account of residual value of £50,000 on 30 September 20Y4, the end of the item's useful life. The overall construction and installation of the item was completed on 30 September 20X6, when the item was first in full working order. Between 1 October and 31 December 20X6 the item was running below normal capacity as employees learnt how to operate it. The year-end carrying amount comprises: costs incurred to 30 September 20X6 of £800,000 plus costs incurred in October to December 20X6 of £50,000 less £10,000 sales proceeds of the output sold in October to December.

(2) On 1 January 20X6 Polson acquired a 30% interest in The Niflumic Company for £240,000, which it classified in its consolidated financial statements as an investment in equity instruments under IFRS 9, *Financial Instruments*. Polson has representation on Niflumic's board of directors. Niflumic's shares are dealt in on a public market and the year-end carrying amount of £360,000 was derived using the market price quoted on that date. The fair value increase of £90,000 (£360,000 – £240,000 less 25% deferred tax) was recognised in an available-for-sale reserve in equity. In its year ended 31 December 20X6 Niflumic earned a post-tax profit of £80,000 and paid no dividends.

(3) At 31 December 20X6 the total trade receivables in a 60% owned subsidiary was £360,000 according to the accounting records, while the separate list of customers' balances totalled £430,000. The accounting records were adjusted by adding the difference to both the carrying amount of trade receivables and revenue. It was revealed that the difference arose from double- counting certain customers' balances when taking the list out.

The 20X6 consolidated financial statements showed £400,000 as the carrying amount of retained earnings at the year end. The effect of taxation is immaterial in respect of the item of plant and the trade receivables adjustment.

Requirement

Determine the following amounts for inclusion as comparative figures in Polson's 20X7 consolidated financial statements after the adjustments required by IAS 8, *Accounting Policies, Changes in Accounting Estimates and Errors*.

(1) The carrying amount of the item of plant at 31 December 20X6

(2) The increase/decrease in equity at 31 December 20X6 in respect of the investment in Niflumic

(3) The carrying amount of retained earnings at 31 December 20X6

Now go back to the Introduction and ensure that you have achieved the Learning outcomes listed for this chapter.

Answers to Interactive questions

Answer to Interactive question 1

Question	Answer
Oak plc has purchased a patent for £40,000. The patent gives the company sole use of a particular manufacturing process which will save £6,000 a year for the next five years.	This is an asset, albeit an intangible one. There is a past event, control and future economic benefit (through cost saving).
Elm plc paid John Brown £20,000 to set up a car repair shop, on condition that priority treatment is given to cars from the company's fleet.	This cannot be classed as an asset. Elm plc has no control over the car repair shop and it is difficult to argue that there are future economic benefits.
Sycamore plc provides a warranty with every washing machine sold.	This is a liability. The business has an obligation to fulfil the terms of the warranty. The liability would be recognised when the warranty is issued rather than when a claim is made.

Answer to Interactive question 2

Statement of profit or loss and other comprehensive income for 20X7 (extract)

	20X6	20X7
	£'000	£'000
Sales	47,400	67,200
Cost of goods sold (W1)	(38,770)	(51,600)
Profit before tax	8,630	15,600
Income tax (W2)	(2,620)	(4,660)
Profit for the year	6,010	10,940
Retained earnings Opening retained earnings		
As previously reported		
	13,000	21,950
Correction of prior period error (4,200 – 1,260)		(2,940)
As restated	13,000	19,010
Profit for the year	6,010	10,940
Closing retained earnings	19,010	29,950

WORKINGS

(1) **Cost of goods sold**

	20X6	**20X7**
	£'000	**£'000**
As stated in question	34,570	55,800
Inventory adjustment	4,200	(4,200)
	3,770	51,600

(2) **Income Tax**

	20X6	**20X7**
	£'000	**£'000**
As stated in question	3,880	3,400
Inventory adjustment (4,200 × 30%)	(1,260)	1,260
	2,620	4,660

Answers to Self-test questions

1 IASB Conceptual Framework

1.1 Neither the intention nor the need to liquidate or curtail materially the scale of its operations.

1.2 It should be complete, neutral and free from error.

2 IFRS for Small and Medium-sized Enterprises – Smerk

Discussion as follows:

(1) **Development expenditure**

The *IFRS for SMEs* requires small and medium-sized entities to expense all internal research and development costs as incurred unless they form part of the cost of another asset that meets the recognition criteria in the IFRS. The adjustment on transition to the *IFRS for SMEs* must be made at the beginning of the comparative period (1 January 20X5) as a prior period adjustment. Thus the expenditure of £2.8 million on research and development should all be written off directly to retained earnings. Any amounts incurred during 20X5 and 20X6 must be expensed in those years' financial statements and any amortisation charged to profit or loss in those years will need to be eliminated.

(2) **Acquisition of Rock**

The *IFRS for SMEs* requires goodwill to be recognised as an asset at its cost, being the excess of the cost of the business combination over the **acquirer's interest** in the net fair value of the identifiable assets, liabilities and contingent liabilities. Non-controlling interests at the date of acquisition must therefore be measured at the proportionate share of the fair value of the identifiable assets and liabilities of the subsidiary acquired (ie, the 'partial' goodwill method).

After initial recognition the acquirer is required to amortise goodwill over its useful life under the *IFRS for SMEs*. If an entity is unable to make a reliable estimate of the useful life of goodwill, the life is presumed to be 10 years.

Goodwill will be calculated as:

	£m
Consideration transferred	7.7
Non-controlling interests (at % FVNA: 9.5 × 40%)	3.8
Fair value of identifiable net assets at acquisition	(9.5)
	2.0
Amortisation (2.0/10 years × 6/12)	(0.1)
	1.9

The amortisation of £0.1 million must be charged to profit or loss in 20X6.

(3) **Investment properties**

Investment properties must be held at fair value through profit or loss under the IFRS for SMEs where their fair value can be measured without undue cost or effort, which appears to be the case here, given that an estate agent valuation is available. Consequently a gain of £0.2 million (£1.9m – £1.7m) will be reported in Smerk's profit or loss for the year.

3 IFRS 13, Fair Value Measurement

Discussion as follows:

(1) **Fair value of asset**

Year to 30 November 20X2	**North American market**	**European market**	**African market**
Volume of market – units	4m	2m	1m
	£	**£**	**£**
Price	19	16	22
Costs of entering the market	(2)	(2)	n/a
Potential fair value	17	14	22
Transaction costs	(1)	(2)	(2)
Net profit	16	12	20

Additional information

- Because Vitaleque currently buys and sells the asset in the African market, the costs of entering that market are not incurred and therefore not relevant.
- Fair value is not adjusted for transaction costs. Under IFRS 13, these are not a feature of the asset or liability, but may be taken into account when determining the most advantageous market.
- The North American market is the principal market for the asset because it is the market with the greatest volume and level of activity for the asset. If information about the North American market is available and Vitaleque can access the market, then Vitaleque should base its fair value on this market. Based on the North American market, the fair value of the asset would be £17, measured as the price that would be received in that market (£19) less costs of entering the market (£2) and ignoring transaction costs.
- If information about the North American market is not available, or if Vitaleque cannot access the market, Vitaleque must measure the fair value of the asset using the price in the most advantageous market. The most advantageous market is the market that maximises the amount that would be received to sell the asset, after taking into account both transaction costs and usually also costs of entry; that is, the net amount that would be received in the respective markets. The most advantageous market here is therefore the African market. As explained above, costs of entry are not relevant here, and so, based on this market, the fair value would be £22.
- It is assumed that market participants are independent of each other, knowledgeable, and able and willing to enter into transactions.

(2) **Fair value of decommissioning liability**

Because this is a business combination, Vitaleque must measure the liability at fair value in accordance with IFRS 13, rather than using the best estimate measurement required by IAS 37, Provisions, Contingent Liabilities and Contingent Assets. In most cases there will be no observable market to provide pricing information. If this is the case here, Vitaleque will use the expected present value technique to measure the fair value of the decommissioning liability. If Vitaleque were contractually committed to transfer its decommissioning liability to a market participant, it would conclude that a market participant would use the inputs as follows, arriving at a fair value of £3,215,000.

Input	**Amount**
	£'000
Labour and material cost	2,000
Overhead: 30% × 2,000	600
Third-party mark-up – industry average: 2,600 × 20%	520
	3,120
Inflation adjusted total (5% compounded over three years): 3,120 × 1.05^3	3,612
Risk adjustment – uncertainty relating to cash flows: 3,612 × 6%	217
	3,829
Discount at risk-free rate plus entity's non-performance risk: (4% + 2% = 6%): 3,829 ÷ 1.06	3,215

4 IAS 8, Accounting Policies, Changes in Accounting Estimates and Errors

£444,000

Per IAS 8.42 a correction of a material error should be applied retrospectively by restating the opening balances of assets, liabilities and equity for the earliest prior period presented

5 Hookbill

20X7: £537,500

20X6: £362,500

	20X7	**20X6**
	£	**£**
Draft profit after tax	500,000	400,000
Inventory adjustment	50,000	(50,000)
Tax thereon at 25%	(12,500)	12,500
Revised profit after tax	537,500	362,500

The comparative amounts for the prior period should be restated, per IAS 8.42.

Correction of opening inventory will increase profit for the current period, by the amount of the after- tax adjustment. Conversely, the closing inventory for the previous period is reduced, thereby reducing profit by the after-tax effect of the adjustment.

6 Carduus

Retained earnings: £400m Profit before tax: £58.0m

The change in useful life is a change in an accounting estimate which is accounted for prospectively (IAS 8.36). So retained earnings brought forward remain unchanged, at £400 million.

The carrying amount of development costs at 1 January 20X7 (halfway through their previously estimated useful life) is (£72m × 5/10) £36 million. Writing this off over three years gives a charge of £12 million per annum. So the profit before tax is £70m – £12m = £58m.

7 Aspen

Profit after tax: £730,000 Retained earnings: £4,070,000

The comparative amounts for the prior period should be restated, per IAS 8.42.

The correction of opening inventories will decrease profit for the current period, by the after-tax value of the adjustment. Thus current period profits are £800,000 – (£100,000 × 70%) = £730,000.

The closing inventories of the previous period are increased by the same amount. So retained earnings are £4,000,000 + (£100,000 × 70%) = £4,070,000.

8 Polson

Figures as follows:

(1) £776,562

(2) (£66,000)

(3) £318,562

All these matters give rise to prior period errors which require retrospective restatement of financial statements as if the prior period error had never occurred (IAS 8.5).

(1) Recognition of cost in the carrying amount of PPE should cease when it is in the condition capable of being operated in the manner intended, so on 30 September 20X6, and depreciation should begin on the same date (IAS 16.20 and 55). So gross cost should be adjusted to £800,000 (£840,000 – £50,000 + £10,000) and depreciation, taking into account overall useful life and residual value, charged for 3 months, so £23,438 ((£800,000 – £50,000) × 1/8 × 25%). The restated carrying amount is £776,562 (£800,000 – £23,438).

(2) The investment in The Niflumic Company is an associate and should be accounted for according to IAS 28, not IFRS 9.

The value of the investment will therefore increase by 30% of Niflumic's post-tax profit rather than according to fair values.

	£
Amount recognised in other components of equity	90,000
30% × Niflumic's profit after tax (retained earnings)	24,000
Adjustment to equity	(66,000)

(3)

	£
Draft retained earnings	400,000
Reduction in carrying value of plant (£840,000 – £776,562)	(63,438)
Niflumic's earnings (£80,000 × 30%)	24,000
Error in trade receivables (£70,000 × 60%)	(42,000)
	318,562

Trade receivables, revenue and therefore profit were overstated by £70,000 in respect of the trade receivables. Polson's share is 60%, so end-20X6 retained earnings must be reduced by £42,000.

The share of Niflumic's profits is recognised in retained earnings, not in a separate reserve, giving rise to an increase of £24,000.

Chapter 3

Ethics

Introduction

Learning outcomes

- Identify and explain ethical issues in reporting, assurance and business scenarios
- Explain and appraise the relevance, importance and consequences of ethical issues
- Evaluate the impact of ethics on a reporting entity, relating to the actions of stakeholders
- Recommend and justify appropriate actions where ethical and professional conduct issues arise in a given scenario
- Design and evaluate appropriate safeguards to mitigate threats and provide resolutions to ethical problems

Chapter study guidance

Use this schedule and your study timetable to plan the dates on which you will complete your study of this chapter.

Topic	Practical significance	Study approach	Exam approach	Interactive questions
1	**The importance of ethics** This first section reminds you of how important it is to do the right thing in the workplace and beyond.	**Approach** This should remind you of why you continue to study ethics – use it to maintain your focus. **Stop and think** WorldCom occurred at the very start of the 20th Century – do you think there is still a risk of good companies doing bad things?	Every question you attempt will need to consider the public interest so always consider how actions look through the lens of various ethical codes.	**IQ1: Ethics and the individual** Use this as an opportunity to remind yourself of how a professional accountant should behave in the face of such adversity.
2	**Ethical codes and standards** The way that you should act is always under consideration – note how these codes have evolved to keep up with current developments.	**Approach** Each of these codes of ethics is contained within your open book permitted text. **Stop and think** Make sure you understand the contents of each of these codes and standards – are you up to date with recent changes?	As you found at the Professional Level, being able to navigate around the open book permitted text under time pressure is very important, so learn to do this whenever you attempt questions.	N/A

Topic	Practical significance	Study approach	Exam approach	Interactive questions
3	**Ethics: financial reporting focus** This section will remind you how ethics applies to the accountant in business.	**Approach** The fundamental principles, threats and safeguards should all be revision for you. **Stop and think** The remaining sections all relate to the work of creating financial information, so while you study them, consider how they could occur in real life.	You should be on the lookout for any clues from the scenario that suggest some questionable ethical behaviour is occurring. For example, considering the FIFA worked example, is there any evidence of bribery or corruption?	N/A
4	**Ethics: audit and assurance focus** This section will remind you how ethics applies to the accountant in practice. Note the recent developments to address ongoing issues from the profession.	**Approach** Having read about the current versions of the IESBA and ICABCodes, you need to make sure that you can find everything you need in the open book permitted text. **Stop and think** Do you know how to respond if presented with a variety of different ethical threats?	Responding appropriately to ethical threats is dependent upon being able to identify and diagnose these threats in the first place, so your technique should always start by confirming the problem and then evaluating suitable alternatives in response.	**IQ2: Ethical risks** Use this as a recap of all the ethical threats that an auditor is likely to face. **IQ3: Stewart Brice** Once you have studied this section, attempt this question to see how well you are able to apply this knowledge.
5	**Making ethical judgements** Not every scenario will be straightforward to diagnose and may require a systematic approach to determine the right response.	**Approach** Work your way methodically through the resolution process. **Stop and think** You may find it helpful to consider a real world problem that you are familiar with when working through the resolution process.	As explained in 'Exam context' you should be prepared for more complex situations when attempting questions in the Corporate Reporting exam.	**IQ4: Revenue recognition** This is a brilliant way of demonstrating how financial reporting and auditing knowledge can be blended together to provide an ethical challenge. How will you respond to this?
6	**Money laundering regulations** The threat of money laundering is going nowhere so you must always keep up to date with current	**Approach** Much of this is revision but you should make sure there is nothing new here from the last time you studied the subject.	The biggest challenge with money laundering is being able to identify it so always be on the lookout for tell-tale signs of questionable	N/A

CHAPTER 3

Topic	Practical significance	Study approach	Exam approach	Interactive questions
	developments in this area.	**Stop and think** Can you explain how the Bangladesh government is currently dealing with money laundering?	financial activity.	
7	**Integrity, objectivity and independence** To supplement your knowledge of the open book permitted text, here are some examples of how the Code of Ethics can be applied.	**Approach** Work through this with the open book permitted text in front of you. **Stop and think** Can you find where each of the threats is covered?	Use this as an opportunity to consider how the various threats could be examined.	N/A
8	**Provisions available for small entities** The Ethical Standard covers issues where the guidance is relaxed for smaller entities.	**Approach** Work through this with the open book permitted text in front of you. **Stop and think** Can you find where each of the key points is covered?	Use this as an opportunity to consider how these points could be examined.	N/A

Once you have worked through this guidance you are ready to attempt the further question practice included at the end of this chapter.

1 The importance of ethics

Section overview

- Ethical behaviour is essential to maintain public confidence.
- Guidance is provided in professional codes of conduct and ethical standards.

1.1 Introduction

In general terms, ethics is a set of **moral principles** and **standards of correct behaviour**. Far from being noble ideals which have little impact on real life, they are essential for any society to operate and function effectively. Put simply, they help to differentiate between right and wrong, although their application often involves **complex issues, judgement and decisions**. While ethical principles can be incorporated into law, in many cases their application has to depend on the self-discipline of the individual. This principle can be seen to apply to society as a whole, the business community and the accounting profession.

1.2 Ethics in business

Business life is a fruitful source of ethical dilemmas because its whole purpose is material gain, the making of profit. Success in business requires a constant search for potential advantage over others and businesspeople are under pressure to do whatever yields such an advantage. As a result, organisations have become increasingly under pressure to act, and **to be seen to be acting, ethically**. In recent years, many have demonstrated this by publishing **ethical codes**, setting out their values and responsibilities towards stakeholders.

In some instances, businesses may be forced to adopt a more ethical approach. In 2013, in some developed economies, many bank chief executives saw a pay cut for the first time in years. This was partly due to tightened regulations which now require banks to align executive pay more closely to risks and performance. Arguably more forceful, however, are the investor revolts arising as a result of shareholders' anger at rising pay in a time of falling profits and reduced dividend payouts.

The ongoing developments in **sustainability** also mean that businesses now need to consider not only acting in an ethical manner but also in a sustainable manner as well – is it possible to satisfy both? The desire to be seen to be acting in the public interest may mean an entity faces an **impossible dilemma** – take the scenario of a **government considering its energy policy** and whether to generate electricity by continuing with mature industries reliant on fossil fuels such as oil and coal or replace them with renewable sources of energy such as wind and solar instead.

- Discontinuing fossil fuels will have serious implications for the industries that rely on them, affecting jobs and communities, and requiring significant transition costs
- Retaining fossil fuels will lead to the inevitable failure to comply with the Paris Accord and for that country to achieve net zero

While this is a simplistic view of a very complex problem, it does illustrate the dilemmas faced by those seeking to walk the line between ethics and sustainability.

Context example: When sportswashing and greenwashing collide

There are plenty of examples of greenwashing (exaggerating your sustainability credentials to improve your reputation) and its near relative sportswashing (associating with a popular sport to improve your reputation) but can this happen at the same time?

Let's start with **sportswashing**. Take a look around at high-profile sports teams and events – how many of them are associated with controversial owners or investors? Here are some examples:

- The 2022 Winter Olympics held in Beijing re-ignited the debate about the treatment of certain ethnic groups in China
- The football World Cups of 2018 and 2022 were both haunted by ongoing concerns over human rights issues with the host nations Russia and Qatar respectively
- Football has also seen unprecedented levels of investment from nation states with questionable human rights records, for example Saudi Arabia with its ownership of Newcastle United Football Club and the recruitment of several high-profile stars to play in the Saudi league, plus hosting a number of high-profile events including the 2034 FIFA men's World Cup
- Hosting a Grand Prix in Bahrain has been considered by some to be a way of drawing attention away from the country's poor human rights record
- During 2023, the threat posed by the breakaway Saudi-backed LIV golf tour was averted as the sport's major bodies all agreed to co-operate within a Saudi-funded merger

Undoubtedly, all of these relate to globally recognised sports where big money is at stake but there is an argument each is attempting to legitimise the actions of the investor (although the rise in popularity of sport and tourism in the Middle East has simply been described as a way of these economies diversifying away from their core industries to address the need to transition away from their traditional dependency on oil).

What about **greenwashing**? Commonly cited examples of this could include recycling advice on products that are inherently unsustainable (such as plastic drinks bottles) or misleading claims about lower emissions (such as those from airlines and their marketing) that cannot be substantiated. Is sport being used in a similar way? The money for a lot of sporting investment is arguably down to the unsustainable wealth of oil-producing nations who are undoubtedly benefiting from their links to these high-profile and attractive events and activities.

Either way, the threat of being associated with both greenwashing and sportswashing presents risks for sport overall - is it a good move in the long term to be associated with something that affects its reputation and at the same time should be diminishing in its influence or does it suggest that the world is still a long way from embracing sustainability issues and that carbon-based products are here to stay for the foreseeable future?

1.3 Ethics and the accounting profession

The IESBA *Code of Ethics for Professional Accountants* (IESBA Code) states:

"A distinguishing mark of the accountancy profession is its acceptance of the responsibility to act in the **public interest**."

The public interest is considered to be the collective well-being of the community of people and institutions the professional accountant serves. These include the following:

- Clients
- Lenders
- Governments
- Employers
- Employees
- Investors
- The business and financial community
- Others who rely on the work of the professional accountant

For the work of the accountant in practice or in business to maintain its value, the accountant must be respected and trusted. The individual professional accountant therefore has a **duty** and a **responsibility** to maintain the **reputation** of the profession and the **confidence of the public**.

1.4 Ethics and the individual

While legislation and professional bodies have their part to play through issuing guidance, the importance of the **integrity of the individual** cannot be overestimated. Its ethical consequences are potentially very significant in deciding, for example, whether to whistleblow on questionable practice at work, despite pressure from colleagues or superiors or negative consequences of doing so.

The devastating effect of the ethical choices of one individual can be seen in the following summary of the role played by Betty Vinson, an accountant at WorldCom.

Context example: WorldCom

WorldCom, the US long-distance telephone carrier, is 'credited' with being responsible for a fraud that created the largest bankruptcy in US history. This reportedly resulted in a fine of $500 million, which at the time was the largest fine ever imposed by the Securities and Exchange Commission (SEC).

The problems began for WorldCom in mid-2000. Its operating costs were increasing sharply due to the fees which it had to pay to other companies for use of their telephone networks. Its chief executive officer and chief financial officer had had to inform Wall Street of lower than expected profits for the second half of the year and there was increasing pressure to improve results. Betty Vinson was working for WorldCom at this time as a senior manager in the corporate accounting division. She was asked by her boss to falsify the accounts in order to increase profits. This was achieved primarily by capitalising line costs rather than treating them as operating expenses. While Betty Vinson considered resignation due to the pressure she was put under to falsify the results, she continued to work for WorldCom until early 2002 and was promoted from senior manager to director with an increase in salary of $30,000. Over an 18-month period she had helped to falsify records at the request of her bosses, increasing profits by $3.7 billion.

By March 2002 questions were being asked by internal audit. Vinson decided to disclose the details of the falsified records to the FBI, the SEC and the US Attorney. She had hoped that her testimony could be exchanged for immunity from prosecution; however, this was not the case. In October 2002 she pleaded guilty to two counts of conspiracy and securities fraud (carrying a maximum sentence of 15 years) and in October 2003 she was charged with entering false information on company documents (carrying a maximum sentence of 10 years).

Interactive question 1: Ethics and the individual

1.1 From the Context Example above, list the factors which you think may have affected Betty Vinson's decision to make the fraudulent entries.

1.2 What other courses of action could she have taken? See **Answer** at the end of this chapter.

Professional skills focus: Applying judgement

Sometimes doing the right thing is not straightforward and you should be prepared to consider things in a personal capacity.

One of the other courses of action that Betty Vinson could have taken would have been to **blow the whistle** – expose the fraud she was asked to participate in either within or outside the organisation. Admittedly, as the highest levels of management were involved in the WorldCom case, making an internal disclosure would have fallen on deaf ears at best, or at worst caused Betty Vinson to lose her job. However, Betty Vinson could have considered making an external disclosure: to the professional regulatory body of which she was a member, to public regulators, or, perhaps as a last resort, to the media. A timely disclosure could have brought the fraudulent activities to an end, mitigating their disastrous consequences.

In the UK, the Public Interest Disclosure Act 1998 (PIDA 1998) aims to protect whistleblowers who raise genuine concerns about malpractice in organisations, including the following:

- Crimes
- Civil offences (including negligence, breach of contract and breach of administrative law)
- Miscarriages of justice
- Dangers to health and safety and/or the environment
- Attempts to cover up any of the above

The Act overrides the confidentiality clauses which may be contained in employment contracts, and provides recourse to the employment tribunal should the whistleblower be victimised.

The text of PIDA 1998, as well as useful examples of whistleblowing cases, can be found on the website of the charity Protect: www.pcaw.org.uk

2 Ethical codes and standards

Section overview

- The accounting profession has developed principles-based codes, including the IESBA Code and the ICAEW Code of Ethics.
- The ICAEW Code centres around five fundamental principles and a professional accountant is responsible for recognising and assessing potential threats to these fundamental principles.
- Where threats are identified, a professional accountant must then implement safeguards to eliminate these threats or reduce them to an acceptable level.

2.1 IESBA, ICAB and FRC Codes

As a key aspect of reputation and professionalism is ethical behaviour, the accounting profession has developed **ethical codes of conduct**. These include:

- The IESBA Code of Ethics for Professional Accountants (IESBA Code). The Bangladesh FRC adopted the International Code of Ethics for Professional Accountants including the International Independence Standards. Previously the IESBA Code was adopted by the ICAB.
- The ICAB Code of Conduct (Schedule C).

The IESBA Code provides ethical guidance internationally for IFAC members. The ICAB Code contains additional guidance or requirements. Therefore, compliance with Bangladesh FRC Code and ICAB Code will will ensure compliance with the IESBA Code. The Bangladesh FRC Code and ICAB Code will be referred to the Codes for the purpose of the Chapter.

You should be familiar with the Code from your previous studies, although it is possible the material you covered at the Professional Level may not have been based on the most up to date versions. This section summarises the key points.

The ICAB Code is compliance based. The ICAB Code covers the following topics:

- Professional misconduct in relation to Chartered Accounts in Practice (Schedule C, Part I)
- Professional misconduct in relation to members of the Institute in service (Schedule C, Part II)
- Professional misconduct in relation to management consultancy
- Professional and other misconduct

The Bangladesh FRC Code (I,e,. IESBA Code) is **principles-based** and members are responsible for:

- identifying threats to compliance with the fundamental principles;
- evaluating the significance of these threats; and
- implementing safeguards to eliminate them or reduce them to an acceptable level.

The guidance in the Code is given in the form of:

- fundamental principles; and
- illustrations as to how they are to be applied in specific situations.

The Code applies to all members, students, affiliates, employees of member firms and, where applicable, member firms, in all their professional and business activities, whether remunerated or voluntary.

It is important to note therefore that adhering to the Code is equally important for a member working in business as it is for a member working in practice, even though the ethical codes are sometimes perceived to be associated more with the accountant in practice.

ICAB and FRC W are committed to enforcing the Code through disciplining members who do not meet reasonable ethical and professional expectations of the public and other members.

A copy of the ICAB Code is included in the Member's Handbook and is available at www.icab.orb.bd. The Bangladesh FRC Code is available at https://frc.gov.bd/.

CHAPTER 3

3 Ethics: financial reporting focus

Section overview

- This section provides a summary of some key points covered in the ethics learning material in the Financial Accounting and Reporting paper at Professional Level.
- Here we primarily consider the application of the ICAB and Bangladesh FRC Code (the "Codes") to the **accountant in business** involved in a financial reporting environment (we look at the accountant in practice in section 4).

3.1 Fundamental principles

Professional accountants are expected to follow the guidance contained in the fundamental principles in the IESBA Code in all their professional and business activities. The professional accountant should also follow the requirements in the illustrations. However, they should be guided not just by the terms but also by **the spirit of the Code**.

The Code sets out five fundamental principles, the spirit of which must always be complied with.

(a) Integrity

A professional accountant should be straightforward and honest in all professional and business relationships.

A professional accountant should not be associated with reports, returns, communications or other information where they believe that the information:

- contains a materially false or misleading statement;
- contains statements or information provided recklessly; or
- omits or obscures required information where such omission or obscurity would be misleading.

(b) Objectivity

A professional accountant should not allow bias, conflict of interest or undue influence of others to override professional or business judgements.

(c) Professional competence and due care

A professional accountant has an obligation to:

- attain and maintain professional knowledge and skill at the level required to ensure that a client or employing organisation receives competent professional services based on current technical and professional standards and relevant legislation; and
- act diligently and in accordance with applicable technical and professional standards.

Professional competence may be divided into two separate phases:

- Attainment of professional competence – initial professional development
- Maintenance of professional competence – continuing professional development (CPD)

Diligence encompasses the responsibility to act in accordance with the requirements of an assignment, carefully, thoroughly and on a timely basis.

(d) Confidentiality

A professional accountant should:

- respect the confidentiality of information acquired as a result of professional and business relationships;
- be alert to the risk that confidential information may be inadvertently disclosed;
- not disclose any such information to third parties without proper and specific authority (unless there is a legal or professional duty to disclose); and
- not use such information for the personal advantage of themselves or third parties.

The professional accountant must maintain confidentiality even in a social environment and even after employment with the client/employer has ended.

A professional accountant may be required to disclose confidential information:

- where there is a professional duty or right to disclose, when not prohibited by law, for example:
  - complying with the quality review of a professional body
  - responding to a professional or regulatory body inquiry or investigation
  - protecting a professional accountant's professional interests in legal proceedings
  - complying with technical and professional standards, including ethical requirements
- where disclosure is permitted by law and is authorised by the client or employer;

- where disclosure is required by law, for example:
  - production of documents or other provision of evidence in the course of legal proceedings
  - disclosure to the appropriate public authorities of infringements of the law that come to light; and
  - in cases where disclosure may be in the public interest (recent developments on non- compliance with laws and regulations (NOCLAR) in a later section are relevant here).

(e) Professional behaviour

A professional accountant should comply with relevant laws and regulations and should avoid any action that discredits the profession.

In marketing and promoting themselves professional accountants should not bring the profession into disrepute. That is, they should not make:

- Exaggerated claims for the services they are able to offer, the qualifications they possess or experience they have gained; or
- disparaging references or unsubstantiated comparisons to the work of others.

3.2 Threats

Compliance with these fundamental principles may potentially be threatened by a broad range of circumstances. Many of these threats can be categorised as follows:

(a) Self-interest threat

The threat that a financial or other interest of a professional accountant or of an immediate or close family member will inappropriately influence the professional accountant's judgement or behaviour.

Examples of circumstances that may create such threats include the following:

- Financial interests, loans or guarantees
- Incentive compensation arrangements
- Inappropriate personal use of corporate assets
- Concern over employment security
- Commercial pressure from outside the employing organisation

(b) Self-review threat

The threat that a professional accountant will not appropriately evaluate the results of a previous judgement made by the professional accountant.

(c) Advocacy threat

The threat that a professional accountant will promote a client's or employer's position to the point that the professional accountant's objectivity is compromised.

(d) Familiarity threat

The threat that due to a long or close relationship with a client or employer, a professional accountant will be too sympathetic to their interests or too accepting of their work.

Examples of circumstances that may create such threats include:

- a professional accountant in business, who is in a position to influence financial or non-financial reporting or business decisions, where an immediate or close family member would benefit from that influence;
- long association with business contacts influencing business decisions; and
- Acceptance of a gift or preferential treatment, unless the value is clearly insignificant.

(e) Intimidation threat

The threat that a professional accountant will be deterred from acting objectively by threats, either actual or perceived.

Examples of circumstances that may create such threats include the following:

- Threat of dismissal or replacement in business, of yourself, or of a close or immediate family member, over a disagreement about the application of an accounting principle or the way in which financial information is to be reported
- A dominant personality attempting to influence the decision-making process, for example with regard to the awarding of contracts or the application of an accounting principle.

Professional skills focus: Structuring problems and solutions

Having good knowledge of all the fundamental principles and threats to objectivity at your disposal will help you to understand how best to identify a suitable response to an ethical issue once you can suitably identify what the problem really is!

3.3 Safeguards

There are two broad categories of safeguards which may eliminate or reduce such threats to an acceptable level:

Safeguards created by the profession, legislation or regulation

Examples are:

- Educational, training and experience requirements for entry into the profession
- CPD requirements
- Corporate governance regulations
- Professional standards
- Professional or regulatory monitoring and disciplinary procedures
- External review by a legally empowered third party of reports, returns, communication or information produced by a professional accountant
- Effective, well-publicised complaints systems operated by the employing organisation, the profession or a regulator, which enable colleagues, employers and members of the public to draw attention to unprofessional or unethical behaviour
- An explicitly stated duty to report breaches of ethical requirements

Safeguards in the work environment

Examples are:

- The employing organisation's systems of corporate oversight or other oversight structures
- The employing organisation's ethics and conduct programmes
- Recruitment procedures in the employing organisation emphasising the importance of employing high calibre, competent staff
- Strong internal controls
- Appropriate disciplinary processes
- Leadership that stresses the importance of ethical behaviour and the expectation that employees will act in an ethical manner
- Policies and procedures to implement and monitor the quality of employee performance

- Timely communication to all employees of the employing organisation's policies and procedures, including any changes made to them, and appropriate training and education given on such policies and procedures
- Policies and procedures to empower and encourage employees to communicate to senior levels within the employing organisation any ethical issues that concern them without fear of retribution
- Consultation with another appropriate professional accountant

3.4 Ethical conflict resolution

When evaluating compliance with the fundamental principles, a professional accountant may be required to resolve a conflict in complying with the fundamental principles.

A professional accountant may face pressure to:

- act contrary to law or regulation;
- act contrary to technical or professional standards;
- facilitate unethical or illegal earnings management strategies;
- lie to, or otherwise mislead, others; in particular:
  - the auditor of the employing organisation, and
  - regulators; or
- issue, or otherwise be associated with, a financial or non-financial report that materially misrepresents the facts, for example:
  - financial statements,
  - tax compliance,
  - legal compliance, and
  - reports required by securities regulators.

3.5 Preparation and reporting of information

Accountants will often be involved in the preparation and reporting of information that may be:

- made public; or
- used by others inside or outside the employing organisation.

The accountant should:

- prepare or present such information fairly, honestly and in accordance with relevant professional standards;
- present financial statements in accordance with applicable financial reporting standards; or
- Maintain information for which they are responsible in a manner which:
  - describes clearly the true nature of the business transactions, assets or liabilities;
  - classifies and records information in a timely and proper manner; and
  - represents the facts accurately and completely in all material respects.

3.6 Acting with sufficient expertise

An accountant should only undertake significant tasks for which they have, or can obtain, sufficient specific training or expertise.

Circumstances that threaten the ability of the accountant to perform duties with the appropriate degree of professional competence and due care include:

- insufficient time for properly performing or completing the relevant duties;
- incomplete, restricted or otherwise inadequate information for performing the duties properly;
- insufficient experience, training and/or education; and
- inadequate resources for the proper performance of the duties.

Safeguards that may be considered include:

- obtaining additional advice or training;
- ensuring that there is adequate time available for performing the relevant duties;
- obtaining assistance from someone with the necessary expertise; and
- consulting where appropriate with:
  - superiors within the employing organisation,
  - independent experts; or
  - ICAEW.

3.7 Financial interests

An accountant may have financial interests, or may know of financial interests of immediate or close family members, that could in certain circumstances threaten compliance with the fundamental principles.

Examples of circumstances that may create self-interest threats are if the accountant or family member:

- Holds a direct or indirect financial interest in the employing organisation and the value of that interest could be directly affected by decisions made by the accountant.
- Is eligible for a profit-related bonus and the value of that bonus could be directly affected by a decision made by the accountant
- Holds, directly or indirectly, share options in the employing organisation, the value of which could be directly affected by decisions made by the accountant
- Holds, directly or indirectly, share options in the employing organisation which are, or will soon be, eligible for conversion
- May qualify for share options in the employing organisation or performance-related bonuses if certain targets are achieved

Safeguards against such threats may include the following:

- Policies and procedures for a committee independent of management to determine the level or form of remuneration of senior management
- Disclosure of all relevant interests and of any plans to trade in relevant shares to those charged with the governance of the employing organisation, in accordance with any internal policies
- Consultation, where appropriate, with superiors within the employing organisation
- Consultation, where appropriate, with those charged with the governance of the employing organisation or relevant professional bodies
- Internal and external audit procedures
- Up to date education on ethical issues and the legal restrictions and other regulations around potential insider trading

3.8 Inducements

An accountant, or their immediate or close family, may be offered an inducement such as:

- gifts;
- hospitality;
- preferential treatment; or
- inappropriate appeals to friendship or loyalty.

An accountant should assess the risk associated with all such offers and consider whether the following actions should be taken:

- Immediately inform higher levels of management or those charged with governance of the employing organisation.
- Inform third parties of the offer, for example a professional body or the employer of the individual who made the offer, or seek legal advice.
- Advise immediate or close family members of relevant threats and safeguards where they are potentially in positions that might result in offers of inducements (for example as a result of their employment situation).
- Inform higher levels of management or those charged with governance of the employing organisation where immediate or close family members are employed by competitors or potential suppliers of that organisation.

Context example: FIFA

The 2018 football World Cup in Russia was widely regarded as a success both on and off the field, due to the engagement of fans with their Russian hosts and the quality of the football viewed by audiences across the world. Yet only three years earlier, the organising body of the World Cup, FIFA, was being investigated for widespread corruption among many of its most senior officials.

Like any high-profile sporting administrator, FIFA has always attracted criticism, but the decision- making processes for awarding both the 2018 and 2022 tournaments came under intense scrutiny following accusations of bribery and corruption among those responsible for deciding on host countries. After an internal investigation, FIFA concluded that the bidding process was fair, although it did not release its report to the public in full, leading to the resignation of the investigation's independent author in protest.

The accusations continued until 2015, when criminal investigations were launched by the US and Swiss authorities which eventually led the leadership structure to remove a number of long-standing 'big' personalities including overall FIFA president Sepp Blatter and his European counterpart Michel Platini: both men were banned from football for eight years by FIFA's ethics committee, although these were subsequently reduced on appeal.

Although the US investigation in 2015 centred on bribes to senior officials of around US$2 million, sums thought to be in excess of US$150 million have also been mentioned in association with illegal payments to secure media and marketing rights to future tournaments. FIFA made more than US$2 billion from the 2014 World Cup tournament held in Brazil. In November 2020, Blatter and Platini were prosecuted by the Swiss authorities who alleged an illegal payment had been made by Blatter to Platini of 2m Swiss francs (around £1.6 million) but in July 2022, the pair were found not guilty after the court accepted the money related to the legitimate supply of advisory services.

The leadership of FIFA continues to face a massive task in restoring faith in the transparency of its own governance arrangements and the public perception of football and its engagement on the global stage.

BBC News (8 July 2022) Sepp Blatter and Michel Platini found not guilty following fraud trial. [Online]. Available from: www.bbc.co.uk/sport/football/62081675 [Accessed 8 July 2022])

3.9 Conflicts of interest

An accountant should take reasonable steps to identify circumstances that could pose a conflict of interest.

Examples might be:

- an accountant in public practice, competing directly with a client, or having a joint venture or similar arrangement with a major competitor of a client;
- an accountant performing services for clients whose interests are in conflict; or
- clients are in dispute with each other in relation to the matter or transaction in question.

Safeguards should include:

- notifying the client of the firm's business interest or activities that may represent a conflict of interest, and obtaining their consent to act in such circumstances;
- notifying all known relevant parties that the professional accountant is acting for two or more parties in respect of a matter where their respective interests are in conflict and obtaining their consent to so act; and
- Notifying the client that the accountant does not act exclusively for any one client in the provision of proposed services and obtaining their consent to so act.

3.10 General duty to report

Under the ICAB's Bye-laws it is the duty of every member where it is in the public interest to do so, to report to the Institute any facts or matters indicating that a member and/or firm or provisional member may have become liable to disciplinary action. In determining whether it is in the public interest to report such facts or matters, regard shall be had to such guidance as the Council shall give from time to time.

3.11 Practical significance

Accountants working within a financial reporting environment can come under pressure to improve the financial performance or financial position of their employer. Finance managers who are part of the team putting together the results for publication must be careful to withstand pressures from their non-finance colleagues to indulge in reporting practices which dress up short-term performance and position. Financial managers must be conscious of their professional obligations and seek appropriate assistance from colleagues, peers or independent sources.

Visit icaew.com (https://www.icaew.com/-/media/corporate/files/technical/ethics/ethical-case-studies/ccabeg-case-studies-accountants-public-practice.ashx?la=en) to access 'Ethical Dilemmas Case Studies' covering ethical dilemmas that are relevant to accountants – including a set of case studies specific to accountants in practice.

3.12 Promoting the role and mindset expected of professional accountants

You will no doubt have seen and heard plenty of comments about inadequate levels of professional scepticism being displayed by audit and assurance providers when undertaking engagements.
Given the significance of this alongside the need to address the expectation gap and other perceived ethical shortcomings across the whole of the profession, in 2019 the IESBA decided to consider whether the use of professional scepticism should be extended to apply to all professional accountants.

After a consultation period, IESBA concluded that while professional scepticism was fundamentally important to preserve trust in the profession, the term felt more appropriate to the nature of audit and assurance work, and there were other characteristics that professional accountants should display in order to be viewed as acting with something like professional scepticism. These were discussed in terms of the role and mindset expected of professional accountants and are summarised below.

- The importance of the role played by professional accountants as part of society and their duty to act in the public interest
- Enhancements to the descriptions of objectivity and professional behaviour within the IESBA Code of Ethics
- Reinforcing the importance of acting with integrity in difficult circumstances when there are easier options that could be taken
- Consideration of the impact of technology on the work of the professional accountant, ensuring competence is maintained and an awareness of the threat of bias from using certain datasets (see below)
- Keeping an open mind about anything that a professional accountant could be faced with as part of their work (as this covers issues such as challenging the views held by others and reserving judgement until all relevant information is available, it is perhaps the closest thing to professional scepticism contained in these proposals)
- An awareness of how cultural factors within an organisation and certain types of bias can affect the judgement of a professional accountant

The IESBA code has been redrafted to contain amendments that reflect these proposals. One of the areas that professional accountants should be aware of is the section on any bias that could create threats to being able to apply the conceptual framework. A brief summary of examples of such bias is shown below.

- Anchoring bias, where judgements are based on an initial piece of information that subsequently turns out to be inaccurate or unrepresentative, leading you to draw inappropriate conclusions
- Automation bias, where machine-generated data is considered superior to human-generated data despite evidence to the contrary
- Availability bias, where easily available information is favoured ahead of information which is less easy to access
- Confirmation bias, where you are inclined to trust information that supports something you already think you know, as opposed to challenging the status quo if such evidence exists
- Groupthink, which is sticking to the views of the group as opposed to considering innovative or individual solutions
- Overconfidence bias, where you assume you possess more expertise about an issue than is justified
- Representation bias, where conclusions about a population are drawn based on factors that may not be representative enough
- Selective perception, where conclusions are drawn based upon what you expect to see instead of keeping an open mind

With this last point, we are back again at professional scepticism – it is clearly a very fine line between the expectations that relate to professional accountants and those that apply to audit and assurance practitioners, but you should still be aware of the key points raised here when considering the mindset expected of a professional accountant.

4 Ethics: audit and assurance focus

Section overview

- This section focuses on ethical guidance most relevant to accountants in practice providing assurance services and builds on the material covered in the Assurance paper at Certificate Level and the Audit and Assurance paper at Professional Level.
- It also provides detail of recent changes to the relevant ethical codes and standards:
  - IESBA Code
  - ICAB Code
  - Revised Ethical Standard

Interactive question 2: Ethical risks

From your knowledge brought forward from your previous studies, and any practical experience of auditing you may have, write down as many potential ethical risk areas concerning audit as you can in the areas below. (Some issues may be relevant in more than one column.)

Personal interests	Review of your own work	Disputes	Intimidation

See **Answer** at the end of this chapter.

4.1 Development of the 2018 IESBA Code

4.1.1 Content changes

One of the driving forces behind the update to the IESBA Code was the conclusion of the **NOCLAR** (non-compliance with laws and regulations) project.

This project addressed professional accountants' responsibilities when they become aware of non- compliance or suspected non-compliance with laws and regulations committed by a client or employer. The IESBA Code states that the objectives of the professional accountant are as follows:

- To comply with the principles of integrity and professional behaviour
- By alerting management or, where appropriate, those charged with governance of the employing organisation, to seek to:
  - enable them to rectify, remediate or mitigate the consequences of the identified or suspected non-compliance; and
  - deter the commission of the non-compliance where it has not yet occurred.
- To take such further action as appropriate in the public interest (IESBA Code: para. 260.4)

Where the professional accountant becomes aware of information concerning instances of non- compliance or suspected non-compliance the following procedures are required. The professional accountant must:

- obtain an understanding of the matter;
- address the matter;
- determine whether further action is needed;
- consider any imminent breaches; and
- consider any additional documentation requirements.

(IESBA Code: para 260.12-23)

In January 2017, the IESBA issued a close off document: **Addressing the Long Association of Personnel with an Audit or Assurance Client**. This states that for audits of Public Interest Entities an individual cannot act as the engagement partner, the individual appointed as responsible for the engagement quality review or any other key audit partner role (or a combination of these roles) for a period of more than seven cumulative years (para R540.5). This period is known as the time-on period. After the time-on period, the individual shall serve a cooling-off period in accordance with paragraphs R540.11 to R540.19. :

- Engagement partner: five consecutive years
- Individual responsible for the engagement quality control review: three consecutive years
- Individual who has acted in any other capacity as key audit partner: two consecutive years

Note: This document was issued prior to the adoption of the quality management standards in 2021 when the terms **quality control** and **engagement quality control review** were still in use – however, in this instance you can assume that these practices are referring to what you understand to be **quality management** and **engagement quality reviews** respectively.

A previous close off document from 2016 provided guidance on two further areas which are now included in the 2018 IESBA Code: **Preparation and presentation of information** (section 220) and **Pressure to breach the fundamental principles** (section 270). While these are presented in the context of the professional accountant in business, the auditor should consider these expectations which have now been explicitly raised as part of their audit approach.

When **preparing or presenting information**, a professional accountant shall:

(a) Prepare or present information in accordance with a relevant reporting framework, where applicable;

(b) Prepare or present the information in a manner that is intended neither to mislead nor to influence contractual or regulatory outcomes inappropriately;

(c) Exercise professional judgement to:

    (1) Represent the facts accurately and completely in all material respects

    (2) Describe clearly the true nature of business transactions or activities; and

    (3) Classify and record information in a timely and proper manner

(d) Not omit anything with the intention of rendering the information misleading or of influencing contractual or regulatory outcomes inappropriately.

A professional accountant shall not allow pressure from others to result in a **breach of compliance with the fundamental principles** or place pressure on others that the accountant knows, or has reason to believe, would result in the other individuals breaching the fundamental principles. (IESBA Code: para R270.3)

4.1.2 Structural changes

In addition to the content changes mentioned above, the IESBA has changed the format and structure of the 2018 Code as follows:

- Guide to the code
- International Code of Ethics for Professional Accountants (including International Independence Standards)
- Preface
- Part 1 – Complying with the Code, fundamental principles and conceptual framework
- Part 2 – Professional accountants in business
- Part 3 – Professional accountants in public practice
- International independence standards: Part 4A Independence for audit and review engagements and 4B Independence for assurance engagements other than audit and review engagements
- Glossary, including list of abbreviations
- Effective dates (mostly 15 June 2019)

This restructured Code is now referred to as the International Code of Ethics for Professional Accountants (including International Independence Standards).

4.2 The IESBA Code 2023

The 2023 edition of the International Code of Ethics for Professional Accountants (including International Independence Standards) (the Code) was issued in September 2023 and incorporates:

(a) The revisions relating to (a) the definition of engagement team, and (b) group audits. The revisions deal with the independence and other implications of the changes made to the definition of "engagement team" in the Code to align with changes to the definition of the same term in the IAASB's International Standards on Auditing (ISAs) and International Standards on Quality Management (ISQMs). The revisions also address holistically the various independence considerations in an audit of group financial statements. The revised provisions relating to the definition of engagement team and group audits will be effective for audits of financial statements and audits of group financial statements for periods beginning on or after 15 December 2023. Early adoption of the revisions is encouraged.

(b) The revisions will become effective for audits of financial statements and audits of group financial statements for periods beginning on or after 15 December 2023.

(c) A signpost of the expiring "jurisdictional provision" addressing long association of personnel with an audit client. The jurisdictional provision will expire and be no longer available for audits of financial statements for periods beginning on or after 15 December 2023. Under the jurisdictional provision (paragraph R540.20 of the Code), where a legislative or regulatory body (or organization authorized or recognized by such legislative or regulatory body) has established a cooling-off period for an engagement partner of less than five consecutive years, that shorter cooling-off period may be applied, subject to a floor of three years, provided that the applicable time-on period does not exceed seven years.

(d) In addition, the 2023 edition of the Code contains the IESBA-approved revised definition of a public interest entity (and related provisions) and technology-related revisions that will become effective in December 2024.

Note: At the time of issuance of this workbook, the IESBA Code 2022 was published and made available in the FRC website. Hence this chapter is based on the IESBA Code 2022. However, this section has been incorporated to make the examinees aware of the key changes introduced in the IESBA Code 2023. The IESBA Code 2023 can be found at: https://www.ethicsboard.org/publications/2023-handbook-international-code-ethics-professional-accountants.

4.3 Threats and safeguards

The IESBA Code, the ICAB Code and the FRC Ethical Standard are all based on the principle that integrity, objectivity and independence are subject to various threats and that safeguards must be in place to counter these.

The majority of threats fall into the following categories:

Threat	Example
Self-interest threat	Undue dependence on total fees from a client
Self-review threat	Reporting on the operation of financial systems after being involved in their design or implementation
Management threat	Where the audit firm has been involved in the design, selection and implementation of financial information technology systems (This threat is included in the FRC Ethical Standard only)
Advocacy threat	Acting as an advocate on behalf of an assurance client in litigation or disputes with third parties
Familiarity or trust threat	A member of the engagement team having a close or immediate family relationship with a director of the client
Intimidation threat	Being threatened with dismissal or replacement in relation to a client engagement

(a) The B Code defines a **safeguard** to be '…actions, individually or in combination, that the professional accountant takes that effectively reduce threats to compliance with the fundamental principles to an acceptable level.'

(b) The Codes considers that there are two general categories of safeguards. These are safeguards created by the profession, legislation or regulations and safeguards in the work environment**.** Safeguards in the work environment may differ according to whether a professional accountant works in public practice, in business or in insolvency.

C H A P T E R 3

(c) When evaluating safeguards, the auditor should consider what a reasonable and informed third party, having knowledge of all relevant information, including the significance of the threat and the safeguards applied, would conclude to be unacceptable.

4.4 Professional appointment

The following procedures for **acceptance and continuance** are applicable based on the Codes. The prospective auditor should consider the various **threats** that an engagement could present – for example:

- integrity and professional behaviour issues may arise from clients with questionable integrity (these can be evaluated by considering the client's integrity and the existence of any suitable governance practices in place)
- self-interest threats could arise from undertaking work that the auditor is not competent to complete (a thorough understanding of the nature of the work being considered is therefore essential)

When considering a prospective engagement, the prospective auditor needs to determine if there are any **reasons** for not accepting the engagement (in other words, would it lead to a threat that could not be satisfactorily dealt with by safeguards).

A suitable response would be to undertake **research** of the prospective client (usually by some form of enquiry) or to ask for information about the prospective client from the existing auditor.

- The prospective auditor should explain to the prospective client that they have a professional duty to communicate with the existing auditor.
- The client should be requested to confirm the proposed change to the existing auditor and to authorise the existing auditor to co-operate with the prospective auditor.
- The prospective auditor should then consider whether to accept or decline the appointment in the light of the information received from the existing auditor
- The existing auditor is required to respond promptly to requests for information, however where enquiries are not answered the prospective auditor should write to the existing auditor by recorded delivery stating an intention to accept the appointment within a specified period of time.
- The prospective auditor is allowed to assume that silence implies that there are no adverse comments to be made. However, the fact that no reply was received should be considered as part of the overall decision-making process.

4.5 Access to information by successor auditors

Unlike the UK Companies Act 2006, in Bangladesh, currently the CA 1994 does not require the predecessor auditor to allow the successor auditor access to all relevant information in respect of its **audit work**. This includes access to relevant working papers.

However, some of the key points in ISAs are as follows:

Some of the key points in this guidance are:

- The request should be made after the successor has been formally appointed
- The successor should consider whether to make a request and the extent of that request
- The request should be as specific as possible. There are specific references to reviewing a predecessor's audit work in:
  - ISA 510 Initial Engagements – Opening Balances

- ISA 710 Comparative Information – Corresponding Figures And Comparative Financial Statements
- ISA 300 Planning an Audit of Financial Statements

- The predecessor should be prepared to assist the successor by providing oral or written explanations
- It is reasonable for the successor to make notes of its review
- There is no obligation to allow copying of papers, but it would be reasonable to allow copying of extracts of the books and records of the client, analyses of financial statement figures and documentation of the client's systems and processes
- Providing access to working papers in this way is not a breach of confidentiality because it is done in order to comply with auditing standards. (A letter from the predecessor to the successor should be copied to the client as a matter of courtesy.)

Interactive question 3: Stewart Brice

You are the Ethics Partner at Stewart Brice, a firm of chartered accountants. The following situations exist.

Teresa is the audit manager assigned to the audit of Recreate, a large quoted company. The audit has been ongoing for one week. Yesterday, Teresa's husband inherited 1,000 shares in Recreate. Teresa's husband wants to hold on to the shares as an investment.

The Stewart Brice pension scheme, which is administered by Friends Benevolent, an unconnected company, owns shares in Tadpole Group, a listed company with a number of subsidiaries. Stewart Brice has recently been invited to tender for the audit of one of the subsidiary companies, Kermit Co.

Stewart Brice has been the auditor of Kripps Bros, a limited liability company, for a number of years. It is a requirement of Kripps Bros' constitution that the auditor owns a token £1 share in the company.

Requirements

3.1 Comment on the ethical and other professional issues raised by the above matters.

3.2 Identify the ethical and professional issues Stewart Brice would need to consider.

See **Answer** at the end of this chapter.

5 Making ethical judgements

Section overview

- The application of ethical guidance requires skill and judgement and relies on the integrity of the individual.
- The Codes provide a framework for the resolution of ethical conflicts.
- In the exam, you will be expected to identify ethical issues and evaluate alternative courses of action.

5.1 Resolving ethical conflicts

Although there are a number of sources of ethical guidance, resolving ethical issues can be complex. As you have seen in your earlier studies, there are some specific rules which can be applied, but current UK ethical guidance is primarily **principles-based**.

The application of these principles requires a degree of skill and the onus is placed on the integrity and judgement of the individual in weighing up the facts of the situation. In addition, it may mean that in certain circumstances there is more than one acceptable outcome.

The Codes recognise that conflicts in the application of fundamental principles may need to be resolved. When providing a service the professional accountant must take into account:

- the **client's requirements**; and
- the **public interest**.

Where these are in conflict, **the public interest should take priority**.

The following help sheet, which was produced by the ICAEW (ICAEW, 2014), sets out a framework that accountants can follow when faced with these issues, which you may find useful when considering ethical problems in the exam.

The help sheet suggests that the resolution process should consider the following:

Relevant facts Do I have all the relevant facts? Am I making assumptions? Is it my problem or can anyone else help?	This may involve: • referring to the organisation's policy, procedures, code of conduct and previous history; or • discussing the matter with trusted managers and employees.
Relevant parties Who are the individuals, organisations and key stakeholders affected? How are they affected? Are there conflicts between different stakeholders? Who are your allies?	These may include those directly affected eg, shareholders, employees and employers but may also include the community at large.
Ethical issues involved Would these ethical issues affect the reputation of the accountancy profession? Would they affect the public interest?	These include: • professional ethical issues; • organisational ethical issues; and • personal ethical issues. You could refer to the ICAEW Code of Ethics for help.
Fundamental principles affected and any associated ethical threats Which fundamental principles are affected? Which threats to compliance exist? Are there safeguards in place which can reduce or eliminate the threats?	This will involve reference to the relevant ethical guidance from the IESBA Code: • Section 110 for the fundamental principles • Section 120.6 A3 for threats to these fundamental principles Are any of these threats clearly insignificant?

Established internal procedures Does your organisation have policies and procedures to deal with this situation? How can you escalate concerns within your organisation? Is there a whistleblowing procedure?	The professional accountant may find it useful to discuss ethical conflict issues with: • immediate superior; • the next level of management; • a corporate governance body; or • other departments eg, legal, audit, human resources.
Alternative courses of action Have all the consequences been discussed and evaluated? Will the proposed course of action stand the test of time? Would a similar course of action be undertaken in a similar situation? Would the course of action stand scrutiny from peers, family and friends?	The following should be considered: • The organisation's policies, procedures and guidelines • Applicable laws and regulations • Universal values and principles adopted by society • Consequences Whenever considering an ethical issue, thought processes, discussions and decisions should all be recorded and can be referred to if you need to justify your actions in future.

Where the conflict is significant and cannot be resolved, the accountant would need to **seek legal advice**. After exhausting all other possibilities and depending on the nature of the conflict, the individual may conclude that withdrawal from the engagement team or resignation from the firm/employing organisation is appropriate.

Note: Withdrawal/resignation would be seen very much as a last resort.

Professional skills focus: Structuring problems and solutions

Scenarios in the exam may be discrete and straightforward, but what if they are not? Use this systematic resolution process to help you work the problem logically.

5.2 Exam context

Ethical issues will have been examined in earlier papers. However, at the Advanced Level you will be faced with **more complex situations**. More emphasis will be placed on your ability to use your **judgement** in the light of the facts provided, rather than testing your knowledge of the ethical codes and standards in detail. In some instances, the correct action may be uncertain and it will be your ability to identify the **range of possible outcomes** which will be important rather than concluding on a single course of action.

You should also be aware that the term 'ethics' will be used in a much broader sense than it has been in the earlier Assurance and Audit and Assurance papers. It is likely to be combined with **financial reporting and business issues** where you may be required to assess the ethical judgements made by others, including management. You may also be asked to consider the issue from the point of view of the accountant in practice and the accountant in business.

The following Interactive question demonstrates these points.

Interactive question 4: Revenue recognition

You are the auditor of Bellevue Ltd for the year ended 31 December 20X8. The company provides information to the financial services sector and is run by the Managing Director, Toby

Stobbart. It has a venture capital investment of which part is in the form of a loan. The investment agreement details a covenant designed to protect the loan. This states an interest cover of two is required as a minimum ie, the company must be able to cover interest and loan principal repayments with profits at least twice.

70% of the revenue of the business is subscription based and contracts are typically three years in duration. 30% of the revenue is for consultancy work which is billed on completion of the work.
Consultancy projects are for a maximum of two months.

During the previous year the management performed a review of the subscription revenue and concluded that 40% of this represented consultancy work and should therefore be recognised in the first year of the contract rather than being recognised over the duration of the contract as had previously been the case. The audit file for 20X7 indicates that this treatment had been questioned vigorously by the audit manager but had been agreed with the audit partner, James Cowell. James Cowell subsequently left the firm abruptly.

You have received a copy of the 20X8 draft accounts which show an interest cover of 2.02 for 20X7 and 2.01 for 20X8. You have also been told that a similar review of subscription income has been made for 20X8, with 40% being reclassified as consultancy work as in the previous year.

Requirement

What are the issues that you as auditor would need to consider in this situation?

See **Answer** at the end of this chapter.

6 Money laundering regulations

Section overview

- Here, we consider an overview of the money laundering regulations in Bangladesh, and how they affect the work of accountants in practice.
- Reporting Entity and the role of accountants as reporting entity

---

6.1 Money laundering regulations in Bangladesh

In Bangladesh, money laundering is governed by the Money Laundering Prevention Act, 2012 (amended in 2015) (the "Act"). The Act outlines several provisions to combat and prevent money laundering activities in the country.

The Bangladesh Financial Intelligence Unit (BFIU) is the central agency in Bangladesh responsible for combating money laundering and terrorist financing. It operates under the jurisdiction of the Central Bank of Bangladesh (i.e., Bangladesh Bank). Financial Intelligent Unit (FIU) of Bangladesh was established in June 2002. However, it was transformed into BFIU in 25 January 2012.

Here are some key provisions from the Act:

- Definition of Money Laundering: The Act defines money laundering as knowingly moving, converting, or transferring proceeds of crime or property involved in an offense for the purpose of concealing or disguising its illicit origin.

- Offenses and Penalties: Engaging in money laundering activities is a criminal offense. The penalties for money laundering can include imprisonment and fines. The severity of the penalty depends on the extent of the offense.
- Reporting Obligations: Financial institutions and non-financial businesses are required to report suspicious transactions to the Bangladesh Financial Intelligence Unit (BFIU). These reports help in identifying and investigating potential money laundering activities.
- Customer Due Diligence (CDD): Financial institutions must conduct customer due diligence to verify the identity of their clients and assess the risk of money laundering. This includes obtaining information on the beneficial ownership of accounts.
- Record Keeping: Financial institutions are required to maintain records of transactions and customer information for a specified period. This helps in tracking and investigating suspicious activities.
- Freezing and Seizure of Assets: The Act provides for the freezing and seizure of assets suspected to be involved in money laundering. This is to prevent the dissipation of assets before they can be confiscated.
- International Cooperation: The Act emphasizes cooperation with foreign jurisdictions in the investigation and prosecution of money laundering offenses. Bangladesh can share information and assist in cross-border investigations.
- Regulatory Authorities: The Bangladesh Financial Intelligence Unit (BFIU) is the primary regulatory body responsible for overseeing compliance with money laundering laws. It also has the authority to investigate and take action against violators.
- Protection for Whistleblowers: The Act includes provisions to protect individuals who report suspicious activities or cooperate with investigations into money laundering.

Here are some key provisions from BFIU:

- Establishment and Function: The BFIU is tasked with receiving, analyzing, and disseminating information related to suspicious financial transactions. It acts as the national center for receiving reports on suspicious activities and transactions.
- Regulatory Oversight: The BFIU supervises and monitors financial institutions and other reporting entities to ensure compliance with anti-money laundering (AML) and combating the financing of terrorism (CFT) regulations. It issues guidelines and directives to enhance the effectiveness of the AML/CFT regime in Bangladesh.
- Suspicious Transaction Reports (STRs) and Cash Transaction Reports (CTRs): Financial institutions and other entities are required to submit STRs and CTRs to the BFIU. The unit analyzes these reports to detect patterns of money laundering and terrorist financing activities.
- International Cooperation: The BFIU collaborates with foreign financial intelligence units and international organizations to exchange information and participate in global efforts to combat money laundering and terrorist financing. Bangladesh is a member of the Egmont Group, an international network of financial intelligence units.
- Capacity Building and Training: The BFIU provides training and capacity-building programs for financial institutions, law enforcement agencies, and other stakeholders to enhance their understanding of AML/CFT measures and improve their ability to detect and prevent financial crimes.
- Public Awareness and Outreach: The BFIU conducts public awareness campaigns and outreach programs to educate the public and private sectors about the risks and consequences of money laundering and terrorist financing.

- Policy Formulation: The BFIU plays a crucial role in formulating policies and strategies to strengthen the AML/CFT framework in Bangladesh. It advises the government on necessary legislative and regulatory measures to address emerging threats.

6.2 Reporting Entity

- bank
- financial institution
- insurer
- money changer
- any company/institution remitting or transferring money or money value
- any other institution carrying out its business with the approval of Bangladesh Bank
- stock dealer and stockbroker, portfolio manager and merchant banker, securities custodian, asset manager
- non-profit organization
- non-government organization
- cooperative society
- Real estate developer
- dealer in precious metals or stones
- trust and company service provider
- lawyer, notary, other legal professional and accountant
- any other institution which Bangladesh Bank may, from time to time, notify with the approval of the Government

6.3 Role of accountants as reporting entity

Chartered Accountant involved in any of the following activities on behalf of the client shall submit suspicious transaction if relevant:

- Buying or selling of real estate
- Managing client money security and other assets
- Management of bank saving and securities account
- Organization of contribution for the creation, operation or management of companies
- Creating, operating or management of legal persons or arrangement and buying or selling of business entities
- Or engage in Trust and company service providers in the following activities:
  - Acting as a formation agent of a legal person
  - Acting as director or secretary of a company or partner of a partnership or similar position
  - Providing registered office, business address accommodation, correspondence address
  - Acting or arranging nominee shareholder for another person

Context example: Greensill, Gupta, the former PM and the auditors

At the time of writing, the FRC has launched investigations into the audits conducted by two UK firms with connections to the collapsed supply chain finance company Greensill Capital and global steel magnate Sanjeev Gupta. Greensill made headlines in 2021 when it emerged that former UK prime minister David Cameron had attempted to secure government loans for Greensill Capital, raising questions over the ethics of lobbying. The finance was expected to have been used to continue Greensill's operations – facilitating the payment of suppliers for companies with liquidity issues – but was declined. Greensill collapsed soon after, leaving questions for its external auditors to answer about the unexpected nature of its swift demise.

Greensill had provided funding for the many companies operating under Sanjeev Gupta's steel empire, including Liberty Steel in the UK, but the withdrawal of insurance cover is considered pivotal in its inability to continue to trade, leaving Mr Gupta's network of companies vulnerable. In May 2021, the UK's Serious Fraud Office launched an investigation into alleged money laundering and fraud relating to loans between Greensill and companies under Mr Gupta, regarding the circumstances surrounding emergency government funding that was approved in order to support companies affected by the global pandemic. In June 2021, the FRC launched an investigation of its own into the audit of Wyelands Bank, also part of Mr Gupta's empire, which is thought to be connected to Greensill and this funding.

These investigations are likely to take some time to complete and may end up being completed by the FRC's successor ARGA, but they highlight the strain being put on a regulatory regime still reeling from the impacts of Carillion.

7 Ethical guidance in more detail

7.1 Integrity, objectivity and independence

7.1.1 Exam focus

You will have covered the ethical guidance on integrity, objectivity and independence in your earlier studies. At the Advanced Level, however, a greater emphasis will be placed on your ability to apply this knowledge. Ethical dilemmas which you may be required to deal with will be less clear-cut and the requirements of the question will not always specifically indicate that ethical issues need to be considered. Instead information will typically be embedded within the question and you will need to demonstrate your skill in identifying the ethical issue and its implications.

This section provides a summary of the key points. It has been structured around the ethical issues, as this is the way that it will be examined at the Advanced Level.

Definitions

Integrity: Being trustworthy, straightforward, honest, fair and candid; complying with the spirit as well as the letter of the applicable ethical principles, laws and regulations; behaving so as to maintain the public's trust in the auditing profession; and respecting confidentiality except where disclosure is in the public interest or is required to adhere to legal and professional responsibilities.

Objectivity: Acting and making decisions and judgments impartially, fairly and on merit (having regard to all considerations relevant to the task in hand but no other), without discrimination, bias, or compromise because of commercial or personal self-interest, conflicts of interest or the undue influence of others, and having given due consideration to the best available evidence.

Independence: Freedom from conditions and relationships which, in the context of an engagement, would compromise the integrity or objectivity of the firm or covered persons.

Reasonable and informed third party: Consideration of whether the ethical outcomes required by the overarching principles and supporting ethical provisions have been met should be evaluated by reference to the perspective of an objective, reasonable and informed third party (sometimes referred to as the 'Third Party Test').

Covered person: A person in a position to influence the conduct or outcome of the engagement.

Close family: A non-dependent parent, child or sibling.

Person closely associated: This is:

(a) a spouse, or partner considered to be equivalent to a spouse in accordance with national law;

(b) a dependent child;

(c) a relative who has lived in the same household as the person with whom they are associated for at least one year;

(d) a firm whose managerial responsibilities are discharged by, or which is directly or indirectly controlled by, the firm/person with whom they are associated, or by any person mentioned in (a), (b) or (c) or in which the firm or any such person has a beneficial or other substantially equivalent economic interest; or

(e) a trust whose managerial responsibilities are discharged by, or which is directly or indirectly controlled by, or which is set up for the benefit of, or whose economic interests are substantially equivalent to, the firm/person with whom they are associated or any person mentioned in (a), (b) or (c).

7.1.2 Self-interest threat

Financial interests	The parties listed below are **not allowed** to own a direct financial interest or an indirect material financial interest in an audited entity:
	• The audit firm • Any partner in the audit firm • Any person in a position to influence the conduct and outcome of the engagement ie, a covered person (eg, a member of the engagement team) • Any person closely associated with any such partner or covered person The following **safeguards** will therefore be relevant: • Disposing of the interest • Removing the individual from the team if required • Keeping the audited entity's audit committee informed of the situation • Using an independent partner to review work carried out if necessary

Business relationships (eg, operating a joint venture between the firm and the client)	Firms, covered persons and persons closely associated with them must not enter into business relationships with any entity relevant to the engagement, or its management or its affiliates except where those relationships involve the purchase of goods on normal commercial terms and which are not material to either party or would be inconsequential in the view of an objective, reasonable and informed third party. Where a business relationship exists that is not permitted and has been entered into by the following parties: (a) The firm: either the relationship is terminated or the firm does not accept/withdraws from the engagement (b) A covered person: either the relationship is terminated or that person is excluded from any role in which they would be a covered person (c) A person closely associated with a covered person: either the relationship is terminated or the covered person is excluded from any role in which they would be a covered person.
Employment with assurance client	When a **partner** leaves the firm they may not be appointed as a director or to a key management position/ member of the audit committee with an audited entity, having acted as statutory auditor or key audit partner in relation to that audit before the end of: (a) in the case of a public interest entity, two years; and (b) in any other case, one year. Where a partner approved as statutory auditor is appointed as a director, a member of the audit committee or to a key management position having previously been a covered person: (a) in the case of a partner, at any time during the two years before the appointment; or (b) in the case of another person, at any time during the year before the appointment the firm must resign from the engagement where possible under applicable law or regulation. The firm cannot accept another engagement for the entity until: (a) in the case of a partner, a two-year period; or (b) in the case of another person, a one year period.
Governance role	The audit firm, a partner or employee of an audit firm shall not perform a role as an officer or member of the board of an entity relevant to the engagement.
Family and personal relationships	Where a covered person or any partner in the firm becomes aware that a person closely associated with them is employed by an entity and that person is in a position to exercise influence on the accounting records and financial statements relevant to the engagement they should be excluded from any role in which they would be a covered person eg, they should be removed from the audit team. Where a covered person or any partner in the firm becomes aware that a close family member who is not a person closely associated with them is employed by an entity and that person is in a position to exercise influence

	on the accounting records and financial statements relevant to the engagement they should report the matter to the engagement partner to take appropriate action. If it is a close family member of the engagement partner, the matter should be resolved in consultation with the Ethics Partner/Function.
Gifts and hospitality	Gifts, favours or hospitality should not be accepted unless an objective, reasonable and informed third party would consider the value to be trivial and inconsequential.
Loans and guarantees	Firms, covered persons and persons closely associated with them **must not enter into any loan or guarantee arrangement** with an audited entity that is not a bank or similar institution, and the transaction is made in the ordinary course of business on normal business terms and is not material to the entity.
Overdue fees	Firms should guard against fees building up, as the audit firm runs the risk of effectively making a loan. Where the amount cannot be regarded as trivial the engagement partner and ethics partner must consider whether it is necessary to resign. Generally, the payment of **overdue fees** should be required before the assurance report for the following year can be issued.
Percentage or contingent fees	Fees for the provision of engagements, non-audit and audit-related services to an entity relevant to an engagement, its parent undertaking and any worldwide controlled undertaking **shall not be contingent fees**. The firm and any of its network firms shall not provide any non-audit /additional services, to or in respect of an entity relevant to an engagement, wholly or partly on a contingent fee basis
High percentage of fees	The Ethical Standard includes a 70% cap in respect of non-audit services provided to an audit client as follows: (a) Total fees for non-audit services provided to a public interest entity audit client must be limited to no more than 70% of the average fees paid in the last three consecutive financial years for the audit. (b) Total fees for such services provided by the audit firm must be limited to no more than 70% of the average of the fees paid to the audit firm in the last three consecutive financial years for the audits of the entity. Where total fees (audit and non-audit services) from an audited entity are expected to regularly exceed 15% of the annual fee income of the audit firm (10% in the case of a public interest entity or other listed entity), the firm should resign or not stand for reappointment. Where total fees from an audited entity are expected to regularly exceed 10% of the annual fee income, but will not regularly exceed 15% (5% and 10% in the case of a public interest entity or other listed entity) the audit engagement partner should disclose that fact to the ethics partner and those charged with governance of the audited entity and consider whether appropriate safeguards should be applied to reduce the threat to independence. Non-public-interest entities will also require an external independent quality control review to be undertaken if the 10-15% category applies.
Lowballing	Where the fee quoted is significantly lower than would have been charged by the predecessor firm, the engagement partner must be satisfied that: • the **appropriate staff** are used **and time** is spent on the engagement; and • all applicable **assurance standards, guidelines** and **quality control procedures** have been complied with.

	The engagement partner must be able to demonstrate that the engagement has assigned to it sufficient partners and staff with appropriate time and skills, irrespective of the fee charged. Fees must not be influenced or determined by the provision of non-audit/additional services to an entity.

7.1.3 Self-review threat

Service with an assurance client	Individuals who have been a director or officer of the client, or an employee in a position to exert direct and significant influence over the financial statements on which the firm will express an opinion should not be assigned to the audit team. The Ethical Standard states that in this situation the individual should be excluded from any role in which they would be a covered person for a period of two years following the date of leaving the entity.
Preparing accounting records and financial statements	The Ethical Standard prohibits the provision of accounting services where: (a) the entity is a listed entity; or (b) for any other entity if those accounting services would involve the firm undertaking the role of management or the services are anything other than routine and mechanical, requiring little or no professional judgement. Where accounting services are provided, **safeguards** include: • using staff members other than engagement team members to carry out work; • a review of the accounting services provided by a partner or other senior staff member with relevant expertise who is not a member of the engagement team; and • a review of the engagement by a partner or other senior staff member with relevant expertise who is not a member of the engagement team. BSEC CG Guideline states that firms should not prepare accounts for financial statements for listed audited entities.
Provision of other services	BSEC CG Guideline states that firms should not provide other non audit services for listed audited entities These include: • Valuation services • Taxation services • Internal audit services • Corporate finance services • Information technology services • Litigation support services While in principle the provision of other services is allowed to non- listed clients, the threat of self-review must be considered particularly where the matter in question will be material to the financial statements. Safeguards may mitigate the threats in some circumstances. In particular, the service should not be provided where the audit firm would undertake part of the role of management.

7.1.4 Advocacy threat

Arises where the assurance firm is in a position of taking the client's part in a dispute or somehow acting as their advocate. Examples: If the firm carried out corporate finance work for the client; eg, if the audit firm were involved in advice on debt restructuring and negotiated with the bank on the client's behalf. • If the firm offered legal services to a client and, say, defended them in a legal case.	The Ethical Standard prohibits the provision of **legal services** for public interest entities with respect to: • the provision of legal counsel; • negotiating on behalf of the audit client; and • acting in an advocacy role in the resolution of litigation. For other entities legal services should not be provided where it would involve acting as the solicitor formally nominated to represent the client in resolution of a dispute or litigation which is material to the financial statements.

7.1.5 Familiarity threat

Long association	The Ethical Standard also requires all firms to monitor the relationship between staff and established clients. As per the IESBA Code, for audits of Public Interest Entities, an individual cannot serve as the engagement partner, the person responsible for the engagement quality control review, or any other key audit partner role (or a combination of these roles) for more than seven cumulative years. This duration is referred to as the "time-on period." After this period, the individual must observe a cooling-off period as specified in paragraphs R540.11 to R540.19. The cooling-off periods are as follows for individuals who have held these roles for seven cumulative years: • Engagement partner: five consecutive years • Individual responsible for the engagement quality control review: three consecutive years • Individual who has acted in any other key audit partner role: two consecutive years Under the jurisdictional provision, where a legislative or regulatory body (or organization authorized or recognized by such legislative or regulatory body) has established a cooling-off period for an engagement partner of less than five consecutive years, that shorter cooling-off period may be applied, subject to a floor of three years, provided that the applicable time-on period does not exceed seven years. In Bangladesh, the mandatory rotation of auditors for banks, finance companies, and listed companies is governed by regulations set by the Bangladesh Bank and the Bangladesh Securities and Exchange Commission (BSEC). According to the guidelines issued by the Bangladesh Bank, banks and NBFIs must rotate their external auditors every three years. An audit firm can be reappointed after a break of one year following the completion of its three-year term. In some cases, banks and finance companies may be

	required to appoint joint auditors. This means that two separate audit firms are engaged simultaneously to conduct the audit, enhancing audit quality and oversight. The Bangladesh Securities and Exchange Commission (BSEC) mandates that listed companies must rotate their auditors every three years. An audit firm can be reappointed after a break of one year. This means that even if the firm remains the same, the lead audit partner must be changed after a specified period, typically five years.
Recruitment and remuneration services	The firm **shall not provide recruitment services** to an entity relevant to an engagement, that would involve the firm taking responsibility for, or advising on the appointment of any director or employee of the entity, or a significant affiliate of such an entity, where the firm is undertaking an engagement. (Ethical Standard s.5.85) The firm **shall not provide advice on the remuneration package or the measurement criteria** on which the remuneration is calculated, for any director or employee of the entity, or a significant affiliate of an entity relevant to an engagement. (Ethical Standard s.5.86)

7.1.6 Intimidation threat

Litigation	Generally, where litigation threatens integrity, objectivity and independence, the normal course of action would be for the firm to resign. However, the firm is not required to resign immediately in circumstances where a reasonable and informed third party would not regard it in the interests of the shareholders for it to do so. This might be the case where: • the litigation was started as the engagement was about to be completed and shareholders would be adversely affected by the delay; or • on legal advice, the firm deems that the litigation is designed solely to bring pressure to bear on the auditor's opinion.

7.1.7 Management threat

Arises when the firm undertakes non-audit services for audit clients which involves making judgements and taking decisions that are the responsibility of management (and due to the alignment of such responsibilities could diminish the firm's professional scepticism)	• If there is **informed management** (ie, management capable of making independent judgements and decisions on the basis of the information provided) safeguards may be able to mitigate the threat • If there is no informed management, it is unlikely that the threat can be avoided if the work is undertaken.

Note: A given situation may give rise to more than one threat.

Professional skills focus: Concluding, recommending and communicating

Questions are unlikely to simply ask you what the problem is - they will also expect some form of recommended action for the firm or accountant to take. Each part of the various Codes and Standards is designed to suggest responses but it is up to you to explain what you believe to be the right one and why.

Summary

Further question

1 Knowledge diagnostic

Before you move on to question practice, confirm you are able to answer the following questions having studied this chapter. If not, you are advised to revisit the relevant learning from the topic indicated.

	Confirm your learning
1.	Can you identify behaviour in a given scenario that may be considered unethical?
2.	Do you know the various ethical codes and standards that you are expected to use and can you find them in your open book permitted text?
3.	Can you differentiate between the ethical issues faced by accountants in business and by auditors working in practice?
4.	Can you identify the various threats raised by certain situations and explain the most suitable response?
5.	Are you aware of current developments in response to money laundering?

2 Question practice

Aim to complete all self-test questions at the end of this chapter. The following self-test questions are particularly helpful to further topic understanding and guide skills application before you proceed to the next chapter.

Question	Learning benefit from attempting this question
Easter	Use this as good practice of how to interrogate the open book permitted text for responses to a series of discrete ethical scenarios.
Marden plc	Having looked at some individual issues, now attempt something more exam-standard where you have to unpick the ethical issues from a larger and more complex scenario.

Once you have completed these self-test questions, it is beneficial to attempt the following questions from the Question Bank for this module. These questions have been selected to introduce exam style scenarios that will help you improve your knowledge application and professional skills development before you start the next chapter.

Question	Learning benefit from attempting this question
Poe, Whitman and Co	Here, you have been asked about practical and ethical issues related to your late appointment as group auditor. This requires a more methodical approach to consider the issues when reading the whole scenario.
UHN	This is a self-contained requirement to consider a one-off assignment but in the field of cyber-security – this presents a number of threats so your answer should adopt as broad a scope as possible.

Refer back to the learning in this chapter for any questions which you did not answer correctly or where the suggested solution has not provided sufficient explanation to answer all your queries. Once you have attempted these questions, you can continue your studies by moving on to the next chapter.

Self-test questions

Answer the following questions

1 Easter

You are a partner in a firm of chartered accountants. The following issues have emerged in relation to three of your clients:

(1) Easter is a major client. It is listed on a major exchange. The audit team consists of eight members, of whom Paul is the most junior. Paul has just invested in a personal pension plan that invests in all the listed companies on the exchange.

(2) While listed, Easter has subsidiaries in five different European countries. Tax regimes in those countries vary on the absolute rate of tax charged as well as expenses allowable against taxable income. The Finance Director of Easter has indicated that the Easter group will be applying management charges between different subsidiaries to take advantage of favourable tax regimes with the five countries. The FD reminds you that another firm offering assurances services, Bunny & Co, has already approved the management charges as part of a special review carried out on the group and the FD therefore considers the charges to be legal and appropriate to Easter.

(3) You are at the head of a team carrying out due diligence work at Electra, a limited company which your client, Powerful, is considering taking over. Your second in command on the team, Peter, who is a manager, has confided in you that in the course of his work he has met the daughter of the Managing Director of Electra, and he is keen to invite her on a date.

(4) Your longest standing audit client is Teddies, which you have been involved in for 10 years, with four years as engagement partner. You recently went on an extended cruise with the Managing Director on his yacht. The company is not a public interest entity or listed entity.

(5) You are also aware that the executive directors of Teddies were recently voted a significant increase in bonus by their audit committee. The financial statements of Teddies do show a small improvement in net profit, but this does not appear to justify the extent of bonus paid. You are also aware that the Finance Director of Teddies is a non-executive director of Grisly, while the Senior Independent Director of Teddies is the Finance Director of Grisly.

Requirement

Comment on the ethical and other professional issues raised by the above matters.

Note: Your answer should outline the threat arising, the significance of the threat, any factors you have taken into account and, if relevant, any safeguards you could apply to eliminate or mitigate against the threat.

2 Saunders plc

Bourne & Berkeley is an assurance firm with a diverse range of audit clients. One client, Saunders plc, is listed on the stock exchange. You are the engagement partner on the audit; you have been engagement partner for four years and have an experienced team of eight staff to carry out the audit. The audit is made slightly more complicated because Bourne & Berkeley rent office space from Saunders plc. The total rental cost of that space is about 10% of the total income from Saunders plc. Office space is made available to other companies, including Walker Ltd, another of your audit clients. You are aware from the audit of Walker Ltd that the company is close to receivership and that the rent arrears is unlikely to be paid by Walker to Saunders.

In an interesting development at the client, the Finance Director resigned just before the audit commencing and the board asked Bourne & Berkeley for assistance in preparing the financial statements. Draft accounts were available, although the final statutory accounts had not been produced.

As part of your review of the draft accounts you notice that the revenue recognition policy includes an estimate of future revenues from the sale of deferred assets. One of the activities of Saunders plc is the purchase of oil on the futures market for delivery and resale between 6 and 12 months into the future. As the price of oil rises, the increase has been taken to the statement of profit or loss and other comprehensive income. When queried, the directors of Saunders state that while the accounting policy is new for the company, it is comparable with other firms in the industry and they are adamant that no amendment will be necessary to the financial statements. They are certain that other assurance firms will accept the policy if asked.

Requirement

Discuss the ethical and professional issues involved with the planning of the audit of Saunders plc.

3 Marden plc

At 6pm on Sunday evening a text message arrives for you from your audit manager, John Hanks, stating:

"Please check your email urgently"

On checking your email, you find the following message.

"I hope you had a good weekend. Instead of coming into the office tomorrow morning I would like you to go to a client called Marden plc. I know you have not worked on this client before so I am emailing you some background information (**Exhibit 1**). One of our audit juniors, Henry Ying, was at Marden's head office last week working on the interim audit and he has come up with a schedule of issues that are worrying me (**Exhibit 2**). Henry does not have the experience to deal with these, so I would like you, as a senior, to go out there and prepare a memorandum for me which sets out the financial reporting implications of each of these issues. I would also like you to explain in the memorandum the ethical issues that arise from these issues and the audit procedures required for each of the matters on Henry's schedule. I will visit Marden on Tuesday to speak to the directors.

John"

Requirement

Prepare the memorandum requested by your audit manager.

Exhibit 1: Background information

Marden plc operates a fleet of 10 executive jets available for private hire. The jets are based in Europe, the US and the Far East, but they operate throughout the world. The company is resident in the UK.

The jets can be hired for specific flights, for short periods or for longer periods. For insurance purposes, all planes must use a pilot employed by Marden. All the jets are owned by Marden.

Marden has an Alternative Investment Market listing. Ordinary share capital consists of five million £1 shares. The ownership of share capital at 1 January 20X6 was:

Directors	25%
Financial institutions	66%
Jack Airlines plc	9%

The company uses an interest rate of 10% to discount the cash flows of all projects. The accounting year end is 31 December.

Exhibit 2: Interim audit issues Prepared by Audit Junior: Henry Ying

In respect of the interim audit of the financial statements for the year to 31 December 20X6 the following issues have arisen.

(1) Marden appears to have inadvertently filed an incorrect tax return for last year showing a material understatement of its corporation tax liability for that year and has therefore paid significantly less corporation tax than it should have. Our firm is not engaged as tax advisers. The directors are now refusing to inform HM Revenue & Customs of the underpayment, as they say that 'it is in the past now'. I am not sure of our firm's obligations in this matter.

(2) One of the directors, Dick Tracey, owns a separate travel consultancy business. He buys unused flying time from Marden to sell to his own clients. In the year to 31 December 20X6 to date he has paid Marden £30,000 for 100 hours of flying time made available.

(3) On 16 September 20X6 a major customer, Stateside Leisure Inc, gave notification to Marden that the service it had been receiving was poor and it was therefore considering terminating its long- term contract with the company. The contract amounted to 15% of Marden's revenue and 25% of its profit in 20X5. The directors did not make an immediate announcement of this and so the share price did not initially change. Four directors sold a total of 200,000 shares in Marden plc on 2 October 20X6. Stateside Leisure Inc terminated the contract on 1 November 20X6 and the directors disclosed this to the London Stock Exchange the same day. The price per share then fell immediately from £7.50 to £6.

(4) Our audit fee for the year to 31 December 20X5 is still outstanding and is now overdue by five months.

(5) I have selected a sample jet to be physically inspected. I selected this jet because it does not appear to have flown since December 20X5. The jet in question cost £6 million on 1 January 20W8 and has a useful life of 10 years with a residual value of £1 million. Each jet is expected to generate £2 million income per year net of expenses.

    The directors say that this jet is located in the US, but they have offered to fly a member of our audit team out there in one of their executive jets. They insist that a jet needs to go there anyway so there would be no cost to Marden by making transport available to us.

(6) On 28 August 20X6 Jack Airlines plc – a large, listed company which operates a discount airline – acquired 1 million shares in Marden from financial institutions. On 20 October 20X6 Jack Airlines plc announced to the London Stock Exchange that it intends to make a bid for the entire share capital of Marden and at the same time requested that our firm, as Marden's auditors, should carry out the due diligence work in respect of the bid.

    Now go back to the Introduction and ensure that you have achieved the Learning outcomes listed for this chapter.

Answers to Interactive questions

Answer to Interactive question 1

1.1 Factors

The request was made by her superiors.

- Financially she may have felt pressure to keep her job.
- Potential prospect of being rewarded through promotion and pay rises.
- Inability to decide how to deal with the situation.

1.2 Other courses of action

She could have:

- refused to make the adjustments;
- brought the matter to the attention of other senior members of staff eg, internal audit;
- resigned;
- sought advice from her relevant professional body;
- sought legal advice; or
- reported the matter to the relevant authorities eg, SEC at an earlier stage.

Answer to Interactive question 2

Potential ethical risk areas

Personal interests	Review of your own work	Disputes	Intimidation
Undue dependence on an audit client due to fee levels	Auditor prepares the accounts	Actual litigation with a client	Any threat of litigation by the client
Overdue fees becoming similar to a loan	Auditor participates in management decisions	Threatened litigation with a client	Personal relationships with the client
An actual loan being made to a client	Provision of any other services to the client	Client refuses to pay fees and they become long overdue	Threat of any services being put out to tender
Contingency fees being offered			
Accepting commissions from clients			
Provision of lucrative other services to clients			
Relationships with persons in associated practices			
Relationships with the client			

Personal interests	Review of your own work	Disputes	Intimidation
Long association with clients			
Beneficial interest in shares or other investments			
Hospitality			

Answer to Interactive question 3

3.1 Issues

(1) Teresa is at present a member of the engagement team and a member of her immediate family now owns a direct financial interest in the audit client. This is unacceptable.

If someone closely associated with a covered person holds a financial interest in the audit client, Stewart Brice needs to apply the following safeguards:

- Ensure that this person disposes of the shares immediately
- Remove Teresa from the engagement team (FRC Ethical Standard, para 2.9)

The financial interest has arisen from an inheritance by Teresa's husband, who has indicated that he would like to keep hold of the investment. The FRC ES paras. 2.11-12 requires that these shares should be disposed of as soon as possible and while this is being arranged, Teresa should be removed from the engagement team.

The firm should appraise the audit committee of Recreate of what has happened and the actions it has taken. The partners should consider whether it is necessary to bring in an independent partner to review audit work. However, given that Teresa's involvement is subject to the review of the existing engagement partner and she was not connected with the shares while she was carrying out the work, a second partner review is likely to be unnecessary in this case.

(2) The audit firm has an indirect financial interest in the parent company of a company it has been invited to tender for by virtue of its pension scheme having invested in Tadpole Group. The FRC ES would classify this indirect financial interest as a diversified collective investment scheme.

This is no barrier to the audit firm tendering for the audit of Kermit Co.

Should the audit firm win the tender and become the auditors of Kermit Co it should consider whether it is necessary to apply safeguards to mitigate against the risk to independence on the audit as a result of the indirect financial interest.

The factors that the partners will need to consider are the materiality of the interest to either party and the degree of control that the firm actually has over the financial interest. (FRC Ethical Standard, para. 2.13, 2.19)

In this case, the audit firm has no control over the financial interest. An independent pension scheme administrator is in control of the financial interest. In addition, the interest is unlikely to be substantial and is therefore immaterial to both parties. It is likely that this risk is already sufficiently minimal as to not require safeguards. However, if the audit firm felt that it was necessary to apply safeguards, it could consider the following:

- Notifying the audit committee of the interest
- Requiring Friends Benevolent to dispose of the shares in Tadpole Group

3.2 In this case, Stewart Brice has a direct financial interest in the audit client, which is technically prohibited by ethical guidance. However, it is a requirement of any firm auditing the company that the share be owned by the auditors.

The interest is not material. The audit firm should safeguard against the risk by not voting on its own re-election as auditor. The firm should also strongly recommend to the company that it removes this requirement from its constitution, as it is at odds with ethical requirements for auditors.

Answer to Interactive question 4

The issues to consider would include the following:

- Whether the management have made the decision to make the change in accounting treatment of a proportion of the subscription income on a valid and ethical basis.
- Management are under pressure not to breach the loan covenants. With the change in timing of the recognition the interest cover is only just achieved in both 20X7 and 20X8. This suggests that without this change the covenant would be breached indicating that profit levels are sensitive.
- The auditor's responsibility to all stakeholders, including shareholders.
- In this case the auditor would have a legal and moral responsibility to the venture capitalists who have invested in Bellevue Ltd, to ensure that profits are fairly stated.
- The implications of the disagreement with the treatment by the audit manager in 20X7 which was overruled by the partner. This is now of particular concern, as the audit partner has left the firm abruptly. This potentially raises questions about the integrity of the partner.
- Whether there is sufficient evidence to support the conclusion that some of the subscription fees are consultancy in nature and should therefore be recognised as the work is completed ie, when the performance obligation is satisfied (IFRS 15) rather than being recognised over the duration of the contract.
- Whether fees treated as subscription fees in previous years should have been recognised as consultancy fees resulting in the need for a prior-period adjustment.
- The basis on which the figure of 40% was established and whether there is evidence to support this estimation, particularly as this is exactly the same percentage as applied in 20X7.
- The overall increase in audit risk due to the need to comply with the loan agreement.

Answers to Self-test questions

1 Easter

Issues

(1) In relation to Easter, there is a threat of self-interest arising, as a member of the audit team has an indirect financial interest in the client.

The relevant factors are as follows:

- The interest is unlikely to be material to the client or Paul, as the investment is recent and Paul's interest is in a pool of general investments made in the exchange on his behalf.
- Paul is the audit junior and does not have a significant role on the audit in terms of drawing audit conclusions or audit risk areas.

The risk that arises to the independence of the audit here is therefore not significant. It would be inappropriate to require Paul to divest his interest in the audit client. If I wanted to eliminate all elements of risk in this situation, I could simply change the junior assigned to my team, but such a step is not vital in this situation.

(2) Regarding the management charges, there is a threat that the management charges are accepted as correct, simply because another assurance firm has recommended those charges to Easter.

To query the charges could imply a lack of trust in Bunny, with the possible effect of bringing the profession into disrepute. There is a risk that you as the assurance professional may not have the necessary knowledge to determine whether or not Easter has been acting correctly. There is also an intimidation threat in that the client is implying the charges are valid as another assurance firm has recommended the changes.

The relevant factors to take into account include the following:

- The legality or otherwise of the transactions. Information concerning the management charges must be obtained and compared to the law, not only of the individual countries but also of the EU as a whole. It remains a possibility that Easter has acted in accordance with laws of individual jurisdictions, but not the EU overall.
- Your level of knowledge. Where necessary, specialist advice must be obtained from the taxation department to determine the legality or otherwise of the transactions.
- The materiality of the management charges involved and the reduction in the taxation expense. Given that Easter is attempting to minimise its taxation charge, then the amounts are likely to be material and therefore as the audit firm, the transactions will have to be audited.
- Your knowledge of Bunny & Co. The assurance firm may well be skilled in advising on this type of issue, in which case there is likely to be less of an issue with the legality of the charges. However, if the reputation of Bunny is suspect, then additional work on the management charges may be required.

The intimidation threat is significant; it is unlikely that Easter would expect your firm to query the charges as another professional firm has confirmed them. A discussion with the FD may be required to confirm the purposes of the audit and the extent of evidence required to reach an audit opinion. Material transactions affecting the financial statements and taxation charges must be subject to standard audit procedures.

Your potential lack of knowledge is relatively easy to overcome. Specialist advice can be obtained from the taxation department, with a tax manager/partner being present in any discussion with the client to determine legality of the management charges.

(3) In relation to Powerful, two issues arise.

The first is that the firm appears to be providing multiple services for Powerful, which could raise a self-interest threat. The second is that the manager assigned to the due diligence assignment wants to engage in a personal relationship with a person connected to the subject of the assignment, which could create a familiarity or intimidation threat.

With regard to the issue of multiple services, insufficient information is given to draw a conclusion as to the significance of the threat. Relevant factors would be such matters as the nature of the services, the fee income and the team members assigned to each. Safeguards could include using different staff for the two assignments and review by a partner not connected to the Powerful engagement.
The risk is likely to be significant only if one of the services provided is audit, which is not indicated in the question.

In relation to the second issue, the relevant factors are these:

- The assurance team member has a significant role on the team as second in command.
- The other party represents a close family member at the company being reviewed.
- Timing.

In this situation, the firm is carrying out a one-off review of the company, and timing is a key issue. Presently Peter does not have a personal relationship which would significantly threaten the independence of the assignment. In this situation, the safeguard is to request that Peter does not take any action in that direction until the assignment is completed. If he refuses, then I may have to consider rotating my staff on this assignment, and removing him from the team.

(4) In relation to Teddies, there is a risk that my long association and personal relationship with the client will result in a familiarity threat.

This is compounded by my acceptance of significant hospitality on a personal level. The

relevant factors are as follows:

- I have been involved with the client for 10 years and have a personal relationship with client staff.
- The company is not a listed or public interest company.
- It is an audit assignment.

The risk arising here is significant but, as the client is not listed, it is not insurmountable. However, it would be a good idea to implement some safeguards to mitigate against the risk. I could invite a second partner to provide a hot review of the audit of Teddies, or even consider requesting that I am rotated off the audit of Teddies for a period, so that the engagement partner is another partner in my firm. In addition, I must cease accepting hospitality from the directors of Teddies unless it is clearly trivial and inconsequential.

If the independence issue cannot be resolved then the audit firm may also consider resigning from the audit of Teddies.

(5) It appears that there are cross-directorships between Teddies and Grisly.

In other words, at least one executive in Teddies assists in setting the bonuses of directors in Grisly, and at least one executive in Grisly is involved in setting the bonuses of directors in Teddies. This issue provides an independence threat for those directors, especially so if the FDs are members of a professional body such as ICAB.

There is a further point, that you as engagement partner are aware of the issue, but your independence may be compromised by the cruise with the managing director. There is also the issue of the lack of clear reporting obligations in this situation. Most codes of corporate governance require the directors of the company to make statements of compliance with that code, and in many situations cross-directorships are not explicitly banned.

Factors to consider include:

- Whether the directors are members of a professional body. If so, the engagement partner could tactfully ask whether there are independence conflicts and how these will be resolved.
- The level of bonuses awarded in Grisly. If these appear to be nominal then the issue of lack of independence regarding the bonuses in Teddies is reduced.
- Whether Teddies has audit and remuneration committees and whether these are effective in determining director remuneration and communicating concerns of the auditor to the board. As auditor, you have access to the audit committee but not the remuneration committee, so there is no precise way of raising concerns with the remuneration committee.
- To a certain extent, the association threat of being linked to a client where the code of corporate governance may not be being followed.

As the engagement partner, it would be appropriate to mention the perceived lack of independence with the Finance Director. This may be directly rather than via the audit committee due to the lack of communication you have with the remuneration committee. The result of any communications must be documented in the audit file, even where communication is simply verbal.

The association risk is probably minimal, although will increase where your firm also provides assurance services to Grisly. Where there are significant and continued breaches of the code of governance, then your firm may consider not acting for Teddies in the future. Provision of additional disclosure is compromised by lack of reporting obligations and your independence issue with the managing director of Teddies.

2 Saunders plc

Issues

(1) The rental of the premises from an audit client represents a business relationship which poses a potential threat to objectivity.

- Bourne & Berkeley would be able to continue to act if the arrangement is:
  - in the ordinary course of business;
  - on an arm's length basis; and
  - not material to either party.
- In this case the rental income is likely to be material to the audit client, as it represents 10% of total income.
- The audit firm would need to take immediate steps to terminate either the client or the business relationship.

(2) The Ethical Standard prohibits accounts preparation work for listed company audit clients.

- In this case it is likely that the preparation of the financial information will involve the auditor in making subjective judgements, as the internal reporting format will need to be converted into the statutory format. Decisions will need to be made about, for example, the level and nature of disclosures. This would constitute an accountancy service and would not be allowed.

(3) There is a conflict of interest here.

While it may be in the interest of Saunders plc for the auditor to disclose the information regarding the recoverability of the debt, this information is confidential, as it was obtained in the course of audit work performed for Walker Ltd. Disclosure of this information to Saunders plc would breach the duty of confidentiality.

- The Code of Ethics requires that the auditor should disclose a conflict of interest to the parties involved. In this case, however, the situation is complicated by the fact that the conflict of interest has had a practical consequence rather than simply being a potential problem. In addition, it may be difficult to make the communication without revealing confidential information.
- The firm should consider whether there were sufficient procedures in place to prevent the conflict of interest occurring in the first place.
- The Code states that the auditor should take steps to identify circumstances that could pose a conflict of interest and to put in place any necessary safeguards eg, use of separate audit teams.
- If procedures were inadequate this may have implications for other clients.
- If the balance is not material further action is unlikely to be necessary. If the balance is material the situation will need to be addressed.
- Saunders plc may be aware of the potential irrecoverability of the debt and an allowance for an irrecoverable receivable may have been made in the financial statements.
- If an adjustment has been made and the auditor is in agreement with it no further action would be required.
- Independent evidence may be available which would indicate that the debt was irrecoverable. For example, there may have been correspondence between Saunders plc and Walker Ltd concerning the payment of the balance. There may also be evidence in the public domain, for example newspaper reports and the results of credit checks. However, the auditor would need to consider how this evidence was used, particularly if it was sought as a result of having the confidential information.
- The audit manager could consider requesting Walker Ltd to communicate with Saunders plc.
- This may not be acceptable to Walker Ltd, who may feel that any communication would not be in their interest. It may also make any future relationship between the auditor and Walker Ltd difficult.
- If the issue cannot be resolved and the balance is material the auditor will not be able to form an audit opinion. Bourne & Berkeley will need to consider resigning as the auditor of Saunders plc.

(4) Revenue recognition policy

It appears that Saunders plc is attempting to implement a change in accounting policy which increases revenue, while at the same time intimidating the auditors to accept this policy. There is an implied threat that Bourne & Berkeley will be removed from office if the accounting policy is not accepted.

Factors to consider include the following:

- The materiality of the amounts involved. Given that the accounting policy is an attempt to increase revenue, the amount is likely to be material – again it would be unlikely that the directors would want to spend the time and effort if this was not the case.

- The accounting policies adopted by similar firms in the industry. The directors of Saunders have noted that the income recognition policy is the same as other firms in the industry. Accounts of similar firms need to be obtained and the accounting policies checked. If the policies are the same as Saunders, and the technical department of Bourne & Berkeley confirm that the policy follows GAAP, then no modification of the auditor's report will be required, although audit evidence will be obtained to confirm the correct application of the policy. If the revenue recognition policy is inappropriate, then additional discussion will be required with the directors to determine whether they will continue with the policy, and risk a modified report, or amend the policy.
- Whether the directors would actually seek to remove Bourne & Berkeley if the revenue recognition policy does not follow GAAP and the auditor's report will be modified. The audit firm needs to document the situation and be prepared to provide a statement on why it is being removed in accordance with Companies Act requirements.

Bourne & Berkeley will find it difficult to remove the intimidation threat. Advice can be obtained from the ethics partner, although it is unlikely that the firm's position can be defended by agreeing to an accounting policy if this does not follow GAAP. Bourne & Berkeley will need to maintain its integrity by insisting that appropriate accounting policies are followed, even where this risks losing an audit client.

3 Marden plc

MEMO

To Audit manager From Audit senior Date XX-XX-XX

Re Accounting issues of Marden plc

(1) Understatement of tax liability Audit and ethics

The understatement of the tax liability is an illegal act by the client. Tuesday's meeting offers the opportunity to attempt to persuade the client even at this late stage.

Consider whether a partner needs to be at the meeting given the ethical importance of the issue. The key issue is the conflict between our duty to report and our duty of confidentiality.

According to ethical requirements in terms of reporting, this may be:

- where there is a duty to disclose
- where there is a right to disclose

Suggested actions if the client continues to refuse to disclose to HMRC:

- Our views should be put in writing to the client
- Report to the audit committee if there is one
- Refer the matter to senior personnel in our firm – eg, the ethics partner
- The firm must consider whether to cease to act for the client
- Consider whether this is a 'whistleblowing' incident in the public interest

Financial reporting

If there is a material unrecognised liability in the financial statements then we need to consider whether the financial statements give a true and fair view. Any material understatement of the tax provision would need to be reflected in the auditor's report. The level of detail as to the cause of the misstatement raises confidentiality considerations.

(2) Related party transaction Audit and ethics

The audit issue in this case is that there is a potential conflict of interest between a director and the body of shareholders.

Directors also have a fiduciary duty to act in the interests of all shareholders. Directors must not place themselves in a position where there is a conflict of interest between their personal interests and their duty to the company (Regal (Hastings) Ltd v Gulliver). In certain circumstances the company may void such contracts.

More specifically, the audit risk in this case is that the price of £30,000 for the use of the jet might not be an arm's length price in terms of an hourly rate for this type of hire. At £300 per hour including the pilot's time there is a risk that the director, Dick Tracey, may be exploiting his position.

The Companies Act imposes restrictions on the dealings of directors with companies in order to prevent directors taking advantage of their position. This applies even where the directors are shareholders, but particularly where the interests of non-controlling, or outside, shareholders may be damaged.

If there has not been knowledge and approval of the transactions by the other directors then there may be an issue of false accounting by Dick Tracey.

Audit procedures:

- Review provisions in Articles of Association regarding directors' contracts with the company
- Examine the terms of the contract(s) ascertaining the nature of the hire agreements
- Ascertain whether any similar arm's length hires took place and at what prices (see evidence of such agreements where appropriate)
- Ascertain whether the other directors were aware of the nature and extent of the hire contracts (eg, review correspondence)
- Review board minutes to see if the hire contracts have been considered and formally approved by the board

Financial reporting

Transactions involving directors are required to be disclosed in the financial statements by both the Companies Act 2006 and IAS 24, *Related Party Disclosures*.

A director is part of key management personnel and thus is a related party of the company. According to IAS 24 the transaction should be disclosed irrespective of its materiality. However, the name of the director need not be disclosed.

As a result, the hire fees are likely to be deemed to be a related party transaction and thus the following disclosures should be made:

- Amounts involved
- Amounts due to or from the related party
- Irrecoverable debt write-offs to or from the related party

(3) Directors' share trading Audit and ethics

There are two issues in this case:

- The failure to make a timely disclosure for personal gain by the directors
- The consequences of the underlying event of the loss of a major contract

The failure to announce the loss of the contract might leave the directors in breach of their fiduciary duty to shareholders, as they may have manipulated the market for their own gain.

Consider taking legal advice as to whether an illegal act has been committed, as the initial communication from Stateside in September was only about poor service. The formal notification of the contract being terminated by Stateside was immediately communicated to the London Stock Exchange by the directors. If this is considered illegal, it could represent money laundering under the Proceeds of Crime Act and as such, care must be taken to avoid tipping off.

Consider also taking advice as to whether stock market rules have been breached by the directors individually and by the company. This might affect quality of markets and may be contrary to insider trading laws.

Regarding the underlying event of the loss of a major customer, consideration needs to be given as to whether going concern is affected by the loss of such a large contract (eg, if the service is poor, will other major contracts be lost?).

Financial reporting

Consider whether any provision is necessary once advice is received on whether the company has committed an illegal act (as opposed to the directors themselves) or has been in breach of regulations. Provisions might include fines or other penalties imposed by the courts or regulators.

If there has been a significant decline in activity, then impairment needs to be considered on the jets if their value in use has decreased.

Consider recoverability of amounts outstanding from Stateside Leisure Inc.

(4) Audit fee outstanding Audit and ethics

It may be that the matter of the overdue fees can be resolved amicably at Tuesday's meeting.

If, however, the fee remains outstanding, it may be a threat to our independence. This may be because it biases our opinion against the client. Alternatively, it may be that we do not wish to put the client's going concern at risk, as this may reduce the likelihood of us receiving payment.

In effect, the overdue fee may be similar to a loan to the client which is not permitted. Actions may include the following:

- A review by an independent partner (perhaps the ethics partner) who is not involved in the audit to agree that the objectivity of the engagement staff is not affected. This should really have been completed before commencement of the audit so it is now a matter of urgency.
- If legal action is necessary to recover the fees it would not be possible for us to continue acting for the client, as the Revised Ethical Standard 2019 prohibits, in most circumstances, auditors acting for clients where there is actual or potential litigation between the two parties.

Financial reporting

A provision should be made for the audit fee outstanding.

(5) Physical inspection of jets Audit and ethics

There are two issues here.

- The fact that one jet appears not to have been used
- The offer of 'free' transport on an executive jet may be deemed as a gift

The fact that a jet has not been used for some time may have a number of possible causes.

- Technical problems – the jet may not be serviceable. We need to establish whether this is the case (eg, hire an independent local aircraft engineer) then consider impairment testing.
- Lack of markets – there may be insufficient demand to warrant using the plane. This seems less likely, as the plane has not been used at all. Examine usage of other Marden planes in the US.
- Unrecorded usage – the jet may be being used but the usage is unrecorded and income understated. Alternatively, it might mean that improper use is being made of the company's assets (eg, by management).

Regarding the 'free' flight, gifts beyond what is considered trivial and inconsequential are not permitted. However, if the flight were merely for the purpose of the audit check and there were no added benefits (additional destinations, trips etc) then it may be permissible if agreed by the ethics partner.

Alternatively, a local firm of auditors could be used. The check might not just be the physical verification of the asset but also usage records (eg, flying logs, pilots' time).

Financial reporting

The jet has not been used for some time and therefore impairment testing needs to be considered.

Technical problems – The jet may not be fully serviceable, in which case it needs to be reviewed for impairment according to IAS 36 as both fair value and value in use may be affected.

The carrying amount at 31 December 20X6 of the jet is £1.5 million (ie, £6m – [£5m × 9/10])

The value in use, if fully operational (assuming year-end operating cash flows and including the residual amount) is:

(£2m + £1m)/1.1 = £2.73m

Thus, there is no impairment if the plane is fully operational (the fair value less costs of disposal calculation is not necessary as the value in use exceeds the carrying amount).

However, if the plane is not operational then both next year's net operating inflow and the residual value are likely to be affected. In this case an impairment charge of £1.5 million (less the present value of any residual value obtainable for a non-operational jet) may be required.

Lack of markets – There may be insufficient demand to warrant using the plane. This will affect value in use but perhaps not the residual value. Again, impairment testing may be needed as according to IAS 36 value in use may be affected.

If the jet is not operational next year, but can be sold for a residual value of £1 million next year (although selling immediately would be a better option in this case) the impairment charge is:

£1.5m – £1m/1.1 = £0.59m

Unrecorded usage – This may mean that any depreciation based on the amount of flying time may be understated.

Any impairment on this aircraft might have further implications for impairment of other aircraft if the cause is market based rather than technically based.

(6) Due diligence assignment Audit and ethics

Acceptance of the due diligence assignment is not permitted, as there would be a conflict of interest between our role as auditor of Marden and a due diligence role for the bidder for Marden, Jack Airlines plc.

The acquisition of one million shares would take Jack Airlines to a 29% holding (Note: 30% is the maximum permitted by the stock exchange before an offer needs to be made to all shareholders). The offer is therefore for the remaining shares. This is a key audit risk, as directors still hold a significant amount of the shares and this may influence their financial reporting, as the share price will be affected by the bid.

It might be noted that the announcement was made during the period that the share price was artificially inflated due to the Stateside Leisure Inc announcement, and this may ultimately affect the bid.

Financial reporting

There is no direct effect on the financial statements; however, consider:

- if the bid process is going into next year and the bid is to be defended, then a provision may need to be made for defence costs; and
- if the bid process is going into next year, then disclosure of the bid as a non-adjusting event after the reporting date may be necessary.

Chapter 4

Corporate governance

Introduction

Learning outcomes

- Explain and appraise the nature and consequences of corporate governance and accountability mechanisms in controlling the operating and financial activities of entities of differing sizes, structures and industries
- Explain the rights and responsibilities of the board, board committees (eg, audit and risk committees), those charged with governance and individual executive and non-executive directors, with respect to the preparation and audit of financial statements
- Explain and appraise the rights and responsibilities of stakeholder groups (eg, executive management, bondholders, government, securities exchanges, employees, public interest groups, financial and other regulators, institutional and individual shareholders) with respect to the preparation and audit of financial statements
- Evaluate and appraise appropriate corporate governance mechanisms
- Explain and evaluate the nature and consequence of relevant corporate governance codes and set out the required compliance disclosures
- Explain the principles, practices and disclosures of corporate governance
- Explain the respective responsibilities of those charged with governance and auditors for corporate risk management and risk reporting
- Explain the respective responsibilities of those charged with governance and auditors in respect of internal control systems
- Explain and evaluate the role and requirement for effective two-way communication between those charged with governance and auditors
- Describe and explain the roles and purposes of meetings of boards and of shareholders

Chapter study guidance

Use this schedule and your study timetable to plan the dates on which you will complete your study of this chapter.

Topic	Practical significance	Study approach	Exam approach	Interactive questions
1	**Relevance of corporate governance** To recap the topic, we have a section designed to remind you of what corporate governance is and why it is necessary.	**Approach** Remind yourself of the various milestones in corporate governance history. **Stop and think** Can you think of any other examples of poor governance like we saw at VW?	Questions in the exam will require you to evaluate the governance arrangements in place in a given scenario.	N/A

Topic	Practical significance	Study approach	Exam approach	Interactive questions
2	**Corporate governance concepts** Do you know the basic underpinning concepts of sound corporate governance?	**Approach** Make sure you can explain each of these terms. **Stop and think** Which of these concepts do you think is the most important?	Instead of focusing on processes, you may wish to explain poor governance in terms of the underlying concepts that are in place which may not be in the spirit of good governance.	N/A
3	**The BSEC Corporate Governance Code** You need to be able to discuss the various principles and provisions currently in use in the BSEC Code.	**Approach** Make sure you understand the BSEC Code. **Stop and think** If required, could you explain which parts of the Governance Code require formal disclosure by a company?	When questions are written for the exam, it is likely that they will use the BSEC Code as a starting point, so make sure you are familiar with the BSEC Code.	**IQ1: BSEC Corporate Governance Code** As well as knowing about the BSEC Code, you may also need to explain how it is used (and even how it could be used).
4	**Role of the board** Can you remember what board members are responsible for?	**Approach** Use this section to recap the various responsibilities of board members. **Stop and think** Can you discuss the benefits and drawbacks associated with non-executive directors?	You may need to advise a non-executive director so it is helpful to consider their role and background to make sure that your tone is appropriate.	N/A
5	**Associated guidance** Additional publications exist to support good governance in other areas.	**Approach** Read through each one to make sure you are familiar with the content. **Stop and think** Can you explain why each of these publications might be necessary?	Consider whether any of these could be helpful in responding to requests in exam questions where the BSEC Code does not apply.	N/A

Topic	Practical significance	Study approach	Exam approach	Interactive questions
6	**Corporate governance: international impact** What does the rest of the world do when it comes to promoting sound corporate governance?	**Approach** Review the Sarbanes-Oxley and G20/OECD guidance. **Stop and think** Compare and contrast these approaches with the BSEC Code - why are there differences?	Be prepared for exam questions to feature governance outside the country.	N/A
7	**Corporate governance and internal control** One of the key elements of sound governance is the management of risk and the use of sound systems of internal control.	**Approach** Use the guidance to see how this can be applied in a practical context. **Stop and think** Can you differentiate between the approaches used by WH Smith and Coca Cola?	You will have studied risk management and internal control in previous subjects so remember that they can also be examined in governance context.	N/A
8	**Evaluation of corporate governance mechanisms** This is especially relevant to auditors as it includes the various governance disclosures that companies are required to make in their annual reports.	**Approach** Although you can see the BSEC Corporate Governance Guidelines and provisions, it is important that you can discuss them in the context of the audit. **Stop and think** Can you list the various disclosures that the auditor is required to review?	Going concern is an area that could easily be combined with a question on governance, so don't forget to consider this angle when attempting suitable questions.	N/A
9	**Communication between auditors and those charged with governance**	**Approach** Work through this section with the open book	Be prepared to explain how this form of communication	**IQ2: Reporting responsibilities** An efficient test of your understanding

Topic	Practical significance	Study approach	Exam approach	Interactive questions
	This section deals with the internal communication between auditors and directors.	permitted text in front of you. **Stop and think** Can you map these points to where they are covered by ISAs 260 and 265?	operates if required in the exam.	of the various forms of communication that the auditor may need to make.

Once you have worked through this guidance you are ready to attempt the further question practice included at the end of this chapter.

CHAPTER

4

1 Relevance of corporate governance

Section overview

- Concerns about the adequacy of financial reporting, a number of high profile corporate scandals in the 1990s and concerns about excessive directors' remuneration highlighted the need for effective corporate governance.
- Corporate governance can be defined as the system by which organisations are directed and controlled.
- The BSEC Corporate Governance Code was revised in October 2023.

1.1 Introduction

Corporate governance potentially covers a **wide range of issues** and disciplines from company secretarial and legal through business strategy, executive and non-executive management and investor relations to accounting and information systems.

Corporate governance issues came to prominence worldwide in the late 1980s. The main drivers associated with the increasing demand for developments in this area included the following:

(a) **Financial reporting**

Issues concerning **financial reporting** were raised by many investors and were the focus of much debate and litigation. Shareholder confidence in what was being reported in many instances was eroded. While corporate governance development is not just about better financial reporting requirements, the regulation of creative accounting practices, such as **off balance sheet financing**, has led to greater transparency and a reduction in risks faced by investors.

(b) **Corporate scandals**

The early 1990s saw an increasing number of high profile **corporate scandals** and collapses, including Polly Peck International, BCCI and Maxwell Communications Corporation. This prompted the development of governance codes in the early 1990s. However, the scandals since then, including Enron, have raised questions about further measures that may be necessary and the financial crisis in 2008–2009 triggered widespread reappraisal of governance systems.

(c) **Excessive directors' remuneration**

Directors being paid excessive salaries and bonuses has been seen as one of the major corporate issues for a number of years. While CEOs have argued that their packages reflect the global market, shareholders and employees are concerned that these are often out of step with the remuneration of other employees and do not reflect the performance of the company.

1.2 What is corporate governance?

There are a number of different definitions of corporate governance.

The following definition is taken from the Cadbury Report and is still relevant in the context of Corporate Governance Code.

Definition

Corporate governance: Corporate governance involves a set of relationships between a company's management, its board, its shareholders and other stakeholders. Corporate governance also provides the structure through which the objectives of the company are set, and the means of attaining those objectives and monitoring performance are determined... providing shareholders, board members and executives as well as financial intermediaries and service providers with the right incentives to perform their roles within a framework of checks and balances (OECD, 2015).

An alternative definition is: The set of processes, customs, policies, laws and institutions affecting the way in which an entity is directed, administered or controlled. Corporate governance serves the needs of shareholders, and other stakeholders, by directing and controlling management activities towards good business practices, objectivity and integrity in order to satisfy the objectives of the entity.

In essence, corporate governance:

- involves the management and reduction of risk;
- specifies the **distribution rights** and **responsibilities** among different participants in the corporation, such as the board, managers, shareholders and other stakeholders;
- spells out the **rules** and **procedures** for making decisions on corporate affairs;
- provides the **structure** through which objectives are set; and
- provides the **means of attaining the objectives** and **monitoring performance.**

It can be argued that good corporate governance:

- provides a **framework** for an organisation to pursue its strategy in an **ethical** and effective way and offers **safeguards** against the misuse of resources, human, financial, physical or intellectual;
- can attract **new investment** into companies, particularly in developing nations; and
- underpins **capital market confidence** in companies.

1.3 Features of poor corporate governance

The scandals over the last 30 years have highlighted the need for guidance to tackle the various risks and problems that can arise in organisations' systems of governance.

1.3.1 Domination by a single individual

A feature of many corporate governance scandals has been boards dominated by a single senior executive, with other board members merely acting as a rubber stamp. Sometimes the single individual may bypass the board to act in their own interests. Even if an organisation is not dominated by a single individual, there may be other weaknesses. The organisation may be run by a small group centred round the chief executive and chief financial officer, and appointments may be made by personal recommendation rather than a formal, objective process.

1.3.2 Lack of involvement of board

Boards that meet irregularly or fail to consider systematically the organisation's activities and risks are clearly weak. Sometimes the failure to carry out proper oversight is due to a **lack of information** being provided.

1.3.3 Lack of adequate control function

An obvious deficiency is a **lack of internal audit**.

Another important control deficiency is **lack of adequate technical knowledge** in key roles, for example in the audit committee or in senior compliance positions. A rapid turnover of staff involved in accounting or control may suggest inadequate resourcing, and will make control more difficult because of lack of continuity.

1.3.4 Lack of supervision

Employees who are not properly supervised can create large losses for the organisation through their own incompetence, negligence or fraudulent activity. The behaviour of Nick Leeson, the employee whose trading losses caused the collapse of Barings Bank was not challenged because he appeared to be successful. Leeson was able to run up losses because he was in charge of dealing and settlement, a systems deficiency or **lack of segregation of key roles** that has featured in other financial frauds.

1.3.5 Lack of independent scrutiny

External auditors may not carry out the necessary questioning of senior management because of fears of losing the audit, and **internal audit** do not ask awkward questions because the chief financial officer determines their employment prospects. Often corporate collapses are followed by criticisms of external auditors, such as the Barlow Clowes affair where poorly planned and focused audit work failed to identify illegal use of client monies.

1.3.6 Lack of contact with shareholders

Often board members may have grown up with the company but lose touch with the interests and views of shareholders. One possible symptom of this is the payment of remuneration packages that do not appear to be warranted by results.

1.3.7 Emphasis on short-term profitability

Emphasis on success or getting results can lead to the **concealment of problems or errors**, or **manipulation of accounts** to **achieve desired results**.

1.3.8 Misleading accounts and information

Often misleading figures are symptomatic of other problems (or are designed to conceal other problems) but clearly poor quality accounting information is a major problem if markets are trying to make a fair assessment of the company's value. Giving out misleading information was a major issue in the UK's Equitable Life scandal, where the company gave contradictory information to savers, independent advisers, media and regulators.

1.4 Risks of poor corporate governance

Clearly the ultimate risk is of the organisation **making such large losses** that **bankruptcy** becomes inevitable. The organisation may also be closed down as a result of **serious regulatory breaches,** for example misapplying investors' monies.

Context example: VW

During 2015, it became apparent that car manufacturer Volkswagen (VW) had created software in its vehicles that was deliberately intended to allow its diesel vehicles to incorrectly pass engine emission tests which are used throughout the motor industry. Many observers have pointed out that such a practice could not have occurred without senior management approval: if this was the case, it suggests serious ethical flaws in the company's governance; if not, it still points to a company that is not in control of its staff.

Professional skills focus: Assimilating and using information

Often you will know that there is a problem but you may not be able to explain exactly what the problem is. Keep in mind the basic idea that there is something not right and then use it as a way of combing all the relevant facts until you can explain what the problem really is.

2 Corporate governance concepts

Section overview

- Corporate governance concepts include the following:
  - Fairness
  - Openness/transparency
  - Independence
  - Probity/honesty
  - Responsibility
  - Accountability
  - Reputation
  - Judgement
  - Scepticism
  - Innovation

One view of governance is that it is based on a series of **underlying concepts**. These are important, as good corporate governance depends on a willingness to apply the **spirit of the guidance** as well as the letter of the law.

2.1 Fairness

The directors' deliberations and also the systems and values that underlie the company must be **balanced** by taking into account everyone who has a legitimate interest in the company, and respecting their rights and views. In many jurisdictions, corporate governance guidelines reinforce legal protection for certain groups, for example minority shareholders.

2.2 Openness/transparency

In the context of corporate governance, transparency means **corporate disclosure to stakeholders**. Disclosure in this context obviously includes information in the financial statements, not just the numbers and notes to the accounts but also narrative statements such as the directors' report and the operating and financial review. It also includes all **voluntary disclosure**; that is, disclosure above the minimum required by law or regulation. Voluntary corporate communications include the following:

- Management forecasts
- Analysts' presentations
- Press releases
- Information placed on websites
- Other reports such as standalone environmental or social reports

The main reason why transparency is so important relates to the agency problem; that is, the potential conflict between owners and managers. Without effective disclosure the position could be unfairly weighted towards managers, since they normally have far more knowledge of the company's activities and financial situation than owners/investors. Reducing this **information asymmetry** requires not only effective disclosure rules but also strong internal controls that ensure that the information disclosed is **reliable**.

2.3 Independence

Independence is an important concept in relation to directors (as well as auditors). Corporate governance reports have increasingly stressed the importance of **independent non-executive directors**; directors who are not primarily employed by the company and who have very strictly controlled other links with it. They should be free from conflicts of interest and in a better position to **promote the interests of shareholders and other stakeholders**. Freed from pressures that could influence their activities, independent non-executive directors should be able to carry out **effective monitoring** of the company in conjunction with independent external auditors on behalf of shareholders and other stakeholders.

2.4 Probity/honesty

Hopefully this should be the most self-evident of the principles, relating not only to telling the truth but also to not **misleading** shareholders and other stakeholders by presenting information in a biased way.

2.5 Responsibility

For management to be held properly responsible, there must be a system in place that allows for **corrective action** and **penalising mismanagement**. Responsible management should do, when necessary, whatever it takes to set the company on the right path.

The board of directors must act responsively to, and with responsibility towards, all stakeholders of the company. However, the responsibility of directors to other stakeholders, both in terms of to **whom** they are responsible and the **extent** of their responsibility, remains a key point of contention in corporate governance debates.

2.6 Accountability

Corporate **accountability** refers to whether an organisation (and its directors) are answerable in some way for the consequences of their actions.

The board of directors is accountable to shareholders. However, making the accountability work is the responsibility of **both** parties. Directors, as we have seen, do so through the quality of information that they provide, whereas shareholders do so through their willingness to **exercise their responsibility as owners**, which means using the available mechanisms to query and assess the actions of the board.

As with responsibility, one of the biggest debates in corporate governance is the extent of management's **accountability** towards **other stakeholders**, such as the community within which the organisation operates.

2.7 Reputation

In the same way, directors' concern for an organisation's reputation will be demonstrated by the extent to which they fulfil the other principles of corporate governance. There are purely **commercial reasons** for promoting the organisation's reputation, namely that the price of publicly traded shares is often dependent on reputation and hence reputation can be a very valuable asset of the organisation.

2.8 Judgement

Judgement means the board **making decisions that enhance the prosperity** of the organisation. This means that board members must acquire a broad enough knowledge of the **business and its environment** to be able to provide meaningful direction to it. This has implications not only for the attention directors have to give to the organisation's affairs but also for the way the directors are recruited and trained.

The complexities of senior management mean that the directors have to bring **multiple conceptual skills** to management that aim to maximise long-term returns. This means that corporate governance can involve balancing many competing people and resource claims against each other.

2.9 Integrity

Integrity is straightforward dealing and completeness. What is required of financial reporting is that it should be honest and that it should present a balanced picture of the state of the company's affairs. The integrity of reports depends on the integrity of those who prepare and present them. It can be taken as meaning someone of **high moral character**, who sticks to principles no matter the pressure to do otherwise. In working life, this means adhering to principles of professionalism and probity.

Straightforward dealing in relationships with the different people and constituencies whom you meet is particularly important; trust is vital in relationships and belief in the integrity of those with whom you are dealing underpins this.

This definition highlights the need for **personal honesty and integrity** of preparers of accounts. This implies qualities beyond a mechanical adherence to accounting or ethical regulations or guidelines. At times accountants will have to use judgement or face financial situations which aren't covered by regulations or guidance, and on these occasions integrity is particularly important.

Integrity is an essential principle of the **corporate governance relationship**, particularly in relation to representing shareholder interests and exercising agency. As with financial reporting guidance, ethical codes don't cover all situations and therefore depend for their effectiveness on the qualities of the accountant. In addition, we have seen that a key aim of corporate governance is to inspire confidence in participants in the market and this significantly depends on a **public perception** of **competence and integrity**.

2.10 Scepticism

You should be familiar with the concept of '**professional scepticism**' from your earlier auditing studies: sound governance practices should also consider the importance of being sceptical about all parts of the business, regardless of whether they have displayed any evidence of dysfunctional behaviour. **For example**, if performance continues to exceed industry averages, even in periods of economic downturn, it could be symptomatic of fraudulent financial reporting.

2.11 Innovation

Change happens; factors such as technological advances, social behaviour, market expectations and even freak weather conditions can all have significant impacts on organisations and their stakeholders, which means that governance structures need to be **agile** and **responsive** in order to stay relevant.

3 The BSEC Corporate Governance Code

Section overview

- The Bangladesh Securities and Exchange Commission issued Corporate Governance Code in order to enhance corporate governance in the interest of investors and the capital market which was last revised in October 2023.
- The Code applies to all publicly listed companies in Bangladesh.
- The Code includes a number of requirements to ensure good governance in structure and practice including several disclosure requirements as well.
- Refer to the workbook of Corporate Laws and Practices at Professional Levels for details of the codes.

Similar Context example: British Airways

UK airline British Airways (BA) is a well-known company that is often used as the benchmark in its industry, yet in 2019 the roles of chair and chief executive were filled by the same individual. How was this allowed? BA is actually owned by the International Airlines Group (IAG) which at the time had a more robust governance structure of chair, 10 non-executive directors and two executive directors (finance director and chief executive). It is therefore important to understand the ownership structure of an entity when appraising how it is directed and controlled.

Professional skills focus: Structuring problems and solutions

Use the various principles and provisions of the Corporate Governance Code to help you structure an answer when presented with a series of governance issues.

Interactive question 1: Corporate Governance Code

Compliance with the Corporate Governance Code is a requirement of Bangladesh Securities and Exchange Commission for all publicly listed companies. Some argue that the Code should be mandatory for all companies.

Requirements

1.1 Discuss the benefits of the BSEC Corporate Governance Code to shareholders and other interested users of financial statements.

1.2 Discuss the merits and drawbacks of having a provision in the form of a voluntary application. See **Answer** at the end of this chapter.

4 Role of the board

Section overview

- The board of directors should be responsible for taking major **policy** and **strategic** decisions and use the best information available to it, reporting how they have fulfilled their duties.
- Directors should have a **mix of skills** and their **performance** should be assessed regularly.
- **Independent non-executive directors** have a key role in governance. Their number and status should mean that their views carry significant weight.

4.1 Scope of role

If the board is to act effectively, its role must be defined carefully. The Code suggests that the board should have a **formal schedule of matters** specifically reserved to it for decision. Some would be such decisions as **mergers and takeovers** that are **fundamental** to the business and therefore should not be taken just by executive managers. Other decisions would include **acquisitions and disposals of assets of the company** or its subsidiaries that are material to the company and **investments, capital projects, bank borrowing** facilities, **loans** and their repayment, and foreign currency transactions, all above a certain size (to be determined by the board).

Other tasks the board should perform include:

- monitoring the chief executive officer;
- overseeing strategy;
- monitoring risks and control systems;
- monitoring the human capital aspects of the company in regard to succession, morale, training, remuneration etc; and
- ensuring that there is effective communication of its strategic plans, both internally and externally.

Similar Context example: Role of the board

For the voluntary sector, the UK's *Good Governance, A Code for the Voluntary and Community Sector* stresses the board of trustees' role in ensuring compliance with the objects, purposes and values of the organisation and with its governing document. The Code stresses that the board must ensure that the organisation's vision, mission, values and activities remain true to its objects.

The Code also lays more stress than the governance codes targeted at listed companies on trustees focusing on the strategic direction of their organisation and not becoming involved in day to day activities. The chief executive officer should provide the link between the board and the staff team, and the means by which board members hold staff to account. Where in smaller organisations trustees need to become involved in operational matters, they should separate their strategic and operational roles.

4.2 Attributes of directors

In order to carry out effective scrutiny, directors need to have **relevant expertise** in industry, company, functional area and governance. The board as a whole needs to contain a **mix of**

expertise and show a **balance** between **executive management** and **independent non-executive directors**.

New and existing directors should also have **appropriate training** to develop the knowledge and skills required.

4.3 Possession of necessary information

As we have seen above, in many corporate scandals, the board was not given full information. The Code states that the chair is responsible for ensuring that the directors receive **accurate, timely and clear information**. Directors should seek clarification where necessary.

4.4 Performance of board

Appraisal of the board's performance is an important control over it. The **performance of the board** should be **assessed** once a year (for FTSE 350 companies this should be externally facilitated every three years).

4.5 Board membership and division of responsibilities

All reports acknowledge the importance of having a division of responsibilities at the head of an organisation. The simplest way to do this is to require the roles of **chair** and **chief executive** to be held by two different people.

Context example: Director Influence

Another area of concern is whether individual directors are exercising disproportionate influence on the company. For example, Boots prohibited the chair of the remuneration committee from serving on the audit committee and vice versa.

4.6 Non-executive directors

Non-executive directors have no executive (managerial) responsibilities.

Non-executive directors should provide a **balancing influence,** and play a key role in **reducing conflicts of interest** between management (including executive directors) and shareholders. They should provide reassurance to shareholders, particularly institutional shareholders, that management is acting in the interests of the organisation.

Context example: Sources of non-executive directors

Non-executive directors may come from a number of sources:

- Companies operating in international markets could benefit from having at least one non-executive director with international experience.
- Lawyers, accountants and consultants can bring skills that are useful to the board.
- Listed companies should consider appointing directors of private companies as non-executive directors.
- Including individuals with charitable or public sector experience but strong commercial awareness can increase the breadth of diversity and experience on the board.

4.7.1 Role of non-executive directors

The role of non-executive directors can be summarised as follows:

- **Strategy**: Non-executive directors should contribute to, and challenge the direction of, strategy.

- **Performance**: Non-executive directors should scrutinise the performance of management in meeting goals and objectives, and monitor the reporting of performance.
- **Risk**: Non-executive directors should satisfy themselves that financial information is accurate and that financial controls and systems of risk management are robust.
- **Directors and managers**: Non-executive directors are responsible for determining appropriate levels of remuneration for executives, and are key figures in the appointment and removal of senior managers and in succession planning.

4.7.2 Advantages of non-executive directors

Non-executive directors can bring a number of advantages to a board of directors.

- They may have **external experience and knowledge which executive directors do not possess**. The experience they bring can be in many different fields. They may be executive directors of other companies, and thus have experience of different ways of approaching corporate governance, internal controls or performance assessment. They can also bring knowledge of markets within which the company operates.
- Non-executive directors can provide a **wider perspective** than executive directors, who may be more involved in detailed operations.
- Good non-executive directors are often a **comfort factor** for third parties, such as investors and creditors.
- It has been suggested that there are **certain roles** non-executive directors are well suited to play. These include 'father-confessor' (being a confidante for the chair and other directors),'oil-can' (intervening to make the board run more effectively) and acting as 'high sheriff' (if necessary taking steps to remove the chair or chief executive).
- The most important advantage perhaps lies in the dual nature of the non-executive director's role. Non-executive directors are **full board members** who are expected to have the level of knowledge that full board membership implies. At the same time, they are meant to provide the so-called **strong, independent element** on the board. This should imply that they have the knowledge and detachment to be able to assess fairly the remuneration of executive directors when serving on the remuneration committee, and to be able to discuss knowledgeably with auditors the affairs of the company on the audit committee.

4.7.3 Problems with non-executive directors

Nevertheless, there are a number of difficulties connected with the role of non-executive director.

- In many organisations, non-executive directors may **lack independence**. There are in practice a number of ways in which non-executive directors can be linked to a company, as suppliers or customers for example. Even if there is no direct connection, potential non-executive directors are more likely to agree to serve if they admire the company's chair or its way of operating.
- There may be a **prejudice in certain companies** against widening the recruitment of non- executive directors to include people proposed other than by the board or to include stakeholder representatives.
- High-calibre non-executive directors may gravitate towards the **best-run companies**, rather than companies which are more in need of input from good non-executives.

- Non-executive directors may have **difficulty imposing** their views on the board. It may be easy to dismiss the views of non-executive directors as irrelevant to the company's needs. This may imply that non-executive directors need good persuasive skills to influence other directors. Moreover, if executive directors are determined to push through a controversial policy, it may prove difficult for the more disparate group of non-executive directors to oppose them effectively.
- It has been suggested that not enough emphasis is given to the role of non-executive directors in **preventing trouble**, in warning early on of potential problems. When trouble does arise, non- executive directors may be expected to play a major role in rescuing the situation, which they may not be able to do.
- Perhaps the biggest problem which non-executive directors face is the **limited time** they can devote to the role. If they are to contribute valuably, they are likely to have time-consuming other commitments. In the time they have available to act as non-executive directors, they must contribute as knowledgeable members of the full board and fulfil their legal responsibilities as directors. They must also serve on board committees. Their responsibilities mean that their time must be managed effectively, and they must be able to focus on areas where the value they add is greatest.

4.7.4 Independence of non-executive directors

Various safeguards can be put in place to ensure that non-executive directors remain independent. A number of factors will be considered, including if the director:

- has been an employee of the company within the last five years;
- has, or has had within the last three years, a material business relationship with the company either directly, or as a partner, shareholder, director or senior employee of a body that has such a relationship with the company;
- receives additional remuneration from the company apart from a director's fee, participates in the company's share option or a performance-related pay scheme, or is a member of the company's pension scheme;
- has close family ties with any of the company's advisers, directors or senior employees;
- holds cross-directorships or has significant links with other directors through involvement in other companies or bodies;
- represents a significant shareholder; or
- has served on the board for more than nine years from the date of their first election.

Whenever a question scenario features non-executive directors, watch out for threats to, or questions over, their independence.

5 Corporate governance: international impact

Section overview

- Corporate governance models differ around the world, but the following principles and legislation are widely recognised:
  - The G20/OECD Principles of Corporate Governance (G20/OECD Principles)

- The Sarbanes–Oxley Act in the US (SOX)
- The BSEC Corporate Governance Code (covered in earlier sections)

- The G20/OECD Principles resulted from market pressure for standardisation of governance guidelines.
- The G20/OECD Principles are non-binding but are intended to assist governments, stock exchanges, investors and companies. They cover the following six areas:
  - Ensuring the basis for an effective corporate governance framework
  - The rights of shareholders
  - The equitable treatment of shareholders
  - The role of stakeholders
  - Disclosure and transparency
  - The responsibilities of the board
- The introduction of SOX in the US resulted from the Enron scandal.
- SOX is a 'rules-based' rather than 'principles-based' approach to improving corporate governance.
- The Act applies to all companies that are required to file accounts with the Securities and Exchange Commission. This includes non-US companies who list their shares in the US and therefore affects companies worldwide.
- SOX has resulted in increased compliance costs for companies.

5.1 G20/OECD Principles of Corporate Governance

5.1.1 Convergence of international guidance

Because of increasing international trade and cross-border links, there is significant pressure for the development of internationally comparable practices and standards. Accounting and financial reporting is one area in which this has occurred. Increasing international investment and integration of international capital markets has also led to pressure for standardisation of governance guidelines, as international investors seek **reassurance about the way their investments are being managed** and the **risks** involved.

5.1.2 OECD guidance

The Organisation for Economic Co-operation and Development (OECD) has carried out an extensive consultation with member countries, and developed a **set of principles of corporate governance** that countries and companies should work towards achieving. The OECD has stated that its interest in corporate governance arises from its concern for **global investment**. Corporate governance arrangements should be credible and understood across national borders. Having a common set of accepted principles is a step towards achieving this aim.

The OECD developed its Principles of Corporate Governance in 1998 and issued a revised version endorsed by the G20 in November 2015. They are **non-binding principles**, intended to assist governments in their efforts to evaluate and improve the legal, institutional and regulatory framework for corporate governance in their countries.

They are also intended to provide guidance to stock exchanges, investors and companies. The focus is on stock exchange listed companies, but many of the principles can also apply to private companies and state-owned organisations.

The G20/OECD Principles deal mainly with governance problems that result from the **separation of ownership and management** of a company. Issues of ethical concern and environmental issues are also relevant, although not central to the problems of governance.

Between February 2009 and February 2010 the OECD issued a number of documents regarding the corporate governance lessons which can be learnt from the recent financial crisis.

5.1.3 G20/OECD Principles

The G20/OECD Principles are grouped into six broad areas:

5.1.3.1 Ensuring the basis for an effective corporate governance framework

The corporate governance framework should promote **transparent and fair** markets, and the efficient allocation of resources. It should be consistent with the rule of law and support effective supervision and enforcement.

5.1.3.2 The rights and equitable treatment of shareholders and key ownership functions

Shareholders should have the right to **participate and vote in general meetings** of the company, **elect** and **remove members of the board** and **obtain relevant and material information** on a timely basis. All shareholders of the same class of shares should be treated equally, including **minority shareholders** and **overseas shareholders**. **Impediments** to **cross-border shareholdings** should be **eliminated**.

Capital markets for corporate control should function in an **efficient and timely manner**.

5.1.3.3 Institutional investors, stock markets and other intermediaries

Institutional investors acting in a fiduciary capacity should **disclose** their corporate governance and voting policies with respect to their investments and should disclose how they **manage material conflicts of interest**. Parties providing advice to investors should disclose and **minimise conflicts of interest**. Votes should be cast in line with the directions of the owners of the shares.

5.1.3.4 The role of stakeholders

Rights of stakeholders should be **protected**. All stakeholders should have **access to relevant information** on a regular and timely basis. **Mechanisms** for employee participation should be **permitted to develop**. Stakeholders, including employees, should be able to **freely communicate their concerns** about illegal or unethical relationships to the board and public authorities.

5.1.3.5 Disclosure and transparency

Timely and accurate disclosure must be made of all material matters regarding the company, including the financial situation, company objectives and non-financial information, major share ownership, including beneficial owners and voting rights, remuneration of members of the board and key executives, information about the board (including their qualifications), related party transactions, foreseeable risk factors, issues regarding employees and other stakeholders and governance structures and policies. Information should be prepared and disclosed in accordance with **standards of accounting and financial and non-financial reporting**. An **annual audit** should be conducted by an independent, competent and qualified auditor following relevant auditing standards. The auditor must exercise **due professional care** in the conduct of the audit. Information must be disseminated through proper channels.

5.1.3.6 The responsibilities of the board

The board is responsible for the **strategic guidance** of the company and for the **effective monitoring** of management. Board members should act on a fully informed basis, in good faith, with due diligence and care and in the **best interests of the company and its shareholders**. They should treat **all shareholders fairly**. The board should be able to exercise **independent judgement**; this includes assigning independent non-executive directors to appropriate tasks.

5.2 Sarbanes–Oxley and governance in the US

5.2.2 The Enron scandal

The most significant scandal in the US in recent years has been the Enron scandal, when one of the country's biggest companies filed for bankruptcy. The scandal also resulted in the disappearance of Arthur Andersen, one of the Big Five accountancy firms who had audited Enron's accounts. The main reasons why Enron collapsed were overexpansion in energy markets, too much reliance on derivatives trading which eventually went wrong, breaches of federal law, and misleading and dishonest behaviour. However, inquiries into the scandal exposed a number of weaknesses in the company's governance.

5.2.2.1 A lack of transparency in the accounts

This particularly related to certain investment vehicles that were not recognised in the statement of financial position. Various other methods of inflating revenues, offloading debt, massaging quarterly figures and avoiding taxes were employed.

5.2.2.2 Ineffective corporate governance arrangements

The company's management team was criticised for being arrogant and overambitious and there were potential conflicts of interest.

5.2.2.3 Inadequate scrutiny by the external auditors

Arthur Andersen failed to spot or question dubious accounting treatments. Since Andersen's consultancy arm did a lot of work for Enron, there were allegations of conflicts of interest.

5.2.2.4 Information asymmetry

That is, the agency problem of the directors/managers knowing more than the investors. The investors included Enron's employees. Many had their personal wealth tied up in Enron shares, which ended up being worthless. They were actively discouraged from selling them. Many of Enron's directors, however, sold the shares when they began to fall, potentially profiting from them.

5.2.2.5 Executive compensation methods

These were meant to align the interests of shareholders and directors, but seemed to encourage the overstatement of short-term profits. Particularly in the US, where the tenure of chief executive officers is fairly short, the temptation is strong to inflate profits in the hope that share options will have been cashed in by the time the problems are discovered.

5.2.3 The Sarbanes–Oxley Act 2002

In the US the response to the breakdown of stock market trust caused by perceived inadequacies in corporate government arrangements and the Enron scandal was the **Sarbanes–Oxley Act 2002.** The Act applies to all companies that are required to file periodic reports with the Securities and Exchange Commission (SEC). The Act was the most far-reaching US legislation dealing with securities in many years and has major implications for public companies. Rule-making authority was delegated to the SEC on many provisions.

Sarbanes–Oxley shifts responsibility for financial probity and accuracy to the board's **audit committee**, which typically comprises three independent directors, one of whom has to meet certain financial literacy requirements (equivalent to non-executive directors in other jurisdictions).

Along with rules from the SEC, the Sarbanes–Oxley Act (SOX) requires companies to increase their financial statement **disclosures**, to have an internal **code of ethics** and to impose **restrictions on share trading** by, and **loans to**, corporate officers.

Effectively the SOX legislates that companies and their boards must comply with provisions derived from principles similar to the OECD Principles and those contained in the UK Corporate Governance Code. However, this rules based approach has drawn criticism for its 'one size fits all' approach and there have been concerns that it unnecessarily burdens smaller entities.

Unlike the UK Corporate Governance Code, which adopts a 'comply or explain' approach, the SOX is strictly rules-based, with penalties imposed for non-compliance. There is a continuing debate around which approach is the more effective. It is argued that the UK's more flexible model:

- provides best practice guidance that can be applied to the varying circumstances of different companies;
- prevents the development of a mechanistic, 'box-ticking' approach to decision-making and the use of legalistic loopholes to avoid compliance with guidance; and
- focuses on the spirit of the guidance and encourages responsibility and the exercise of professional judgement.

On the other hand, supporters of a rules-based approach argue that compliance with such guidance is easier since the requirements are prescriptive and leave little room for misunderstanding.
Furthermore, rules-based approaches are easier to enforce.

5.2.4 Detailed provisions of the Sarbanes-Oxley Act

Note: This legislation was issued prior to the adoption of the quality management standards in 2021 when the term quality control was still in use however, in this instance you can assume that the law is referring to what you understand to be quality management.

These are as follows:

Public Oversight Board

The Act set up a new regulator, the **Public Company Accounting Oversight Board**, to oversee the audit of public companies that are subject to the securities laws.

The Board has powers to set **auditing, quality control, independence and ethical standards** for registered public accounting firms to use in the preparation and issue of audit reports on the financial statements of listed companies. In particular, the Board is required to set standards for registered public accounting firms' reports on listed company statements on their internal control over financial reporting. The Board also has **inspection and disciplinary powers** over firms.

Auditing standards

Audit firms should **retain working papers** for at least seven years and have **quality control standards** in place, such as second partner review. As part of the audit they should review internal control systems to ensure that they **reflect the transactions** of the client and provide **reasonable assurance** that the transactions are recorded in a manner that will **permit preparation** of the **financial statements** in accordance with **generally accepted accounting principles**. They should also review records to check whether **receipts** and **payments** are being made **only in accordance with management's authorisation**.

Non-audit services

Auditors are expressly prohibited from carrying out a number of services, including internal audit, bookkeeping, systems design and implementation, appraisal or valuation services, actuarial services, management functions and human resources, investment management, and legal and expert services. **Provision of other non-audit services** is only allowed with the **prior approval** of the **audit committee**.

Quality control procedures

There should be **rotation** of lead or reviewing audit partners every five years and other procedures such as independence requirements, consultation, supervision, professional development, internal quality review and engagement acceptance and continuation.

Auditors and audit committee

Auditors should discuss **critical accounting policies**, **possible alternative treatments**, the management letter and unadjusted differences with the audit committee.

Audit committee

Audit committees should be established by all listed companies.

All members of audit committees should be **independent** and should therefore not accept any **consulting** or **advisory fee** from the company or be affiliated to it. At least one member should be a financial expert. Audit committees should be responsible for the **appointment, compensation** and **oversight** of auditors. Audit committees should establish mechanisms for dealing with complaints about accounting, internal controls and audit.

Corporate responsibility

The chief executive officer and chief financial officer should certify the appropriateness of the financial statements and that those financial statements fairly present the operations and financial condition of the issuer. If the company has to prepare a restatement of accounts due to material non-compliance with standards, the chief financial officer and chief executive officer should forfeit their bonuses.

Off balance sheet transactions

There should be **appropriate disclosure** of **material off balance sheet transactions** and other relationships (transactions that are not included in the accounts but that impact on financial conditions, results, liquidity or capital resources).

Internal control reporting

Annual reports should contain **internal control reports**. We look at this aspect in more detail in section 7 when we consider internal control.

Whistleblowing provisions

Employees of **listed companies** and **auditors** will be granted whistleblower protection against their employers if they **disclose private employer information** to parties involved in a fraud claim.

5.2.5 Impact of Sarbanes–Oxley in the US

The biggest expense involving compliance that companies are incurring is fulfilling the requirement to ensure their **internal controls** are properly documented and tested. US companies had to have efficient controls in the past, but they are now having to document them more comprehensively than before, and then have the external auditors report on what they have done.

The Act also formally stripped accountancy firms of almost all non-audit revenue streams that they used to derive from their audit clients, for fear of conflicts of interest.

For lawyers, the Act strengthens requirements on them to whistleblow internally on any wrongdoing they uncover at client companies, right up to board level.

5.2.6 International impact of Sarbanes–Oxley

The Act also has a significant **international dimension**. About 1,500 non-US companies, including many of the world's largest, list their shares in the US and are covered by Sarbanes–Oxley. There were complaints that the new legislation conflicted with local corporate governance customs and, following an intense round of lobbying from outside the US, changes to the rules were secured. For example, German employee representatives, who are non-management, can sit on audit committees, and audit committees do not have to have board directors if the local law says otherwise, as it does in Japan and Italy.

Also, as the US is such a significant influence worldwide, arguably Sarbanes–Oxley may influence certain jurisdictions to adopt a more rules-based approach.

5.2.7 Criticisms of Sarbanes–Oxley

Sarbanes–Oxley has been criticised in some quarters for **not being strong enough** on certain issues, for example the selection of external auditors by the audit committee, and at the same time being over-rigid on others. Directors may be less likely to consult lawyers in the first place if they believe that legislation could override lawyer-client privilege.

In addition, it has been alleged that a Sarbanes–Oxley compliance industry has sprung up focusing companies' attention on complying with all aspects of the legislation, significant or much less important. This has distracted companies from **improving information flows** to the market and then allowing the market to make well-informed decisions. The Act has also done little to address the temptation provided by generous stock options to inflate profits, other than requiring possible forfeiture if accounts are subsequently restated.

Most significantly, perhaps, there is recent evidence of companies turning away from the US stock markets and towards other markets such as London. Many observers have suggested that this was partly due to companies tiring of the **increased compliance costs** associated with Sarbanes–Oxley implementation. In addition, the nature of the **regulatory regime** may be an increasingly significant factor in listing decisions.

While it is unlikely that you will be expected to consider the regulatory aspects of an

Professional skills focus: Assimilating and using information

organisation from the US in great detail, basic knowledge of Sarbanes-Oxley will help you with the headline issues.

5.3 International focus for internal control

As we discussed earlier, large international companies may be listed in the US and are required to comply with the US Sarbanes–Oxley Act 2002 (SOX).

The key difference between SOX and the UK approach to corporate governance is that while the UK Corporate Governance Code is principles-based, SOX is rules-based. By contrast to the UK's 'comply or explain' approach, most of the SOX regulations are enshrined in legislation, with penalties for non- compliance.

One area of this Act that has sparked widespread debate has been section 404 relating to the assessment of internal control. Under SOX, management and the auditors must report on the adequacy of the company's internal control over financial reporting. Working to implement, document and test controls to the degree required to make an assertion that the controls are adequate can be a costly and time-consuming process.

Annual reports for companies affected by SOX should contain **internal control reports** that state the responsibility of management for establishing and maintaining an **adequate internal control structure** and **procedures for financial reporting**. Annual reports should also contain an **assessment** of the **effectiveness** of the **internal control structure** and **procedures** for **financial reporting**. Auditors should report on this assessment.

Companies should also report whether they have adopted a **code of conduct** for senior financial officers and the content of that code.

5.3.1 Example of internal control report under SOX

The following extract has been taken from the annual report for 31 December 2017 of Coca-Cola Enterprises, Inc.

Management's report on internal control over financial reporting

Management of the Company is responsible for establishing and maintaining adequate internal control over financial reporting as such term is defined in Rule 13a-15(f) under the Securities Exchange Act of 1934 ("Exchange Act"). Management assessed the effectiveness of the Company's internal control over financial reporting as of December 31, 2017. In making this assessment, management used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (2013 Framework) ("COSO") in Internal Control–Integrated Framework. Management has excluded from the scope of its assessment of internal control over financial reporting the operations and related assets of Coca-Cola Beverages Africa Proprietary Limited ("CCBA"), which the Company began consolidating in October 2017. The operations and related assets of CCBA were included in the consolidated financial statements of The Coca-Cola Company and subsidiaries and constituted 8 percent of total assets and 8 percent of consolidated net income as of and for the year ended December 31, 2017. Based on this assessment, management believes that the Company maintained effective internal control over financial reporting as of December 31, 2017.

The Company's independent auditors, Ernst & Young LLP, a registered public accounting firm, are appointed by the Audit Committee of the Company's Board of Directors, subject to ratification by our Company's shareowners. Ernst & Young LLP has audited and reported on the consolidated financial statements of The Coca-Cola Company and subsidiaries and the

Company's internal control over financial reporting. The reports of the independent auditors are contained in this annual report.

6 Communication between auditors and those charged with governance

Section overview

- Auditors have to communicate various audit-related matters to those charged with governance.
- This section summarises and builds on the important points covered by the Audit and Assurance paper at Professional Level.

6.1 Communication during the audit

Two standards are relevant here:

- ISA 260 (Revised), *Communication with Those Charged with Governance*
- ISA 265, *Communicating Deficiencies in Internal Control to Those Charged with Governance and Management*

The revisions to ISA 260 include the need to consider the implications of ISA 701, *Communicating Key Audit Matters in the Independent Auditor's Report* and enhanced auditor reporting for all public interest entities (PIEs) and listed companies.

Definition

Governance: The term used to describe the role of persons with responsibility for overseeing the strategic direction of the entity and obligations related to the accountability of the entity. This includes overseeing the financial reporting process. Those charged with governance may include management only when it performs such functions.

6.1.1 Objectives

ISA 260 (Revised) states that the objectives of the auditor are to:

(a) communicate clearly with those charged with governance the **responsibilities of the auditor** in relation to the financial statement audit and an overview of the planned scope and timing of the audit;

(b) obtain from those charged with governance **information relevant to the audit**;

(c) provide those charged with governance with **timely observations** arising from the audit that are significant and relevant to their responsibility to oversee the financial reporting process; and

(d) promote effective **two-way communication** between the auditor and those charged with governance.

The auditor must communicate audit matters of governance interest arising from the audit of financial statements with those charged with governance of an entity. The scope of the ISA is limited to matters that come to the auditor's attention as a result of the audit; the auditors are not required to perform procedures to identify matters of governance interest.

The auditor must determine the relevant persons who are charged with governance and with whom audit matters of governance interest are communicated.

The auditors may communicate with the whole board, the supervisory board or the audit committee depending on the governance structure of the organisation. To avoid misunderstandings, the engagement letter should explain that auditors will only communicate matters that come to their attention as a result of the performance of the audit. It should state that the auditors are not required to design procedures for the purpose of identifying matters of governance interest.

The letter may also do the following:

- **Describe** the **form** which any **communications** on governance matters will take
- **Identify** the **relevant persons** with whom such communications will be made
- **Identify** any **specific matters** of **governance** interest which it has agreed are to be communicated

Matters to be communicated

Matters would include:

The **auditor's responsibilities** in relation to the financial statements	Including that: • the auditor is responsible for forming and expressing an opinion on the financial statements; and • the audit does not relieve management or those charged with governance of their responsibilities.
Planned **scope and timing** of the audit	Including: • how the audit proposes to address the significant risks of material misstatement from fraud or error; • how the auditor plans to address areas of higher assessed risks of material misstatement; • the auditor's approach to internal control; • application of materiality; • the extent to which the auditor will use an auditor's expert; • when ISA 701 applies, the auditor's preliminary views about matters that may be areas of significant auditor attention in the audit and therefore may be key audit matters; and • the auditor's planned approach to significant changes in the applicable reporting framework, environment financial condition or activities. When the auditor is required or decides to communicate key audit matters ISA 260 (Revised) requires that the overview of the planned scope and timing of the audit must also include communicating

C H A P T E R 4

	about the most significant assessed risks of material misstatement identified by the auditor.
Significant findings from the audit	Including: • the auditor's views about accounting policies, accounting estimates and financial statement disclosures; • significant difficulties, if any, encountered during the audit (eg, delays in provision of required information, brief time in which to complete audit, unavailability of expected information); • significant matters arising during the audit that were discussed or subject to correspondence with management; • written representations the auditor is requesting; • circumstances that affect the form and content of the auditor's report; and • other significant matters, including material misstatements or inconsistencies in other information that have been corrected. Entities that are required or choose to report on the application of the UK Corporate Governance Code must communicate to the audit committee information relevant to the board and the audit committee in fulfilling their responsibilities under the Code. For audits of the financial statements of public interest entities the auditor is required to submit an additional report in writing to the audit committee explaining the results of the audit and information including: • a declaration of independence; • identity of key audit partners; • a description of the scope and timing of the audit; • a description of the methodology used; • the quantitative level of materiality applied; • events or conditions that may cast significant doubt on the entity's ability to continue as a going concern; • significant deficiencies in the control system; and • significant difficulties encountered and significant matters arising from the audit.
Auditor independence	In the case of **listed entities** matters include: • a statement that relevant ethical requirements regarding independence have been complied with; • all relationships (including total fees for audit and non-audit services) which may reasonably be thought to bear on independence; and • the related safeguards that have been applied to eliminate/reduce identified threats to independence.

	In the case of public interest entities, the auditor must: • confirm to the audit committee annually in writing that the firm and partners, senior managers and managers, conducting the audit are independent; and • discuss with the audit committee the threats to the auditor's independence and the safeguards applied.

6.1.2 Communication process

The auditor must communicate with those charged with governance the form, timing and expected general content of communications.

The communication process will vary with the circumstances, including:

- the size and governance structure of the entity;
- how those charged with governance operate; and
- the auditor's view of the significance of the matters to be communicated.

For example, reports of relatively minor matters to a small client may be best handled orally via a meeting or telephone conversation.

Before communicating matters with those charged with governance the auditor may discuss them with management, unless that is inappropriate. For example, it would not be appropriate to discuss questions of management's competence or integrity with management.

Written representation should be sought from those charged with governance that explains their reasons for not correcting misstatements brought to their attention by the auditor.

6.1.3 Adequacy of the communication process

The auditor must evaluate whether the two-way communication with those charged with governance has been adequate for the purpose of the audit and, if not, must consider the effect on the assessment of the risks of material misstatement and the ability to obtain sufficient, appropriate evidence.

Interactive question 2: Reporting responsibilities

In each of the cases listed below identify to whom the auditor would initially report.

(1) The auditor has obtained evidence that the operations manager has committed a fraud against the company.

(2) The auditor has obtained evidence that the finance director has committed a fraud against the company.

(3) Disagreement with an accounting policy.

(4) The auditor is suspicious that the board of directors are involved in money laundering activities.

See **Answer** at the end of this chapter.

CHAPTER 4

6.1.4 Reporting deficiencies in internal control

Auditors may also issue a report on control deficiencies to management. These reports were a key element in your earlier studies in auditing.
ISA 265, *Communicating Deficiencies in Internal Control to Those Charged with Governance and Management* specifies a threshold of significance at which deficiencies in internal control should be communicated to those charged with governance.

Significant deficiencies in internal control are those which, in the auditor's professional judgement, are of sufficient importance to merit the attention of those charged with governance.

Matters that the auditor may consider in deciding whether deficiencies are significant include the following:

- Likelihood of the deficiencies leading to material misstatements in future
- Susceptibility to fraud of related assets and liabilities
- Subjectivity and complexity of determining estimated amounts, such as fair value estimates
- The financial statement amounts exposed to the deficiencies
- The volume of activity in the account balance or class of transactions
- The importance of the controls to the financial reporting process
- The cause and frequency of the exceptions detected
- The interaction of the deficiency with other deficiencies in internal control

Recap of key qualities of a report to management

6.1.4.1 It should not **include language** that **conflicts** with the **opinion** expressed in the audit report.

6.1.4.2 It should state that the **accounting and internal control** system were **considered only** to the **extent necessary** to **determine** the **auditing procedures** to report on the financial statements and not to determine the adequacy of internal control for management purposes or to provide assurances on the accounting and internal control systems.

6.1.4.3 It will state that it **only discusses deficiencies** in internal control which have **come to the auditor's attention** as a result of the **audit** and that other deficiencies in internal control may exist.

6.1.4.4 It should also include a statement that the **communication is provided for use only** by **management** (or another specific named party).

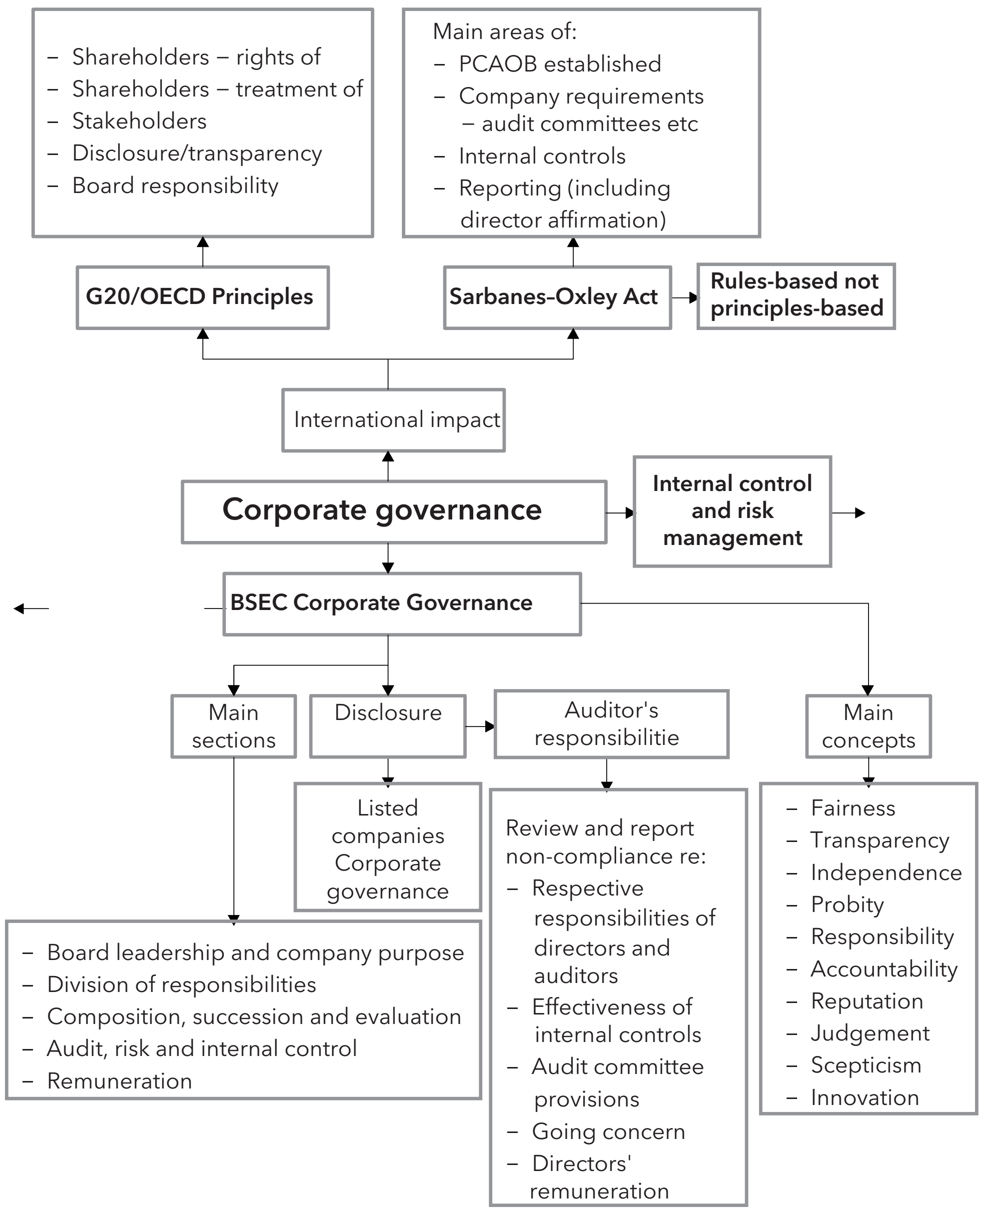
6.1.4.5 The auditors will usually ascertain the actions taken, including the reasons for those suggestions rejected.

6.1.4.6 The auditors may encourage management to respond to the auditor's comments, in which case any response can be included in the report.

Professional skills focus: Concluding, recommending and communicating

The auditor is required to communicate their findings from the course of the audit – it is imperative that the requirements of the standards are followed or the firm could face significant problems.

Summary



CHAPTER 4

1 Knowledge diagnostic

Before you move on to question practice, confirm you are able to answer the following questions having studied this chapter. If not, you are advised to revisit the relevant learning from the topic indicated.

	Confirm your learning
1.	Can you explain what good and bad systems of corporate governance look like?
2.	Can you explain the concepts that underpin sound corporate governance?
3.	Do you understand what the BSEC Corporate Governance Code includes and how it expects companies to apply it? Can you explain how this works in other countries?
4.	Do you understand the various roles played by board members including non-executive directors?
5.	Are you aware of current developments in governance, such as the Stewardship Code, the guidance on risk management and internal control and the various forms of communication required to satisfy best practice?

2 Question practice

Aim to complete all self-test questions at the end of this chapter. The following self-test questions are particularly helpful to further topic understanding and guide skills application before you proceed to the next chapter.

Question	Learning benefit from attempting this question
SPV	You may be required to assess the governance practices in place across an organisation, so this question should help you learn how this can be achieved.
Hammond Brothers	Further scenario practice, this time focusing on remuneration issues and matters of a control nature.

Once you have completed these self-test questions, it is beneficial to attempt the following questions from the Question Bank for this module. These questions have been selected to introduce exam style scenarios that will help you improve your knowledge application and professional skills development before you start the next chapter.

Question	Learning benefit from attempting this question
Couvert requirement (2)	Good practice of how governance could be tested in the exam.

Refer back to the learning in this chapter for any questions which you did not answer correctly or where the suggested solution has not provided sufficient explanation to answer all your queries. Once you have attempted these questions, you can continue your studies by moving on to the next chapter.

Self-test questions

Answer the following questions.

1 SPV

SPV is listed on the stock exchange of a central European country. The company manufactures a wide range of pharmaceutical products, including modern drugs used in preventing and treating diseases. SPV has three factories where drugs are produced and one research and development facility.

The board of directors comprises the chair/CEO, three executive and two non-executive directors (NEDs). Separate audit and remuneration committees are maintained, although the chair has a seat on both those committees. The NEDs are appointed for two and usually three consecutive four-year terms of office before being required to resign. The internal auditor currently reports to the board (rather than the financial accountant) on a monthly basis, with internal audit reports normally being actioned by the board.

There have recently been problems with the development of a new research and development facility. On a number of occasions the project has fallen behind schedule and the costs have been much greater than expected. Because of developments that have taken place elsewhere in the pharmaceuticals industry while the project was being completed, concern has been expressed that the facility cannot now represent value for money. A couple of large institutional investors have raised concerns about this, and have indicated their intention to raise the issue at the annual AGM and possibly vote against the accounts.

Throughout the project one of the non-executive directors criticised the way the project had been approved and monitored. She claimed that the board had been led by the senior managers in the research and development department and had acted as no more than a rubber stamp for what they wanted to do. She is threatening to resign at the AGM on the grounds that the board is failing to function effectively and she does not wish to be held responsible for decisions on which she has had no effective input. As a result, the other non-executive director has also raised questions about the way the board is functioning.

Requirements

1.1 Explain the main responsibilities of the board, identifying the ways in which SPV's board appears to have failed to fulfil its responsibilities.

1.2 Evaluate the structures for corporate governance within SPV, recommending any amendments you consider necessary to those structures.

2 Hammond Brothers

Hammond Brothers, a road haulage company, is likely to be seeking a stock exchange listing in a few years' time. In preparation for this, the directors are seeking to understand certain key recommendations of the major international corporate governance codes, since they realise that they will have to strengthen their corporate governance arrangements. In particular the directors require information about what the governance reports have achieved in:

- defining the role of non-executive directors;
- improving disclosure in financial accounts;

CHAPTER 4

- strengthening the role of the auditor; and
- protecting shareholder interests.

Previously the directors have received the majority of their income from the company in the form of salary and have decided salary levels among themselves. They realise that they will have to establish a remuneration committee but are unsure of its role and what it will need to function effectively. The directors have worked together well, if informally; there is a lack of formal reporting and control systems both at the board and lower levels of management. There is also currently no internal audit department.

The directors are considering whether it will be worthwhile to employ a consultant to advise on how the company should be controlled, focusing on the controls with which the board will be most involved.

Requirements

2.1 Explain the purpose and role of the remuneration committee.

2.2 Explain what is meant by organisation and management controls and recommend the main organisation and management controls that Hammond Brothers should operate.

Now go back to the Introduction and ensure that you have achieved the Learning outcomes listed for this chapter.

Answers to Interactive questions

Answer to Interactive question 1

1.1 **Benefits of the BSEC Corporate Governance Code (the Code) Shareholders**

At its heart, the Code places great emphasis on the importance of sound governance that allows shareholders to assess how well directors have **performed** and what **value** they have created. There are numerous requirements to **engage** with shareholders (such as at formal general meetings or via the senior independent director) and policies such as those related to **remuneration** require alignment with shareholder interests.

Internal controls

Another important area for shareholders is the emphasis placed on directors monitoring and assessing **internal controls** in the business on a regular basis. While it is a statutory requirement that directors safeguard the investment of the shareholders by instituting internal controls, this additional emphasis on quality should increase shareholders' confidence in the business.

Directors' re-election

The requirements of the Code make the **directors more accessible** to the shareholders. They are subject to re-election every year. They are also asked to make disclosure in the financial statements about their responsibilities in relation to preparing financial statements and going concern.

Audit committee

Lastly, some people would argue that the existence of an **audit committee** will lead to shareholders having greater confidence in the reporting process of an entity.

Other users

The key advantage to other users is likely to lie in the increased emphasis on internal controls, as this will assist the company in operating smoothly and increasing visibility of operations, which will be of benefit to customers, suppliers and employees.

1.2 **Voluntary code**

Adherence to the BSEC Corporate Governance Code is not a statutory necessity, although it is possible that in the future such a Code might become part of company law.

Advantages

The key merit of the Code being voluntary for most companies is that it is **flexible**. Companies can review the Code and make use of any aspects which would benefit their business.

If they adopt aspects of the Code, they can disclose to shareholders what is being done to ensure **good corporate governance**, and what aspects of the Code are not being followed, with reasons.

This flexibility is important, for there will be a **cost of implementing** such a Code, and this cost might outweigh the benefit for small or owner-managed businesses.

Disadvantages

Critics would argue that a voluntary code allows companies that should comply with the Code to **get away with non-compliance** unchallenged.

They would also argue that the **type of disclosure** made to shareholders about degrees of compliance could be **confusing and misleading** to shareholders and exacerbate the problems that the Code is trying to guard against.

Answer to Interactive question 2

Initial report

(1) The auditor would report the matter to those charged with governance (ISA 260/240).

(2) The auditor would report the matter to any other member of the board, for example the chief executive or the chair. Where there is doubt about the integrity of those charged with governance as a whole, the auditor will need to seek legal advice as to the appropriate course of action. This may include reporting to third parties eg, police or a regulatory authority (ISA 240).

(3) This would be reported to and discussed with those charged with governance (ISA 260). If the disagreement is material and is not changed, the auditors will also report to the shareholders via the modified opinion in the audit report.

(4) The auditor should report suspicions of money laundering activities to the firm's Money Laundering Compliance Principal (MLCP). The MLCP will then decide on the next appropriate step which may involve making disclosure to the National Crime Agency.

Answers to Self-test questions

1 SPV

1.1 Role of board

Each individual board of directors will take on particular tasks peculiar to their own company and these will be different from company to company. However, there are three key tasks that will be addressed by all boards of directors to one degree or another.

Strategic management

The development of the strategy of the company will almost certainly be led by the board of directors. At the very least they will be responsible for **setting the context for the development of strategy**, defining the nature and focus of the operations of the business and determining the mission statement and values of the business.

Strategic development will also consist of **assessing the opportunities and threats** facing the business, **considering, developing and screening the strategic proposals and selecting and implementing appropriate strategies.** Some or all of this more detailed strategic development may be carried out by the board, but also may be delegated to senior management with board supervision.

In the case of SPV, the board appears to have had inadequate involvement in the development of strategy. While the board may use advice from expert managers, the board should also have challenged what they provided and carried out its own analysis; possible **threats from rivals** appear to have been inadequately considered.

Control

The board of directors is ultimately responsible for the **monitoring and control** of the activities of the company. They are responsible for the financial records of the company and that the financial statements are drawn up using appropriate accounting policies and show a true and fair view. They are also responsible for the **internal controls within the business** that ensure the financial information is accurate and the assets are safeguarded.

The board will also be responsible for the direction of the company and ensuring that the managers and employees work towards the **strategic objectives** that have been set. This can be done by the use of plans, budgets, quality and performance indicators and benchmarking.

Again what has happened with the projects appears to indicate board failings. It seems that the board failed to spot **inadequacies in the accounting information** that managers were receiving about the new project, and did not ensure that **action was taken by managers to control** the overruns in time and the excessive costs that the accounting information may have identified. The board also seems to have failed to identify inadequacies in the information that it was receiving itself.

Shareholder and market relations

The board of directors has an important role externally to the company. The board is responsible for **raising the profile of the company and promoting the company's interests** in its own and possibly other marketplaces.

The board has an important role in managing its relationships with its shareholders. The board is responsible for **maintaining relationships and dialogue** with all shareholders, plus stakeholders as well. As well as the formal dialogue at the AGM many boards of directors have a **variety of informal methods** of keeping shareholders informed of developments and proposals for the company. Methods include informal meetings, company websites, social reports and environmental reports.

The institutional shareholders' intention to vote against the accounts is normally seen as a **last resort** measure, if other methods of exercising their influence and communicating their concerns have failed. This indicates that the board has **failed to communicate effectively** with the institutional shareholders.

1.2 **Suggestions for corporate governance Composition of the board**

Corporate governance requirements normally indicate that the board of directors should comprise equal numbers of executive and non-executive directors. By having only two non-executive directors, SPV may not be following requirements. SPV needs to appoint at least one more non-executive director to the board.

There is also a lack of any recent or relevant financial experience amongst the non-executive directors. Corporate governance regulations normally suggest that at least one NED has financial experience so they can effectively monitor the financial information that the board is reviewing. Making the new appointee an accountant would help to fulfil this requirement.

Role of chair/CEO

Corporate governance regulations normally require that the roles of the chair (the person running the board) and the CEO (the person running the company) are split. The reason for this is to ensure that no one person has too much influence over the running of the company. The roles of chair and CEO at SPV should be split at the earliest opportunity.

Appointment and nomination committee

There does not appear to be a nomination committee for addressing succession and appointment issues. Other issues that are not clear with the current structures relate to the function and composition of SPV's existing committees. Taking the UK Corporate Governance Code as an example, the chair of the board is not normally allowed to sit on the audit committee but they can sit on the remuneration committee provided they are independent and do not chair the committee. SPV needs to ensure that this requirement is being followed.

Service contracts

Service contracts for NEDs should be for a specified term. Any term beyond nine years should be subject to rigorous review and should take into account the need for progressive refreshing of the board. The duration of contracts is limited to ensure that payments for early termination of contracts are not excessive. The reappointment provisions apply to ensure that new NEDs are being appointed as directors on a regular basis. NEDs who have been on the board for a few years may become too familiar with the operations of the company and therefore may not provide the necessary external independent check that they are supposed to do.

Service contracts need to be limited and any over nine years for NEDs (and one year for executives) should be reviewed.

Internal audit

The internal audit department usually does not report to the financial accountant, as that person may have a vested interest in not taking any action on the reports, especially where reports are critical of the accountant. In that sense, reporting to the board is acceptable.

However, the board as a whole may not have the time to review internal audit reports and may be tempted to ignore them if they are critical of the board itself. Corporate governance regulations indicate that the internal audit department should report to the audit committee with reports being forwarded to the board. This ensures that the report is heard by the NEDs, who can then ensure that internal audit recommendations are implemented where appropriate by the board.

In SPV, the internal auditor needs to report to the audit committee, for reasons already mentioned above.

2 Hammond Brothers

2.1 Purpose and role of remuneration committee

The purpose of the remuneration committee is to provide a **mechanism** for **determining** the **remuneration packages** of executive directors. The scope of the review should include not only salaries and bonuses, but also share options, pension rights and compensation for loss of office.

The committee's remit may also include issues such as **director appointments** and succession planning, as these are connected with remuneration levels.

Constitution of remuneration committee

Most codes recommend that the remuneration committee should consist entirely of **non-executive directors** with no personal financial interest other than as shareholders in the matters to be decided. In addition, there should be **no conflict of interests** arising from remuneration committee members and executive directors holding directorships in common in other companies. Within Hammond, there is a requirement to first appoint NEDs and then ensure that the remuneration committee is comprised of these individuals. The current system of the directors deciding their own salary is clearly inappropriate; there is no independent check on whether the salary levels are appropriate for the level of experience of the directors or their salary compared with other similar companies.

Functioning of remuneration committee

The UK Corporate Governance Code recommends that remuneration policy should be long term in nature and clearly linked to the successful delivery of strategy. The committee should pay particular attention to the setting of performance-related elements of remuneration.

Within Hammond, the vast majority of remuneration is based on salary; there is little element of performance-related pay. Governance guidelines indicate that remuneration should be balanced between basic salary and bonuses. Hammond's remuneration committee needs to increase the bonus element of remuneration to focus directors more onto improving the performance of the company. However, conditions for receipt of performance-related remuneration should be designed to promote the long-term success of the company.

Consideration should be given to the possibility of reclaiming variable components in exceptional circumstances of misstatement or misconduct.

Reporting of remuneration committee

A **description** of the work of this committee should form part of the annual report. This description should set out **company policy** on remuneration and give details of the **packages** for **individual directors** and their **rationale**. The report should describe the extent (if any) of **shareholder engagement** with the company's remuneration policy and **workforce engagement** about how executive remuneration is aligned with the wider company pay policy.

2.2 Main concerns of board

The board's principal concern is with controls that can be classified as organisation or management.

Organisation controls

Organisation controls are designed to ensure **everyone** is **aware** of their **responsibilities**, and **provide** a **framework** within which lower level controls can operate. Key organisation controls include the following.

(1) **Structure**

The board should establish an **appropriate structure** for the organisation and **delegate** appropriate levels of authority to different grades.

(2) **Internal accounting system**

The board should ensure that the system is providing **accurate and relevant information** on a regular basis. Good quality information will enable the board to assess whether targets are being met or losses are possible.

(3) **Communication**

Communication of organisation **policies** and values through manuals and other guidance to staff is essential. It is not clear from the scenario whether Hammond actually has any of these controls in place; however, from the relatively informal basis in which the company has been run, it is unlikely that detailed controls have been implemented.

Management controls

Management controls are designed to **ensur**e that the **business** can be **effectively monitored**. Key management controls include the following.

(1) **Monitoring of business risks on a regular basis**

This should include **assessment of the potential financial impact** of contingencies.

(2) **Monitoring of financial information**

Management should be alert for significant variations in results between branches or divisions or significant changes in results.

(3) **Use of audit committee**

The committee should actively **liaise** with the external and internal auditors, and **report** on any deficiencies discovered. The committee should also regularly **review** the **overall structure** of internal control, and investigate any serious deficiencies found.

(4) **Use of internal audit**

Internal audit should be used as an independent check on the operation of detailed controls in the operating departments. Internal audit's work can be targeted as appropriate towards areas of the business where there is a risk of significant loss should controls fail. As there is no internal audit department at present, the board will need to establish one and define its remit.

The overall lack of controls is concerning, given the objective to obtain a listing. The directors will need to implement the recommendations of the UK Corporate Governance Code to ensure that a listing can be obtained.

Chapter 5

The statutory audit: planning and risk assessment

Introduction

Learning outcomes

- Evaluate and explain current and emerging issues in auditing including developments in the use of technology (eg, impact of Task Force on Climate-related Financial disclosures, big data, data analytics and artificial intelligence)
- Identify the components of risk and how these components may interrelate
- Appraise the entity and the, potentially complex, economic environment within which it operates as a means of identifying and evaluating the risk of material misstatement
- Identify and appraise the risks, including analysing qualitative and quantitative data using data analytics software, arising from, or affecting, a potentially complex set of business processes and circumstances and assess their implications for the engagement
- Identify significant business risks (including those arising from cyber security and technological advances including cloud computing, cryptocurrencies and robotic process automation) and assess their potential impact upon the financial statements and the audit engagement
- Evaluate the impact of risk and materiality in preparing the audit plan, for example the nature, timing and extent of audit procedures
- Evaluate the components of audit risk for a specified scenario using data analytics software when appropriate, including the interactions of inherent risk, control risk and detection risk, considering their complementary and compensatory nature
- Interrogate an organisation's accounting records using data analytics software to identify audit risks and communicate with the audit team
- Show professional scepticism in assessing the risk of material misstatement, having regard to the reliability of management
- Develop and appraise, based upon planning procedures, an appropriate audit strategy and detailed audit plan or extracts
- Analyse and evaluate the control environment for an entity based on an understanding of the entity, its operations and its processes
- Evaluate an entity's processes for identifying, assessing and responding to business and operating risks as they impact on the financial statements
- Explain and evaluate the relationship between audit risk and audit evidence

Chapter study guidance

Use this schedule and your study timetable to plan the dates on which you will complete your study of this chapter.

Topic	Practical significance	Study approach	Exam approach	Interactive questions
1	**Overview of the audit process**	**Approach** Use the diagram to	This diagram will help you to remember where	N/A

	A quick reminder of the various stages of the audit so you can track your progress through this part of the Workbook.	introduce the rest of this chapter. **Stop and think** How much of this do you remember from your previous auditing studies?	you are in the audit process and what (if anything) you may still require for successful completion.	
2	**Audit planning** An overview of the key auditing standards that are used during planning.	**Approach** Confirm your understanding of these standards by reference to the diagram in the previous section. **Stop and think** Can you find these standards in your auditing standards open book?	Many questions are set at the planning stage of the audit so it's important you can apply the standards to the scenario if required.	N/a
3	**Professional scepticism** The role and importance of professional scepticism has grown in recent years, following a number of high profile corporate casualties.	**Approach** Compare this section with the definitions of professional scepticism that you will find in both ISA 200 and the Glossary at the back of the auditing standards open book. **Stop and think** Consider which parts of the audit are most likely to require the greatest amounts of professional scepticism.	You can expect to see scenarios that will require you to display professional scepticism when analysing the key issues.	N/A
4	**Understanding the entity** You need to understand an entity properly in order to be able to assess risks of misstatements within the financial statements effectively.	**Approach** Through reading both this section and the contents of ISA 315, you should be able to start identifying issues that could lead to some form of misstatement. Note how various	This section demonstrates the need to treat all information in a given scenario holistically in order to build a fuller picture of the entity and all the risks it presents.	N/A

		industries and processes affect your understanding. **Stop and think** Use the worked example to see this working in practice.		
5	**Business risk model** As well as being part of sound governance, business risks can be used to understand the areas of the financial statements at greatest risk of being misstated.	**Approach** Consider business risks and how they could impact on the financial statements. **Stop and think** Can you explain why this is not the same as audit risk but can still be helpful when identifying areas of audit risk?	You will need to be on the lookout for various situations that could create misstatement of some kind.	**IQ1: Financial risk** A short illustration of the connection between these two types of risk. **IQ2: Audit procedures** Great practice for interrogating a scenario and considering the implications of your findings. **IQ3: Identifying business risk** Further practice of how the business risk approach is used to consider the impact of certain business issues on the audit.
6	**Audit risk** A comprehensive background of the elements that go into the assessment of audit risk.	**Approach** Review this content with your previous studies in mind and focus on how you would apply this knowledge in a more complex scenario. **Stop and think** Note how practical the approaches in this section are.	You may find it helpful to consider the separate components of audit risk (inherent, control and detection) in structuring your answer.	**IQ4: Inherent risks from financial reporting policies** A useful starting point in explaining inherent risk. **IQ5: Audit risk** A more detailed scenario which will help you understand how to identify and explain audit risks in an exam situation.
7	**Creative accounting** This is one of the bigger risks that can have a significant effect on a set of financial statements,	**Approach** Consider each of the causes and consequences of creative accounting.	Taking the list of red flags as an example, you should be prepared to look for illustrations of these factors in a scenario	N/A

	yet it can also be one of the hardest to detect.	**Stop and think** Note how a strong sense of professional scepticism would help identify cases of creative accounting.	as they are likely to have been inserted specifically for the purpose of implying that there is something more sinister buried.	
8	**Materiality** This is what gives the auditor an indication of the things that really matter, both at planning and in subsequent parts of the audit. Remember that it is not always a number that determines materiality!	**Approach** This section is largely revision from your previous auditing studies but still requires your attention. **Stop and think** Note the levels of materiality used in some of the worked examples.	While you can always calculate the materiality levels to be used in an exam question based on certain thresholds, don't forget the specific circumstances in the scenario that could mean other items are still worthy of your audit focus.	**IQ6: Materiality (1)** An assessment of your ability to calculate the appropriate level of materiality. **IQ7: Materiality (2)** A more complex example of the amount that should be used to determine materiality.
9	**Responding to assessed risks** Once audit risk has been assessed, the auditor needs to decide what to do next.	**Approach** Make sure you can differentiate between risks that affect the financial statements overall and those at the assertion level only. **Stop and think** You will need to consider the evidence required from this evaluation.	Make sure you consider audit procedures that are suitable and based on the assessed risks.	N/A
10	**Other audit methodologies** In addition to the risk methodologies covered in this chapter, there are other approaches that the auditor can use.	**Approach** Work through each of these three audit methodologies. **Stop and think** Can you remember which methodologies support substantive testing as opposed to testing controls?	You should be prepared to consider a variety of audit approaches and must be led by the detail provided in the scenario.	N/A

11	**Information technology and risk assessment** Most organisations rely on some form of information technology to support their business operations. It is essential that auditors factor this into their audit planning.	**Approach** Review the content in this section paying particular attention to the terminology used. **Stop and think** Are there elements of this technology that you or your employer make use of?	Questions in this area tend to require that you advise a client on something of a technical nature, so it is essential that you can identify what the technology is and how it should be used, being alert to the advantages and disadvantages.	N/A
12	**Big data** This is another area of significant importance for auditors and their clients.	**Approach** Consider the different Vs of big data. **Stop and think** Make sure that you can explain what big data is and how it could be used in an entity.	Again, you are most likely to need to explain the opportunities, benefits and drawbacks of big data in an advisory capacity.	N/A
13	**Data analytics, robotic process automation (RPA) and artificial intelligence (AI)** Technology is fast becoming the next frontier for auditors as business processes are increasingly becoming more automated. Audit quality is the ultimate winner but it requires significant investment to reap the promised benefits.	**Approach** Once you have read this section, start to consider how technology could improve the audit but at the same time, what risks the use of technology might also bring. **Stop and think** How can you use technology to improve the quality of the audit?	This is becoming an increasingly challenging area to examine as the pace of change is relentless. However, you should consider the use of technology in the audit (especially data analytics software) and how it can be leveraged to improve audit quality.	N/A

Once you have worked through this guidance you are ready to attempt the further question practice included at the end of this chapter.

1 Overview of the audit process

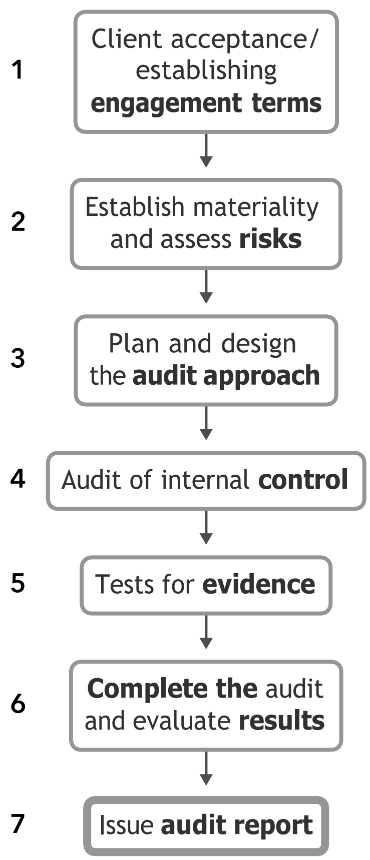
Section overview

The audit is designed to enable the auditor to obtain sufficient, appropriate evidence.

1.1 Overview

While there may be variations between specific procedures adopted by individual firms, the audit process as set out in auditing standards is a well-defined methodology designed to enable the auditor to obtain sufficient, appropriate evidence.

This process can be summarised in a number of key stages: Figure 5.1: Summary of audit process



In this chapter we will consider stages 1 to 4. In Chapter 6 we will consider stage 5, and in Chapter 8, stages 6 and 7. However, it is important not to view the audit as a series of discrete stages and individual audit procedures. For example, it can be argued that all audit procedures which provide evidence are risk assessment procedures whether they are conducted during planning, control evaluation, substantive testing or completion. The audit process will adopt a strategy where complementary evidence is acquired and evaluated from a range of sources. The process is repeated until the auditor has obtained sufficient, appropriate audit evidence which is adequate to form an opinion.

2 Audit planning

Section overview

You should be familiar with the basic planning process

2.1 Introduction

Auditors are required to plan their work to ensure that attention is paid to the correct areas of the audit, and the work is carried out in an effective manner.

In order to produce this plan the auditor must do the following:

- Understand the business, its control environment, its control procedures and its accounting system
- Assess the risk of material misstatement
- Determine materiality
- Develop an audit strategy setting out in general terms how the audit is to be carried out and the type of approach to be adopted
- Produce an audit plan which details specific procedures to be carried out to implement the strategy taking into account all the evidence and information collected to date

You have already covered planning and risk assessment issues in your earlier studies. The relevant ISAs are:

- ISA 210 (, *Agreeing the Terms of Audit Engagements*
- ISA 300, *Planning an Audit of Financial Statements*
- ISA 315, *Identifying and Assessing the Risks of Material Misstatement*
- ISA 320, *Materiality in Planning and Performing an Audit*
- ISA 330, *The Auditor's Responses to Assessed Risks*

A number of issues are developed in the remainder of this chapter; however, it is assumed that you are already familiar with the basic principles of planning and risk assessment. A summary of these and other related ISAs can be found in the technical reference section at the end of the chapter.

3 Professional scepticism

Section overview

The auditor must maintain an attitude of professional scepticism throughout the audit.

3.1 Requirement

Definition

Professional scepticism: An attitude that includes a questioning mind, being alert to conditions which may indicate possible misstatement due to error or fraud, and a critical assessment of audit evidence.

Professional scepticism includes being alert to:

- audit evidence that contradicts other audit evidence;
- information that brings into question the reliability of documents and responses to enquiries to be used as audit evidence;
- conditions that may indicate possible fraud; and
- circumstances that suggest the need for audit procedures in addition to those required by the ISAs.

ISA 200, *Overall Objectives of The Independent Auditor and the Conduct of an Audit in Accordance with International Standards on Auditing* requires that the auditor 'shall plan and perform an audit with professional scepticism recognising that circumstances may exist that cause the financial statements to be materially misstated'. Maintaining professional scepticism throughout the audit reduces the risks of overlooking unusual circumstances, overgeneralising when drawing conclusions and using inappropriate assumptions in determining the nature, timing and extent of the audit procedures and evaluating the results. ISA 200 also makes the following points:

(a) The auditor may accept records and documents as genuine unless there is reason to believe the contrary. Where there is doubt, for example where there are indications of possible fraud, the auditor must investigate further and determine whether to modify or increase the audit procedures.

(b) A belief that management and those charged with governance are honest and have integrity does not relieve the auditor of the need to maintain professional scepticism.

The same points are reiterated in ISA 240, The Auditor's Responsibilities Relating to Fraud in an Audit of Financial Statements. This standard emphasises that where there are potential fraud issues the auditor's professional scepticism is particularly important when considering the risks of material misstatement.

3.2 Importance of professional scepticism

The importance of professional scepticism cannot be overemphasised. An effective and compliant audit cannot be carried out without it.

Given that it is fundamental that professional scepticism is applied for all audits of financial statements, the audit engagement partners of audit firms must lead by example and firms should ensure that professional scepticism is given the degree of prominence it warrants during the training of audit staff.

Following the global financial crisis in 2008 and 2009 a common theme in a number of regulator reports was that professional scepticism could have been more clearly demonstrated by auditors when looking at a number of audit areas. It continues to be at the top of the agenda for regulators and standard setters, including the IAASB in their 2018 update of the IESBA Code of Ethics as well as the UK FRC, whose response to this 2018 update cited the need for 'a global debate to focus on what actions, key characteristics and behaviours are required on the part of a practitioner to ensure the application of appropriate professional scepticism in a way that will meet the expectations of users of information' (UK FRC, 2018).

This section has dealt with the theoretical background of professional scepticism and the use of professional scepticism in an audit planning context. We will look at professional scepticism again in the more practical context of audit fieldwork in Chapter 6.

4 Understanding the entity

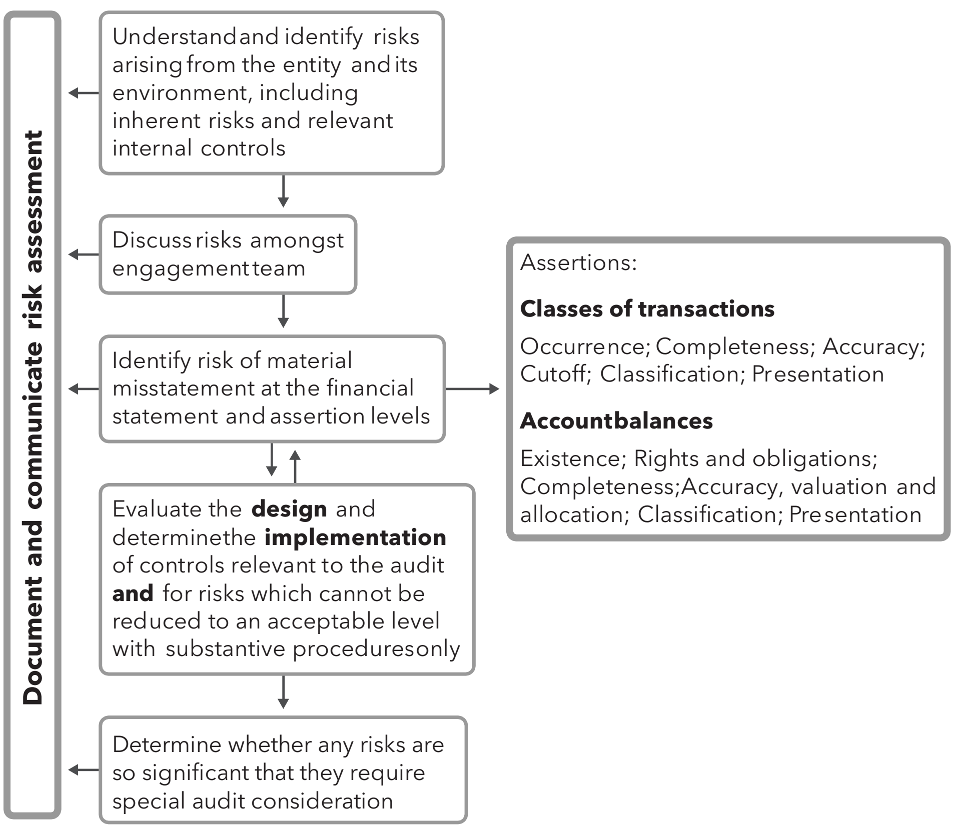
Section overview

- The auditor obtains an understanding of the entity in order to assess the risks of material misstatement.
- Information will be sought regarding the industry in which the business operates and the different business processes within the entity itself.
- Auditors should be aware of the concept of scalability when assessing risk for entities of different sizes and complexities.

4.1 Procedures

ISA 315, *Identifying and Assessing the Risks of Material Misstatement* paragraph 11 states that: “the objective of the auditor is to identify and assess the risks of material misstatement, whether due to fraud or error, at the financial statement and assertion levels thereby providing a basis for designing and implementing responses to the assessed risks of material misstatement”.

Figure 5.2: Audit risk assessment



(Source: ICAEW Audit and Assurance Faculty (2004) *Auditing Standards – All Change: A Short Guide to Selected International Standards on Auditing (UK and Ireland) adapted for standards updated since 2004*)

You will have studied the financial statement assertions in your earlier studies and you will find a more detailed recap including changes resulting from the June 2016 revised standards in Chapter 6.

ISA 315 sets out various methods by which the auditors may obtain this understanding as part of their risk assessment:

- **Enquiries of management** and others within the entity (including internal audit if appropriate)
- **Analytical procedures**
- **Observation** and **inspection**
- Audit team **discussion** of the applicable financial reporting framework and the susceptibility of the financial statements to material misstatement
- **Prior period knowledge** (subject to certain requirements) and engagement-specific matters related to acceptance and continuance

The auditors must use a combination of the top three techniques, and must engage in discussion for every audit. The auditor may use their prior period knowledge, but must carry out procedures to ensure that there have not been changes in the year meaning that it is no longer valid.

The ISA sets out a number of areas of the entity and its environment that the auditor should gain an understanding of. These are summarised as follows:

- Industry, regulatory and other external factors
- Nature of the entity
- The applicable financial reporting framework and the entity's selection and application of accounting policies, including reasons for any changes
- Measurement and review of the company's performance
- Inherent risk factors and the impact they have at both assertion and financial statement level
- Internal control relevant to the audit

The purpose of obtaining the understanding is to **assess the risks of material misstatement** in the financial statements for the current audit. The ISA says that the auditor shall identify and assess the risks of material misstatement at the financial statement level, and in line with ISA 330 (effectively responding to assessed risks at the assertion level).

The approach that the auditor is required to take can be summarised by the following steps:

Step 1 Identify risks throughout the process of obtaining an understanding of the entity Evaluate

Step 2 whether the risks relate pervasively to the financial statements as a whole Relate the risks to

Step 3 what can go wrong at the assertion level

Step 4 Consider the likelihood of misstatement (including the possibility of multiple misstatements)

Step 5 Consider the likelihood of the risks causing a material misstatement

Context example: Ockey Ltd

The audit team at Ockey Ltd has been carrying out procedures to obtain an understanding of the entity. In the course of making enquiries about the inventory system, they have discovered that Ockey Ltd designs and produces tableware to order for a number of high street stores. It also makes a number of standard lines of tableware, which it sells to wholesalers. By the terms of its contracts with the high street stores, it is not entitled to sell unsold inventory designed for them to wholesalers. Ockey Ltd regularly produces 10% more than the high street stores have ordered, in order to ensure that they meet requirements when the stores do their quality control check. Certain stores have more stringent control requirements than others and regularly reject some of the inventory.

The knowledge above suggests two risks, one that the company may have obsolescent inventory, and another that if its production quality standards are insufficiently high, it could run the risk of losing custom.

We shall look at each of these risks in turn and relate them to the assertion level.

Inventory

If certain items of the inventory are obsolescent due to the fact that it has been produced in excess of the customer's requirement and there is no other available market for the inventory, then there is a risk that inventory as a whole in the financial statements will not be carried at the appropriate value. Given that inventory is likely to be a material balance in the statement of financial position of a manufacturing company, and the value could be up to 10% of the total value, this has the capacity to be a material misstatement.

The factors that will contribute to the likelihood of these risks causing a misstatement are matters such as:

- whether management regularly review inventory levels and scrap items that are obsolescent;
- whether such items are identified and scrapped at the inventory count; or
- whether such items can be put back into production and changed so that they are saleable.

Losing custom

The long-term risk of losing custom is that in the future the company will not be able to operate (a going concern risk). It could have an impact on the financial statements, if sales were disputed, revenue and receivables could be overstated; that is, not carried at the correct value. However, it appears less likely that this would be a material problem in either area, as the problem is likely to be restricted to a few customers, and only a few sales to those customers.

Again, review of the company's controls over the recording of sales and the debt collection procedures of the company would indicate how likely these risks to the financial statements are to materialise.

Some risks identified may be **significant risks** (indicated by the following factors), in which case they present **special audit considerations** for the auditors:

- Risk of **fraud**
- Its relationship with **recent developments**
- The degree of **subjectivity** in the financial information
- The fact that it is an **unusual** transaction
- It is a significant transaction with a **related party**
- The **complexity** of the transaction

Routine, non-complex transactions are less likely to give rise to significant risk than unusual transactions or matters of director judgement because the latter are likely to have more management intervention, complex accounting principles or calculations, greater manual intervention or lower opportunity for control procedures to be followed.

When auditors identify a significant risk, if they have not done so already, they should evaluate the design and implementation of the entity's controls in that area.

4.2 Industries and processes

During the initial planning phase, the audit firm will need to obtain information about the specific nature of the entity being audited and the different business processes within the entity itself.

4.2.1 Industry

The type of entity being audited will have a significant impact on the audit plan. For example:

Service industry	Manufacturing industry
Little or no inventory	Complex costing systems to allocate costs to inventory and work in progress
Focus on salaried employees	Many production staff based paid on hours worked including various overtime and incentive schemes
Payment by commission	May have payment by piece rates
Sales dependent on services provided	Sales dependent on products sold
Relatively little investment in plant and equipment; office space main building cost	Large investment in plant and equipment; office space relatively small in comparison to production facilities

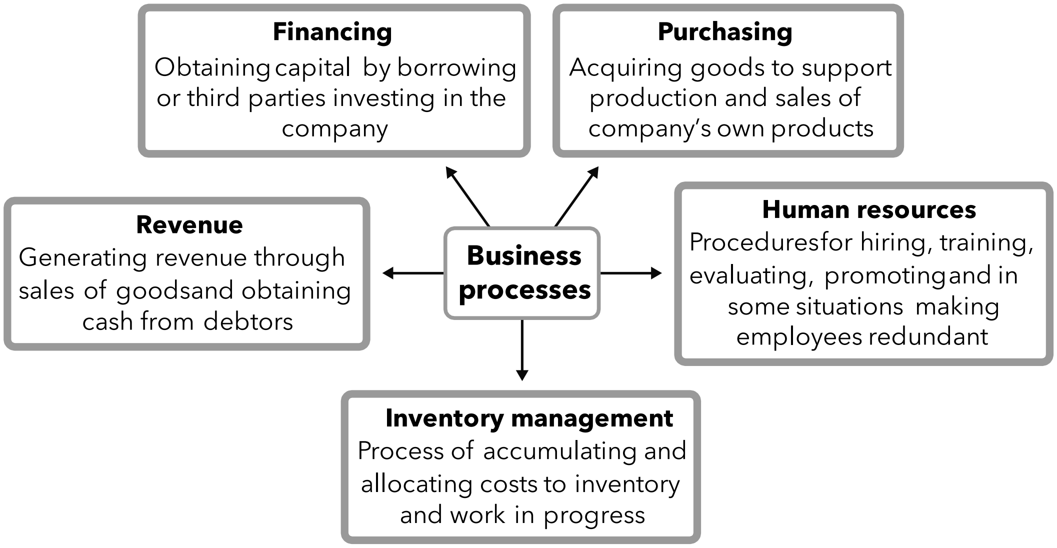
An understanding and appreciation of these differences will assist the auditor in identifying risk areas and in developing an appropriate audit approach.

From the auditor's point of view, the different entities will result in a different audit approach for each entity. For example, the lack of inventory in service industries will obviously mean less time will be devoted to that area. Conversely, the use of complicated costing systems will require use of specialist computer-auditors to identify, record and test various computerised systems.

4.2.2 Business processes

From the comments above, it is possible to identify the different business processes that the auditor will need to focus on. The five main processes are summarised in the diagram below.

Figure 5.3: Business processes



An understanding of each process focuses the auditor's attention on specific parts of the business.

Process	Audit focus
Financing	Verification of new share issues / confirming current account and loan balances and where necessary bank support for the business.
Purchasing	Audit of the purchases transaction cycle and payables balance.
Human resources	Audit of wages and salaries, including bonuses linked to production and commission on sales.
Inventory management	Audit of work in progress systems, including year-end inventory valuation and identification of inventory below cost price.
Revenue	Audit of sales transaction cycle and receivables balance.

The actual audit approach will depend partly on the audit methodology used.

Professional skills focus: Assimilating and using information

Scenarios are usually long and complex but will usually contain all the information you require to evaluate audit risk. Understanding the entity is therefore a process that takes time to master, but eventually helps you build up a better overall view of an organisation.

4.3 Scalability

ISA 315 reminds auditors of the concept of scalability.

Definition

Scalability: Auditors should apply the requirements of an ISA to all entities regardless of their complexity, nature and circumstances.

What this means is that ISA 315 should be applied to all entities regardless of their size or complexity – small entities with poor systems of control might still be complex and therefore risky, while larger entities with robust systems of internal control might actually be considered less risky.

There should be no preconceptions.

4.4 Standing back

In line with other ISAs there is also a need for the auditor to constantly assess the evidence that is being uncovered as the audit engagement unfolds: should this indicate contradictory to initial assessments, suitable action should be taken, either escalating or diminishing audit effort as appropriate, on an iterative basis.

5 Business risk model

Section overview

- Business risk is the risk arising to the business that it will not achieve its objectives.
- Corporate governance guidelines emphasise the importance of risk management processes within a business.
- The business risk model of auditing requires the auditor to consider the entity's process of assessing business risk and the impact this might have in terms of material misstatement.

5.1 Business risk

Business risk is the risk arising to entities that they will not achieve their objectives. It includes risks at all levels of the business.

Business risks can be classified into three categories.

(a) **Financial risks**

(b) **Operating risks**

(c) **Compliance risks**

Definitions

Financial risks: Risks arising from the company's financial activities (eg, investment risks) or the financial consequences of operations (eg, receivables risks).

Examples: going concern, market risk, overtrading, credit risk, interest rate risk, currency risk, cost of capital, treasury risks.

Operating risks: Risks arising from the operations of the business.

Examples: loss of orders; loss of key personnel; physical damage to assets; poor brand management; technological change; stock-outs; business processes unaligned to objectives.

Compliance risks: Risks arising from non-compliance with laws, regulations, policies, procedures and contracts.

Examples: breach of company law, non-compliance with accounting standards; listing rules; taxation; health and safety; environmental regulations; litigation risk against client.

The fundamental structure governing data protection and privacy is established by the constitutional rights to privacy in Bangladesh, as outlined in the Constitution, alongside the Information Communication Technology Act of 2006 and the Digital

Security Act of 2018. The ICT Guidelines, read with the Bank Companies Act, impose an obligation on the banks to ensure that their data are stored within the geographical limits of Bangladesh.

The UK's adoption of the General Data Protection Regulation as part of EU law could also be included here, although compliance is just as important for auditors as it is for their clients.

Business risk may be caused by many factors, or a combination of factors, including the following:

- Complex environment
- Dynamic environment
- Competitors' actions
- Inappropriate strategic decision-making
- Operating gearing
- Financial gearing
- Lack of diversification
- Susceptibility to currency fluctuations
- Inadequate actual or contingent financial resources
- Dependence on one or few customers
- Regulatory change or violation
- Adequacy and reliability of suppliers
- Overtrading
- Developing inappropriate technology
- Macroeconomic instability
- Poor management

5.2 Business risk management

Most working environments now have some form of risk management system. In Chapter 4 we discussed the Corporate Governance Code and the *Guidance on risk management, internal control and related financial and business reporting* that highlight its importance. Typically, the process of risk management for the business is as follows:

- Identify significant risks which could prevent the business achieving its objectives
- Provide a framework to ensure that the business can meet its objectives
- Review the objectives and framework regularly to ensure that objectives are met

In practice, each of these stages is complex

5.3 Audit methodology: business risk model

5.3.1 Principle behind the model

ISA 315 requires that auditors consider the **entity's process for assessing its own business risks**, and the impact that this might have on the audit in terms of material misstatements. Auditors consider the following:

- What factors lead to the problems which may cause material misstatements
- What the audit can contribute to the business pursuing its goals

The business risk audit approach tries to mirror the risk management steps that have been taken by the directors. In this way, the auditor will seek to establish that the financial statement objectives have been met, through an investigation into whether all the other business objectives have been met by the directors.

The application of the business risk model (BRM) is therefore related to the client's:

- objectives
- business strategy
- risk management procedures
- industry environment
- economic environment

This approach to the audit has been called a **top down approach** because it starts with the business and its objectives and works back down to the financial statements, rather than working up from the financial statements which has historically been the approach to audit involving detailed tests of transactions and balances. The BRM therefore looks at the 'big risks' that may significantly threaten the valuation, profitability or even the going concern of the business. Those who support this approach argue that the key audit risks are more likely to relate to the failure of the company's strategy than the misstatement of a transaction.

The following table demonstrates the way in which business risks can have implications for the financial statements and therefore the audit.

Principal risk	Immediate Financial Statement implications
Economic pressures causing reduced unit sales and eroding margins	Inventory values (IAS 2) Going concern
Economic pressures resulting in demands for extended credit	Receivables recoverability
Product quality issues related to inadequate control over supply chain and transportation damage	Inventory values – net realisable value and inventory returns
Customer dissatisfaction related to inability to meet order requirements	Going concern
Customer dissatisfaction related to invoicing errors and transportation damage	Receivables valuation
Unacceptable service response call rate related to poor product quality	Going concern Litigation – provisions and contingencies Inventories – net realisable value
Out of date IT systems affecting management's ability to make informed decisions	Anywhere
Extensive use of freelance and contract labour resulting in issues regarding their employment status	Employees' NI (may be understated if freelancers/contract workers are deemed to be employees) Fines – provisions and contingencies

Interactive question 1: Financial risk

On 1 January 20X8 a steel production company has significant steel inventories with a total value of £20 million.

To protect the inventory from changes in value, the entity enters into a futures contract on a commodities exchange to fix the selling price in 18 months' time. This is the first time that the entity has entered into this type of transaction.

Requirements

1.1 Identify the business risk in this situation.

1.2 Identify the issues which the auditor would need to consider. See **Answer** at the end of this chapter.

5.3.2 Impact on audit procedures

This can be summarised as follows:

Audit procedure	Effect of business risk model
Tests of controls	As the auditor pays greater attention to the high level controls used by directors to manage business risks, controls testing will be focused on items such as the control environment and corporate governance rather than the detailed procedural controls tested under traditional approaches.
Analytical procedures	Analytical procedures are used more heavily in a business risk approach, as they are consistent with the auditor's desire to understand the entity's business rather than to prove the figures in the financial statements.
Detailed testing	The combination of the above two factors, particularly the higher use of analytical procedures, will result in a lower requirement for detailed testing, although substantive testing will not be eliminated completely.

Interactive question 2: Audit procedures

You are using the business risk model in the statutory audit of a major international pharmaceutical company.

You are told that the key determinant of profitability is the development of new types of drug, which are superior to those of competitors. This is achieved by significant investment in research and development (R&D). However, you are also informed that such drugs may take as many as 10 years before gaining regulatory approval for use. One major R&D project is a joint venture with another pharmaceutical company.

Requirement

Outline:

(1) the key risks facing the company

(2) controls that management might use to mitigate such risks

(3) audit procedures to be carried out in respect of such risks

See **Answer** at the end of this chapter.

Interactive question 3: Identifying business risks

KidsStuff Ltd imports children's toys from a supplier in the Far East into its warehouse in Liverpool and distributes them to retailers throughout the UK. The company was set up by Joseph Cooper 40 years ago and is managed by Joseph and his two sons. The company had experienced reasonable growth until the last five years, but recent performance has been poor and the company now relies on a substantial overdraft. Joseph feels that the decline is due in part to the competitiveness of the market and the trend towards computer games. KidsStuff Ltd does not have a strong market presence in this area but this is currently being addressed by Joseph's son, Neil, who is confident that performance has improved.

You have received the following email from the engagement partner.

To: Audrey Senior

From: Allan Partner

Subject: KidsStuff Ltd

I know you are about to start work on your planning of this audit. Can you make sure that you specifically identify the business risks faced by KidsStuff Ltd and set out the effect of those on the audit. Can you also make a list of the further information you need in order to plan the audit so that I can request it from the directors?

Requirement

Respond to the engagement partner's email. See **Answer** at the end of this chapter.

6 Audit risk

Section overview

- Audit risk is the risk that the auditors may give an inappropriate opinion when the financial statements are materially misstated and consists of risks of material misstatement and detection risk.
- Risks of material misstatement can exist at both financial statement level and assertion level.
- The risk of material misstatement at the assertion level is made up of inherent risk and control risk.
- Inherent risk factors can include complexity, subjectivity, change, uncertainty or susceptibility to misstatement due to management bias and/or fraud.
- Information gained in obtaining an understanding of the business is used to assess risk.
- Assessment of control risk involves assessing an entity's system of internal control which consists of the control environment, the entity's risk assessment process, the entity's process for monitoring the system of internal control, information systems and communication, control activities and limitations of internal control.

6.1 Audit risk

Definitions

Audit risk: The risk that auditors may give an inappropriate audit opinion when the financial statements are materially misstated. Audit risk has two key components: **risks of material misstatement** in the financial statements and the risk of the auditor not detecting material misstatements in the financial statements (**detection risk**).

Risks of material misstatement: According to ISA 200, risks of material misstatement exist at two levels: the overall **financial statement level** (affecting many assertions) and the **assertion level** for classes of transactions, account balances and disclosures. Risks of material misstatement at the assertion level consist of **inherent risk** and **control risk**.

Inherent risk: The **susceptibility** of an assertion about a class of transaction, account balance or disclosure to a misstatement that could be material, either individually or when aggregated with other misstatements, before consideration of any related controls.

Control risk: The risk that a misstatement could occur in an assertion about a class of transaction, account balance or disclosure and that could be material, either individually or when aggregated with other misstatements, **will not be prevented, or detected and corrected**, on a timely basis by the entity's system of internal control.

Detection risk: The risk that the procedures performed by the auditor to reduce audit risk to an acceptably low level **will not detect a misstatement** that exists and that could be material, either individually or when aggregated with other misstatements.

6.1.1 The financial statement level

There are a number of factors which ISA 315 (Revised) discusses that could generate risks of material misstatement at the financial statement level. Here are some examples, including the impact that each could have on the conduct of the audit:

- **Operating losses** and **liquidity problems** which could affect the going concern status of the entity
- **Deficiencies in the entity's system of internal control** which may lead the auditor to conclude that there are questions around management integrity
- **Adverse economic conditions** that could lead to the need for additional financing (this could in turn lead to greater risk of material misstatement at the assertion level in areas susceptible to manipulation of key areas of the financial statements, such as assets, revenue and liabilities)
- Concerns about **changes to information systems** could increase the risks of material misstatement when considering the reliance to be placed upon the entity's accounting records (ISA 315 : paras. A195-199)

6.1.2 Inherent risk

ISA 315 Appendix 2 lists a series of inherent risk factors that indicate susceptibility to misstatement before the consideration of any controls. They relate to the preparation of information required by the applicable financial reporting framework and are listed below.

- Complexity
- Subjectivity
- Change
- Uncertainty
- Susceptibility to misstatement due to management bias or fraud

The susceptibility of any item prone to misstatement needs to be assessed by the auditor and this will be undertaken in terms of **likelihood** and **magnitude**, placing such items on what is called the **spectrum of inherent risk**. Items placed towards the higher end of this spectrum will be considered **significant risks** and will therefore demand more of the auditor's time and attention.

Inherent risk is the risk that items will be misstated due to characteristics of those items, such as the fact they are estimates and that they are important items in the accounts. The auditors must use their **professional judgement** and the **understanding of the entity** they have gained to assess inherent risk. If no such information or knowledge is available then the inherent risk is **high**.

Factors affecting client as a whole	
Integrity and **attitude to risk** of directors and management	Domination by a single individual can cause problems
Management experience and **knowledge**	Changes in management and quality of financial management
Unusual pressures on management	Examples include tight reporting deadlines, or market or financing expectations
Nature of business	Potential problems include technological obsolescence or overdependence on single product
Industry factors	Competitive conditions, regulatory requirements, technological developments, changes in customer demand
Information technology	Problems include lack of supporting documentation, concentration of expertise in a few people, potential for unauthorised access

Factors affecting individual account balances or transactions	
Financial statement accounts **prone to misstatement**	Accounts which require adjustment in previous period or require high degree of estimation
Complex or **subjective** accounts	Accounts which require expert valuations or are subjects of current professional discussion

Factors affecting individual account balances or transactions	
Assets at risk of being **lost** or **stolen**	Cash, inventory, portable non-current assets (computers)
Quality of **accounting systems**	Strength of individual departments (sales, purchases, cash etc)
High **volume** transactions	Accounting system may have problems coping

Unusual transactions	Transactions for large amounts, with unusual names, not settled promptly (particularly important if they occur at period end) Transactions that do not go through the system, that relate to specific clients or are processed by certain individuals
Staff	Staff changes or areas of low morale

Interactive question 4: Inherent risks from financial reporting policies

Fonesforall is a mobile phone network provider with its own retail outlets. It is currently offering the following package for £30 per month.

- ZX4 mobile phone handset
- 12-month subscription to the network
- 300 'free' call minutes per month (for 12 months)
- 500 'free' texts per month (for 12 months)
- Any unused call minutes or texts may be carried forward to the following month

The fair value of this package is estimated to be £500.

Requirement

Identify the risks associated with the treatment of revenue in relation to this package in the financial statements of Fonesforall.

See **Answer** at the end of this chapter.

6.1.3 Control risk

Control risk is the risk that client controls fail to detect material misstatements. A **preliminary assessment** of **control risk** at the planning stage of the audit is required to determine the level of controls and substantive testing to be carried out.

ISA 315 (Revised) Appendix 3 lists the matters that the auditor should consider when assessing an entity's system of internal control:

- Control environment
- The entity's risk assessment process
- The entity's process for monitoring the system of internal control
- The information system and communication
- Control activities
- Limitations in internal control

In this respect, a key initial audit question is "how does management control the business?". An understanding of this issue is a key element in an initial assessment of control risk.

Substantive and reliance strategies

For an ongoing client, the auditor will already have significant information on file regarding the control systems at the audit client. The audit strategy will therefore focus on **updating** this control information.

For a new client, a judgement on audit strategy will normally be deferred until after a more detailed understanding of the system of internal control is obtained. For the new client, the

auditor will **obtain information on the control systems** and then perform an **initial testing** of those controls to determine whether or not they are working correctly. Where these risk assessment procedures indicate that controls are not working correctly, then it is unlikely that the auditor will place reliance on those controls, as control risk will be set to maximum. **Substantive procedures** will be used instead.
However, if the risk assessment procedures indicate that controls are working correctly, then **some reliance** will be placed on internal controls. Control risk may be set only as either 'high' or 'low' in an all or nothing approach, as previously noted. Alternatively, there may be a possibility of setting control risk to an intermediate amount(s) within some firms' audit methodologies.

So, providing an initial determination of the nature, timing and extent of audit procedures, two possible audit strategies are normally identified:

- Substantive strategy – focusing on substantive testing (ie, tests of details and analytical procedures)
- Reliance strategy – focusing on tests of controls and reliance from inherent assurance

Notes

1 There will not be one strategy for the entire audit. Each business process or specific audit assertion will be allocated its own strategy. Similarly, each audit assertion may be allocated a different 'mix' of reliance and substantive strategy.

2 Auditing standards do require some substantive testing for each material class of transactions, account balances and disclosure, so the audit strategy for any one assertion will never be completely a reliance strategy.

3 However, it is possible (but unusual) that substantive testing may comprise entirely of analytical procedures, without any tests of details being carried out.

An auditor is more likely to follow a **reliance strategy** where:

- an entity uses **electronic data interchange** to initiate orders; there will be no paper documentation to verify;
- an entity provides **electronic services** to its customers eg, an internet service provider or telephone company. No physical goods are produced, with all information being collected and billing carried out electronically; and
- the test is for **understatement**.

An auditor is more likely to follow a **substantive strategy** where:

- there are **no controls** available for a specific audit assertion;
- the controls are assessed as **ineffective**;
- it is **inefficient** to test the effectiveness of the controls; and
- the test is for **overstatement**.

Whichever strategy is chosen, the auditor will **document** the reasons for choosing that strategy and then perform detailed auditing procedures in accordance with that strategy.

Control environment

Within an entity, the control system works within the **control environment**. A poor control environment implies that the control system itself will also be poor, because the entity does not place sufficient emphasis on having a good control environment.

So, the control environment sets the **philosophy of an entity** effectively influencing the 'control consciousness' of directors and employees. The importance of the enforcement of integrity and ethical values was illustrated in July 2011, with the closure of the *News of the World* newspaper resulting from phone hacking allegations.

Factors affecting the control environment include:

Factor	Explanation
Communication and enforcement of integrity and ethical values	An organisation should try to maintain the **integrity and ethical standing of the employees**. Membership of a professional body helps enforce ethical standards for professional staff. Ethics in other areas are maintained by ensuring rules do not encourage unethical conduct (eg, unrealistically high sales targets to earn commissions).
Commitment to competence	Each job should have a job description showing the standards expected in that job. Employees should then be hired with the **competences** to carry out the job without compromising on the quality of work produced.
Participation by those charged with governance	Those charged with governance should take an **active role** in ensuring ethical standards are maintained. For example, the audit committee should ensure that directors carry out their duties correctly in the context of the audit. Similarly, those charged with governance must ensure appropriate independence from the company they are governing.
Management philosophy	Management should **set the example** of following ethical and quality standards. Where management establish a risk management system and regularly discuss the effect of risks on an organisation then the auditor will gain confidence that the overall control environment is effective.
Structure of the organisation	The structure of the organisation should ensure that **authority is delegated appropriately** so that lower management levels can implement appropriate risk management procedures. However, responsibility for risk management overall is maintained by the board.
Reporting hierarchy	Within the organisation's hierarchy, each level of management has responsibilities for risk included in their job description. There should also be a **clear reporting system** so that objectives for risk management are communicated down the hierarchy, while identified risks are communicated back up the hierarchy for action.
HR policies and procedures	HR policies should have **appropriate policies** for ensuring the integrity of staff, both for new and existing employees. This should extend to include recruitment, retention, performance management and disciplinary procedures.

From a review of these factors, the auditor will form an opinion on the effectiveness of the control environment. The auditor will also consider the means by which the entity monitors controls eg, by the internal audit department. This in turn affects the opinion on how well the internal control systems will be implemented and operated.

Control risk will also increase where specific events occur within an organisation. Events that tend to increase control risk include the following:

- Use of new technology
- New or substantially amended information systems
- Hiring of new personnel, especially into key management roles
- Changes to the regulatory or operating environment

- Significant growth in the organisation
- Restructuring of the company or group
- Expansion of overseas operations

Control activities

Having assessed the control environment, the auditor will then identify and assess the operating effectiveness of control activities carried out by management. Control activities in this context are the **policies and procedures that help ensure management's directives are carried out**.

The auditor is required to differentiate between the following:

- Direct controls – these are considered precise enough to address risks of material misstatement at the assertion level
- Indirect controls – these are considered to be less precise and support direct controls

Control activities that the auditor will investigate include:

Control activity	Explanation
Physical or logical controls	Controls to ensure the security of assets including data files and computer programs (eg, not simply tangible assets such as company motor vehicles).
Authorisation and approval	Controls that confirm a transaction is valid and that the entity is satisfied should occur (such as the approval of an expenses claim).
Segregation of duties	Segregation of the authorisation of transactions, recording of transactions and custody of any related assets. For example, employees receiving cash should not be responsible for recording that cash in the receivables ledger – teeming and lading could occur.
Reconciliations	Comparison of two or more items to confirm their completeness and accuracy.
Verification	This includes comparing actual performance against agreed standards and policies, involving follow up to establish reasons for any variances.
Information processing controls	These are controls to check the completeness, accuracy and authorisation of the processing of transactions. Two types of controls are generally recognised: • General IT controls – over the information processing environment as a whole, for example to ensure the security of data processing operations and maintenance of adequate backup facilities. • Application controls – over the processing of individual transactions, again ensuring the completeness and accuracy of recording.

Where the auditor is satisfied regarding the ability of the control environment to process transactions correctly and control activities to identify deficiencies in that processing, then control risk can be set to a low figure. Obviously, where the control environment is weak, and control activities are missing, then control risk will be set to a higher level.

Control activities for transaction assertions

Within each class of transactions, the auditor will ensure that specific audit assertions have been achieved. Remember that for each assertion, a different 'mix' of control and substantive procedures may be used.

For each of the audit assertions relevant to transaction testing, specific control activities are normally available.

The assertions and control activities are summarised below.

Assertion	Explanation	Typical control activities
Occurrence	Transactions and events that have been recorded have occurred and pertain to the entity	• Segregation of duties • Daily/monthly reconciliation of subsidiary records with an independent review • Prenumbering of documents (with completeness of numbering confirmed
Completeness	All transactions and events that should have been recorded have been recorded, and all related disclosures that should have been included in the financial statements have been included	• Segregation of duties • Prenumbering of documents (with completeness of numbering confirmed) • Daily/monthly reconciliation of subsidiary records with an independent review
Accuracy	Amounts and other data relating to recorded transactions and events have been recorded appropriately, and related disclosures have been appropriately measured and described	• Internal confirmation of amounts and calculations • Monthly reconciliation of subsidiary records by an independent person
Cut-off	Transactions and events have been recorded in the correct accounting period	• Procedures for the prompt recording of transactions • Internal verification of cut-off at year end
Classification	Transactions and events have been recorded in the proper accounts	• Agreeing transactions against chart of accounts • Internal verification of the accuracy of posting

Monitoring the system of internal control

The auditor should also assess the means by which management monitors internal control over financial reporting and what (if any) action is taken to remediate any deficiencies identified. In many entities internal auditors fulfil this function. The impact on the audit of the existence of an internal audit function is dealt with in ISA 610 , Using the Work of Internal Auditors.

ISA 315 discusses the importance of such monitoring being undertaken on a timely basis by the entity and differentiates between manual and automated controls. The standard also requires auditors to understand whether monitoring is a separate activity or is simply built into the system of internal controls – the former should go further and be set up to establish whether there are any underlying reasons for control breaches.

6.1.4 Limitations in internal controls

Detection risk is the risk that audit procedures will fail to detect material errors. Detection risk relates to the inability of the auditors to examine all evidence. Audit evidence is usually persuasive rather than conclusive so some detection risk is usually present, allowing the auditors to seek 'reasonable confidence'.

The auditor's **inherent and control risk assessments** influence the **nature, timing and extent of substantive procedures** required to reduce detection risk and thereby audit risk.

However, despite the auditor's best efforts, there will always be some inherent limitations in any system of internal controls:

- Poor judgement by humans when making decisions and other forms of human error (such as fatigue)
- Poor design or operation of internal controls (such as a failure to act on an exception report)
- Poor ethics displayed by employees who decide to collude in order to circumvent certain controls

6.1.5 The entity's risk assessment process and information and communication

Both of these categories have coverage elsewhere in the learning materials, but in the context of how the auditor assesses the way they support the entity's system of internal controls there are points that will help at this stage:

- The auditor needs to understand how the entity **identifies and analyses risks** that could compromise its ability to achieve its objectives (in essence, business risks) which are relevant to the preparation of the financial statements in accordance with the applicable financial reporting framework (such as new information systems, changes in the entity's structure or rapid growth).
- The auditor also needs to understand how the entity's **information systems** contribute to the preparation of the financial statements, especially in the context of how transactions are processed, how the system addresses any overrides or bypasses to controls and how responsibilities for the preparation of the financial statements are **communicated** to relevant staff.

Data analytics tools may be used in risk assessment. Data analytics is discussed later in this chapter.

Professional skills focus: Structuring problems and solutions

Although you are unlikely to explicitly use the headings of inherent, control and detection risk when determining audit risk in a question, breaking it down into constituent parts can help you to assess risk more effectively.

Interactive question 5: Audit risk

Forsythia is a small limited company offering garden landscaping services. It is partly owned by three business associates, Mr Rose, Mr White and Mr Grass, who each hold 10% of the shares. The major shareholder is the parent company, Poppy Ltd. This company owns shares in 20 different companies, which operate in a variety of industries. One of them is a garden centre, and Forsythia regularly trades with it. Poppy Ltd is in turn wholly owned by a parent, White Holdings Ltd.

The management structure at Forsythia is simple. Of the three non-corporate shareholders, only Mr Rose has any involvement in management. He runs the day to day operations of the company (marketing, sales, purchasing etc) although the company employs two landscape gardeners to actually carry out projects. The accounts department employs a purchase clerk and a sales clerk, who deal with all aspects of their function. The sales clerk is Mr Rose's daughter, Justine. Mr Rose authorises and produces the payroll. The company ledgers are kept on Mr Rose's personal computer. Two weeks after the year end, the sales ledger records were severely damaged by a virus. Justine has a single printout of the balances as at the year end, which shows the total owed by each customer.

Forsythia owns the equipment which the gardeners use and pays them a salary and a bonus based on performance. Mr Rose is remunerated entirely on a commission basis relating to sales and, as a shareholder, he receives dividends annually, which are substantial.

Forsythia does not carry any inventories. When materials are required for a project, they are purchased on behalf of the client and charged directly to them. Most customers pay within the 60- day credit period, or take up the extended credit period which Forsythia offers. However, there are a number of accounts that appear to have been outstanding for a significant period.

Justine and her father do not appear to have a very good working relationship. She does not live at home and her salary is not significant. However, she appears to have recently purchased a sports car, which is not a company car.

The audit partner has recently accepted the audit of Forsythia as a new client. You have been assigned the task of planning the first audit.

Requirement

Identify and explain the audit risks arising from the above scenario.

See **Answer** at the end of this chapter.

7 Creative accounting

Section overview

- There is a spectrum of activity with respect to accounting policy choice. Creative accounting attempts to change users' perceptions of the performance and position of a business.
- The occurrence of creative accounting depends on both incentives and opportunity.
- The consequences of creative accounting depend upon a range of factors that change over time but are specific to individual companies.
- Creative accounting can be overt (disclosed) or covert (not disclosed).
- Red flags exist which may indicate that creative accounting practices have taken place.
- Empirical evidence supports the notion that creative accounting occurs on a widespread basis.

7.1 Introduction

One of the factors affecting the overall level of **financial statement risk** is the potential for creative accounting.

Directors have choices and they may exercise those choices to recognise values that do not reflect economic reality. A prime example is the choice of the cost model when an asset's fair value is significantly higher than cost. (**Note:** If an asset's fair value and value in use were lower than cost, then an impairment would be required under IAS 36 and directors would not have the discretion to disclose at cost.) Directors are more likely to make use of their discretion to mislead financial statement users if they have the **opportunity** (eg, imprecise accounting regulations, weak auditors) and **incentives** (eg, approaching the breach of a debt covenant, an impending takeover, profit-based bonus) to do so.

Creative accounting is covered from a financial reporting perspective in Chapter 24.

7.2 The nature of creative accounting

Definition

Creative accounting: The active manipulation of accounting results for the purpose of creating an altered impression of the underlying financial position or performance of an enterprise by using accounting rules and guidance in a spirit other than that which was intended when the rules were written.

This well-documented practice is a potential problem for auditors in assessing the underlying performance and position of a company and recent evidence suggests that it is one of the major issues facing financial reporting.

Accounting measures involve a degree of subjectivity, choice and judgement and it would be wrong to describe all such activity as creative accounting. Moreover, **creative accounting normally falls within permitted regulation** and is not therefore illegal. It is therefore often a question of fine judgement as to when creative accounting is of such an extent that it becomes misleading.

The spectrum of creative accounting practices may include the following (commencing with the most legitimate):

- Exercise of **normal accounting policy choice** within the rules permitted by regulation (eg, first in, first out and average cost for inventory valuation)
- Exercise of a degree of estimation, judgement or prediction by a company **within reasonable bounds** (eg, non-current asset lives)
- Judgement concerning the **nature or classification of a cost** (eg, expensing and capitalising costs)
- Systematic selection of **legitimate policy choices and estimations** to alter the perception of the position or performance of the business in a uniform direction
- Systematic selection of **policy choice and estimations** that fall on the margin of permitted regulation (or are not subject to regulation) in order to alter materially the perception of the performance or position of the business
- Setting up of **artificial transactions** to create circumstances where material accounting misrepresentation can take place
- **Fraudulent activities**

It can thus be a matter of fine judgement for an auditor as to where within this spectrum creative accounting becomes unacceptable.

Companies may also seek to manipulate the perception of their performance and position by altering underlying transactions, rather than just the way they are recorded. Accounting regulation seeks to limit the effects of this behaviour in a number of ways as previously discussed. Nevertheless, while it may seek to report faithfully transactions that actually take place, it cannot regulate for transactions which do not take place, or which are delayed in order to manipulate the perception of performance or position. These might include:

- deferring discretionary expenditure (eg, maintenance costs, R&D);
- changing the timing of the sale of investments or other assets; or
- delaying investment or financing decisions.

Context example: Patisserie Valerie

UK café chain Patisserie Valerie hit the headlines in October 2018 when trading in its shares was suspended following allegations of irregularity about its financial position. Soon after, the company's finance director was also suspended as the size of the hole in its finances began to grow. In November 2018, the FRC announced that it was launching an investigation into the audit of the holding company, Patisserie Holdings. By January 2019, the company had been placed into administration and was later sold for £5 million to private equity investors. In June 2019, five people were arrested by the UK Serious Fraud Office in connection with the deficit, which at that time was estimated to be £94 million.

The events of Patisserie Valerie came hot on the heels of the Carillion controversy of 2017, which have both been cited as the final straw for the existing UK regulatory regime for corporate reporting and auditing. The lessons here seem obvious: poor quality audit and inadequate responses to fraud have serious economic consequences and therefore need to be taken more seriously.

(Sources: Economia and BBC News Website, 2018 and 2019)

Professional skills focus: Applying judgement

Scenarios in the exam are very likely to require you to be on the lookout for possible areas of creative accounting. Don't forget the importance of maintaining professional scepticism and displaying critical thinking at all times when reading the contents of a question.

7.3 Causes of creative accounting – opportunity

The causes of creative accounting have two key elements:

(a) Opportunity

(b) Incentives

Where these two elements both exist then the **risks of creative accounting taking place are greatest**. This section looks at opportunity. The following section looks at incentives.

It is important for the auditor to be aware of the causes of creative accounting in order to highlight the circumstances, where there is the greatest risk or incentives for creative accounting to take place.

The causes of **opportunity** for creative accounting include the following:

- **Subjectivity** – Areas of subjectivity lend themselves to a greater degree of choice, judgement and uncertainty.
- **Complexity** – Complex industries and transactions are difficult to regulate precisely and give more scope for manipulation.
- **Inadequate corporate governance** – Inadequate or inappropriate controls over directors may permit greater discretion.
- **Insufficiently independent auditors** – Auditors may come under increased managerial pressure to approve creative accounting practices.
- **Imprecise regulations** – Where regulations are imprecise or inadequate, companies have

greater scope to exercise discretion, and auditors have a poor benchmark to challenge the selected accounting procedures.

- **Inadequate sources of information** – Where reliable sources of audit evidence exist (eg, to challenge management estimations) the scope for effective manipulation is more limited.
- **Inadequate penalties** – Where creative accounting is discovered to have misled users, the penalties for the company, and for the directors, are regarded by some as inadequate to provide sufficient disincentives.

7.4 Causes of creative accounting – incentives

The following have been put forward as incentives for companies/managers engaging in creative accounting:

- **Income smoothing** – Companies normally prefer to show a steady trend of growth in profits, rather than volatility with significant rises and falls. Income smoothing techniques (eg, declaring higher provisions and deferring income recognition in good years) contribute to reducing volatility in reported earnings.
- **Achieving forecasts** – Where forecasts of future profits have been made, reported earnings may be manipulated to tie in with these forecasts.
- **Profit enhancement** – This is where current year earnings are boosted to enhance the short-term perception of performance.
- **Maintain or boost share price** – Where markets can be made to believe that increased earnings represent improved underlying commercial performance, then share price may rise, or at least be higher than it would be in the absence of creative accounting.
- **Accounting-based contracts** – Where accounting-based contracts exist (eg, loan covenants, profit- related pay) then any accounting policy that falls within the terms of the contract may significantly impact on the consequences of that contract. For example, the breach of a gearing-based debt covenant may be avoided by the use of off balance sheet financing.
- **Incentives for directors** – There may be personal incentives for directors to enhance profit in order to enhance their remuneration. Examples might include: bonuses based on earnings per share (EPS), or share incentive schemes and share option schemes that require a given EPS before they become operative. Directors may also benefit more indirectly from creative accounting by increasing the security of their position.
- **Taxation** – Where accounting practices coincide with taxation regulations there may be an incentive to reduce profit in order to reduce taxation. In these circumstances, however, it may be necessary to convince not only the auditor but also HMRC.
- **Regulated industries** – Where an industry is currently, or potentially, regulated then there may be an incentive to engage in creative accounting to reduce profit in order to influence the decisions of the regulator. This may include utilities where regulators may curtail prices if it is perceived that excessive profits are being earned. It may also be relevant to avoid a reference to the Competition Commission.
- **Internal accounting** – A company as a whole may have reason to move profits from division to division (or subsidiary to subsidiary) in order to affect tax calculations or justify the closure/expansion of a particular department.
- **Losses** – Companies making losses may be under greater pressure to enhance reported performance.
- **Commercial pressures** – Where companies have particular commercial pressures to enhance the perception of the company there is increased risk of creative accounting; for example, a takeover bid, or the raising of new finance.

Thus, a range of stakeholders may have incentives to engage in creative accounting. In particular, however, an appropriate degree of professional scepticism should be applied where benefits arise for directors, as they are also the group responsible for implementing creative accounting practices.

7.5 The consequences of creative accounting

It is important for the auditor to understand the consequences of creative accounting, as:

- It enables an **understanding of the motivations and reasons** for the company's directors to engage in the practice. (For instance, the existence and nature of a debt covenant that may be affected by creative accounting.)
- It **enhances the understanding of whether the practice is material** ie, whether it would reasonably influence decisions made.
- It enables an **understanding of the continued impact of a particular creative accounting practice in future years' financial statements** and whether the impact will be sustainable year on year.

The consequences of creative accounting depend crucially upon whether or not it is disclosed.

Overt creative accounting refers to practices, which may change reported profits or the statement of financial position, but that are **disclosed externally** to financial statement users. Examples may include:

- not depreciating non-current assets
- capitalising development costs
- significant provisioning
- changing depreciation policy

Covert creative accounting refers to practices that are used to enhance profitability or asset values but are **not disclosed**. Examples might be:

- the timing of revenue recognition on complex long-term transactions
- the treatment of overhead allocations
- many decisions to capitalise or expense cash outlays

As a result, such covert practices are not readily identifiable by outside users, who are thus unable, in some cases, to distinguish increases in reported earnings arising as a result of accounting manipulation, from those arising from improvements in substantive underlying transactions. The potential consequences of covert creative accounting (eg, for share price movements) are therefore likely to be more substantial than for overt creative accounting.

7.6 Sustainability

Some creative accounting practices are sustainable in the long term while others may only serve to enhance the current year's profit, but only with the effect that future profits are correspondingly reduced.

Sustainable practices may include the following:

- **Income smoothing** – assuming it is smoothed at a normal level of profitability, it may be sustained indefinitely
- **Off balance sheet financing**

Unsustainable practices include the following:

- **Capitalisation of expenses** – if, for instance, annual development costs are inappropriately capitalised and amortised over 10 years then, after that period, assuming constant expenditure, the profit will be equivalent for either write-off or amortisation policies (though not the statement of financial position) as there will be 10 amounts of 10% amortisation recognised in profit or loss

- **Revenue recognition** – bringing forward the recognition of revenues may initially enhance profit, but at the cost of reducing future profits

7.7 Some specific consequences

Share price effects

Where creative accounting practices are disclosed then one would expect that, in a semi strong efficient market, investors would see through the manipulation and correctly price shares, with creative accounting having little effect. However:

- the market may not always be efficient;
- accounting-based contracts may be affected; and
- complex series of transactions may mean that markets fail to appreciate fully the impact of creative accounting.

Covert creative accounting is likely to include all the above effects but in addition, even where the market is semi-strong efficient, it cannot always 'see through' the creative accounting and shares could be mispriced. This may result in shareholders suffering an undue loss.

Recent revelations regarding creative accounting have resulted in significant falls in the share prices of the companies concerned providing evidence of previous mispricing. However, shares prices also fell in other companies, as markets generally placed less trust in reported earnings and auditors were perceived as being unable to prevent creative accounting.

Accounting-based contracts

Whether creative accounting is covert or overt, it can affect the application of accounting-based contracts, so long as the selected accounting treatment falls within the terms of that contract.

Typically, a restrictive covenant on gearing, or interest cover, may be avoided by enhancing equity or earnings. This may benefit one stakeholder (eg, shareholders) but disadvantage another (eg, debtholders).

7.8 Red flags and detection

The best detection techniques for creative accounting are a good knowledge of financial reporting regulations and a good understanding of the business. There may, however, be more general techniques and indicators that can suggest that a company is engaging in creative accounting practice. These include the following:

- **Cash flows** – Operating cash flows are systematically out of line with reported operating profits over time.
- **Reported income and taxable income** – Is financial reporting income significantly out of line with taxable income with inadequate explanation or disclosure?
- **Acquisitions** – Where a significant number of acquisitions have taken place, there is increased scope for many creative accounting practices.
- **Financial statement trends** – Indicators include: unusual trends, comparing revenue and EPS growth, atypical year-end transactions, flipping between conservatism and aggressive accounting from year to year, level of provisions compared to profit indicating smoothing, EPS trend, timing of recognition of exceptional items.
- **Ratios** – Ageing analyses revealing old inventories or receivables, declining gross profit margins but increased net profit margins, inventories/receivables increasing more than sales, gearing changes.

- **Accounting policies** – Consider if there is the minimum disclosure required by regulation, changes in accounting policies, examine areas of judgement and discretion. Consider risk areas of off balance sheet refinancing, revenue recognition, capitalisation of expenses, significant accounting estimates.
- **Changes of accounting policies and estimates** – Is the nature, effect and purpose of these changes adequately explained and disclosed?
- **Management** – Estimations proved unreliable in the past, minimal explanations provided.
- **Actual and estimated results** – Culture of always satisfying external earnings forecasts, absence of profit warnings, inadequate or late profit warnings leading to 'surprises', interim financial statements out of line with year-end financial statements.
- **Incentives** – Management rewarded on reported earnings, profit-orientated culture exists, other reporting pressures eg, a takeover.
- **Audit qualifications** – Are they unexpected and are any auditors' adjustments specified in the audit report significant?
- **Related party transactions** – Are these material and how far are the directors affected?

The above is not a comprehensive list, but merely includes some main factors. Also, it is not suggested that the above practices necessarily mean there is creative accounting but, where a number of these factors exist simultaneously, then the auditor should be put 'on inquiry' to make further investigations.

7.9 Examples of creative accounting techniques

A number of examples of creative accounting have been given above and throughout these learning materials in the context of their application. The following list draws some of these together and provides further examples under key headings. The list is not meant to be comprehensive.

7.9.1 Timing of operating expenses

- Underprovisioning in poor years
- Overprovisioning in good years
- Manipulation of reserves
- Aggressive capitalisation of costs
- Optimistic asset lives
- Accelerating expenses in good years
- Increased write-downs and write-offs in good years
- Exceptional gains timed to offset exceptional losses

7.9.2 Revenue recognition

- Premature recognition of revenues
- Recording out of period revenue
- Recognition of revenue of service contracts before the service being performed
- Recognition of sales before physical movement of goods
- Front-end recognition of sales that should be spread over more than one accounting period
- Percentage of completion estimates in construction industry
- Cut-off misapplied

7.9.3 Off balance sheet financing

In some circumstances transactions may be structured in order to allow a particular accounting treatment (eg, making a finance lease appear to be an operating lease) rather than presenting the fairest view. This is one of the primary reasons for the large quantity of disclosure standards (as against measurement standards) in previous years.

8 Materiality

CHAPTER 5

Section overview

- Materiality considerations are important at the planning stage.
- An item might be material due to its nature, value or impact on readers of financial statements.

8.1 Revision of materiality

ISA 320, *Materiality in Planning and Performing an Audit* states that the auditor's frame of reference for materiality should be based on the relevant financial reporting framework. IAS 1 gives the following definition:

Omissions or misstatements of items are material if they could, individually or collectively, influence the economic decisions that users make on the basis of the financial statements.

Materiality depends on the size and nature of the omission or misstatement judged in the surrounding circumstances. The size or nature of the item, or combination of both, could be the determining factor.

Materiality criteria

An item might be material due to its:

Nature	Given the definition of materiality that an item would affect the readers of the financial statements, some **items** might **by their nature affect readers**. Examples include **transactions related to directors**, such as remuneration and contracts with the company.
Value	Some items will be significant in the financial statements by virtue of their **size**; for example, if the company had bought a piece of land with a value which comprised three-quarters of the asset value of the company, that would be material. That is why materiality is often expressed in terms of **percentages** (of assets, of profits).
Impact	Some **items may by chance have a significant impact** on financial statements; eg, a proposed journal which is not material in size could convert a profit into a loss. The difference between a small profit and a small loss could be material to some readers.

Although there are general guidelines on how materiality might be calculated in practice, the calculation involves the application of judgement. It should be reassessed throughout the course of the audit as more information becomes available. Note that as materiality has both quantitative and qualitative aspects risk assessment must include the analysis of both quantitative and qualitative data.

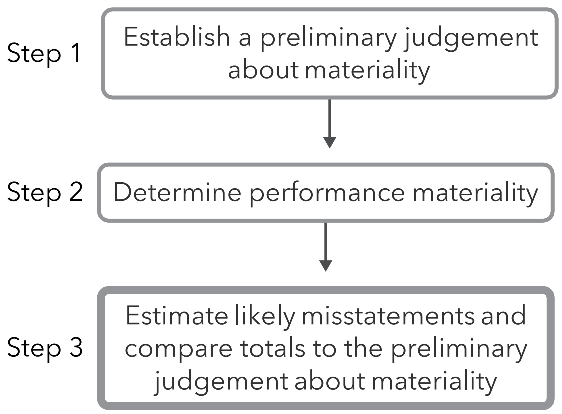
Users' needs

The auditor must consider the needs of the users of the financial statements when setting materiality. The ISA indicates that it is reasonable for the auditor to assume that users:

- Have a reasonable knowledge of the business and economic activities and accounting and a willingness to study the information in the financial statements with reasonable diligence
- Understand that financial statements are prepared and audited to levels of materiality
- Recognise the uncertainties inherent in the measurement of amounts based on the use of estimates, judgement and the consideration of future events
- Make reasonable economic decisions on the basis of the information in the financial statements

8.2 Applying materiality

The application of materiality to an audit can be summarised in three key steps: Figure 5.4: Steps in applying materiality on an audit



Steps 1 and 2 would normally be performed as part of the planning process. Step 3 is normally performed as part of the review stage of the audit when the auditor evaluates the audit evidence.

Auditors of companies applying the UK Corporate Governance Code are required to make significant disclosures in the auditor's report about how they have applied materiality in their audit. However till now no such requirement applies to the audits in Bangladesh.

8.2.1 Preliminary judgement

Materiality considerations during **audit planning** are extremely important. The assessment of materiality at this stage should be based on the most recent and reliable financial information and will help to determine an effective and efficient audit approach. Materiality assessment will help the auditors to:

- determine the amount of audit work necessary to facilitate audit efficiency and effectiveness;
- put audit risk in context;
- decide whether to use sampling techniques;
- determine the applicability of accounting standards which normally apply only to material items;
- evaluate uncorrected misstatements during the audit; and
- evaluate what level of error is likely to lead to a modified audit opinion.

In specifying materiality, an auditor should establish a benchmark (or benchmarks) to which a percentage factor is applied. Factors that may affect the identification of an appropriate benchmark include the following:

- The elements of the financial statements
- Items on which the attention of the users tends to be focused
- The nature of the entity, where it is in its life cycle and the industry and economic environment in which it operates
- The entity's ownership structure and the way it is financed
- The relative volatility of the benchmark

The following materiality benchmarks are typically used:

Benchmark	Threshold
Profit before tax	Approx. 5%
Adjusted profit before tax	Approx. 5%
Total revenue	Approx. 1%
Total assets	Approx. 1–2%
Equity	Approx. 1–2%

(The benchmarks suggested above are based on information from the UK FRC publication *Extended Auditor's Reports: A review of Experience in the First Year*, 2015.)

The following points should be noted:

- There is some variation used in the methods to determine materiality within and between audit firms.
- Multiple measures are sometimes used to determine materiality.
- Adjusted profit before tax and profit before tax are the most commonly used measures.

Determining the level of materiality is a matter of professional judgement, rather than applying benchmarks mechanically. In applying such judgements, the auditor should consider any relevant qualitative factors, including:

- whether it is a first-year engagement;
- deficiencies in controls;
- material misstatements in prior years;
- risk of fraud;
- significant management turnover;
- unusually high market pressures;
- sensitivity of covenants in loan agreements to changes in the financial statements; and
- effect of changes in results on earnings trends.

By far the most common level of materiality for listed company auditors is 5% of adjusted profit before tax. It is also necessary to determine a materiality threshold for reporting any unadjusted differences to the audit committee. This will be much lower than overall materiality..

In the case of a group audit, the group auditor will also set materiality for the group as a whole, as well as component materiality for any component auditors. Component materiality is always less than group materiality.

8.2.2 Performance materiality

The preliminary assessment of materiality, as referred to above, is in the context of the financial statements as a whole. However, if the audit procedures are planned solely to detect individually material misstatements this would:

- overlook the fact that the aggregate of individually immaterial misstatements could cause the financial statements to be materially misstated; and
- leave no margin for possible undetected misstatements.

Further materiality levels must therefore be set before audit procedures are designed and performed. The requirement to do so was introduced into ISA 320 as part of the IAASB's Clarity Project, and these lower materiality levels are referred to as **performance materiality**. Seen as a 'working level of materiality', performance materiality is a concept that most experienced auditors would have applied throughout their careers.

The auditor must set an amount or amounts at less than the materiality for the financial statements as a whole and this is known as **performance materiality**. This could be set in two ways:

(a) as a judgemental estimate to reduce the probability that the aggregate of uncorrected and undetected misstatements exceeds the materiality for the financial statement as a whole; or

(b) specific materiality levels may be set for particular classes of transactions, account balances or disclosures that could have a particular influence on users' decisions in the particular circumstances of the entity.

Different levels of materiality may therefore be used in the various audit procedures carried out. The following example illustrates, in a simplistic way, the role of performance materiality in an audit.

Context example: Performance materiality

The auditor of Company A has set materiality for the financial statements as a whole at

£100,000 During the audit, the following misstatements were identified:

(a) Misclassification of abortive research and development expenses as an intangible asset of £41,000. This is the only intangible asset on the statement of financial position.

(b) Overstatement of non-current assets by £50,000 due to cut-off errors.

(c) Overstatement of receivables by £29,000 representing the unpaid balance from a customer which has been liquidated during the period.

Considering each of the misstatements on an individual basis, the auditor may overlook the misstatements above. This would give rise to an aggregate of uncorrected misstatements of £120,000 – exceeding materiality for the financial statements as a whole.

In addition, the uncorrected misstatement (1) could have misled the users of the financial statements, whose attention would have been drawn to the company's new, and only, intangible assets.

The auditor would avoid the risk of giving an inappropriate audit opinion by applying performance materiality:

(a) **Set a general performance materiality at £50,000 to reduce the probability that the aggregate of uncorrected misstatements would exceed materiality for the financial statements as a whole:** This would identify misstatement (2) as requiring adjustment.

(b) **Set performance materiality specific to intangible assets at £40,000 to reflect the specific risks associated with this account:** This would identify misstatement (1) as requiring adjustment.

(c) Now, provided management agrees to correct misstatements (1) and (2), the only adjustment which remains uncorrected is misstatement (3). At £29,000, this is now less than 30% of materiality for the financial statements as a whole

Performance materiality should be used in both the planning and fieldwork stages of the audit. In the November 2011 issue of the *ICAEW Audit & Assurance Faculty newsletter*, the article 'Living in a material world' by David Gallagher usefully sets out four circumstances in which performance materiality can be applied:

At the planning stage:

(1) to determine when no work is necessary, and where evidence is required, the extent of that evidence; and

(2) to help identify which items to test (for example, if a substantive test of detail approach is adopted, the auditor may consider selecting all items above performance materiality first, and then consider whether any, and if so how many, further items should be sampled).

At the fieldwork stage:

(3) to help evaluate the results of sample tests (for example, if on a particular test the extrapolated difference of potential misstatements is less than materiality, the auditor may conclude that sufficient audit evidence had been obtained in this area); and

(4) to help evaluate the results of analytical procedures (for example, if the results of a reasonableness test produced a difference between the predicted and actual amounts which is less than performance materiality, the auditor may conclude that sufficient audit evidence had been obtained in this area).

Students who work in an audit practice may have come across **tolerable misstatement** (previously called 'tolerable error') In carrying out audit engagements. Essentially, tolerable misstatement is an example of how the concept of performance materiality is applied to **sampling** (points (2) and (3) above).

What constitutes sufficient audit evidence, and the different audit procedures, are covered in further detail in Chapter 6. However, you should already be familiar with these topics from your earlier studies.

8.2.3 Estimation of likely misstatements

Towards the end of the audit, the auditor will aggregate the misstatements from each account balance, class of transaction or disclosure (including both known and likely misstatements) and compare this with the preliminary assessment of materiality. Where additional information has come to light the preliminary assessment of materiality **may need to be revised**. If this is the case, the circumstances should be adequately documented. Comparison of the aggregated misstatements and materiality will determine whether the financial statements require adjustment.

Like materiality for the financial statements as a whole, performance materiality is linked to audit risk. Where the audit risk has been revised during an audit, and the materiality level for the financial statements as a whole has been reduced, the auditor must consider whether performance materiality also needs to be revised. This may affect the nature, timing and extent of further audit procedures.

8.2.4 Auditor's report – Example from UK market

Auditors of companies applying the UK Corporate Governance Code must disclose the materiality level used in the audit for the financial statements as a whole. This area is covered in more detail in Chapter 8 of this Workbook, but for now it may be helpful to see a real-life example of such a disclosure. For instance, PwC's auditor's report for Barclays plc (in relation to the 2016 Annual Report) included the following statement.

"Overall group materiality [was set at]: £320 million [which represents] 5% of Barclays Core profit before tax excluding notable items. The use [of this measure of profit] is appropriate as it reflects the underlying business management is focusing upon and will be what is left once disposals from Non- core have occurred."

(Source: Barclays plc (2016) *Building the bank of the future: Annual Report*. [Online]. Available from: https://home.barclays/content/dam/home-barclays/documents/investor-relations/ResultAnnouncements/2016FYResults/Barclays%20PLC%20Annual%20Report%202016.pdf [Accessed 27 May 2022])

Deloitte's auditor's report for Tesco plc (in relation to the 2016 Annual Report) includes the following description of the basis on which materiality was derived, making reference to the effect on the materiality level of the change of auditors.

"We determined materiality for the Group to be £50 million (2014/15: materiality determined by the previous auditor of £50 million). Professional judgement was applied in determining an appropriate level of materiality and we considered a number of profit based and other measures with reference to the Group's performance. We concluded that it was appropriate to determine materiality with reference to the Group's average profitability over a three year period (2013/14, 2014/15, and 2015/16), adjusted for exceptional items.

In our professional judgement, we believe that the use of an adjusted profit measure is appropriate as the amounts which have been excluded from the Group's profit before tax are one-off items which would otherwise skew the level of materiality determined and are not reflective of the Group's trading activity. However, we capped the materiality determined to that applied by the previous auditor in the light of the Group's lower level of profit in the current year and as a result of 2015/2016 being our first year of appointment."

(Source: Tesco (2016) *Annual Report and Financial Statements*. [Online]. Available from: www.tescoplc.com/media/264194/annual-report-2016.pdf [Accessed 27 May 2022])

Ernst and Young's auditor's report for J Sainsbury plc (in relation to the 2016 Annual Report) provides information about both overall materiality and performance materiality as follows:

"We determined materiality for the Group to be £31.9 million, which is 5% of profit before tax excluding one-off items of £90 million as described in note 3. We believe that this materiality basis provides us with the best assessment of the requirements of the users of the financial statements. This is consistent with the approach taken by auditors in the prior period.

On the basis of our risk assessments, together with our assessment of the Group's overall control environment and this being our first period of engagement, our judgement was that performance materiality was approximately 50% of our planning materiality, namely £16 million."

(Source: J Sainsbury plc (2016) *Annual Report and Financial Statements.* [Online]. Available from: www.about.sainsburys.co.uk/~/media/Files/S/Sainsburys/documents/reports-and-presentations/annual-reports/annual-report-2016.pdf [Accessed 27 May 2022])

8.3 Problems with materiality

As discussed above, materiality is a matter of judgement for the auditor. Therefore, prescriptive rules will not always be helpful when assessing materiality. A **significant risk** of prescriptive rules is that a **significant matter**, which **falls outside the boundaries of the rules**, could be overlooked, leading to a **material misstatement in the financial statements**.

The percentage guidelines of assets and profits that are commonly used for materiality (eg, those referred to in section 8.2.1) must be handled with care. The auditor must bear in mind the **focus** of the company being audited.

In some companies, **post-tax profit** is the key figure in the financial statements, as the level of dividend is the most important factor in the accounts.

In **owner-managed businesses**, if owners are paid a salary and are indifferent to dividends, the key profit figure stands higher in the statement of profit or loss and other comprehensive income, say at **gross profit** level. Alternatively in this situation, the auditor should consider a figure that does not appear on the statement of profit or loss and other comprehensive income: **profit before directors' salaries and benefits**.

Some companies are **driven by assets** rather than the need for profits. In such examples, higher materiality might need to be applied to assets. In some companies, say charities, **costs** are the driving factor, and materiality might be considered in relation to these.

While rules or guidelines are helpful to auditors when assessing materiality, they must always keep in mind the **nature** of the business they are dealing with. Materiality must be **tailored to the business and the anticipated user** of financial statements, or it is not truly materiality. The extracts from auditors' reports included in section 8.2.4 above demonstrate how these principles are applied in practice.

The UK FRC published **Audit Quality Thematic Review: Materiality** in December 2017 and found that the quality and frequency of materiality judgements displayed by audit firms was improving: for example, in three out of the eight firms visited, the UK FRC found that performance materiality was reduced to reflect the increased risk presented by the first year of audit. The review did conclude that the disclosure of judgements associated with materiality

Professional skills focus: Applying judgement

could be explained further by auditors within the auditor's extended report and that there should be greater dialogue about materiality between audit committees and their external auditors to ensure full visibility of the audit approach, but overall, there was optimism that this area was seeing some improvement in quality.

The evaluation of materiality often starts with a calculation but encourages auditors to consider other factors as well when determining what should really be the focus in the audit. This approach of combining both quantitative and qualitative factors is therefore a good way of demonstrating judgement.

Interactive question 6: Materiality (1)

You are the manager responsible for the audit of Albreda Ltd. The draft consolidated financial statements for the year ended 30 September 20X6 show revenue of £42.2 million (20X5 £41.8 million), profit before taxation of £1.8 million (20X5 £2.2 million) and total assets of £30.7 million (20X5 £23.4 million). In September 20X6, the management board announced plans to cease offering 'home delivery' services from the end of the month. These sales amounted to £0.6 million for the year to 30 September 20X6 (20X5 £0.8 million). A provision of £0.2 million has been made at 30 September 20X6 for the compensation of redundant employees (mainly delivery van drivers).

Requirement

Comment upon the materiality of these two issues. See **Answer** at the end of this chapter.

Interactive question 7: Materiality (2)

You are the auditor of Oscar Ltd and are in the process of planning the audit for the year ended 31 December 20X8. In the past the audit of this company has been straightforward. The following information is available:

	20X8	20X7
	£'000	**£'000**
Total assets	1,800	1,750
Total revenue	2,010	1,900
Profit before tax	10	300

Materiality has been calculated by a colleague as follows: Profit before tax = £10,000 × 5% = £500

Requirement

Comment on the suitability of the planning materiality figure.

See **Answer** at the end of this chapter.

9 Responding to assessed risks

Section overview

Further audit procedures should be designed in response to the risks identified.

As a result of the auditor's risk assessment and assessment of materiality an **audit strategy** will be developed in response. ISA 330, *The Auditor's Responses to Assessed Risks* makes the following points in this context which you should be familiar with.

9.1 Overall responses

The auditor should design and implement **overall responses** to address the risks of material misstatement at the financial statement level. This may include the following:

- Emphasising to the audit team the need to maintain **professional scepticism** in gathering and evaluating audit evidence
- Assigning more **experienced staff**, those with **special skills** or using **experts**
- Providing **more supervision**
- Incorporating **additional elements of unpredictability** in the selection of further audit procedures

The auditor may also make general changes to the nature, timing or extent of audit procedures, for example by performing substantive procedures at the period end instead of at an interim date.

These decisions will take into account the auditor's assessment and understanding of the control environment.

9.2 Audit procedures responsive to risks of material misstatement at the assertion level

The auditor is required to design and perform procedures which will address the risks identified. The ISA emphasises the link between **further audit procedures and the risk assessment process**.

Factors which the auditor will consider include the following:

- The reasons for the risk assessment at the assertion level for each class of transaction, account balance or disclosure
- The likelihood of material misstatement due to the particular characteristics of the class of transaction, account balance or disclosure involved
- Whether the risk assessment takes account of relevant controls and so requires the auditor to obtain evidence to determine whether the controls are operating effectively

The auditor shall obtain more persuasive audit evidence the higher the assessment of risk.

The auditor will then determine the **nature, timing and extent of further audit procedures**. We will look at this aspect of the audit in detail in Chapter 6.

9.3 Evaluating the sufficiency and appropriateness of audit evidence obtained

Based on the audit procedures performed and the evidence obtained, the auditor should conclude whether sufficient, appropriate audit evidence has been obtained to reduce the risk of material misstatement to an acceptably low level. While this will be considered by the auditor throughout the audit, it is of particular relevance at the review stage of the audit. We will consider this in more detail in Chapter 6.

9.4 Documentation

The ISA emphasises the need to document the link between the audit procedures and the assessed risks. These matters should be recorded in accordance with ISA 230, *Audit Documentation*. You should be familiar with the principles of this ISA from your earlier studies.

Professional skills focus: Concluding, recommending and communicating

Whatever the auditor's response to the risk assessment carried out, it must follow on logically from the evidence collected at the planning stage or the audit may not address the correct audit risks.

10 Other audit methodologies

Section overview

Other audit methodologies include:

- systems audit;
- transaction cycle approach; and
- balance sheet audit approach.

10.1 Introduction

In this chapter we have looked in detail at business risk and audit risk. However, there are a number of other audit approaches which may be adopted.

10.2 Systems audit

An auditor may predominantly test controls and systems, but substantive testing can **never** be eliminated entirely. It is always used in conjunction with another approach.

You should be familiar with the systems and controls approach to auditing from your previous studies.

Management are required to implement a system of controls which is capable of fulfilling its duty of **safeguarding the assets** of the shareholders.

Auditors assess the system of controls put in place by the directors and ascertain whether they believe it is effective enough for them to be able to rely on it for the purposes of their audit.

If they believe that the system is effective, they carry out tests of controls to ensure that the control system operates as it is supposed to. If they believe that the control system is ineffective, they assess control risk as high and undertake higher levels of substantive testing.

The key control objectives and procedures over the main cycles of sales, purchases and wages were studied at length in your previous studies. If you do not feel confident in what they are, you should go back to your learning materials in these areas and revise them now.

An auditor may choose predominantly to carry out substantive tests on the transactions and balances of the business in the relevant period, but if internal control systems are particularly weak then no amount of substantive testing may give adequate assurance (eg, if point of sales controls over cash receipts are inadequate, then substantive testing may never detect material understatement of revenues).

Two approaches to substantive testing are:

- the **transaction cycle approach**; and
- the **balance sheet approach**.

10.3 Transaction cycle approach

Cycle testing is in some ways closely linked to systems testing, because it is based on the same systems.

When auditors take a cycle approach, they test the transactions which have occurred, resulting in the entries in the statement of profit or loss and other comprehensive income (for example, sales transactions, inventory purchases, asset purchases, wages payments, other expenses).

They would select a sample of transactions and test that each transaction was valid and complete and processed correctly throughout the cycle. In other words, they substantiate the transactions which appear in the financial statements.

The key business cycles are outlined below. Remember that you know what the processes should be in the cycle (you have assessed the system and controls previously). Under this approach, you are ensuring that individual transactions were processed correctly. Hence, the cycles outlined below should correspond to the controls processes you are already aware of.

Figure 5.5: Sales cycle

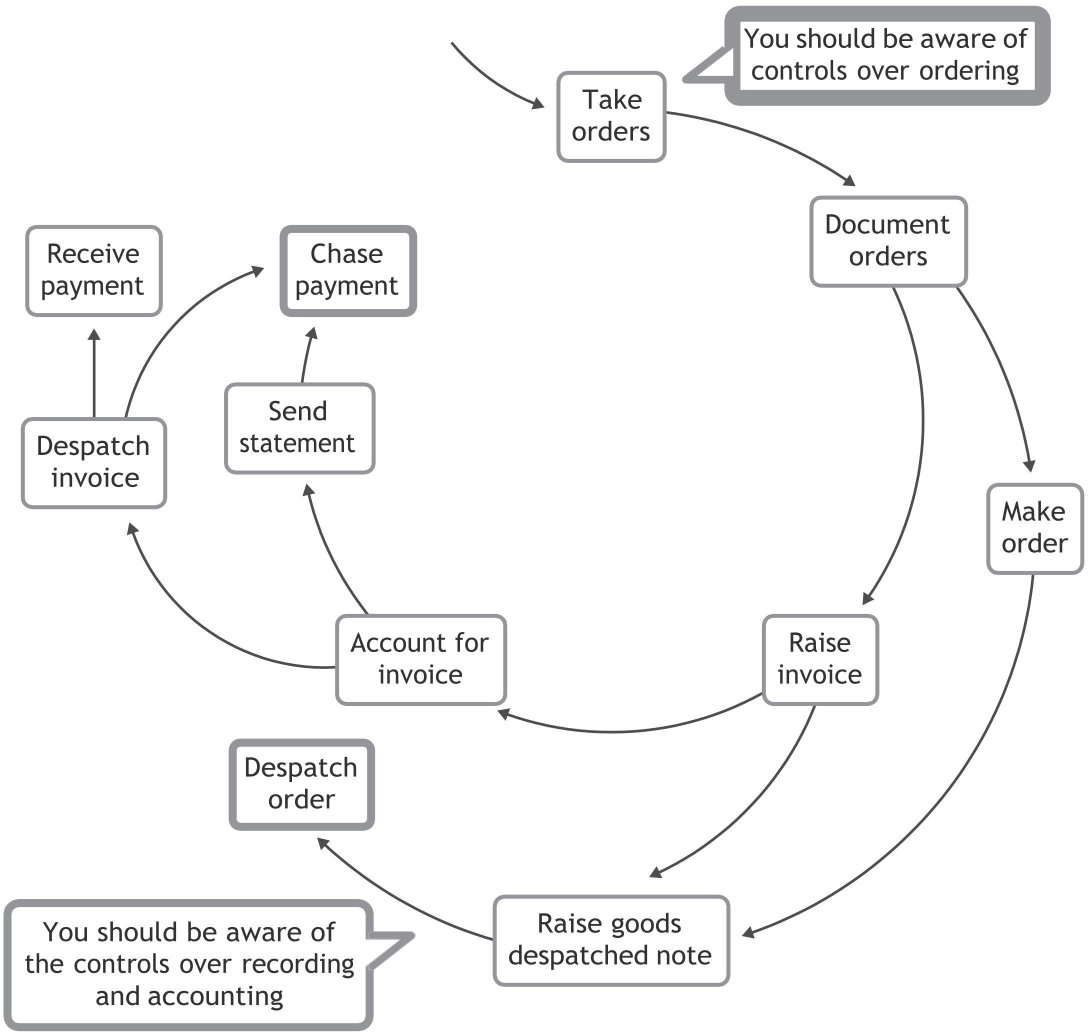


Figure 5.6: Purchases cycle

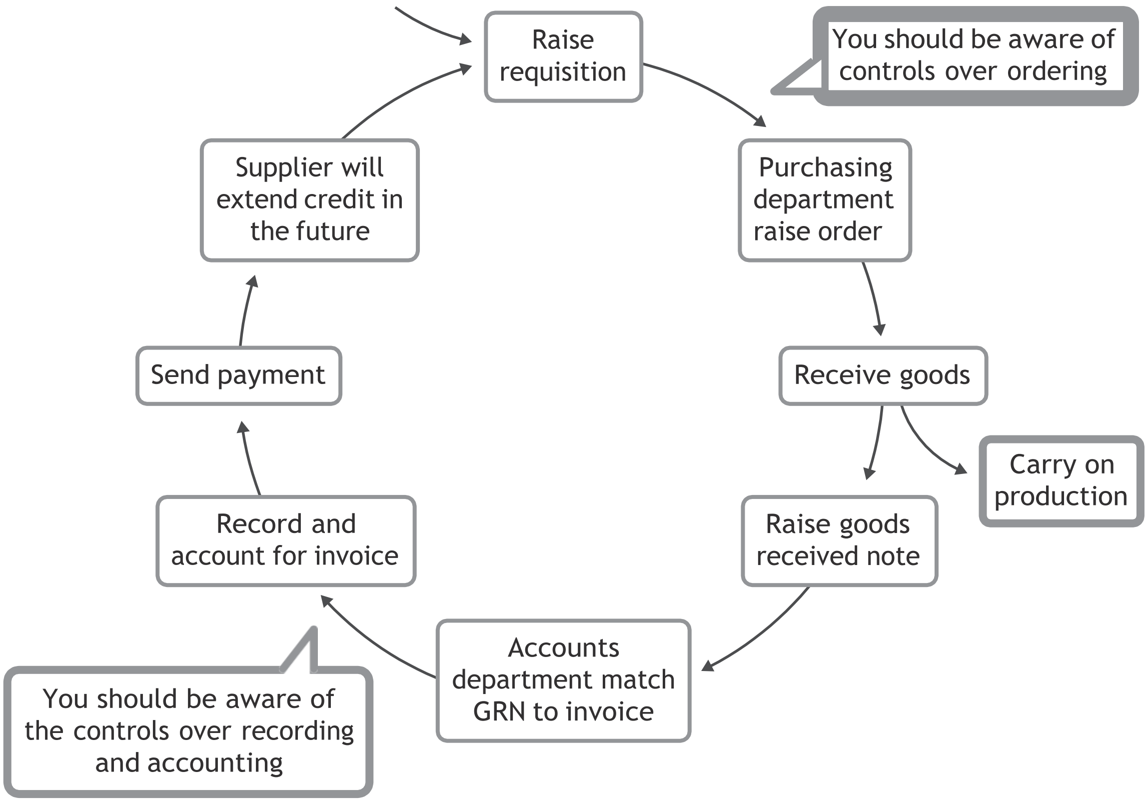

The auditor should be able to find an audit trail for each transaction, for example in the purchases cycle:

- Requisition
- Invoice
- Order
- Ledger and daybook entries
- GRN
- Payment in cashbook

10.4 Balance sheet approach

An alternative to the cycles (or transactions) approach to auditing is to take the balance sheet approach. This is the most common approach to the substantive part of the audit, after controls have been tested.

The statement of financial position (balance sheet) shows a snapshot of the financial position of the business at a point in time. It follows that if it is fairly stated and the previous snapshot was fairly stated then it is reasonable to undertake lower level testing on the transactions which connect the two snapshots; for example, analytical procedures.

Under this approach, therefore, the auditors seek to concentrate efforts on substantiating the closing position in the year, shown in the statement of financial position, having determined that the closing position from the previous year (also substantiated) has been correctly transferred to be the opening position in the current year.

You should be aware of the financial statement assertions and the substantive tests in relation to the major items on the statement of financial position from your previous studies. We will also review these in more detail in Chapter 6.

10.4.1 Relationship with business risk approach

The substantive element of an audit undertaken under a business risk approach is restricted due to the high use of analytical procedures. However, the element of substantive testing which remains in a business risk approach can be undertaken under the balance sheet approach.

In some cases, particularly **small companies**, the business risks may be strongly connected to the fact that management is concentrated in one person. Another feature of small companies may be that their statement of financial position is uncomplicated and contains one or two material items, for example receivables or inventory.

When this is the case, it is **often more cost effective to undertake a highly substantive balance sheet audit than to undertake a business risk assessment**, as it is relatively simple to obtain the assurance required about the financial statements from taking that approach.

10.4.2 Limitations of the balance sheet approach

When not undertaken in conjunction with a risk-based approach or systems testing, the **level of detailed testing** can be high in a balance sheet approach, rendering it **costly**.

11 Information technology and risk assessment

Section overview

- A huge number of organisations now use computer systems to run their businesses and to process financial information.
- The main risks associated with using computerised systems include infection by viruses and access by unauthorised users. Both these risks could potentially have a very damaging effect on the business.
- This means that a number of the controls which the directors are required to put into place to safeguard the assets of the shareholders must be incorporated into the computer systems.
- Auditors have to assess the effectiveness of the controls in place within computer systems and can do this by performing a systems audit as part of their initial assessment of risk during the planning stage of the audit.

11.1 The use of information technology

Most organisations and businesses, even very small entities, now use **information technology (IT)** to some degree. The first use of a computerised accounting system is thought to have been back in 1954 by General Electric, and rapid advances in computer technology since then are allowing companies to conduct business globally, making them indispensable and essential to an entity's operations.

However, the increasing use of computer systems brings with it certain **risks to the business** which can also have an impact on the **risk of the financial statements being misstated**. These risks have increased with the development of the **internet** in the last few years and with it the facility for transactions to be conducted electronically.

One area where IT-driven business risk is growing is the increasing use of **cloud computing**, where digital storage is provided by third parties in remote locations and is only accessible online. Chapter 7 contains more details on cloud computing.

11.2 Risks associated with the use of computerised systems

Cyber-security is becoming an increasingly important issue for businesses to address. The two key **business risks** of organisations using computerised systems are as follows:

- The system being put at risk by a **virus** or some other fault or breakdown which spreads across the system
- The system being **invaded by an unauthorised user**, who could then:
- affect the smooth operation of the system; or
- obtain commercially sensitive information.

Context example: British Airways

In May 2017, IT failures at British Airways resulted in hundreds of flights at Heathrow and Gatwick airports being cancelled and thousands of passengers disrupted. There have been suggestions that the failure could have been avoided if the company had not outsourced its IT work. In 2016 the company made hundreds of its IT staff redundant and outsourced its IT services to India. The failure in May led to planes not being able to take off, baggage not being allowed to move and boarding passes not being able to be issued to passengers.

A few days after the failure, the chief executive of British Airways' parent company stated that the disruption had been caused by an engineer disconnecting a power supply, leading to a power surge when it was reconnected.

Context example: NHS

Also in May 2017, the NHS was affected by a global cyber attack which resulted in patients' operations being cancelled, ambulances being diverted and some patient records being unavailable in England and Scotland. The attack affected not just the UK but almost 100 other countries and originated from malware that was using technology stolen from the National Security Agency in the USA. The malware blocks access to PC files until a ransom is paid, in this case $300. There was no confirmation from the UK government that NHS patient data had been backed up. The attacks used software called WanaCryptor 2.0 or WannaCry which made use of a vulnerability in Windows – Microsoft had issued an update to fix this in March 2017 but not all computers had installed this.

Risks and relevant controls related to cyber-security are dealt with in more detail in Chapter 7.

11.3 Systems audit (IT-specific)

As part of any audit, auditors are required to assess the **quality and effectiveness** of the accounting system. Increasingly, this necessarily includes a consideration of the computer systems in place within the organisation.

The following are the key areas they are likely to concentrate on to establish how reliable the systems are:

- Management policy
- Segregation of duties

- Security

You should be aware that these are important control considerations in a computer environment. The details that the auditor will consider within each area are outlined below.

Management policy

- Does management have a written statement of policy with regard to computer systems?
- Is it compatible with management policy in other areas?
- Is it adhered to?
- Is it sufficient and effective?
- Is it updated when the systems are updated?
- Does it relate to the current system?

Segregation of duties

- Is there adequate segregation of duties with regard to data input?
- Are there adequate system controls (eg, passwords) to enforce segregation of duties?

Security

- Is there a security policy in place?:
  - Physical security (locked doors/windows)
  - Access security (passwords)
  - Data security (virus shields)
- Is it adhered to?
- Is it sufficient and effective?

11.4 Internal controls in a computerised environment

ISA 315 specifically requires the auditor to gain an understanding of the entity's accounting systems and control environment as part of the risk assessment process at the planning stage of the audit. Today, almost any accounting system and control an auditor will encounter will involve some form of IT.

The management policies, segregation of duties and security issues established by the organisation are examples of the internal control activities in a computerised environment. There are two categories of internal controls: general controls and application controls.

General IT controls are the policies and procedures that relate to many IT applications at the same time. They support application controls by maintaining the overall integrity of information and security of data. Examples include procedure manuals, password protection and back-up facilities.

Application controls are manual or automated procedures that typically operate at a business process level and apply to the processing of transactions by individual applications. They are designed to ensure the integrity of the accounting records: that transactions occurred, are authorised, and are completely and accurately recorded and processed. Examples include edit checks of input data and numerical sequence checks with manual follow up of exception reports.

You should already be familiar with these two types of controls from your earlier studies. We will look at them in further detail in Chapter 7.

11.5 Cryptocurrencies and blockchain

To counter the problems of reporting financial performance and position both accurately and securely, a virtual system known as 'blockchain' has become more widespread across the world. Using what is also referred to as a 'distributed ledger', transactions are recorded in blocks, with access and initiation driven by encryption technology. Instead of using a recognised currency, which can be difficult to use online, a virtual currency called 'cryptocurrency' is used within blockchain (one example of this is 'Bitcoin').

Why is this relevant to corporate reporting? You need to be familiar with the technology and how it could be used in a corporate context, including the business risks created from diverting traditional funds into forms of cryptocurrency and how to accurately record, measure and review transactions using such technology. Make sure you revise these terms from your Professional Level Business Strategy and Technology materials.

12 Big data

Section overview

Big data is a broad term for data sets which are large or complex

12.1 Big data

Advances in technology have helped to make data an increasingly important resource in business. Making use of the insights that can be gained from data analysis has made data management a strategic issue for many organisations. The increased emphasis on the importance of data has given rise to the now widely used terms of big data and data analytics (Data analytics is discussed in more detail in section 13). As businesses have changed the way that they use data, auditors have had to respond to the opportunities and challenges that this development has created.

Definition

Big data: A term that describes those "datasets whose size is beyond the ability of typical database software to capture, store, manage and analyse."*(*McKinsey Global Institute, *Big data: The next frontier for innovation, competition and productivity*, 2011*)*.

Today, organisations have access to greater quantities of data than in the past, with vast amounts of transactional data available from a number of internal and external sources, such as suppliers and customers.

The growth in the amount of data now available has been largely fuelled by increasing internet usage and by developments in communication methods such as wireless networks, social media sites and smartphones. An increasing number of organisations have embraced the so-called 'internet of things' by embedding sensor technologies, such as RFID tags (Radio Frequency Identification) and tracking devices, into their operations to gather data from a diverse range of activities. Companies including British Gas, an energy supplier in the UK, have introduced so-called smart meters as a way of measuring the amount of electricity consumers are using on a daily basis. Such meters also allow home owners to better manage their household energy costs as the meter records and wirelessly transmits the level of energy consumption back to the energy provider.

Leading data analytics software firm, SAS, offers the following explanation of big data.

Big data is a term that describes the large volume of data – both structured and unstructured – that inundates a business on a day-to-day basis. But it's not the amount of data that's important. It's what organisations do with the data that matters. Big data can be analysed for insights that lead to better decisions and strategic business moves.

(Source: SAS (n.d.) *Big data – What it is and why it matters*. [Online] Available at: www.sas.com/en_us/insights/analytics/big-data-analytics.html [Accessed 27 May 2022])

12.2 Features of big data

As explained in the ICAEW IT Faculty document *Big data and analytics – what's new?* big data is often characterised by the three Vs:

- Large **volumes** of data
- High-**velocity** data
- Wide **variety** of data

Doug Laney, an analyst with technology research firm Gartner, also suggests that big data can be defined with reference to the three Vs of volume, velocity and variety.

Volume

The vast quantities of data generated are a key feature of big data. Advances in technology and data analytics software have enabled very large data sets to be processed. This is helping organisations to gain a deeper understanding of customer requirements. For example, organisations can collect large amounts of external data about their customers from customers' use of the internet and social media.

This data can now be combined with internally generated data for example, from customer loyalty cards or transactions recorded at shop tills, to build up a more detailed profile of the customer. The volume aspect of big data has challenged the strategic capabilities of many organisations wishing to exploit its potential. Most notably, these have involved enhancing existing IT infrastructures through the use of cloud computing architectures so that they are capable of holding greater amounts of data.

Velocity

Velocity refers to the speed at which 'real time' data flows into the organisation and the speed at which the data is processed by the organisation's systems to produce a meaningful output. Many online retailers have developed capabilities which enable them to record the movements and 'clicks' made by a customer when using the organisation's website. As such, online retailers are now able to build up a better picture of those products and services the customer found most interesting as opposed to only recording the final sale transaction with the customer. Analysing the customers' clicks while still visiting the website has enabled online retailers to recommend relevant additional items for purchase based on those items already viewed. Online websites including Amazon and eBay use this tactic to encourage customers to make extra purchases

Variety

Variety is concerned with the diverse range of forms that big data can take. An increasing amount of data generated comes in an unstructured form, ie, data which is not easy to hold in a database.

Unstructured data may take the form of words used by people on social media sites such as Facebook and Twitter, along with shared content such as photographs or video recordings. Capturing, processing and storing unstructured data presents further challenges to organisations which may need to develop their existing IT/IS capabilities to be able to firstly store such data and secondly extract meaning from the data they hold. Data which is too large, moves too fast or fails to fit neatly with existing IT infrastructures reduces the value which can be derived from it.

The three Vs of big data can also be extended to include an additional characteristic: veracity

Veracity

Veracity (value) is concerned with the truthfulness of the data collected. For data to have any value when being used for decision-making in an organisation, it needs to be truthful, ie, it must not present a bias or contain inconsistencies. The use of poor quality data may have expensive and far reaching consequences for those organisations which rely on it for making strategically important decisions. For example, an organisation may decide to introduce a type of product in the belief that there is sufficient customer demand for it when in reality this may not be the case.

The trend in big data is being propelled by three factors: a growth in computer power, new sources of data and infrastructure for knowledge creation. The combination of these three factors is enabling businesses to use data in ways which were not previously possible or viable. In particular they are using big data to:

- gain insights eg, using more granular data about customers;
- predict the future eg, customer service functions personalise services based on predictions about individual customers; and
- automate non-routine decisions and tasks eg, using machine learning techniques to automate a medical diagnosis.

Like business, auditors have had to respond to the changing environment brought about by big data. Historically auditors have reviewed structured data (eg, transactions recorded in the general ledger) however the analysis of unstructured data can provide new insights (eg, data extracted from emails, texts and social media). Audit firms have invested heavily in recent years in data analytics tools which will enable them to use this data to better understand their clients, identify risks and add value.

13 Data analytics, robotic process automation (RPA) and artificial intelligence (AI)

Section overview

Some firms are currently investing in data analytics to provide a better quality audit and to reduce risk and liability for the auditor. Recent developments in robotic process automation (RPA) and artificial intelligence (AI) have made this kind of technology more sophisticated thus increasing its potential.

13.1 Data analytics

Large firms in particular have been developing a data analytics offering with many clients now expecting their auditors to adopt this approach. However with the growing range of generic data analytics tools becoming available it is also becoming more relevant to small and medium sized firms too.

There are many definitions of data analytics.

Definitions

Data analytics: The process of collecting, organising and analysing large sets of data to discover patterns and other information which an organisation can use for its future business decisions.

Closely linked to the term data analytics is data mining.

Data mining: The process of sorting through data to identify patterns and relationships between different items. Data mining software, using statistical algorithms to discover correlations and patterns, is frequently used on large databases. In essence, it is the process of turning raw data into useful information.

The ICAEW Audit and Assurance faculty document *Data analytics for external auditors* describes data analytics as follows:

"Data analytics involves the extraction of data using fields within the basic data structure, rather than the format of records. A simple example is Power view, an Excel tool which can filter, sort, slice and highlight data in a spreadsheet and then present it visually in variety of bubble, bar and pie charts."

In simpler terms data analytics is about examining raw data with the purpose of drawing conclusions about it. The Audit and Assurance faculty document identifies the following as commonly performed data analytics routines:

- Comparing the last time an item was bought with the last time it was sold, for cost/NRV purposes
- Inventory ageing and how many days inventory is in stock by item
- Receivables and payables ageing and the reduction in overdue debt over time by customer
- Analysis or revenue trends split by product or region
- Analyses of gross margins and sales, highlighting items with negative margins
- Matches of orders to cash and purchases to payments
- 'Can do did do testing' of user codes to test whether segregation of duties is appropriate, and whether any inappropriate combinations of users have been involved in processing transactions
- Detailed recalculations of depreciation of fixed assets by item, either using approximations (such as assuming sales and purchases are mid-month) or using the entire data set and exact dates
- Analyses of capital expenditure v repairs and maintenance
- Three-way matches between purchases/sales orders, goods received/despatched documentation and invoices

Data analytics can also draw on external market data as well as internal data, for example third-party pricing sources and foreign exchange rates can be accessed to recalculate the valuation of investments. ('Coming your way' by Katherine Bagshaw and Phedra Diomidous, *Audit and Beyond*, 2016).

Data analytics can analyse unstructured data as well as structured data. For example an analysis of emails could be a more effective means of identifying fraud than an analysis of journals. Data analytics tools allow the auditor to analyse this type of information in a level of detail which would not be possible manually.

13.2 Improved audit quality

One of the key drivers behind the use of data analytics is improved audit quality. The Audit and Assurance faculty document identifies the following as the unique features of data analytics which contribute to improved risk assessment:

- The ability to graphically visualise results: this makes it easier to drill down to the underlying data and obtain a better understanding of findings

- Sophistication, and the breadth of interrogation options: this includes wide-ranging query and filter options
- Ease of use by non-specialists: the identification of anomalies, outliers and trends could highlight issues that would otherwise have gone unnoticed
- Scale and speed: resulting in time efficiencies

By using data analytics tools the auditor can navigate much bigger data sets much faster than before so that while the analyses performed are not fundamentally different to those performed in the past they are now at a more granular level. The quality of the analyses is enhanced and therefore the judgments made on the basis of this information are enhanced too.

Data analytics can be used to 'drill down' into the data, for example, in order to identify which journals need to be tested. In this way substantive procedures are better directed. For example:

- Extract and examine all credit journal entries to the Revenue Account where the corresponding debit is **not** either receivables or cash (which would be the normal expected entries). These extracted exceptions can then be investigated.
- Extract and examine all journal entries which are: Dr PPE account; Cr an expense account. This would be an unusual entry in the normal course of business and there is a risk of creative accounting by capitalising expenditure that should be expensed. These can be investigated including requiring management explanations.

The Audit and Beyond article also highlights the role of data analytics in supporting the application and demonstration of professional scepticism. For example, predictive data analytics tools might be used to help assess the reasonableness of management representations.

A recent article by KPMG 'Data, Analytics and Your Audit' discusses the impact of big data and how it affects auditors. The article emphasises that the use of data by auditors is not a new thing by any means since auditors have always had to analyse data. Data analytics allows auditors to analyse data at much greater speeds than before. For example, data analytics will allow auditors to sample much higher volumes of transactions up to 100% in some cases, which will allow auditors to identify high risk transactions over a vast array of data and in minutes rather than over weeks. The article cites the example of a clothing retailer and shows how data analytics can allow auditors to evaluate the three- way match between purchase orders, delivery confirmations and invoice documentation in a graphical way that can show account relationships and transaction flows and control issues over segregation of duties. Data analytics can also be used to examine supplier relationships (supplier contracts, payment terms, controls over procurement processes etc).

The article includes a very useful table on the use of data analytics which is shown below.

Area	Use of data analytics
Revenue and accounts receivable	Identify discrepancies in price and quantity between invoices, sales orders and shipping documentation Identifies stockouts and customer orders coming in faster than shipped products

Area	Use of data analytics
Segregation of duties	Identifies areas of increased risk Highlights internal control deficiencies through inefficient segregation of duties
Purchases and accounts payable	Identifies significant or unusual items such as invoice price discrepancies against original purchased products Shows purchase trends and activities with suppliers that are unauthorised or where there are concentrations of spending activities
Supply chain	Identifies risks resulting from the concentration of suppliers in a particular region Can highlight possible issues if suppliers are affected by regional disruptions

13.3 Technical challenges

While data analytics can be seen as the solution to many problems it is also the cause of new ones.

13.3.1 Data capture, extraction, validation and transformation

In order to apply data analytics effectively the auditor needs to be able to extract data from the client's system in a usable format. In order to do so they need to be able to interface with clients' systems. This can involve a considerable amount of investment in mapping different systems, particularly where they are bespoke to the client.

The issue of 'transformation' also has to be addressed. This relates to the way in which data is made useable. This normally involves changing the data by simplifying it. Before changes are made careful thought is required regarding the impact this will have on the quality of the evidence.

13.3.2 Data protection

Confidentiality and security of information are critical issues. This is particularly the case where there is the potential for the creation of new personal data when analyses refer to individuals. In these cases the auditor must ensure that relevant data protection laws and regulations are complied with.

13.3.3 Quality

Data analytics tools must be developed to the highest quality assurance standards. As the Audit and Assurance Faculty document indicates procedures should include pilot and parallel running with the 'normal' audit process together with contingency plans should the software crash. There also need to be proper controls to ensure that individuals using the tools are using them properly.

13.3.4 Data retention

The audit process has always allowed the auditor access to and retention of information which is not its own. However the scope of data analytics is such that the volume has reached a new scale. While there are differing views about the amount of information that should be retained and how long it should be kept there is a consensus that 'If an item has been tested, information about it should be retained such that it could be identified again if necessary'.

13.4 Data analytics and auditing standards

Current auditing standards are risk-based. They require risk analysis, controls testing and sampling against a 'materiality' benchmark. It could be argued that data analytics and its possibilities challenges these concepts and therefore the audit itself. Two aspects of the audit in particular are potentially affected as the technology is developing:

Test of controls

ISAs require evaluation and testing of controls where the auditor is to rely on them, as a means of obtaining comfort that transactions processed by the system are properly recorded in the financial statements. However if auditors are able to use data analytics tools which allow them to see what has happened to all of the transactions and these tools show that they are properly valued and recorded why would the auditor need to test the controls applied in the system?

Sampling

Sampling has historically been adopted on the basis that it is not cost-effective (or necessary if risk assessment has been performed) to audit 100% of all balances in the financial statements. Again data analytics could challenge this principle. For example if it is possible to examine 100% of the invoices automatically, both cheaply and efficiently why would the auditor choose to examine only a sample?

Auditing data analytics

As accountants increasingly use data analytics for the purposes of visualisation, summary and interpretation of ever larger data sets, auditors also need to become more accustomed to using this information in their audits and develop skills that allow them to manage the output of data analytics into their audit approach. Key to this will be unlocking the messages contained in the content created by data analytics techniques. As a student, you should start to consider how you can leverage your professional judgement and scepticism skills when presented with the outcome of data analytics activity.

For example, an auditor may possess software that uses data imported from its client to perform analysis that either applies AI or the auditor's own judgement to highlight trends or anomalies within a population for closer inspection.

13.5 Current developments

13.5.1 IAASB Request for input

The IAASB has set up a Data Analytics Working Group to determine how developments in IT including data analytics might be reflected in new or revised standards. In September 2016 it issued Request for input: Exploring the growing use of technology in the audit, with a focus on data analytics. This aimed to inform stakeholders of the ongoing work by the IAASB in this area, but also to obtain stakeholder input, particularly with respect to whether all of the relevant considerations have been identified.

It makes the following points.

Data analytics and the financial statement audit – benefits

- The quality of the financial statement audit can be enhanced by the use of data analytics.
- The use of data analytics enables the auditor to obtain a more effective and robust understanding of the entity (in an increasingly complex and high volume data environment), improving the application of professional scepticism and professional judgement.
- The auditor is able to obtain audit evidence from the analysis of larger populations.
- The auditor obtains a better insight into the entity and its environment which in turn

provides the entity with additional information to inform its own risk assessment and business operations.

Data analytics and the financial statement audit – limitations

- Auditors need to have a clear understanding of the data they are analysing and in particular the relevance to the audit.
- Being able to test 100% of a population does not change the fact that reasonable assurance is provided.
- The use of data analytics does not replace the need for professional judgement and professional scepticism, particularly in relation to accounting estimates and qualitative information.
- Care must be taken not to have 'overconfidence' in technology ie, adopting the attitude that if a computer software program produced it, it must be right.

Technology and the ISAs

- The ISAs do not prohibit, nor stimulate, the use of data analytics.
- ISAs need to be robust and relevant, however they must be based on principles which drive appropriate auditor performance rather than being tied to current practice or trends.
- Technology solutions can increase the amount of time which auditors can spend on judgemental aspects of analysis as the amount of time spent on manual analysis is reduced.
- There is a current challenge to fit audit evidence derived from data analytics into the current audit evidence model set out in the ISAs.
- A lack of reference to data analytics in ISAs (with the exception of CAATs) may act as a barrier to their adoption more widely.
- The lack of reference in ISAs to data analytics could also suggest that their use does not reduce the procedures required by ISAs, even where these may appear to have been made redundant as a result of the information gained from the use of data analytics.
- Risks arise where new techniques are used for which there is no strong framework within the standards.

Unanswered questions

The IAASB document identifies a number of unanswered questions and challenges.

Data acquisition

Entity data being transferred to the auditor raises security and privacy issues together with storage problems for large volumes of data.

Conceptual changes

The approach, information required and questions asked of the client may be quite different to the traditional approach which may be challenging for the client.

Legal and regulatory challenges

These may relate to data security and potential restrictions on data being transferred from one jurisdiction to another.

Resource availability

There may not be sufficient centralised resources with the required IT expertise to support the engagement teams.

Maintaining oversight

There are challenges for oversight authorities and regulators who may have little experience of data analytics themselves.

Investment in re-training

Training will be required to change the auditor's mind set to that required where data analytics has been used

Next steps

The IAASB states that an evolutionary, rather than revolutionary process should be adopted. ISAs need to take account of the changing technological developments but care must be taken not to commence standard-setting activities prematurely to avoid unintended consequences.

(Source: IAASB (2016) Exploring the Growing Use of Technology in the Audit, with a Focus on Data Analytics [Online]. Available from: www.ifac.org/system/files/publications/files/IAASB-Data-Analytics- WG-Publication-Aug-25-2016-for-comms-9.1.16.pdf [Accessed 27 May 2022])

13.5.2 UK FRC Audit Quality Thematic Review

In January 2017 the FRC issued Audit Quality Thematic Review: The Use of Data Analytics in the Audit of Financial Statements. The purpose of this review was to look at firms' policies and procedures in respect of data analytics and to make comparisons between firms to identify areas of good practice and areas of weakness. The review was based on the use of audit data analytics at the six largest firms in the UK: BDO LLP, Deloitte LLP, Ernst & Young LLP, Grant Thornton UK LLP, KPMG LLP and KPMG Audit plc and PricewaterhouseCoopers LLP.

Use of data analytics

The review document notes that the use of data analytics in the audit is not as prevalent as the market might expect. At the time of the review the only standard tool used widely (ie, accepted norm) by all six firms was journal entry testing. General ledger analysis/third party tools were used regularly (ie, part of the standard auditor 'tool kit') by three firms, with two more using them in a limited capacity. Revenue analytics tools were used widely by one firm and on a limited basis by another whilst derivatives valuation tools were used regularly by one firm only. Process analytics tools and impairment modelling tools were either used on a limited basis or not at all.

Audit quality

The review identified that the use of audit data analytics could improve audit quality in a number of ways including the following:

- Deepening the auditor's understanding of the entity
- Facilitating the focus of audit testing on the areas of highest risk through stratification of large populations
- Aiding the exercise of professional scepticism
- Improving consistency and central oversight in group audits
- Enabling the auditor to perform tests on large or complex data sets where a manual approach would not be feasible
- Improving audit efficiency
- Identifying instances of fraud
- Enhancing communications with audit committees

From its observations of specific applications the Review team observed the following examples of audit data analytics being used to produce good quality audit evidence:

- Tracing individual revenue transactions to debtors and subsequent cash received
- Reproduction of debtors aging
- Valuation of financial instruments
- Tracing supplier income to agreements and cash received
- Recalculation of fund management fees based on value of assets under management

Data capture for use in audit data analytics

The review notes that 'effective and efficient data capture is the key to the successful use of audit data analytics'. At an early stage the audit team needs to ascertain whether the quality of the data that can be provided by the entity's management is sufficient to support the analytic which is to be used. In many instances specialist staff may be used to perform data capture and this may mean that the audit team, the data analytics specialists and the data may be in different geographical locations. This may create issues in relation to data governance, security and privacy.

Appropriate use of audit analytics tools

The Review document states that 'Audit teams need to have a clear understanding of the purpose of the audit data analytics technique to ensure that they obtain sufficient and appropriate audit evidence'. This is of particular relevance at the planning stage of the audit. The Review indicates that the following areas need to be considered when deciding whether to use an audit data analytics tool:

- Whether the tool is a 'good match' for the client's specific environment
- The need to ensure that all relevant assertions are still covered for the balance being tested
- Whether testing in other areas needs to be flexed to provide the necessary supporting evidence for the use of audit data analytics

Evidencing of audit data analytics

The Review emphasises the point that audit documentation should enable an experienced auditor to understand the nature, timing and extent of the audit procedures performed, including where data analytics have been used. In particular it notes that the data analytics specialists must be considered as part of the audit team. Auditing standards in relation to evidence and documentation therefore cover the data analytics specialists' work as they do any other audit work.

13.5.3 Robotic process automation (RPA)

We have already considered the use of RFID chips in the context of big data – imagine how they could be put to use if inventory could be remotely counted and monitored using such technology. This would create savings in terms of staffing required to physically maintain inventory and also those required to process the data from inventory counts, none of whom would ever get sick.

This is just one example of robotic process automation (RPA) where the opportunities to streamline business processes via the use of smart technology are potentially limitless. Clearly, there are also risks attached to such automation, including over-reliance on technology and the structural shift in skills required as finance departments rely more on data analysis than on collection, cleansing and processing. Finance staff need to be trained to operate and review such processes competently.

13.5.4 Artificial intelligence (AI)

Definition

Artificial intelligence (AI): Technology to help improve decisions made by machines, based on machine learning, in an attempt to make better decisions than humans can. AI requires pattern recognition and learning, rather than relying on a series of complex rules, so is not the same as expert systems, which failed to grasp the complexities of the real world and were unable to adapt to dynamic situations. AI systems use complex programming to know how to behave in certain situations, while machine learning promotes automatic learning without being prompted.

Current examples of AI include Amazon's Alexa and Apple's Siri where **small digital devices** are able to respond to voice commands when completing requests such as online searches and connection to other smart devices (such as those that might control lighting and heating in a house). AI and machine learning are also used in various **manufacturing processes** where precision is essential for creating and maintaining competitive advantage.

AI is starting to have more widespread use in driver-less cars and forecasting algorithms for companies. AI needs to consider both forms of decision-making: **intuitive** (based on instincts) and **reasoned** (based on logic). There are similarities to the 'dot com' boom at the start of the 21st century because no-one is really sure how far the possibilities afforded by AI could go.

AI and auditors – opportunities and issues

There is an increasing role of AI as part of **audit data analytics**, in automated and smart auditing of populations, not just samples, thus reducing human error. AI-driven data analytics offer efficiencies, better insight and added value for both accountants and their clients as they can handle large data volumes while the system learns but it will not get tired or make mistakes. AI could support stronger forensic auditing techniques as well (see Chapter 25). Auditors would need to be able to understand the impact of AI and machine learning in the financial statements (such as valuation or impairment for new and emerging technologies, including software).

Accountancy applications exist too, such as increased automation in transaction processes and systems, greater analysis of data to differentiate between 'rogue' (eg, fraud) and 'normal' activity and better predictions and forecasts on complex areas such as revenue.

AI is not 100% perfect though - what about unusual situations with little previous data to use for this machine learning to occur? Currently, while it is in development, AI still requires significant investment to become mainstream and effective and for auditors to be able to direct this AI and interpret its findings.

Nonetheless, there is still great potential (indeed, there may be no choice to adopt once it gains enough traction) which will lead to change and adaptation in the profession: there could be less backward-looking review, and more forward-looking advisory work instead. There could even be scope to determine further uses of AI, such as whether AI can apply **professional scepticism** without a human's judgement present.

13.5.5 Taskforce on Climate-related Financial Disclosures (TCFD)

In March 2020, the Financial Conduct Authority (FCA), which is the main UK financial markets regulator, issued instructions for all UK companies listed on the UK stock market to disclose their **carbon risks** to investors. This would be achieved by companies signing up to the Taskforce on Climate-related Financial Disclosures (TCFD) and disclosing matters such as:

- describing management oversight of risks
- explaining how their strategy would cope in different temperature scenarios

- setting out risk management processes
- reporting their progress against targets

This TCFD approach is endorsed by the UK Government in its Green Finance Strategy (BEIS, July 2019) which outlined the core elements of the recommended climate-related financial disclosures:

Figure 5.7: TCFD

Governance

The organisation's governance around climate-related risks and opportunities

Strategy

The actual and potential impacts of climate-related risks and opportunities on the organisation's businesses, strategy and financial planning

Risk management

The processes used by the organisation to identify, assess, and manage climate- related risks

Metrics and targets

The metrics and targets used to assess and manage relevant climate-related risks and opportunities

According to the government's Green Finance Strategy, 785 organisations now support the TCFD including investors who are responsible for managing assets valued at over £1 trillion.

This comes amid a wider call for **greater corporate transparency** over the sustainability implications of strategies pursued by companies (and indeed countries) as ecological issues continue to dominate public debate. **Investors** in particular have welcomed this transparency as it will allow an informed decision on the steps companies are taking to address the possibility that climate-related issues may affect their return (for example, the risks of flooding affecting crop yields for a food manufacturer).

Clearly, there are **challenges** in how corporate reporting mechanisms can address these requirements, not only for organisations in **collecting and managing the data required** to support these disclosures but also for assurance providers who may be asked to **assess the validity** of such disclosures (whether as part of the audit or otherwise).

In 2021, the UK Government confirmed that with effect from 6 April 2022, the largest UK listed entities and some of the UK's largest private companies would be **required to make climate-related disclosures** that reflect the **TCFD framework** (BEIS, 2021). To this end, the Companies Act 2006 has now been amended specifically to refer to sustainability alongside non-financial disclosures within a company's Strategic Report (UK Government, 2022). The UK's Financial Conduct Authority (FCA) clarified these requirements, stating that from 2022, premium listed companies and issuers of standard listed shares and global depository receipts (GDRs) would be required to make climate- related disclosures in line with the TCFD framework on a '**comply or explain**' basis. UK asset managers, life insurers and FCA-regulated pension providers would not have the option to explain: instead, they would need to make TCFD disclosures at both **entity-level** and in relation to their **products and portfolios** (FCA, 2021). This has since been supplemented by guidance from the FRC on the preparation of the **Strategic Report** in the UK which now includes sustainability and climate- related disclosures for qualifying entities that also reflect the TCFD framework (FRC, 2022).

There is currently **no requirement for these TCFD disclosures to be subject to any specific assurance**, although technically, information of this kind is covered by the auditor's Companies Act 2006 responsibilities for reviewing information in the Strategic and/or Directors' Report, the auditor's responsibilities relating to the UK Corporate Governance Code 'comply or explain' disclosures and those responsibilities that fall under ISA (UK) 720 for the audit of "other information" (TCFD, 2017).

In the UK, the FCA was consulted on the need to mandate assurance for any environmental, social and governance (ESG) disclosures including those related to TCFD, but while **benefits** could be seen, the **cost implications** and the absence of any applicable standards were felt to be obstacles that could not be justified (FCA, 2020).

However, the launch of the **ISSB** and its draft standards on disclosure for sustainability and climate- related risks and opportunities during 2022 may lead to renewed calls for more explicit assurance over ESG information becoming a mandatory requirement.

13.5.6 Guideline on Sustainability and Climate-related Financial Disclosure

In December 2023, Bangladesh Bank, the central bank of the country, issued guidance on sustainability and climate-related Financial Disclosure. Bangladesh Bank has positioned itself as a leading central bank in championing Green & Sustainable finance, actively confronting climate and sustainability risks, and seizing opportunities within the financial sector through strategic policy measures. Recognizing the importance of Sustainability reporting to stakeholders, investors, and development partners, Bangladesh Bank has opted to implement a policy for the financial sector that aligns with the Task Force on Climate-related Financial Disclosures (TCFD) recommendations. This policy aims to provide guidance on Sustainability and Climate-related Financial Disclosures. To address the pressing need for globally accepted sustainability reporting standards that are cohesive, consistent, and comparable to financial reporting standards, the International Financial Reporting Standards (IFRS) Foundation has formed the International Sustainability Standards Board (ISSB). Among the initial standards developed by the ISSB are IFRS S1 and IFRS S2, focusing on sustainability disclosure.

The primary goal of IFRS S1 is to disclose all information pertaining to sustainability-related risks and opportunities, while IFRS S2 outlines disclosure requirements for climate-related financial risks and opportunities. These standards fully integrate the recommendations of the TCFD, aiming to comprehensively capture factors that could reasonably impact a company's future prospects.

Aligned with the aforementioned objectives, Bangladesh Bank released guidelines for banks and financial institutions regarding disclosures concerning sustainability and climate-related risks, utilizing IFRS S1 and IFRS S2 in a phased manner beginning in 2024. The standards issued by the ISSB will empower stakeholders to make informed decisions with assurance. Bangladesh Bank has opted to implement IFRS S1 and IFRS S2 in partnership with the Financial Reporting Council (FRC) of Bangladesh.

Detection risk
Creative accounting

Further question practice

1 Knowledge diagnostic

Before you move on to question practice, confirm you are able to answer the following questions having studied this chapter. If not, you are advised to revisit the relevant learning from the topic indicated.

	Confirm your learning
1.	Can you list the various stages of an audit?
2.	Do you remember the auditing standards (ISAs) relevant to planning and risk assessment?
3.	Can you define professional scepticism and do you know why it matters to auditors?
4.	Do you know which techniques are recommended for an effective understanding of the entity?
5.	Can you explain how business risk is used to help identify areas of misstatement in a set of financial statements?
6.	Do you know the various stages of the audit risk methodology?
7.	Can you explain the term 'creative accounting' and suggest some examples of how it may be present in an audited entity?
8.	Can you define materiality and explain how it should be calculated for a given set of circumstances?
9.	Do you know how the auditor should respond to the assessed level of risk and can you suggest alternative methodologies for the auditor to use?
10.	Are you aware of the following current developments in auditing: information technology; cryptocurrencies and blockchain; big data; data analytics; robotic process automation; and artificial intelligence? Can you explain how each of these developments could impact on the work of the auditor, including the level of audit quality?

2 Question practice

Aim to complete all self-test questions at the end of this chapter. The following self-test questions are particularly helpful to further topic understanding and guide skills application before you proceed to the next chapter.

Question	Learning benefit from attempting this question
Gates Ltd	An opportunity to see how data analytics could be used in an auditing context.
Suttoner plc	Using a larger scenario, this question asks you to apply the business risk methodology before considering the UK FRC guidance on internal controls.

Once you have completed these self-test questions, it is beneficial to attempt the following questions from the Question Bank for this module. These questions have been selected to introduce exam style scenarios that will help you improve your knowledge application and professional skills development before you start the next chapter.

Question	Learning benefit from attempting this question
Hillhire	Key audit risks and the associated financial statement treatment from a series of issues in a detailed scenario.
Dormro	An integrated scenario question that requires the identification of audit risks in the financial statements.

Refer back to the learning in this chapter for any questions which you did not answer correctly or where the suggested solution has not provided sufficient explanation to answer all your queries. Once you have attempted these questions, you can continue your studies by moving on to the next chapter.

Technical reference

1 ISA 210

- Response at assertion level – **ISA 330.6–.7**
- Evaluation of sufficiency and appropriateness of evidence– **ISA 330.25-27**

Self-test questions

Answer the following questions.

1 Gates Ltd

You are an audit senior at Bob & Co and have received the following email.

To: Jackie Smith, Audit senior

From: Roy Bob, Audit partner

Subject: Gates Ltd

We are about to take on the audit of Gates Ltd, a wholly owned subsidiary of a US parent company.

Gates Ltd produces computer software for the military for battlefield simulations. It also produces 'off the shelf' software products for other customers. I am concerned about the accounting issues related to these products. Based on the following information, would you please identify and comment on the accounting issues.

The military software usually takes at least three years to develop. The military insists on fixed price contracts. Once the software has been authorised for use by the customer, Gates Ltd supplies computer support services, which are charged on the time spent by the software engineers on site.

The 'off the shelf' packages are not sold to customers, but are issued under a licence giving the right to use the software for a typical period of three years. The licence fee is paid up front by customers and is non-refundable. As part of the licence agreement Gates Ltd supplies maintenance services without additional charge for the three-year period.

Again, based on the above regarding the military software and the 'off the shelf' packages, please can you also set out the audit issues arising.

As a firm we are keen to adopt cutting-edge audit techniques and are in the process of developing data analytics software. I am considering the use of data analytics tools for the audit of Gates Ltd next year and am due to discuss this idea with the audit committee next month. As an IT company itself, the board of Gates Ltd is very interested in this approach. I am putting together some initial thoughts for my meeting and would like you to make some short notes for me, setting out the benefits and challenges of using data analytics as an audit tool.

Requirement

Respond to the partner's email.

2 Suttoner plc

Suttoner plc (Suttoner) operates in the food processing sector and is listed on the London Stock Exchange. You are a member of its internal audit department. The company purchases a range of food products and processes them into frozen or chilled meals, which it sells to major supermarkets in Europe and North America.

The company structure

The company sells food through five subsidiaries, each of which is under the control of its own managing director who reports directly to the main board. Each subsidiary has responsibility for, and is located in, its own sales region. The regions are the UK, the rest of Western Europe, Eastern Europe, the US and Canada. Food is produced in only two subsidiaries, the UK and the US. Head office operates central functions, including the legal, finance and treasury departments.

The board has asked the managing directors of each subsidiary to undertake a risk assessment exercise, including a review of the subsidiary's procedures and internal controls. This is partly due to a review of the company's compliance with the provisions of UK FRC's Guidance on Risk Management,

Internal Control and Related Financial and Business Reporting and also because Suttoner has been severely affected by two recent events and now wishes to manage its future risk exposure.

Recent events

(1) In renegotiating a major contract with a supermarket Suttoner refused to cut its price as demanded. As a result a major customer was lost.

(2) Later in the year the company had been cutting costs by sourcing food products from lower-cost suppliers. In so doing it acquired contaminated pork which made several consumers ill. A major health and safety inspection led to the destruction of all Suttoner's pork inventories throughout Europe, due to an inability to trace individual inventories to source suppliers. More significantly, many supermarkets refused to purchase goods from Suttoner for several months thereafter.

    As a result of these events the company's cash flow was severely disrupted, and significant additional borrowing was needed.

The board's view

In guiding the risk assessment exercise, the board has set clear objectives for subsidiaries to achieve: sales growth, profit growth and effective risk management. Additionally, the board wishes to foster integrity and competence supported by enhancing human resource development.

The board requires managing directors of each subsidiary to report to them annually on these objectives and on internal controls. Otherwise, they have considerable autonomy on pricing, capital expenditure, marketing and human resource management. The UK and US subsidiaries, which process raw foodstuffs, are free to choose their suppliers. The other three subsidiaries may purchase only from the UK or US subsidiaries.

Over a number of years each subsidiary has been managed according to the nature and experience of its managing director, and this has resulted in different styles and levels of control being established locally.

Email from the head of internal audit

To: Joe Lyons

From: Ben Jones

Subject: Risk assessment exercise Joe,

As you know, we are scheduled to update our risk assessment exercise. Can you please take the following on board for me and produce something by Wednesday afternoon?

Firstly, I need you to identify, classify and comment on the key compliance, operating and financial risks to which the company is exposed. On the back of this, can you then draft a note for the finance director to send to the other directors, advising them as to the extent and the likelihood of the three most significant risks identified. For each of these, can you identify appropriate risk management procedures.

Finally, can you draft a note in accordance with the FRC's *Guidance on Risk Management, Internal Control and Related Financial and Business Reporting* (formerly the Turnbull Report) which we can put in our financial statements in relation to 'Control environment and control activities'.

Cheers.

Ben

Requirement

Respond to the email from Ben Jones.

Now go back to the Introduction and ensure that you have achieved the Learning outcomes listed for this chapter.

Answers to Interactive questions

Answer to Interactive question 1

1.1 The risk is the risk of changes in value of the steel inventory due to changes in the price of the commodity. This is a financial or market risk.

1.2 The auditor would need to consider the following:

- Whether the futures contracts are to be used in a fair value hedge of the steel inventory.
- Whether the required criteria have been met ie, the hedging relationship has been formally designated and the hedge is 'effective'.
- Whether adequate documentation can be produced, including details of:
  - identification of the hedging instrument;
  - the hedged item;
  - nature of the risk being hedged; and
  - how hedge effectiveness will be calculated.
- If hedge accounting is to be used, the risk of incorrect accounting treatment. This risk is increased due to the entity's lack of experience in dealing with this type of transaction.
- Whether the accounting rules of IFRS 9, *Financial Instruments* (or IAS 39 if those rules are applied) have been complied with.

The derivative should be recognised as a financial asset at fair value and any gain recognised in profit or loss.

- The way in which fair value has been established.

Answer to Interactive question 2

Risks/controls/audit procedures

Key risk	Controls to mitigate	Audit procedures
• Failure of internal R&D projects	• Constant monitoring with exit strategies	• Review of failed projects, controls exercised and timing of exit • Write-off of any capitalised R&D
• Excessive expenditure on R&D	• Regular reviews of benefits against costs for each drug, each R&D unit and each period	• Cost-benefit review • Comparison to similar companies • Review of R&D cost control and budgetary procedures
• Insufficient new drugs in the pipeline to sustain profitability	• Monitoring effectiveness of R&D function • Consideration of adequate expenditure levels	• Consider sustained going concern • Review plausibility of alternative strategies

Key risk	Controls to mitigate	Audit procedures
	• Consider alternative strategies (eg, increases in generic drug production) • Alternative uses for existing drugs	
• Development of new drugs by competitors	• Consider effectiveness of patent protection • Consider possibility of licensing • Quantification of effects	• Review patent registration by other companies • Review projected impact on client • Consider writing off any capitalised R&D
• Joint venture failure, disagreement or decline	• Clear contractual rights and obligations • Transparency and communication • Technical monitoring of procedures similar to internal systems above	• Review contractual arrangements and technical progress
• Inadequate financial resources to sustain R&D	• Short-term and long-term financial budgets with actual and contingent financing arrangements	• Consider actual and potential financial resources • Evidence from bankers and other finance providers or their agents
• Changes in health spending or health regulation by governments in major geographical markets	• Monitor political statements and policies • Political lobbying • Consider impacts of changes on profitability	• Review trends in health spending and prospective regulation in key markets • Review client's governmental monitoring procedures and information gained therefrom

Answer to Interactive question 3

Business risks faced by KidsStuff Ltd

- Exposure to foreign exchange risk if imports are not denominated in sterling.
- One major supplier – too reliant on one source.
- Distance from supplier makes resolving production errors more difficult.
- Children's toy market tends to be seasonal – could require significant working capital for periods of the year.
- Strict health and safety rules over children's toys could be breached.
- May be heavily reliant on the skills of Joseph Cooper who will now be close to retirement.
- If unable to keep up with market trends the company will not be able to continue trading.
- Penetration of the computer games market would require significant investment which may not pay off.

- The overdraft is likely to be an expensive form of financing.
- The overdraft could be withdrawn.

Effect of risks on the audit

- The going concern basis of preparation may not be appropriate due to many of the business risks eg, reliance on overdraft.
- Payables, purchases and inventories could all be misstated if incorrect exchange rates are used.
- Exchange gains and losses may be incorrectly accounted for or miscalculated.
- The overseas supplier is likely to have a material payables balance but evidence may be difficult to obtain.
- Importing extends delivery times and makes cut-off more difficult to administer.
- Last year's toys in inventories may well be obsolete.
- Provisions may be required for fines or legal claims in respect of health and safety breaches.
- If the year end is pre-busy season, inventories are likely to be material.
- If the year end is post-busy season, receivables are likely to be material.
- The bank may use the accounts in determining whether or not to renew the overdraft – a duty of care should be considered.
- Neil Cooper may bias the accounts to show an improved performance.

Further information required

- Management accounts for the year to date
- Budgeted results for the year
- Audited financial statements for the previous year(s)
- Correspondence from the bank regarding the overdraft
- Correspondence with the previous auditor regarding: previous audit issues
- Visits to client/notes to ascertain the client's systems
- Trade journals
- Health and safety legislation for the industry
- Minutes of board meetings
- Legal costs and correspondence with solicitors as evidence for litigation risk

Answer to Interactive question 4

Risks associated with accounting treatment include the following.

- **Nature of the contract**

  This contract is essentially a number of goods and services bundled into one contract. This fact adds complexity to the accounting treatment and therefore adds risk. Where the elements can be separated and sold as individual items they should be recognised as if they were independent of each other. In this case it would be possible to sell the handset, access to the network, the call minutes and the texts individually so separate recognition would be appropriate.

- **Revenue recognition policy not in accordance with principles of IFRS 15**

  A distinction will need to be made between the different elements of the package as these are separate performance obligations. Revenue from the sale of the handset should be recognised when this performance obligation has been met. This will normally be at the point that the contract is signed and the customer takes receipt of the handset. Alternatively if the handset is sent to the customer it will be at the point of delivery.

Use of the network would be treated as the rendering of a service. As the service is provided equally over the 12-month period of the contract, the revenue attached to this element should be recognised on a straight-line basis.

The free calls and texts would also be treated as the rendering of a service. However, this service will not necessarily be received on an equal basis each month (as not all free calls/texts may be used each month and may be carried over). The allocation should be based on the best estimate of how the free calls and texts will be used over the life of the contract. This will involve a large amount of estimation which increases audit risk. Where the allocation can be based on historical information eg, average usage on similar packages risk will be reduced

- **Each component of the package may be valued incorrectly**

  The package is effectively a bundle of goods and services with a fair value of £500 sold at a discount of £140 (£500 – £360). If there is a specific discount policy this should be applied to the individual components. For example, the whole of the discount could relate to the handset, in which case the whole of the discount would be deducted from the fair value of the phone. If there is no specific policy an alternative allocation method would be required eg, on a pro rata basis.
  The auditor would need to ensure that the basis used is reasonable.

Answer to Interactive question 5

Audit risks

- **Inherent**
  - Related party transactions/group issues
  - Receivables
  - Fraud – possible indicators, professional scepticism
  - Profit-driven management
  - Credit extended – accounting/law and regulations
- **Control**
  - Lack of segregation of duties
  - PC/virus
  - Suspicion of fraud?
  - Key man
- **Detection**
  - First audit
  - Opening balances and comparatives – audited?

Audit risks – inherent

Related parties and group issues

Forsythia is part of a **complicated group structure**. This raises several issues for the audit:

- There is a risk of related party transactions existing and not being properly disclosed in the financial statements in accordance with IAS 24.
- Similarly, there is a risk that it will be difficult to ascertain the controlling party for disclosure.

- There are likely to be some group audit implications. The firm may be required to undertake procedures in line with the group auditors' requirements if Forsythia is to be consolidated.

Receivables

Forsythia is a **service provider**, and it **extends credit** to customers. This is likely to mean that **trade receivables** will be a significant audit balance. However, there is **limited audit evidence** concerning trade receivables due to the effects of a computer virus. There are also indicators of a **possible fraud**.

Fraud?

There are various factors that may indicate a sales ledger fraud has taken/is taking place:

- Lack of segregation of duties
- Extensive credit offered
- The virus only destroyed sales ledger information – too specific?
- Poorly paid sales ledger clerk – with expensive lifestyle
- Sales ledger clerk is daughter of rich shareholder and they do not have a good relationship

None of these factors necessarily point to a fraud individually, but added together raise significant concerns.

Profit-driven management

Mr Rose is motivated for the financial statements to show a profit for two reasons:

- He receives a commission (presumably sales driven, which impacts on profit).
- He receives dividends as shareholder, which will depend on profits.

There is a risk that the **financial statements** will be **affected by management bias**.

Audit risk – control

There are three significant control problems at Forsythia.

Segregation of duties

There appears to be a **complete lack of segregation of duties** on the three main ledgers. This may have led to a **fraud** on the sales ledger. The fact that there is no segregation on payroll is also a concern, as this is an area where frauds are carried out.

Lack of segregation of duties can also lead to **significant errors** arising and not being detected by the system. This problem means that **control risk** will have to be assessed as **high and substantial substantive testing** be undertaken.

Personal computer

A PC is used for the accounting system. This is likely to have **poor built-in controls** and to further exacerbate the problems caused by the lack of segregation of duties.

The **security** over PCs is also often poor, as has been the case here, where a **virus** has destroyed evidence about the sales ledger.

Key man

The fact that Mr Rose is dominant in management may also be a control problem, as he can override any controls that do exist. There are also risks if he were ever to be absent, as most controls appear to operate through him and there are no alternative competent senior personnel.

Answer to Interactive question 6

Home delivery sales

The appropriate benchmark of materiality with regard to the home delivery sales is revenue, as the home delivery sales form part of the total revenue of the company.

£0.6 million is 1.4% of the total revenue for 20X6 (see W1 below).

An item is generally considered to be material if it is in the region of 1% of revenue, so the home delivery services are material.

Provision

The appropriate benchmark of materiality with regard to the provision is total assets and profit, as the provision impacts both the statement of financial position (it is a liability) and the statement of profit or loss and other comprehensive income (it is a charge against profit).

£0.2 million is 0.65% of total assets in 20X6 (see W2 below). As an item is generally considered to be material if it is in the region of 1–2% of total assets, the provision is not material to the statement of financial position.

However, £0.2 million is 11% of profit before tax for 20X6 (see W3 below). An item is considered material to profit before tax if it is in the region of 5%. Therefore, the provision is material to the statement of profit or loss and other comprehensive income.

WORKING

Materiality calculations

As follows:

(1) (0.6 million ÷ 42.2 million) × 100 = 1.4%

(2) (0.2 million ÷ 30.7 million) × 100 = 0.65%

(3) (0.2 million ÷ 1.8 million) × 100 = 11%

Answer to Interactive question 7

Suitability

- Although the materiality calculation is based on a benchmark commonly used ie, percentage of profit before tax, in this case the resulting figure does not seem appropriate.
- This is due to the fact that the profit figure of the business is volatile (£300,000 in the previous year) and does not seem to be representative of the size of the business in terms of its assets or revenue.
- In instances like this where the company is close to breaking even, total assets or revenue may be a more suitable basis. Alternatively, if profits are to be used, an average figure over a number of years would give rise to a more appropriate materiality balance.
- Materiality as it is currently set is extremely low. The consequence of this is that it would result in substantially increased audit procedures which would be inefficient.

Answers to Self-test questions

1 Gates Ltd

Accounting issues

(1) Military contracts

Long-term contract accounting

The software development should be accounted for under IFRS 15, *Revenue from Contracts with Customers*. Specifically, it is a fixed price contract, ie, where the revenue arising is fixed at the outset of the contract. Under such contracts there is an element of certainty about the revenue accruing, but not about the costs which will arise. For a fixed price contract the contractor should be able to measure reliably the total contract revenues and be able to identify and measure reliably both the costs that have been incurred and those that will be incurred to complete the project. The contractor should also assess whether it is probable that payment will be received under the contract.

As the contracts are fixed price there is an increased risk of the contracts being loss-making, and such losses must be provided for in full.

Computer support

As the amount billed relates directly to the hours spent on site, it would be appropriate to recognise this as revenue when charged.

(2) 'Off the shelf' packages Licence and maintenance costs

An argument could be proposed to recognise this revenue on receipt, given that it is non-refundable, and paid after the development work has been completed and the costs incurred.

However, under IFRS 15, *Revenue from Contracts with Customers* it is generally not appropriate to recognise revenue based on payments received under the contract, as stage payments set out under the terms of the contract often bear little resemblance to the actual services performed. This is a contract in which a performance obligation (the provision of services) is satisfied over time. Revenue relating to the licence should therefore be recognised as the services are provided, ie, as the performance obligation is satisfied.

The maintenance costs should be recognised on a basis that reflects the costs incurred which might be based on the frequency of maintenance calls, probably related to the previous history of maintenance calls.

Audit issues Inherent risks

- Given the nature of the business and the military contracts, physical and electronic security and controls are a major issue.
- Long-term contract accounting involves significant judgements with respect to future contract costs. Judgement increases the likelihood of errors or deliberate manipulation. This area is particularly difficult to audit given the specialised nature of the business, and we will need to ensure that we have personnel with the right experience assigned to the audit.
- There is a risk with long-term contract accounting of misallocation of contract costs – particularly away from loss-making contracts.
- The maintenance provision is an estimate and, again, susceptible to error.

Detection risks

The nature of the military contracts may mean that we are unable to review all the information because of the Official Secrets Act. This could generate a limitation on scope.

Notes re data analytics Benefits

- Enhanced audit quality
- Increased sophistication and breadth of interrogation options
- Enables us to obtain audit evidence from larger populations efficiently
- Analysis at a more granular level enhancing the basis on which judgements are made
- Results in a more effective and robust understanding of the entity improving the application of professional scepticism and professional judgement
- Ability to graphically visualise results increasing ease of use and interpretation
- Provides the entity with additional information to better inform its own risk assessment and business operations

Challenges

- We need to ensure that the development of the software is properly managed so that a high quality audit tool is developed.
- There may be issues with data capture, extraction, validation and transformation.
- Need to consider security and privacy issues together with storage problems for the large volumes of data.
- There may be restrictions on data being transferred from one jurisdiction to another.
- We may have insufficient in-house resources with relevant IT expertise to use the data analytics software and/or to provide central support.
- Need to consider how we use data analytics whilst still complying with the requirements of ISAs (which do not yet address the changes in approach brought about by the use of data analytics).
- The use of data analytics changes the nature of the information required and questions asked of the client. The client may find this challenging.
- We need to ensure that professional scepticism and judgement continue to be applied and that we do not have 'overconfidence' in the technology.

2 Suttoner plc

Identification and classification of risks Compliance risks

Health and safety regulations – Risk of closure of plant and/or destruction of food if contamination arises from purchasing, processing, storing or distribution activities.

Accounting regulations – Need to comply with regulations in several different countries. May need to restate for group accounting purposes to comply with IFRSs if those countries have domestic GAAP that differs from IFRSs.

Taxation – Need to comply with tax regulations, particularly in respect of transfer pricing between divisions in different countries.

Litigation risk – Arising from the possibility of food poisoning. Risks include litigation against the company by those individuals affected and for loss of reputation by supermarkets.

Operating risks

Loss of major customers – Supermarkets may regularly renegotiate contracts and, in so doing, find alternative suppliers. The loss of one such customer this year may be part of a trend.

Power of customers to reduce price – Even where contracts with supermarkets are retained, the renegotiation may be on less favourable terms, resulting in a loss of profits.

Lack of goal congruence by divisional MDs – Significant autonomy at divisional level may mean reduced co-ordination and the pursuit of conflicting goals.

Geographically dispersed supply chain – Given that processing is concentrated in only two centres, there are significant distances involved in the supply chain. This may lead to risks of failure to supply on time and significant low temperature transport and storage costs.

Perishable nature of inventory – The deterioration of perishable food may involve several risks, including inventory valuation, costs of inventory losses and unobserved perishing, which may lead to further food poisoning and loss of reputation.

Measuring divisional performance (arbitrary transfer prices) – There is trade between divisions arising from the supply of distribution divisions from processing divisions. As the companies are separate subsidiaries, there are implications for attesting the profit of individual companies, given the arbitrariness of transfer prices. Moreover, the impact of transfer prices on taxation and their acceptance under separate tax regimes creates additional risk in respect of the taxable profit of separate subsidiaries.

Control systems – The loss of inventory was greater due to the inability to trace the contamination to specific inventories. This deficiency in inventory control systems magnifies any effects from contamination risks of this type.

Generalised food scares – Food scares which are not specific to the company but which arise from time to time may create a reluctance by consumers to purchase some types of the company's product portfolio.

Financial risks

- **Foreign exchange risk** – This includes economic, transaction and translation risk
- **Economic risk** – refers to adverse movements in the exchange rate making goods less competitive in overseas markets or making inputs relatively more expensive
- **Transaction risk** – refers to the situation where in the period between contracting and settlement adverse movements in the exchange rate make the contract less profitable
- **Translation risk** – refers to the risk of the consolidated statement of financial position showing the assets of overseas subsidiaries at a reduced value due to adverse exchange rate movements

Borrowing – gearing risk/liquidity – Increased financial gearing due to the additional borrowing in the year will make future earnings more volatile.

Going concern problems if further contamination scares occur – The loss of business due to the contamination of one of the company's products meant that additional borrowing was needed: this may create questions of going concern if a further incident arises.

Control of financial resources at divisional level – The fact that divisional MDs have significant autonomy has meant that different styles and methods of control have been used. This may be a cause for concern about potential variations in control.

Briefing notes

To: Finance Director

From: Internal auditor

Date: 6 November 20X1
Subject: Extent and likelihood of three key risks

Food scare

Low probability – if appropriate controls are put in place over food quality.

High impact – arising from loss of inventory, loss of reputation, possible loss of contracts/ customers, litigation risk, closure on health grounds.

Proposed course of action – quality control procedures, contingency plans, better inventory identification to locate and minimise infected inventory.

Loss of customer

High probability – assuming that such contracts are being renegotiated on a regular basis. Impact depends on whether:

- sales are concentrated with a few customers;
- new customers can be generated; or
- the loss of customers is systematic, in which case the cumulative impact may be significant.

Proposed course of action – maintain customer relationships, compete on price and non-price issues, develop a wider customer base.

Foreign exchange

High probability – some (and possibly significant) foreign currency movements over time are very likely.

High impact – potentially, the effects of a major currency movement may be significant, although this would depend on the actions taken to moderate such effects. There may also be a favourable currency impact arising from East European currencies becoming more readily acceptable in trading.

Proposed course of action – hedge in the short term (where appropriate and where the cost of doing so is not significant), back to back financing (eg, borrow in US dollars to finance US operations), consider acceptability of East European currencies before significant development in these countries.

Notes to the financial statements

Control environment and control activities

The company is committed to ensuring that a proper control environment is maintained. There is a commitment to competence and integrity, together with the communication of clear objectives to all divisions. These are underpinned by a human resources policy that develops quality with integrity.

The organisational structure has been developed to delegate authority with accountability to ensure that control and consistency are maintained, having regard to an acceptable level of risk. Managing directors report on the control environment on a regular basis to the board. Moreover, the performance of each division is reported and reviewed regularly.

This year the board has undertaken a specific review to assess key risks and to ensure that appropriate information and monitoring is being received.

Chapter 6

The statutory audit: audit evidence

Introduction

Learning outcomes

- Determine analytical procedures, where appropriate, at the planning stage using technical knowledge of corporate reporting, data analytics and skills of financial statement analysis
- Evaluate, where appropriate, the need for, and extent of reliance to be placed on expertise from other parties to support audit processes including when to challenge the extent and working practices of other parties
- Determine, design and develop audit objectives for each financial statement assertion
- Justify and conclude for a particular scenario what comprises sufficient, appropriate audit evidence
- Design and determine audit procedures in a range of circumstances and scenarios, for example identifying an appropriate mix of tests of controls, analytical procedures and tests of details
- Apply professional scepticism to the process of gathering audit evidence and evaluating its reliability including the use of client-generated information and external market information and audit data analytics software
- Design and determine audit procedures in a range of circumstances and scenarios, for example identifying an appropriate mix of tests of controls, analytical procedures and tests of details
- Demonstrate and explain, in the application of audit procedures, how relevant ISAs affect audit risk and the evaluation of audit evidence
- Evaluate, applying professional judgement, whether the quantity and quality of evidence gathered from various audit procedures, including interpreting and extrapolating the results of sampling using appropriate data analysis tools and analytical procedures, is sufficient to draw reasonable conclusions
- Recognise and prioritise using professional judgement on audit issues arising whilst gathering assurance evidence that should be referred to a senior colleague or other specialist

Specific syllabus references for this chapter are: 11(f), 11(i), 14(b)–(g), 14(i)

Chapter study guidance

Use this schedule and your study timetable to plan the dates on which you will complete your study of this chapter.

Topic	Practical significance	Study approach	Exam approach	Interactive questions
1	**Revision of assertions** One of the key criteria of good audit evidence is that it is relevant – this is achieved by	**Approach** Use the auditing standards open book to find these assertions and bookmark them for when you need	Focusing on the right assertions will help you to create audit procedures that are relevant for collecting the necessary audit	**IQ1: Financial statement assertions (1)** A good recap designed to refresh your knowledge of assertions.

Topic	Practical significance	Study approach	Exam approach	Interactive questions
	the use of assertions which describe the characteristics that items in the financial statements need to possess in order to belong there.	them. **Stop and think** How much of this do you remember from your previous auditing studies?	evidence.	**IQ2: Financial statement assertions (2)** Further practice on assertions using more typical question-based scenarios.
2	**Sufficient, appropriate audit evidence** Evidence is the oxygen without which the auditor cannot breathe – how do we make sure we have enough of the right kind for the audit?	**Approach** This section is mainly revision from your earlier studies but does introduce the use of data analytics as a way of generating audit evidence. **Stop and think** Can you explain the process of triangulation and how it helps to provide audit evidence?	The acid test for any audit evidence is whether or not it ultimately supports the auditor's opinion – when discussing evidence in the exam, you should always be clear about what it is and how it helps the auditors achieve their objectives.	**IQ3: Audit evidence – revision** This is a good recap of the various types of audit evidence that you may come across and why some may be better than others.
3	**Sources of audit evidence** You need to be able to explain the various techniques used by auditors for generating evidence.	**Approach** This should be revision but make sure you can differentiate between tests of control and substantive tests. **Stop and think** Can you tell the difference between tests of detail and substantive analytical procedures?	Exam questions may require you to generate audit procedures in response to a specific issue and that could be driven either by a substantive test or a test of control, so make sure you can describe each one accordingly.	N/A
4	**Selection of audit procedures** This section is essential reading for you – first, you will recap some of the key techniques for	**Approach** Once you have revisited the various procedures, consider how non-current assets could be audited.	Audit procedures need to be specific to score marks in the exam, so learn how to write them in a way that is specific and focused on achieving a particular	**IQ4: Audit procedures revision of tangible assets** This is excellent practice for how to plan an approach for a discrete part of

CHAPTER 6

Topic	Practical significance	Study approach	Exam approach	Interactive questions
	generating evidence and second, consider how these can be applied to specific parts of the financial statements.	**Stop and think** Focus on how procedures are written with a specific assertion in mind.	objective. Remember to design procedures that use appropriate verbs and which justify the use of that procedure in the circumstances.	the financial statements and also how to write suitable audit procedures.
5	**Analytical procedures** This is another significant section in your revision of how to audit – as well as looking at where (and when) analytical procedures are used throughout the audit, you will also learn how to apply these techniques in specific situations (including engagements that fall outside the remit of audit work).	**Approach** While you read through each of these techniques, use the various activities presented as an opportunity to add to your skill set of analytical procedures. **Stop and think** Although very practical and logical, you may still need to display some form of creativity in your use of analytical procedures in order to unlock the messages hidden in the data.	You will definitely need to be able to perform some kind of analytical procedures in your exam (either as part of the audit elements or when analysing a set of financial statements) so you must practise these techniques and be able to manipulate data in order to generate meaningful conclusions.	**IQ5: Analytical procedures (1)** You should note the data that you have been provided with and tailor your approach accordingly. **IQ6: Analytical procedures (2)** As well as making sure you focus on the audit of trade payables, note how software could be used as part of your analysis. **IQ7: Analytical procedures (3)** As well as using these techniques for an audit, you may be asked to appraise an entity's financial health in some way – this is good practice of how to use the same techniques for a different outcome.
6	**Audit of accounting estimates** One of the areas of criticism that auditors are currently facing relates to items in the financial statements where estimates have been	**Approach** Read through this section noting the location of the key terms in the auditing standards open book. **Stop and think** Can you think of	Exam questions could focus on audit procedures where the evidence available may be subject to some form of estimation uncertainty and management bias, so being able to apply	N/A

Topic	Practical significance	Study approach	Exam approach	Interactive questions
	included and the auditor has failed to display suitable levels of professional scepticism. ISA (UK) 540 (Revised) is designed to improve the auditor's approach in this area.	some suggested areas of the financial statements where estimates may be particularly common?	some of the guidance suggested here would be required.	
7	**Initial audit engagements – opening balances** As well as the audit risks that arise from all engagements, taking on a new client can also lead to audit risks from their opening balances. What can you do to address this risk?	**Approach** Revisit this material which is revision from your previous studies. **Stop and think** Could you find this standard in the auditing standards open book if required?	Focusing on the given procedures and the information in the appendix will help you to generate suitable audit procedures if required.	N/A
8	**Using the work of others** The auditor may require the use of specialist expertise beyond their own skillset but must ensure it will result in sufficient appropriate audit evidence.	**Approach** You have met experts and internal audit before so make sure you have fully revised this area. **Stop and think** Can you find the necessary ISAs (UK) in your auditing standards open book?	It is possible that the work of either an expert or an internal auditor may be described in an exam scenario – your job is to use the contents of the standards to evaluate the quality of this evidence and identify any shortcomings.	**IQ8: Using an expert – revision** Use this as an opportunity to consider how experts should be used by auditors.
9	**Working in an audit team** Can you explain the hierarchy of roles in an audit team?	**Approach** This is useful to inform you of the various roles in the audit team. **Stop and think** Can you see how each of these roles would help support	Questions may be set which require you to consider the operation of the audit team and to identify possible risks from anyone not performing their role to the best of their ability.	N/A

Topic	Practical significance	Study approach	Exam approach	Interactive questions
		sound quality management?		
10	**Auditing in an IT environment** The use of e-commerce is on the rise – you need to be able to respond accordingly if there is evidence that it is being used in an exam question.	**Approach** Use this section to understand what is meant by e-commerce. **Stop and think** Have you ever been involved in e-commerce?	The content that discusses the considerations for auditors is especially relevant to ensure you use the correct form of terminology.	N/A
11	**Professional scepticism in the audit fieldwork stage** We have already discussed professional scepticism but this section discusses how it can be applied when collecting audit evidence.	**Approach** Work through this section, noting that the worked example will require you to engage with your peers. **Stop and think** Note how the use of data analytics may not always be helpful to the auditor!	As ever, questions will require you to read through everything in the scenario carefully to identify any areas where there could be ambiguity (and as such, could require the need for greater levels of professional scepticism).	N/A
12	**Appendix – External confirmations, sampling and directional testing** Further supporting information on gathering evidence that should be considered revision from your earlier studies.	**Approach** Note the content on external confirmations and sampling and how you can find it in your auditing standards open book. **Stop and think** Also note the use of assertions in directional testing.	While these relate to specific types of evidence gathering techniques, you may still be asked to assess whether audit procedures (which could include anything mentioned here) that are stated in a scenario have been completed appropriately or not.	N/A

Once you have worked through this guidance you are ready to attempt the further question practice included at the end of this chapter.

1 Revision of assertions

Section overview

- Evidence is obtained in respect of each assertion used by the auditor.

1.1 Introduction

As we have seen, **audit work is about reducing risk** – the risk that the financial statements include **material misstatements**. At the most basic level, the financial statements simply consist of the following information about the entity:

- Revenues
- Costs
- Assets
- Liabilities
- Capital

These items will have certain attributes if they are included correctly in the financial statements. These attributes are referred to as **financial statement assertions**.

1.2 Financial statement assertions

Definition

Assertions: The representations by management, explicit or otherwise, that are embodied in the financial statements, as used by the auditor to consider the different types of potential misstatement that may occur.

By approving the financial statements, the directors are making representations about the information therein. These representations or assertions may be described in general terms in a number of ways.

For example, if the statement of financial position includes a figure for freehold land and buildings, the directors are asserting that:

- the property concerned exists;
- it is either owned by the company outright or else the company has suitable rights over it;
- its value is correctly calculated; and
- there are no other items of a similar nature which ought to be included but which have been omitted.
- it is disclosed in the financial statements in a way which is not misleading and is in accordance with the relevant 'reporting framework' eg, international accounting standards.

ISA 315 (Revised 2019), *Identifying and Assessing the Risks of Material Misstatement* states that "the objective of the auditor is to identify and assess the risks of material misstatement, whether due to fraud or error, at the **financial statement** and **assertion** levels thereby providing a basis for designing and implementing responses to the assessed risks of material misstatement" (ISA 315.11). It gives examples of assertions in these areas. Depending on the nature of the item, certain assertions will be more relevant than others.

Assertions used by the auditor	
Assertions about **classes of transactions,** events, and **related disclosures**, for the period under audit (ISA 315.A190(a))	**Occurrence**: Transactions and events that have been recorded or disclosed have occurred and pertain to the entity. **Completeness**: All transactions and events that should have been recorded have been recorded, and all related disclosures that should have been included have been included. **Accuracy**: Amounts and other data relating to recorded transactions and events have been recorded appropriately and related disclosures have been appropriately measured and described. **Cut-off**: Transactions and events have been recorded in the correct accounting period. **Classification**: Transactions and events have been recorded in the proper accounts. **Presentation**: transactions and events are appropriately aggregated or disaggregated and clearly described, and related disclosures are relevant and understandable in the context of the requirements of the applicable financial reporting framework.
Assertions about **account balances, and related disclosures,** at the period end (ISA 315.A190(b))	**Existence**: Assets, liabilities and equity interests exist. **Rights and obligations**: The entity holds or controls the rights to assets, and liabilities are the obligations of the entity. **Completeness**: All assets, liabilities and equity interests that should have been recorded have been recorded, and all related disclosures that should have been included in the financial statements have been included. **Accuracy, valuation and allocation**: Assets, liabilities and equity interests have been included in the financial statements at appropriate amounts and any resulting valuation or allocation adjustments have been appropriately recorded and related. **Classification**: Assets, liabilities and equity interests have been recorded in the proper accounts. **Presentation**: Assets, liabilities and equity interests are appropriately aggregated or disaggregated and clearly described, and related disclosures are relevant and understandable in the context of the requirements of the applicable financial reporting framework.

1.2.1 Summary

We have seen that there are 12 assertions applying in different ways to different items in the financial statements.

You can summarise them in the following four questions:

(a) Should it be in the financial statements at all?

(b) Is it included at the right amount?

(c) Are there any more?

(d) Has it been properly disclosed and presented?

The following table shows how the assertions fit with these questions:

	Transactions, events and related disclosures	**Account balances and related disclosures at the period end**
Should it be in the accounts at all?	Occurrence Cut-off	Existence Rights and obligations
Is it included at the right amount?	Accuracy	Accuracy, valuation and allocation
Are there any more?	Completeness	Completeness
Is it properly disclosed and presented?	Classification Presentation	Classification Presentation

Interactive question 1: Financial statement assertions (1)

Complete the table below.

- Identify procedures to satisfy the four key questions.
- Identify the financial statement assertions that these procedures will satisfy.

Audit area	Key question	Examples of procedures	Assertions
Non-current assets	Should it be in the accounts at all?	Physically verify	Existence Rights and obligations
	Is it included at the right amount?	Inspect invoices/contracts Check depreciation	Accuracy, valuation and allocation
	Are there any more?		
	Is it properly disclosed and presented?		
Receivables	Should it be in the accounts at all?		
	Is it included at the right amount?		
	Are there any more?		
	Is it properly disclosed and presented?		

Audit area	Key question	Examples of procedures	Assertions
Payables	Should it be in the accounts at all?		
Payables	Is it included at the right amount?		
	Are there any more?		
	Is it properly disclosed and presented?		
Inventory	Should it be in the accounts at all?		
	Is it included at the right amount?		
	Are there any more?		
	Is it properly disclosed and presented?		

See **Answer** at the end of this chapter.

Interactive question 2: Financial statement assertions (2)

For the following points, identify and explain the most relevant financial statement assertions. Assume that the year end is 31 December 20X7 in each case.

2.1 Fine plc is proposing to award share options to five directors. The proposal is to issue 100,000 options to each of the five individuals on 1 September 20X7 (the grant date) at an exercise price of £7 per share. The scheme participants will need to have been with the company for at least three years before being able to exercise their options. It is believed that all the directors will satisfy this condition. Other relevant information is as follows:

	1 September 20X7	31 December 20X7
	£	£
Market price per share	7.00	8.20 (estimated)
Fair value of each option	3.00	5.70 (estimated)

2.2 Wiggam plc has purchased goods worth £750,000 from Tepid Ltd on an arm's length basis. Wiggam owns 40% of the ordinary share capital in Tepid.

2.3 Deakin plc issued 10,000 6% convertible bonds at par value of £10 on 31 December 20X7. On this date the market interest rate for similar debt without the option to convert was 10%. Each bond is convertible into four ordinary shares on 31 December 20X9.

See **Answer** at the end of this chapter.

2 Sufficient, appropriate audit evidence

Section overview

- Auditors need to obtain sufficient, appropriate audit evidence.

2.1 Importance

ISA 500, *Audit Evidence* states that the objective of the auditor is to obtain sufficient, appropriate audit evidence to be able to draw reasonable conclusions on which to base the auditor's opinion.

The importance of obtaining sufficient, appropriate audit evidence can be demonstrated in the Arthur Andersen audit of Mattel Inc.

Context example: Mattel Inc

This is a complex case but in simple terms Mattel Inc inflated its reported earnings by using a technique which came to be known as 'bill and hold'. This involved billing customers for future sales. While the sale was recorded immediately (with invoices often prepared without the knowledge of the customer) the merchandise was not shipped. To support these sales Mattel produced false sales orders, invoices and bills of lading. The bills of lading were signed by employees as both themselves and the carrying company. They were then stamped 'bill and hold'. Problems which arose when the goods were actually sold were dealt with by making other fraudulent entries in the books.

When Arthur Andersen audited accounts receivable they sent accounts receivable confirmations to customers. These were returned with many substantial discrepancies due to the 'bill and hold' entries. As part of the reconciliation process the auditors reviewed copies of bills of lading to serve as confirmation that the goods had been shipped. However, the auditors did not question the term 'bill and hold' even though it was clearly stamped on the documents and did not appear to notice that the same individual had signed as both representatives of Mattel Inc and the shipping company. A number of entries were questioned and the audit senior who reviewed the working papers noted that additional explanations were required but no further investigation actually took place.

(Source: Hayes, R., Dassen, R., Schilder, A., Wallage, P. (2005) Principles of Auditing: An Introduction to International Standards on Auditing. 2nd Ed. England: Pearson Education Limited)

2.2 Sufficient and appropriate evidence

'Sufficiency' and 'appropriateness' are **interrelated** and apply to both tests of controls and substantive procedures.

Sufficient evidence relates to the **quantity** of evidence gathered. However, it is not simply a question of 'more is better', as different sources can be more or less persuasive. Broadly speaking, however, it is possible to say that the greater the risk of misstatement, the greater the quantity of evidence required.

However, the standards are clear that if the auditor decides to perform more comprehensive testing eg, by selecting a bigger sample the extra work must contribute to the reduction of risk.

Appropriateness relates to the **quality** of evidence. ISA 0 amplifies this term by saying that evidence should be:

- **relevant**
- **reliable**

Relevance deals with the logical connection with the purpose of the audit procedure and, where appropriate, the **assertion** under consideration.

Reliability is **influenced by the source and nature of the evidence**; however, you should be familiar with the following generalisations from your earlier studies:

- Audit evidence is **more reliable** when it is obtained from **independent sources** outside the entity.
- Audit evidence that is generated **internally** is more reliable when the related controls imposed by the entity are **effective**.
- Audit evidence obtained **directly by the auditor** (for example, observation of the application of a control) is **more reliable** than audit evidence obtained indirectly or by inference (for example, inquiry about the application of a control).
- **Documentary evidence** is **more reliable**, whether paper, electronic or other medium (for example, a written record of a meeting is more reliable than a subsequent oral representation of the matters discussed).
- **Original documents** are **more reliable** than photocopies or faxes.

2.2.1 Audit data analytics

The UK FRC Audit Quality Thematic Review: The Use of Data Analytics in the Audit of Financial Statements indicates a number of issues which need to be considered at the planning stage of the audit which relate to sufficiency and appropriateness of audit evidence. These are as follows:

- Considering whether a tool is a 'good match' for the client's specific environment
- Ensuring that all relevant assertions are covered
- Whether testing in other areas needs to be flexed to provide the necessary supporting evidence for the use of audit data analytics
- The UK FRC Review was covered in more detail in Chapter 5.

The issue of reliability of data also needs to be re-assessed as data analytics includes the interrogation of a wider range of sources of information than might have traditionally been the case. For example expectations regarding reliability relating to information generated by the client's accounting system will be different to those relating to the reliability of information generated by analytics procedures performed on emails.

Interactive question 3: Audit evidence – revision

"The objective of the auditor is to […] obtain sufficient appropriate audit evidence to be able to draw reasonable conclusions on which to base the auditor's opinion." (ISA 500.4)

Requirements

Discuss the extent to which each of the following sources of audit evidence is appropriate and sufficient.

3.1 Oral representation by management in respect of the completeness of sales where the majority of transactions are conducted on a cash basis.

3.2 Flowcharts of the accounting and control system prepared by a company's internal audit department.

3.3 Year-end suppliers' statements.

3.4 Physical inspection of a non-current asset by an auditor.

3.5 Comparison of revenue and expenditure items for the current period with corresponding information for earlier periods.

3.6 A proof in total calculation performed by the auditor to validate the interest expense relating to a bank loan.

See **Answer** at the end of this chapter.

2.3 The work of a management's expert as audit evidence

Definition

Management's expert: An individual or organisation possessing expertise in a field other than accounting or auditing whose work in that field is used by the entity to assist the entity in preparing financial statements.

Certain aspects of the preparation of financial statements may require expertise such as actuarial calculations (relevant to accounting for pensions) or valuations (where the fair value alternative is used for non-current assets). The entity may employ such experts or may engage the services of external experts. ISA 500 includes guidance on the considerations that arise for the external auditor in using this information as audit evidence.

If this work is significant to the audit the external auditor shall:

- evaluate the competence, capabilities and objectivity of the expert;
- obtain an understanding of the work of the expert; and
- evaluate the appropriateness of the expert's work as audit evidence for the relevant assertion.

Note: Situations where the external auditor requires the assistance of an expert in obtaining audit evidence are covered by ISA 620, *Using the Work of an Auditor's Expert* (see later in this chapter).

2.4 Triangulation

Forming an audit opinion is a question of using **professional judgement** at all times and judgements have to be made about the nature, the quality and the mix of evidence gathered. It is also essential that individual items of evidence are not simply viewed in isolation but instead support other evidence and are supported by other evidence. This approach views evidence from different sources as predominantly complementary, rather than compensatory. This strategy of acquiring and evaluating **complementary** evidence from a range of sources is referred to as **triangulation.** This approach is an application of the general principle that evidence obtained from different sources, that presents a consistent picture, is mutually strengthening and gives greater reliance than merely increasing the amount of evidence from a single source. The consequence of overreliance on one specific type and source of evidence can be seen in the case of the collapse of Parmalat.

Professional skills focus: Assimilating and using information

Scenarios are always presented in such a way as to require analysis of all the available information, which is only possible once you have reviewed everything in the question.

Mastering this process of triangulation is a key part of being able to make the best use of the information at your disposal.

Context example: Overreliance on confirmations

One of the largest examples of overreliance on one type of audit confirmation was the Parmalat collapse of 2003.

Parmalat Finanziaria Spa is an Italian-based company. Its main operating subsidiary Parmalat Spa dealt with dairy produce around the world. On 24 December 2003 Parmalat Spa filed for bankruptcy. How could this happen to a company that employed 36,000 employees, operated in 30 countries and was Italy's biggest food maker? The answer is simply forged documentation!

Parmalat allegedly had €3.95 billion worth of cash and marketable securities in an account at the Bank of America but under the name of Bonlat Financing Corporation. In 2002 Grant Thornton, the auditors of Bonlat, had requested confirmation of the balances from Bank of America. Three months later a reply was received by post, not fax, confirming the balance. It later transpired that this letter was a forgery and Bank of America confirmed this in a press release. The Parmalat CEO left Italy on the day of this press release. The €3.95 billion worth of cash and securities simply did not exist.

In retrospect, additional evidence rather than simply one (forged) letter should have been obtained for the cash balance. The case shows that even external confirmations and letters from other auditors should be treated with some scepticism where the amounts involved are very material.

(Source: Hayes, R., Dassen, R., Schilder, A., Wallage, P. (2005) Principles of Auditing: An Introduction to International Standards on Auditing. 2nd Ed. England: Pearson Education Limited)

3 Sources of audit evidence

Section overview

Sources of audit evidence include:

- Tests of controls (covered in Chapter 7)
- Substantive procedures

3.1 Tests of controls

You will have covered **tests of controls** in your earlier studies. We cover evaluation of controls and tests of controls in more detail in Chapter 7; however, a key point to remember is even if evaluated and tested controls are considered strong enough to rely on, there is still a need to carry out some substantive testing.

3.2 Substantive procedures

ISA 330, *The Auditor's Responses to Assessed Risks* states that irrespective of the assessed risk of material misstatement, the auditor shall design and perform substantive procedures for each material class of transactions, account balance and disclosure.

There are two key types of substantive procedure.

- **Substantive analytical procedures**. These are generally more applicable to large volumes of transactions that tend to be predictable over time. We will look at these in detail in section5.
- **Tests of details**. These are ordinarily more appropriate to obtain audit evidence regarding certain assertions about account balances. We will see how these are applied to key aspects of the financial statements as we work through the remainder of the chapter.

4 Selection of audit procedures

Section overview

Methods of obtaining audit evidence include:

- inquiry
- observation
- inspection
- recalculation
- reperformance
- external confirmation
- analytical procedures

The procedures used are selected according to the nature of the balance being audited and the assertion being considered. Audit procedures may be carried out using data analytics tools as discussed in Chapter 5.

4.1 Types of procedure

Auditors obtain evidence by using one or more of the following procedures.

4.1.1 Inquiry

Definition

Inquiry: Consists of seeking information of knowledgeable persons both financial and non-financial within the entity or outside the entity.

Examples

Inquiry includes obtaining responses to formal written questions and asking informal questions in relation to specific audit assertions. The response to inquiries provides the auditor with information that was not previously possessed or may corroborate information obtained from other sources. The strength of the evidence depends on the knowledge and integrity of the source. Where the result of inquiry is different from other evidence obtained, then reasons for that difference must be sought and the information reconciled.

Business focus

Common uses of inquiry are as follows:

- Written representations – where management have information not available from any other source

- Asking employees about the internal control systems and effectiveness of the controls they are operating

Remember it is not normally sufficient to accept inquiry evidence by itself – some corroboration will be sought. The US court case of *Escott et al. v Bar Chris Corporation1968* ruled that the auditor was negligent in not following up answers to management inquiries. The judge indicated that the auditor was too easily satisfied with glib answers and that these should have been checked with additional investigation.

4.1.2 Observation

Definition

Observation: Consists of looking at a procedure or process being performed by others.

Examples

Observation is not normally a procedure to be relied on by itself. For example, the auditor may observe a non-current asset, such as a motor vehicle. However, this will only prove the vehicle exists; other assertions such as rights and obligations will rely on other evidence such as invoices and valuation possibly on the use of specialist valuers or documentation.

Business focus

Observation is commonly used in the business processes of inventory management. After inventory has been purchased, an organisation holds raw materials, work in progress and finished goods in its warehouses and factories. Observation is used to determine that the inventory exists, it is valued correctly (looking for old and slow-moving inventory) and that inventory is complete in the organisation's books. Note the link to audit assertions here.

Additionally, the auditor will be observing the internal control systems over inventory, particularly in respect to perpetual inventory checking and any specific procedures for year-end inventory counting. You should be familiar with the audit procedures in respect of attendance at an inventory count from your Assurance studies.

Observation may also be used in the human resource business process. The auditor will observe employees operating specific controls within the internal control system to determine the effectiveness of application of those controls, as well as the ability of the employee to operate the control. However, the act of observing the employee limits the value of the evidence obtained; many employees will amend their work practices when they identify the auditor observing them.

4.1.3 Inspection

Definition

Inspection: Means the examination of records, documents or tangible assets.

Examples

By carrying out inspection procedures, the auditor is substantiating information that is, or should be, in the financial statements. For example, inspection of a bank statement confirms the bank balance for the bank reconciliation which in turn confirms the cash book figure for the financial statements.

Business focus

Inspection assists with the audit of most business processes. For example:

- Financing: inspection of loan agreements to confirm the term and repayment details (part of the completeness of disclosure in the financial statements)
- Purchasing: inspection of purchase orders to ensure that the order is valid and belongs to the company (occurrence assertion among others)
- Human resources: inspection of pay and overtime schedules as part of wages audit
- Inventory management: inspection of the work in progress ledger confirming cost allocation to specific items of work in progress (valuation assertion)
- Revenue: inspection of sales invoices to ensure that the correct customer has been invoiced with the correct amount of sales (completeness and accuracy assertions)

Inspection of assets that are recorded in the accounting records confirms **existence**, gives evidence of **valuation**, but does not confirm **rights and obligations**.

Confirmation that assets seen are recorded in accounting records gives evidence of **completeness**. Confirmation to documentation of items recorded in accounting records confirms that an asset **exists** or a transaction **occurred**. Confirmation that items recorded in supporting documentation are recorded in accounting records tests **completeness**.

Cut-off can be verified by inspecting the reverse population; that is, checking transactions recorded **after** the end of the reporting period to supporting documentation to confirm that they occurred after the end of the reporting period.

Inspection also provides evidence of **valuation/accuracy**, **rights and obligations** and the nature of items **(presentation and classification)**. It can also be used to **compare** documents (and hence test **consistency** of audit evidence) and confirm **authorisation**.

CHAPTER 6

4.1.4 Recalculation

Definition

Recalculation: Consists of checking the arithmetical accuracy of source documents and accounting records.

Examples

Recalculation obviously relates to financial information. It is deemed to be a reliable source of audit evidence because it is carried out by the auditor.

Business focus

Recalculation relates to most business processes. For example:

- Financing: calculation of interest payments
- Purchasing: accuracy of purchase orders and invoices
- Inventory management: valuation of work in progress
- Revenue: recalculation of sales invoices

Recalculation is particularly effective when carried out using **computer-assisted audit techniques** (CAATs), as the computer can perform the whole of the inventory calculation (for example) in a short time period. Data analytics may also be used. For example data analytics routines may be used to perform detailed recalculations of depreciation on non-current assets by item. Approximations could be used (eg, assuming sales and purchases are mid-month) or by using the entire data set and exact dates.

4.1.5 Reperformance

Definition

Reperformance: Means the auditor's independent execution of procedures or controls that were originally performed as part of the entity's internal control.

Examples

Auditors will often reperform some of the main accounting reconciliations, such as the bank reconciliation or reconciliations of individual supplier balances to supplier statements. It is also deemed to be a reliable source of audit evidence because it is carried out by the auditor.

Business focus

Reconciliations are a key control over many transaction cycles in the business, and if performed properly are an effective means of identifying accounting errors or omissions. If they are performed by an individual who is not involved in the day to day accounting for the underlying transactions they can be a deterrent against fraudulent accounting.

4.1.6 External confirmation

Definition

External confirmation: Audit evidence obtained as a direct written response to the auditor from a third party.

Examples

A typical example of confirmation evidence is obtaining a response from a debtors' circularisation (see Appendix for revision on this area). The evidence obtained is highly persuasive, as it comes from an independent external source.

Key characteristics of any confirmation are as follows:

- Information is requested by the auditor.
- The request and response are in writing and the response is sent direct to the auditor.
- The response is from an independent third party.
- The confirmation is usually required to be positive (a response is expected) rather than negative (a non-reply is assumed to confirm information provided to the third party).

Business focus

Confirmations are normally used in the following business processes:

- Financing: agreement of bank balances, loan amounts outstanding etc, (see Appendix)
- Inventory: confirmation of inventory held at third parties
- Revenue: confirmation of amounts due from debtors and payable to creditors (see Appendix)

4.1.7 Analytical procedures

We will look at these in a later section.

4.2 Application of procedures to specific areas of the financial statements

You should be familiar with the basic principles behind the audit of key balances in the financial statements from your Assurance studies. This section demonstrates the application of these principles, looking in particular at non-current assets.

4.2.1 Tangible assets

The major risks of misstatement in the financial statements are due to:

- expenses being capitalised as non-current assets (**existence** assertion);
- tangible assets being carried at the wrong cost or valuation (**accuracy, valuation and allocation**
assertion);
- tangible assets being carried at the wrong cost or valuation due to charging inappropriate depreciation, or not depreciating (**accuracy, valuation and allocation** assertion); and
- tangible assets being carried at the wrong cost or valuation due to impairment reviews not being carried out appropriately (**accuracy, valuation and allocation** assertion).

Interactive question 4: Audit procedures revision of tangible assets

Your firm acts as auditors to Xantippe Ltd, a manufacturer of industrial components. You have been presented with the financial statements for the year to 31 December 20X6, which include the following information in connection with property, plant and equipment.

	At 1 January 20X6	**Additions**	**Disposals**	**At 31 December 20X6**
	£	**£**	**£**	**£**
Cost				
Freehold property	80,000	–	–	80,000
Plant and machinery	438,000	62,000	(10,000)	490,000
Motor vehicles	40,500	13,000		53,500
	558,500	75,000	(10,000)	623,500

	At 1 January 20X6	**Charge for year**	**Disposals**	**At 31 December 20X6**
	£	**£**	**£**	**£**
Depreciation				
Freehold property	8,000	1,600	–	9,600
Plant and machinery	139,500	47,000	(3,000)	183,500
Motor vehicles	20,000	10,200		30,200
	167,500	58,800	(3,000)	223,300

Requirements

4.1 Explain the factors that should be considered in determining an approach to the audit of property, plant and equipment of Xantippe Ltd.

4.2 State the procedures you would perform in order to reach a conclusion on property, plant and equipment in the financial statements of Xantippe Ltd for the year ended 31 December 20X6.

See **Answer** at the end of this chapter.

Impairment of non-current assets

An asset is **impaired** when its **carrying amount** (depreciated cost or depreciated valuation) **exceeds** its **recoverable amount**. Management are required to determine if there is any **indication** that the assets are impaired.

The auditors will consider whether there are any **indicators of impairment** when carrying out **risk assessment procedures**. They will use the same impairment criteria laid out in IAS 36, *Impairment of Assets* as management do. If the auditors believe that impairment is indicated, they should request that management show them the impairment review that has been carried out. If no impairment review has been carried out, then the auditors should discuss the need for one with management and, if necessary, modify their report on grounds of disagreement (not conforming with IAS 36) if management refuse to carry out an impairment review.

If an impairment review has been carried out, then the auditors should audit that impairment review. Management will have estimated whether the recoverable amount of the asset/cash generating unit is lower than the carrying amount.

For auditors, the key issue is that **recoverable amount requires estimation**. As estimation is subjective, this makes it a risky area for auditors.

Management have to determine if recoverable amount is higher than carrying amount. It may not have been necessary for them to estimate both fair value and value in use because, if one is higher than carrying amount, then the asset is not impaired. If it is not possible to make a reliable estimate of net realisable value, then it is necessary to calculate **value in use**. Net realisable value is only calculable if there is an **active market for the goods**, and would therefore be audited in the same way as fair value. Costs of disposal such as taxes can be recalculated by applying the appropriate tax rate to the fair value itself. Delivery costs can be verified by comparing costs to published rates by delivery companies, for example, on the internet.

If management have calculated the value in use of an asset or cash-generating unit, then the auditors will have to **audit that calculation**. The following procedures will be relevant.

Value in use

- Obtain management's calculation of value in use.
- Reperform calculation to ensure that it is mathematically correct.
- Compare the cash flow amounts to recent budgets and projections approved by the board to ensure that they are realistic.
- Calculate/obtain from analysts the long-term average growth rate for the products and ensure that the growth rates assumed in the calculation of value in use do not exceed it.
- Refer to competitors' published information to compare how much similar assets are valued at by companies trading in similar conditions.
- Compare to previous calculations of value in use to ensure that all relevant costs of maintaining the asset have been included.
- Ensure that the cost/income from disposal of the asset at the end of its life has been included.
- Review calculation to ensure cash flows from financing activities and income tax have been excluded.
- Compare discount rate used to published market rates to ensure that it correctly reflects the return expected by the market.

If the asset is impaired and has been written down to recoverable amount, the auditors should review the financial statements to ensure that the write-down has been carried out correctly and that the IAS 36 disclosures have been made correctly.

4.2.2 Intangible assets

Accounting guidance for intangibles is given in IAS 38, *Intangible Assets* and IFRS 3, *Business Combinations*. The types of assets you are likely to encounter under this heading include the following:

- Patents
- Licences
- Trademarks
- Development costs
- Goodwill

The major risks of misstatement in the financial statements are due to:

- expenses being capitalised as non-current assets (**existence** assertion);
- intangible assets being carried at the wrong cost or valuation (**accuracy, valuation and allocation** assertion);
- intangible assets being carried at the wrong cost or valuation due to charging inappropriate amortisation, or not amortising (**accuracy, valuation and allocation** assertion); and
- intangible assets being carried at the wrong cost or valuation due to impairment reviews not being carried out appropriately (**accuracy, valuation and allocation** assertion).

In order to address these, the auditor should carry out the following procedures.

Completeness

- **Prepare analysis** of movements on cost and amortisation accounts.

Rights and obligations

- **Obtain confirmation** from a patent agent of all **patents** and **trademarks** held.
- **Verify payment** of **annual renewal fees**.

Accuracy, valuation and allocation

- **Review specialist valuations** of intangible assets, considering:
  - qualifications of valuer
  - scope of work
  - assumptions and methods used
- **Confirm that carried down balances** represent **continuing value**, which are proper charges to future operations.

Additions (rights and obligations, valuation and completeness)

- Inspect purchase agreements, assignments and supporting documentation for intangible assets acquired in period.
- Confirm that purchases have been authorised.
- Verify amounts capitalised of patents developed by the company with supporting costing records.

Amortisation

- **Review amortisation**
  - Check computation
  - Confirm that rates used are reasonable

Income from intangibles

- **Review sales returns** and **statistics** to verify the reasonableness of income derived from patents, trademarks, licences etc.
- **Examine audited accounts** of third-party sales covered by a patent, licence or trademark owned by the company.

Professional skills focus: Structuring problems and solutions

The requirements of a question will often need some further work to fully understand what the examining team is looking for, especially when requesting audit procedures in relation to a stated exhibit. Good awareness of the various types of procedure and when they should be used will help you make sense of what you have been asked to do.

5 Analytical procedures

Section overview

- Analytical procedures are used as part of risk assessment and are required to be used as part of the final review process.
- Analytical procedures may be used as substantive procedures.

5.1 Use of analytical procedures

Analytical procedures are used throughout the audit.

- ISA 315 (Revised 2019), *Identifying and Assessing the Risks of Material Misstatement* deals with their use as **risk assessment** procedures.
- ISA 520, *Analytical Procedures* **requires** that analytical procedures are used **near the end of the audit** when forming an overall conclusion as to whether the financial statements are consistent with the auditor's understanding of the entity.

Analytical procedures **may** also be used as **substantive procedures**.

Auditors should not normally rely on analytical procedures alone in respect of material balances but should **combine them with tests of detail**.

However, ISA 330 paragraph A43 points out that the combination will depend on the circumstances, and that the auditor may determine that performing only analytical procedures will be sufficient to reduce audit risk to an acceptably low level; for example, where the auditor's assessment of risk is supported by audit evidence from tests of controls.

This is an area of the audit where the use of data analytics tools can be particularly effective, in support of judgements and providing greater insights. Data analytics tools are able to draw on a wider range of data as compared to traditional methods. For example interest and foreign exchange rates, changes in GDP and other growth metrics could be used. External market data may also be relevant.

Professional skills focus: Structuring problems and solutions

Remember that as well as any quantitative data presented in the exam question, there will also be information from the data analytics software that you will need to consider as part of your approach.

5.2 Practical techniques

Ratio analysis is one of the key techniques which the auditor will use when performing analytical procedures. You have looked at the relevant ratios in detail in your Assurance studies. A brief summary is provided below.

5.2.1 Ratio analysis

When carrying out analytical procedures, auditors should remember that every industry is different and each company within an industry differs in certain aspects.

Important accounting ratios	Gross profit margins, in total and by product, area and months/quarter (ifpossible) Receivables ratio (average collection period) Inventory turnover ratio (inventory divided into cost of sales) Current ratio (current assets to current liabilities) Quick or acid test ratio (liquid assets to current liabilities)Gearing ratio (debt capital to equity capital) Return on capital employed (profit before interest and tax to total assets less current liabilities)
Related items	Payables and purchases Inventory and cost of sales Non-current assets and depreciation, repairs and maintenance expense Intangible assets and amortisation Loans and interest expense Investments and investment income Receivables and irrecoverable debts expense Receivables and sales

Ratios mean very little when used in isolation. They should be calculated for **previous periods** and for **comparable companies**. The permanent file should contain a section with summarised accounts and the chosen ratios for prior years.

In addition to looking at the more usual ratios the auditors should consider examining **other ratios** that may be **relevant** to the particular **client's business**, such as revenue per passenger mile for an airline operator client, and fees per partner for a professional office.

5.2.2 Other techniques

Other analytical techniques include:

(a) **Simple comparisons**

A simple year on year comparison could provide very persuasive evidence that an expense such as rent is correctly stated, providing that the auditor has sufficient knowledge of the business, for example knowing that the same premises have been leased year on year and that there has been no rent review.

(b) Examining related accounts

Examining related accounts in conjunction with each other could provide evidence that a balance is fairly stated. Often revenue and expense accounts are related to asset and liability accounts and comparisons should be made to ensure relationships are reasonable.

(c) Reasonableness tests

These involve calculating the **expected value** of an item and comparing it with its actual value, for example, for straight-line depreciation.

(Cost + Additions – Disposals) × Depreciation % = Recognised in profit or loss This may

include the comparison of non-financial as well as financial information.

For example, in making an estimate of employee costs, probably for one specific department, such as manufacturing, the auditor might use information about the number of employees in the department, as well as rates of pay increases.

(d) Trend analysis

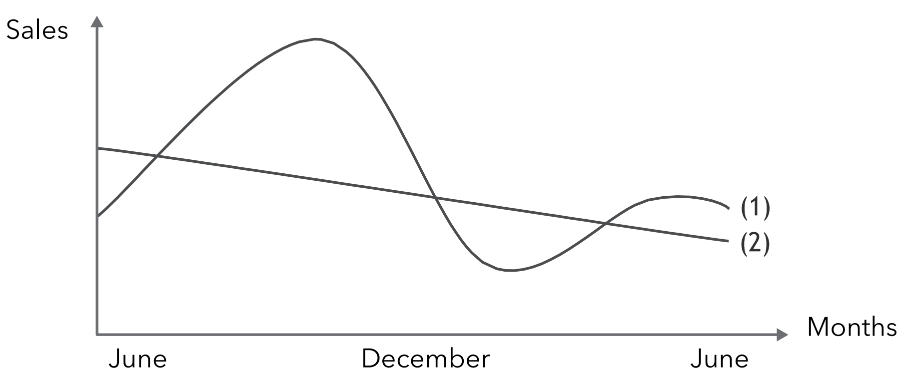
This is a sophisticated statistical technique that can be used to compare this period with the previous period. Information technology can be used in trend analysis, to enable auditors to see trends graphically with relative ease and speed.

Methods of trend analysis include the following:

- Scatter graphs
- Bar graphs
- Pie charts
- Any other visual representations
- Time series analysis
- Statistical regression

Time series analysis involves techniques such as eliminating seasonal fluctuations from sets of figures, so that underlying trends can be analysed. This is illustrated in the figure below.

Figure 6.1: Time series analysis



Line (1) in the diagram shows the actual sales made by a business. There is a clear seasonal fluctuation before Christmas. Line (2) shows a level of sales with 'expected seasonal fluctuations' having been stripped out.

In this analysis the seasonal fluctuations have been estimated. This analysis is useful, however, because the estimate is likely to be based on past performance, so the conclusion from this is that there might be a problem:

- Sales are below the levels of previous years.
- Sales are below expectation.

5.3 Analytical procedures as risk assessment procedures

ISA 315 (Revised) para.14 requires that risk assessment procedures include analytical procedures.

Analytical procedures are usually carried out at the **planning stage** of the audit because:

- it is a tool which assists in the **identification of risk**; and
- the result helps the auditor to **plan the audit approach**.

The benefits of adopting this technique are that:

- it helps to **focus** on the key priorities, as it is a 'top down' procedure; and
- it is an **efficient procedure**, due to its focus on key priorities.

5.3.1 Technique

Although ISA 520 deals with analytical procedures in the context of substantive procedures the same basic techniques would be applied when using analytical procedures as risk assessment procedures. The key stages in the process are as follows:

- **Interpretation**
- **Investigation**
- **Corroboration**

When potential problem areas have been identified, one of the key questions to ask is 'why?'.

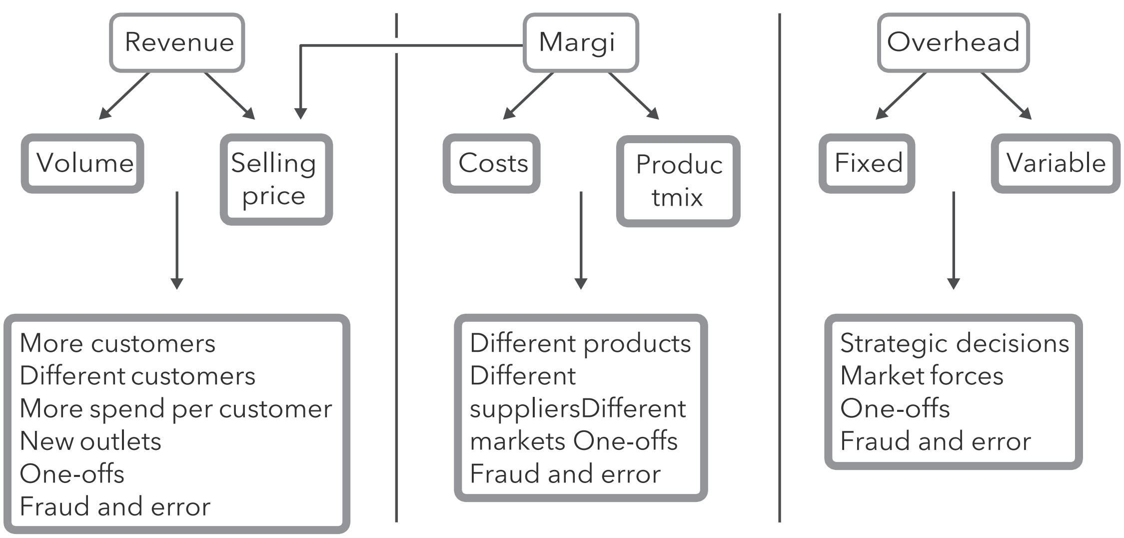
The statement of profit or loss and other comprehensive income

To apply this in more detail think about the client's statement of profit or loss and other comprehensive income.

The key question must be:

Why did the client make more (or less) money this year?

Figure 6.2: Statement of profit or loss



Changes in revenue must depend on changes in either:

- volumes; or
- prices.

Alternatively, it could be a combination of the two.

Changes in margins must have something to do with changes in:

- selling prices
- cost prices
- product mix

Changes in overheads will need to be identified line by line, but you might like to consider the different impacts of changes in:

- fixed overheads
- variable overheads

The boxes at the bottom of the diagram give some suggestions for the reasons why. The suggestions are not intended to be exhaustive, but they should give you a good basis for an answer to an analytical procedures type question.

A similar approach needs to be taken both to statement of financial position areas and those efficiency ratios which link statement of financial position figures to the performance ratios.

5.3.2 Financial and non-financial factors

ISA 520 stresses the need to consider the use of **non-financial information** eg, employee numbers and available selling space. Non-financial performance indicators can be found within the financial statements. In particular, an **operating and financial review**, or possibly the **chair's statement**, may serve as useful indicators as they attempt to comment on both the past and the future of the company. However, care must be taken in assessing the **reliability** of this information, as indicators may have been selected to ensure a positive message is conveyed.

Interactive question 5: Analytical procedures (1)

You are planning the audit of Darwin Ltd for the year ended 31 December 20X7. You are currently engaged in the interim audit during November 20X7. The company manufactures and distributes light fittings for both internal and external use. Approximately 40% of revenue is generated from overseas customers.

You have been provided with the following operating information.

	10 months to 31 Oct 20X7	10 months to 31 Oct 20X6	Year to 31 Dec 20X6
	£'000	£'000	£'000
Revenue	27,187	23,516	27,068
Cost of sales	16,040	14,966	17,175
Gross profit	11,147	8,550	9,893
Operating expenses	5,437	4,938	5,678
Operating profit	5,710	3,612	4,215
Gross profit margin	41%	36%	37%
Operating profit margin	21%	15%	16%
Inventories	5,160	4,320	4,080

Requirement

Based on the operating information identify and explain the potential audit risks.

See **Answer** at the end of this chapter.

Interactive question 6: Analytical procedures (2)

Libby Ltd is a ladies fashion retailer operating a chain of shops in the South-East of England from a head office in Guildford. Your firm has been the auditor of Libby Ltd for some years.

During the current year one shop was closed and the product range of the remaining eight shops was extended to include accessories and footwear.

The company has a computerised accounting system and the audit manager is keen to ensure that the audit is as efficient as possible.

As senior in charge of the audit you are currently planning the audit procedures for trade payables and you have obtained draft financial statements from the client.

Extracts from the draft financial statements:

	Year ended 31 March	
Statement of profit or loss and other comprehensive income	**Draft 20X7**	**Actual 20X6**
	£'000	**£'000**
Revenue	8,173	5,650
Gross profit	1,717	1,352

	As at 31 March	
Statement of financial position	**Draft 20X7**	**Actual 20X6**
	£'000	**£'000**
Non-current assets	2,799	2,616
Current assets	1,746	1,127
Trade payables	991	718
Other payables	514	460

Requirements

State what observations you can draw from the extracts from the draft financial statements and how they may affect your audit of trade payables.

6.1 Indicate how audit software could be used in the audit of trade payables to achieve a more efficient audit.

See **Answer** at the end of this chapter.

5.4 Analytical procedures as substantive procedures

5.4.1 Factors to consider

There are a number of factors which the auditors should consider when deciding whether to use analytical procedures as substantive procedures. You will have covered these in your Assurance studies. A brief reminder is given below.

Factors to consider	Example
The **suitability** of particular analytical procedures for given assertions	Substantive analytical procedures are generally more applicable to large volumes of transactions that tend to be predictable over time, such as analysis involving revenue and gross profit margins.
The **reliability** of the data from which the auditors' expectations are developed	This will depend on factors such as: • the **source** of the information; and • the **comparability** of the data; industry comparison may be less meaningful if the entity sells specialised products.
The **detail** to which information can be **analysed**	Analytical procedures may be more effective when applied to financial information or individual sections of an operation such as individual factories and shops.
The **nature of information**	Financial: budgets or forecasts. Non-financial: eg, the number of units produced or sold.
The **relevance of the information** available	Whether the budgets are established as results to be expected rather than as tough targets (which may well not be achieved).
The **knowledge gained during previous audits**	The effectiveness of the accounting and internal controls. The types of problems giving rise to accounting adjustments in prior periods.

Factors which should also be considered when determining the reliance that the auditors should place on the results of substantive analytical procedures are:

Reliability factors	Example
Other audit procedures directed towards the same financial statements assertions	Other procedures auditors undertake in reviewing the collectability of receivables, such as the review of subsequent cash receipts, may confirm or dispel questions arising from the application of analytical procedures to a schedule of customers' accounts which lists for how long monies have been owed.
The **accuracy** with which the expected results of analytical procedures can be predicted	Auditors normally expect greater consistency in comparing the relationship of gross profit to sales from one period to another than in comparing expenditure which may or may not be made within a period, such as research and advertising.
The **frequency** with which a relationship is observed	A pattern repeated monthly as opposed to annually.

Reliance on the results of analytical procedures depends on the auditor's assessment of the **risk** that the procedures may mistakenly identify relationships (between data) when in fact there is a material misstatement (that is, the relationships do not in fact exist). It also depends on the results of investigations that auditors have made if substantive analytical procedures have highlighted significant fluctuations or unexpected relationships.

5.4.2 Substantive analytical procedures

In practical terms, the use of substantive analytical procedures involves four distinct steps:

(a) Firstly, **formulate expectations**

(b) Secondly, **compare expected value with the actual recorded amount**

(c) Thirdly, **obtain possible reasons for variance** between expected value and recorded amount

(d) Fourthly, **evaluate impact of any unresolved differences** between the expected and recorded amounts on the audit and financial statements

Each of these steps is explained below.

Formulate expectations

The auditor develops an expectation of figures in the financial statements using prior year financial statements, budgets, industry information etc. The expectation should be developed so that any material difference between this and the actual values in the financial statements indicates a potential misstatement. The auditor must also evaluate whether the expectation is sufficiently precise to identify a misstatement.

To carry out this procedure, the auditor will need access to industry data and environmental factors affecting that industry. Access to the financial statements is not required at this time, as this could prejudice the expectations of the auditor.

Example

The auditor is confirming the accuracy of salary expense in the statement of profit or loss and other comprehensive income.

The prior year salary figure can be obtained from the prior year financial statements. This year's salary can be estimated using the average number of employees (from personnel records) and the average salary again from personnel records. Changes in number of staff can be checked as reasonably accurate from knowledge of the industry sector (expanding or declining?) and initial knowledge of the client's business (expanding or contracting?). Average number of employees multiplied by average salary should give an approximate salary cost for the financial statements.

Compare expected value with the actual recorded amount

The auditor compares the expected value with the actual amount in the financial statements. In making this comparison, the auditor must decide the amount of deviation which will be allowed between the expected and actual figures – in other words, set a materiality limit. As assessed risk increases, the amount of difference considered acceptable without investigation decreases. If the difference between the two figures exceeds this materiality threshold then further investigation will be required in an attempt to explain the difference. If the difference is below the materiality threshold then no further investigation will be necessary.

The actual salary expense in the statement of profit or loss and other comprehensive income can be found. Assuming that salary cost does not involve overtime, then the estimated amount and the actual should be relatively close – materiality is likely to be set at, say, 10% difference between the two figures.

Obtain possible reasons for variances

The auditor attempts to identify reasons for the difference between the expected figure and the actual figure in the financial statements. The level of investigation depends to some extent on the accuracy of the auditor's expected figure. If the expected figure is precise, then more investigation will be expected. Conversely, if the expected figure has a larger element of imprecision, then it is less likely that any difference is due to misstatement and therefore less investigation work will be performed. (The auditor should have assessed whether expectations were capable of sufficiently precise measurement before adopting analytical procedures.)

Corroboration of any difference will normally start by obtaining written representations from management. However, these representations should be treated with scepticism due to the inherent problem of reliability of this source of evidence. Evidence from other sources will be required to ensure that written representations are accurate.

If the expected and actual salary expenses are more than 10% different, then further work is needed to determine why this is the case. Initial discussions with management may highlight areas where costs will be different eg, expansion in the last month of the year may skew the average number of managers to a larger number than expected. Or a salary increase late in the year may also inflate expectations of average salary. These written representations will be checked back in detail to the salary records.

Evaluate impact of any unresolved differences

Finally, the auditor will evaluate the impact of any unresolved differences on audit procedures and the financial statements. A large difference may mean that additional substantive procedures are required on the account balance to determine its accuracy. Any small remaining difference may be ignored as immaterial.

Hopefully, differences in expected and actual salaries will be resolved and any remaining residual difference will be immaterial. However, where differences remain, additional substantive testing of the salaries figure will be required.

5.5 Analytical procedures at the completion stage

ISA 520 states that analytical procedures performed when forming an overall conclusion are intended to corroborate conclusions formed during the audit. This assists the auditor in forming their opinion. The steps for carrying out analytical procedures at the completion stage of the audit may be very similar to those used as part of the risk assessment process at the planning stage. However, they are applied in a different way:

(a) Interpretation

The individual carrying out the analytical procedures reads through the financial statements and interprets them, considering the absolute figures themselves and the relevant ratios.

(b) Investigation

When analytical procedures are used as risk assessment procedures or as a substantive procedure the aim is to identify potential problems. The problems are then investigated during fieldwork by making inquiries and gathering audit evidence.

Considerations when carrying out such procedures may include the following:

(a) Whether the financial statements adequately reflect the information and explanations previously obtained and conclusions previously reached

(b) Whether the procedures reveal any new factors which may affect presentation or disclosures in the financial statements

(c) Whether the procedures produce results which are consistent with the auditor's knowledge of the entity's business

(d) The potential impact of uncorrected misstatements identified during the course of the audit

If analytical procedures identify a previously unrecognised risk of material misstatement, then the auditor should reassess risk and modify the audit plan and perform further procedures as required.

From a practical point of view it is worth remembering the following:

(a) For the smaller client, the working papers supporting the final analytical procedures may well be simply an update of the work done at the planning stage.

(b) For the larger client, the review becomes much more of a specific exercise.

(c) The financial statements used for the analytical procedures need to incorporate any adjustments made as a result of the audit.

5.6 Analytical procedures and other engagements

In this section we have been looking at the role of analytical procedures in the audit process. However, the skills and techniques involved may be applied to **other aspects** of the professional accountants' work.

Professional skills focus: Applying judgement

Judgement is always necessary when analytical procedures are used as part of your answer - what is the message behind the numbers and is any other information (either quantitative or qualitative) required?

Interactive question 7: Analytical procedures (3)

Harrison plc is a small jewellers based in Hatton Garden in London. Over the years it has built up an impressive client portfolio, and boasts names from high society as regular customers. You have recently joined the engagement team.

Harrison plc now needs to restructure its long-term and short-term financing in order to facilitate future growth, and has provided your firm with the following data to make an assessment of its liquidity. The firm is also looking to re-evaluate its performance measures and is seeking advice on what might be the most appropriate non-financial performance measures.

The following is an extract from the financial information provided by Harrison plc for the year ended 30 September 20X4.

	£m
Revenue	2.0
Purchases	1.2
Cost of sales	1.5
	£
Non-current assets	550,000
Inventory	300,000
Receivables	150,000
Cash	100,000
Payables	(100,000)
	1,000,000
Ordinary shares of 25p each	250,000
Reserves	350,000
7% preference shares of £1 each	250,000
15% unsecured loan stock	150,000
	1,000,000

The ordinary shares are currently quoted at 125p each, the loan stock is trading at £85 per £100 nominal, and the preference shares at 65p each.

Requirement

Evaluate the financial performance of the company. See **Answer** at the end of this chapter.

CHAPTER 6

6 Audit of accounting estimates

Section overview

- Accounting estimates and their disclosure require judgement and therefore lead to increased audit risk.

ISA 540 (Revised), *Auditing Accounting Estimates and Related Disclosures* provides guidance on the audit of accounting estimates contained in financial statements and requires auditors to obtain sufficient, appropriate audit evidence regarding accounting estimates and how they are disclosed.

Definitions

Accounting estimate: A monetary amount for which the measurement, in accordance with the requirements of the applicable financial reporting framework, is subject to estimation uncertainty.

Estimation uncertainty: Susceptibility to an inherent lack of precision in measurement.

The ISA gives the following examples of accounting estimates (ISA (UK) 540.A1):

- Allowance to reduce inventory due to obsolescence
- Depreciation methods
- Valuation or impairment of assets or financial instruments
- Provision for a loss from a lawsuit
- Revenue recognised for long term contracts
- Determination of fair value in a goodwill calculation

Directors and management are responsible for disclosing accounting estimates within the financial statements when something cannot be directly observed. The amount disclosed is usually referred to as **management's point estimate**.

Under ISA 540 (Revised) *Auditing Accounting Estimates and Related Disclosures* auditors are most concerned about **estimation uncertainty**, because the inherent limitations in any knowledge or data used to create accounting estimates inevitably lead to **increased risk of material misstatement** from either deliberate or accidental **management bias** in the financial statements. Auditors therefore need to consider **inherent risks** when assessing the estimation uncertainty attached to an accounting estimate. Other factors that the auditor should consider are the **complexity** and **subjectivity** involved in the creation of management's point estimate (ISA 540.2–3).

6.1 Audit procedures

Where estimation uncertainty, complexity and subjectivity exist, the auditor may need to exercise greater levels of **professional scepticism**. Professional scepticism should be maintained specifically for estimates relating to fair value, asset impairments and provisions.

Inherent risk factors that the auditor should consider include:

- the entity and its environment
- the experience that management has in developing its own point estimate
- the volatility associated with the estimate
- the degree of judgement and subjectivity involved when creating an estimate

As well as assessing inherent risk, auditors must also gain an understanding about **controls** related to accounting estimates, including sources of information and any supporting systems:

- that they exist and have been implemented
- that they are operating effectively

Audit procedures would be dependent on the results of this controls testing, although the ISA does point out that in some cases (such as high volumes of transactions or data processing) **substantive testing alone** may not be enough and **controls effectiveness** would still be required to determine sufficiency and appropriateness of audit evidence (ISA 540.A87–88).

When determining the **reasonableness** of accounting estimates and their disclosure, auditors may consider the following:

- how the estimate has been calculated, including the **method** used, its accuracy and any **assumptions** and **data** relied upon, in the context of the company's circumstances
- why that particular management's point estimate was **chosen**
- how the **estimation uncertainty** surrounding the estimate has been addressed by management and how this has been disclosed

Further audit procedures to address any concerns about estimation uncertainty may also include:

- obtaining evidence from events occurring up to the date of the auditor's report
- developing an auditor's point estimate or range

6.2 Evaluation of results of audit procedures

Where the auditor concludes that there is evidence of possible **management bias**, this should be treated in the same way as any other **fraud**. Otherwise, the outcome of audit procedures on accounting estimates should be considered in the context of the **auditor's report** (and in relation to any uncorrected factual, judgemental or projected misstatements in the context of ISA 450, covered further in Chapter 8).

6.3 Key audit matter

Where an accounting estimate has been identified as having a **high estimation uncertainty** the auditor may conclude that it is a key audit matter that requires disclosure in accordance with ISA 701, *Communicating Key Audit Matters in the Independent Auditor's Report*. ISA 701 is also covered in Chapter 8.

7 Initial audit engagements – opening balances

Section overview

- Opening balances are those account balances which exist at the beginning of an accounting period.
- The auditor will perform audit procedures to ensure that those balances are accurately stated.
- Specific procedures may be required where the opening balances were not audited by the current audit firm.

7.1 Opening balances

Opening balances are those account balances which exist at the beginning of the period. Opening balances are based on the closing balances of the prior period and reflect the effects of:

- transactions and events of prior periods; and
- accounting policies applied to the prior period.

ISA 510, *Initial Audit Engagements – Opening Balances* provides guidance on opening balances:

- when the financial statements of an entity are audited **for the first time**; and
- when the financial statements for the prior period were audited by **a predecessor auditor**.

7.2 Requirements

The auditor shall obtain sufficient, appropriate audit evidence about whether the opening balances contain misstatements that materially affect the current period's financial statements by:

- determining whether the prior period's closing balances have been correctly brought forward to the current period or, when appropriate, have been restated;
- determining whether the opening balances reflect the application of appropriate accounting policies; and
- performing one or more of the following:
  - Where the prior year financial statements were audited, reviewing the predecessor auditor's working papers to obtain evidence regarding the opening balances
  - Evaluating whether audit procedures performed in the current period provide evidence relevant to the opening balances
  - Performing specific audit procedures to obtain evidence regarding the opening balances.

When the prior period's financial statements were audited by another auditor, the current auditor may be able to obtain sufficient, appropriate audit evidence regarding opening balances by reviewing the predecessor auditor's working papers., when the predecessor auditor ceases to hold office, if requested by the successor auditor, the predecessor auditor may allow the successor access to all relevant information in respect of its audit work. This includes access to relevant working papers.).

The nature and extent of audit procedures necessary to obtain sufficient, appropriate audit evidence on opening balances depends on matters such as the following.

- The accounting policies followed by the entity
- The nature of the account balances, classes of transactions and disclosures and the risks of material misstatement in the current period's financial statements
- The significance of the opening balances relative to the current period's financial statements
- Whether the prior period's financial statements were audited and, if so, whether the predecessor auditors' opinion was modified

If the auditor obtains audit evidence that the opening balances contain misstatements, that could materially affect the current period's financial statements, the auditor shall perform such additional audit procedures as are appropriate in the circumstances to determine the effect on the current period's financial statements.

7.2.1 Specific audit procedures

For current assets and liabilities some audit evidence may be obtained as part of the current period's audit procedures. For example, the collection (payment) of opening accounts receivable (accounts payable) during the current period will provide some audit evidence of their existence, rights and obligations, completeness and valuation at the beginning of the period.

In the case of inventories, however, the current period's audit procedures on the closing inventory balance provide little audit evidence regarding inventory on hand at the beginning of the period.

Therefore, additional procedures may be necessary, such as:

- observing a current physical inventory count and reconciling it back to the opening inventory quantities;
- performing audit procedures on the valuation of the opening inventory items; and
- performing audit procedures on gross profit and cut-off.

A combination of these procedures may provide sufficient, appropriate audit evidence.

For non-current assets and liabilities, some audit evidence may be obtained by examining the accounting records and other information underlying the opening balances. In certain cases, the auditor may be able to obtain some audit evidence regarding opening balances through confirmation with third parties, for example for long-term debt and investments. In other cases, the auditor may need to carry out additional audit procedures.

7.2.2 Consistency of accounting policies

The auditor shall obtain sufficient, appropriate audit evidence about whether the accounting policies reflected in the opening balances have been consistently applied in the current period's financial statements, and whether changes in the accounting policies have been appropriately properly accounted for and adequately presented and disclosed in accordance with the applicable financial reporting framework.

7.2.3 Prior period balances audited by a predecessor auditor

When the prior period's financial statements were audited by a predecessor auditor, the current auditor must read the most recent financial statements and predecessor auditor's report for information relevant to opening balances. The current auditor may be able to obtain sufficient, appropriate evidence regarding opening balances by performing this review depending on the professional competence and independence of the predecessor auditor. Relevant ethical and professional requirements guide the current auditor's communications with the predecessor auditor.

If there was a modification to the opinion, the auditor must evaluate the effect of the matter giving rise to the modification in assessing the risks of material misstatement in the current period's financial statements.

7.3 Audit conclusion and reporting

"If the auditor is unable to obtain sufficient appropriate audit evidence regarding the opening balances, the auditor shall express a qualified opinion or disclaim an opinion on the financial statements, as appropriate.

"If the auditor concludes that the opening balances contain a misstatement that materially affects the current period's financial statements, and the effect of the misstatement is not appropriately accounted for or not adequately presented or disclosed, the auditor shall express a qualified opinion or an adverse opinion, as appropriate." (ISA 510.10–11)

Note: The Appendix to the ISA gives illustrations of auditors' reports with modified opinions relating to opening balances. These have been updated to reflect the changes made to the equivalent IAASB ISA.

The auditor shall express a qualified opinion or an adverse opinion as appropriate if they conclude that:

- the current period's accounting policies are not consistently applied in relation to opening balances in accordance with the applicable financial reporting framework; or
- a change in accounting policies is not appropriately accounted for or not adequately presented or disclosed in accordance with the applicable financial reporting framework.

If the prior period auditor's report was modified, the auditor should consider the effect on the current period's financial statements. For example, if there was a scope limitation in the prior period, but the matter giving rise to the scope limitation has been resolved in the current period, the auditor may not need to modify the current period's audit opinion.

The ISA finishes:

"If the predecessor auditor's opinion regarding the prior period's financial statements included a modification to the auditor's opinion that remains relevant and material to the current period's financial statements, the auditor shall modify the auditor's opinion on the current period's financial statements." (ISA 510.13)

8 Using the work of others

Section overview

- In certain situations the auditor will consider it necessary to employ someone else with different expert knowledge to gain sufficient, appropriate audit evidence.
- If the auditor's client has an internal audit department, the auditor may seek to rely on its work.

8.1 Using the work of experts: revision

Professional audit staff are highly trained and educated, but their experience and training is limited to accountancy and audit matters. In **certain situations** it will therefore be necessary to employ someone else with **different expert knowledge** to gain sufficient, appropriate audit evidence. ISA 620 , *Using the Work of an Auditor's Expert* covers this area and the principles included in this standard were covered at Professional Level. The key points are covered below.

Definition

Auditor's expert: An individual or organisation possessing expertise in a field other than accounting and auditing, whose work in that field is used by the auditor in obtaining sufficient, appropriate audit evidence. An auditor's expert may be either an auditor's internal expert (a partner or staff of the auditor's firm, or a network firm) or an auditor's external expert.

Note: The use of data analytics has increased the need for the use of IT experts in the audit team.

The ISA makes a distinction between this situation and the situation outlined in ISA 500, *Audit*

Evidence (see earlier in this chapter) where management use an expert to assist in preparing financial statements.

When using the work performed by an auditor's expert, auditors should obtain sufficient, appropriate audit evidence that such work is adequate for the purposes of an audit.

The following list of examples is given by the ISA of areas where it may be necessary to use the work of an auditor's expert:

- The valuation of complex financial instruments, land and buildings, plant and machinery, jewellery, works of art, antiques, intangible assets, assets acquired and liabilities assumed in business combinations and assets that may have been impaired
- The actuarial calculation of liabilities associated with insurance contracts or employee benefit plans
- The estimation of oil and gas reserves
- The valuation of environmental liabilities, and site clean-up costs
- The interpretation of contracts, laws and regulations
- The analysis of complex or unusual tax compliance issues

When considering whether to use the work of an expert, the auditors should review the following:

- Whether management has used a **management's expert** in preparing the financial statements
- The **nature and significance** of the matter, including its complexity
- The **risks of material misstatement**
- The auditor's knowledge of and experience with the work of experts in relation to such matters and the availability of **alternative sources of audit evidence**

8.1.1 Competence, capabilities and objectivity of the auditor's expert

When planning to use the work of an auditor's expert the auditors shall assess the professional competence (including professional qualifications, experience and resources) of the expert. The auditor shall evaluate the objectivity of the expert.

This will involve considering:

- the expert's **professional certification**, or licensing by, or membership of, an appropriate professional body and the technical performance standards and other requirements, such as ethical standards of that body;
- the **relevance** of the expert's competence to the matter for which that expert's work will be used, including any areas of speciality within that expert's field; and
- the expert's **competence** with respect to relevant **accounting and auditing requirements**, such as assumptions and methods required by the applicable financial reporting framework.

In considering the objectivity of the expert, the auditor should consider circumstances such as self- interest threats, advocacy threats, familiarity threat, self-review threats and intimidation threats as well as the safeguards that may have been put in place to eliminate or reduce these.

The auditor shall evaluate whether the auditor's expert has objectivity for the auditor's purposes. In the case of an auditor's external expert, the evaluation of objectivity shall include inquiry regarding interests and relationships that may create a threat to that expert's objectivity. (ISA 620.9)

Professional skills focus: Applying judgement

Remember that although an expert may be presented as the solution to your problem, they may also pose problems of their own if there are concerns about their competence, capability or objectivity, so you should be on the lookout for any evidence of this in an exam question.

8.1.2 Obtaining an understanding of the field of expertise of the auditor's expert

The auditor needs to have a sufficient understanding in order to be able to:

- determine the nature, scope and objectives of the expert's work for the auditor's purposes; and
- evaluate the adequacy of that work for the auditor's purposes.

8.1.3 Agreement with the auditor's expert

Written instructions usually cover the expert's terms of reference and such instructions may cover such matters as follows:

- The **nature**, **scope** and **objectives** of the expert's work
- The respective roles and responsibilities of the auditor and the expert
- The nature, timing and extent of communication between the auditor and the expert, including the form of any report to be provided by the expert
- The need for the expert to observe confidentiality requirements

8.1.4 Evaluating the adequacy of the auditor's expert's work

The auditors shall assess the adequacy of the expert's work for audit purposes.

Auditors should assess whether the substance of the expert's findings is properly reflected in the financial statements or supports the financial statement assertions. It will also require consideration of:

- the relevance and reasonableness of the expert's findings or conclusions, and their consistency with other audit evidence;
- the relevance and reasonableness of any significant assumptions and methods used; and
- the relevance, completeness and accuracy of any source data used.

The auditors do **not** have the expertise to judge the assumptions and methods used; this is the responsibility of the expert. However, the auditors should seek to obtain an understanding of these assumptions, to consider their reasonableness based on other audit evidence, knowledge of the business and so on.

If the results of the expert's work are not adequate for the auditor's purposes, the auditor shall:

- agree with the expert on the nature and extent of further work to be performed by the expert; or
- perform additional audit procedures appropriate to the circumstances.

8.1.5 Reference to the auditor's expert in the audit report

When issuing an unmodified audit opinion, the auditor should not refer to the work of the expert unless required by law or regulation to do so.

Such a reference may be misunderstood and interpreted as a qualification of the audit opinion or a division of responsibility, neither of which is appropriate.

If the auditors issue a modified audit opinion, then they may refer to the work of the expert if such a reference is relevant to an understanding of the modification. The auditor must also indicate in the report that the reference does not reduce the auditor's responsibility for the opinion. In such cases, auditors may need to obtain permission in advance from the expert. If such permission is not given, then the auditors may have to seek legal advice.

Interactive question 8: Using an expert – revision

Explain whether it is necessary to use the work of an auditor's expert in these situations. Where relevant, you should describe alternative procedures.

Requirements

8.1 As auditor to an oil exploration company, you have ascertained that the useful life of each drilling platform is assessed annually on factors such as weather conditions and the period over which it is estimated that oil will be extracted. You are auditing the useful lives of the platforms.

8.2 Piles of copper and brass, that can be distinguished with a simple acid test, have been mixed up. You are attending the inventory count.

See **Answer** at the end of this chapter.

8.2 Using the work of internal auditors

Using the work of internal auditors is covered at Professional Level in the Audit and Assurance paper. However, a summary of the key points of ISA 610, *Using the Work of Internal Auditors* is set out below.

8.2.1 Assessment of internal audit

First, the external auditors will determine whether and to what extent to use the work of internal auditors for the purposes of the audit by evaluating the following:

Evaluation of internal audit	
Objectivity	Consider the status of the function within the entity, who they report to, whether they have any conflicting responsibilities or restrictions placed on their function. Consider also to what extent management acts on internal audit recommendations.
Competence	Consider whether internal auditors have adequate resources, technical training and proficiency, and whether internal auditors possess the required knowledge of financial reporting. They will also consider whether the internal auditors are members of relevant **professional bodies.**
Systematic and disciplined approach	Consider whether internal audit is **properly planned**, **supervised**, **reviewed** and **documented**, whether the function has appropriate quality management procedures, audit manuals, work programmes and documentation.

8.2.2 The effect on external audit procedures

The external auditor then must determine the effect of the work of the internal auditors on the nature, timing or extent of the external auditor's procedures. The factors to consider are as follows:

- The **nature and scope** of the internal audit work

- The assessed **risks** of material misstatement
- The degree of **subjectivity** involved in the evaluation of the audit evidence

8.2.3 Evaluating specific internal auditing work

The ISA states: "The external auditor shall perform sufficient audit procedures on the body of the work of the internal audit function as a whole that the external auditor plans to use to determine its adequacy for the purposes of the audit." (ISA 610.23)

In practice, the evaluation here will consider the scope of work and related audit programmes and whether the original assessment of the internal audit function remains appropriate.

Evaluation	
Training and proficiency	Have the internal auditors had sufficient and adequate technical training to carry out the work? Are the internal auditors proficient?
Supervision	Is the work of assistants properly supervised, reviewed and documented?
Evidence	Has adequate audit evidence been obtained to afford a reasonable basis for the conclusions reached?
Conclusions	Are the conclusions reached appropriate, given the circumstances?
Reports	Are any reports produced by internal audit consistent with the result of the work performed?
Unusual matters	Have any unusual matters or exceptions arising and disclosed by internal audit been resolved properly?
Plan	Are any amendments to the external audit plan required as a result of the matters identified by internal audit?

The nature and extent of the testing of the specific work of internal auditing will depend on the amount of judgment involved.

The external auditor's procedures **must** include **reperformance of some of the work of the internal audit function**. If the external auditors decide that the internal audit work is not adequate, they should extend their own procedures in order to obtain appropriate evidence.

8.2.4 Direct assistance

In addition to using specific work done by an internal audit function, the external auditor may obtain direct assistance from individuals from the internal audit department. Where this is the case the external auditor:

- obtains written confirmation from those individuals and as an authorised member of the entity that they will follow instruction from the external audit team and that they will keep specific matters confidential;
- confirms with the head of internal audit or those charged with governance the role those individuals will play and the responsibility of the external auditor for quality management and the audit opinion;
- supervises, reviews and evaluates the work performed;
- ensures that such individuals are only involved in work where self-review or judgement is not an important part of the procedure; and
- agrees the approach with those charged with governance.

8.3 Service organisations

A service organisation is a third-party organisation that provides services to user entities that are part of those entities' information systems relevant to financial reporting.

ISA 402, *Audit Considerations Relating to an Entity Using a Service Organisation* provides guidance on how auditors carry out their responsibility to obtain sufficient, appropriate audit evidence when the audit client (called the 'user entity' in the standard) uses such an organisation. The use of service organisations will be discussed in detail in Chapter 7.

9 Working in an audit team

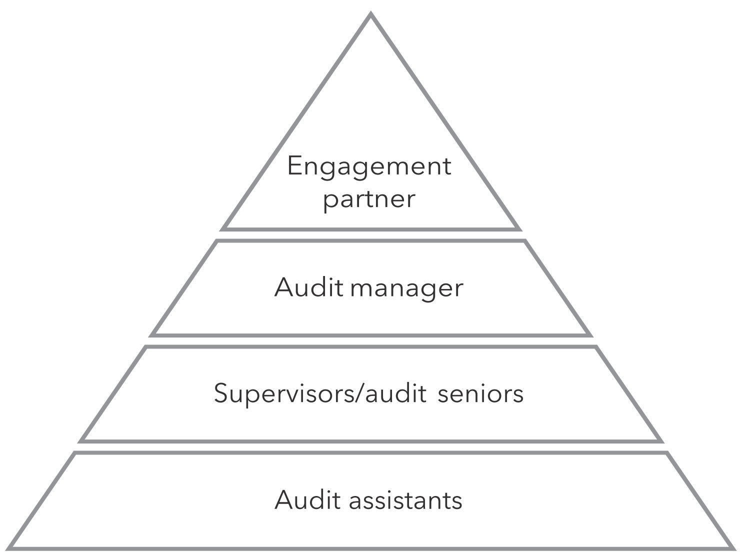
Section overview

- This section deals with working in an audit team.

The audit **engagement partner** (sometimes called the **reporting partner**) must take responsibility for the quality of the audit carried out. They should assign staff with necessary competences to the audit team.

Some audits are wholly carried out by a sole practitioner (an accountant who practises on their own) or a partner. More commonly, the engagement partner will delegate aspects of the audit work such as the detailed testing to the staff of the firm. The usual hierarchy of staff on an audit engagement is:

Figure 6.3: Audit staff hierarchy



9.1 Direction

The partner directs the audit. They are required by other auditing standards to hold a meeting with the audit team to discuss the audit, in particular the risks associated with the audit. ISA 220 para. A14 provides examples of direction techniques that the partner might use.

9.2 Supervision

The audit is supervised overall by the engagement partner, but more practical supervision is given within the audit team by senior staff to more junior staff (covered more fully by ISA 220 in para. A16).

9.3 Review

Before the auditor's report is issued, the engagement partner must be sure that sufficient and appropriate audit evidence has been obtained to support the audit opinion. The audit engagement partner need not review all audit documentation, but may do so. They must review critical areas of judgement, significant risks and other important matters (ISA 220.A17-21).

9.4 Consultation

Consultation is usually required to ensure difficult or contentious matters have been dealt with properly and that such matters and conclusions are properly recorded.

Professional skills focus: Concluding, recommending and communicating

As well as working together in a team where everyone understands their role and how they fit together, good audit quality can only be demonstrated by the way that the team formulates and communicates its findings.

10 Auditing in an IT environment

Section overview

- The more an organisation uses e-commerce, the greater the risk associated with it. As a consequence, there are special considerations for auditors performing the audit of companies who use e-commerce.

10.1 Introduction

We looked at IT-specific risks in the context of carrying out an audit risk assessment and the role of data analytics tools in this aspect of the audit in Chapter 5. Most companies now have a presence on the worldwide web: there are few companies who do not engage in some form of e-commerce nowadays.

E-commerce introduces specific risks. In this section, we will look at what this means for the auditor.

Definitions

Electronic data interchange (EDI): A form of computer to computer data transfer. Information can be transferred in electronic form, avoiding the need for the information to be re-inputted somewhere else.

Electronic mail (email): A system of communicating with other connected computers or via the internet in written form.

Electronic commerce (e-commerce): Involves individuals and companies carrying out business transactions without paper documents, using computer and telecommunications links.

10.2 Engaging in e-commerce

As e-commerce is a very fast-growing area of business, it is an important area for audit. For example, the trend is increasingly towards cloud-based services. The ICAEW Information Technology Faculty Helpsheet: *Standard terms for the provision of cloud computing services to clients* describes cloud computing as the "storage of data and software on remote computers, which are then used to deliver services over the internet to the users' preferred devices". This can be a particularly good option for smaller businesses to handle orders and process payments. There is no upfront investment and well- established providers offer services at competitive prices. Obvious advantages include the 'anywhere access', but issues of security and the stability of providers must be considered. Auditors must have an understanding of these kinds of developments and the impact that they will have on the business and the audit. The issues affecting the auditor's appraisal of systems including virtual arrangements and cloud computing are addressed in Chapter 7.

A business can engage in e-commerce to a large or small extent. The greater the involvement a business has with e-commerce, **the more the risk associated with it**. The extent of involvement is explored in the following table.

Involvement in e-commerce	Risk moving from:
Information provision. A website can be used as a marketing device, to provide information to potential customers, and to enable them to request further information through an email link.	**LOW**
Transactions with existing customers. Existing customers can be given the opportunity to track current contracts or initiate others over the website.	
Access to new customers. A website can be used as a place where new customers may initiate transactions with the company.	
New business model. A website can be used to diversify into specific web-based products, for example, data for download.	**HIGH**

There are a variety of business risks specific to a company involved in e-commerce, which will exist to a greater or lesser degree depending on the extent of involvement.

- Risk of non-compliance with taxation, legal and other regulatory issues
- Contractual issues arising: are legally binding agreements formed over the internet?
- Risk of technological failure (crashes) resulting in business interruption
- Impact of technology on going concern assumption, extent of risk of business failure
- Loss of transaction integrity, which may be compounded by the lack of sufficient audit trail
- Security risks, such as virus attacks and the risk of frauds by customers and employees
- Improper accounting policies in respect of capitalisation of costs such as website development costs, misunderstanding of complex contractual arrangements, title transfer risks, translation of foreign currency, allowances for warranties and returns, and revenue recognition issues
- Overreliance on e-commerce when placing significant business systems on the internet

Many of these issues have **implications for the statutory audit** and these are discussed in detail in the next section.

An entity that uses e-commerce must address the business risks arising as a result by implementing appropriate security infrastructure and related controls to ensure that the identity of customers and suppliers can be verified, the integrity of transactions can be ensured, agreement on terms of trade can be obtained, and payment from customers is obtained and privacy and information protection protocols are established.

In its paper *Across Jurisdictions in E-commerce,* the ICAEW IT Faculty states that an e-trader must ensure that it:

- displays and uses accurate information electronically;
- complies with relevant regulations and laws;
- intentionally trades only with specific geographical markets and customers;
- has contracts to facilitate effective transactions;
- monitors its contract process;
- keeps audit trails;
- creates and maintains appropriate levels of security; and
- takes appropriate insurance cover.

10.3 Considerations for auditors

With the withdrawal by IAASB of IAPS 1013, *Electronic Commerce – Effect on the Audit of Financial Statements,* there is currently no specific guidance on the special considerations for auditors who are undertaking audits of companies that use e-commerce. The logic is that, given the prevalence of e- commerce, this should no longer be viewed as a separate specialist audit area, but one to which the principles of any statutory audit should extend.

However, the following practical points are still relevant.

First, the auditor needs to consider whether the staff assigned to the audit have **appropriate IT and internet business knowledge** to carry out the audit. The auditor must also ensure that they have sufficient knowledge of the client's business in accordance with ISA 315 , *Identifying and Assessing the Risks of Material Misstatement*. In particular, the auditor must consider the following:

- The entity's business activities and industry
- The entity's e-commerce strategy
- The extent of the entity's e-commerce activities
- The entity's outsourcing arrangements

Internal controls can be used to mitigate many of the risks associated with e-commerce. The auditor has to consider the control environment, information and communication systems and control procedures in accordance with the requirements of ISA 315. There may be situations (such as the use of highly automated ecommerce systems, high transaction volumes, lack of electronic evidence) when the auditor would have to use tests of control as well as substantive procedures to render audit risk to an acceptably low level. In these situations, **CAATs** could be used. (Internal controls and CAATs will be covered in further detail in Chapter 7.)

When auditing an entity that uses e-commerce, the auditor must consider in particular the issues of security, transaction integrity and process alignment.

Cyber security

The auditor should consider the following:

- The use of **firewalls** and **virus protection software**
- The effective use of **encryption**
- Controls over the **development** and **implementation** of systems used to support e-commerce activities

- Whether **security controls** already in place remain effective as new technologies become available
- Whether the **control environment** supports the control procedures implemented

Transaction integrity

The auditor must consider the completeness, accuracy, timeliness and authorisation of the information provided for recording and processing in the financial records, by carrying out procedures to evaluate the reliability of the systems used for capturing and processing the information.

Process alignment

This is the way the IT systems used by the entity are integrated with one another to operate effectively as one system. Many websites are not automatically integrated with the internal systems of the entity, such as its accounting system and inventory management system, and this may affect such issues as the completeness and accuracy of transaction processing, the timing of recognition of sales, purchases and other transactions, and the identification and recording of disputed transactions.

11 Professional scepticism in the audit fieldwork stage

Section overview

We looked at professional scepticism in Chapter 5, in the context of audit planning. Professional scepticism is central throughout the audit process, and therefore must remain at the top of the agenda as the auditor gathers audit evidence and documents their work.

Ongoing global financial instability has increased the risk of misstatements. The risks centre particularly around judgemental areas where there may be no clear 'right answer', where the exercise of professional scepticism is more important than ever.

The areas of particular risk today include the following:

(a) **Fraud**: Consideration should be given to fraud at audit engagement team meetings. Fraud must be considered, regardless of how well the auditor knows the client.

(b) **Going concern**: Smaller entities often lack detailed management information (for example, profit forecasts), so the auditor needs to consider a broader range of audit evidence. The client's specific circumstances and the challenges the business faces must be documented, along with the conclusions reached.

(c) **Asset impairment**: The recent financial crisis has affected basic assumptions – for example, the expected future cash flows from long-term non-financial assets such as goodwill, plant and equipment and intangible assets. Where the audit client has non-financial assets located in, or related to, struggling economies, the value of such assets should be actively challenged. Where assets have been impaired, management's assumptions behind the impairment calculation also need to be scrutinised.

(d) **Valuation of receivables** and **revenue recognition**: Besides the likely impact of fraud on revenue recognition, the liquidity problems faced by companies and governmental organisations mean that bad debt allowances must be considered. Revenue should be recognised only when it is probable that future economic benefits will flow to the entity.

Worked example: Building professional scepticism into audit methodology

Audit firms are faced with the tricky task of building the exercise of professional scepticism into their audit methodology. How does one effectively instil a 'state of mind' into a standardised process consistently applied by hundreds upon thousands of individual staff members? Let's look at a real-life example.

One international audit firm does this, partly, by including instructions and reminders about exercising professional scepticism into its audit working paper templates. For example, the walkthrough of internal controls template includes the following instructions:

"Our inquiries during the walkthrough should include questions that could help to identify the abuse of controls or indicators of fraud. For example, our follow-up questions might include asking personnel what they do when they encounter errors, the types of errors they encounter, what happened as a result of finding errors, and how the errors were resolved. We might also ask the personnel whether they have ever been asked to override processes or controls, and to describe the situation, why it occurred, and what happened."

The working paper template also includes a checklist at the end, which audit staff are required to initial and date in order to indicate that they have addressed each of the requirements. An excerpt is reproduced below:

	Initials and date
We inquired of the Company personnel about their understanding of what was required by the Company's prescribed procedures and controls to determine whether the processing procedures are performed as originally intended and on a timely basis.	
We were alert to exceptions in the Company's procedures and controls.	
Our inquiries of Company personnel included follow-up questions that help to identify the abuse of controls or indicators of fraud.	

Requirement

Discuss the following with your peers:

(1) In what ways does this approach help to ensure professional scepticism is exercised in all audits?

(2) In what ways might the impact of this approach be limited?

(3) What other more effective methods can you think of to ensure that audit team members exercise professional scepticism when performing audit procedures?

Solution

The ICAEW Audit and Assurance Faculty released a video in 2011 on professional scepticism and other key audit issues (www.icaew.com/en/technical/audit-and-assurance/professional-scepticism).

The video usefully mentioned some questions which auditors should bear in mind as they perform audit fieldwork:

- Does the reporting reflect the substance of what has happened?
- Does it make sense?
- Are we focusing on the things that are there but missing the things that are not there – but should be?
- Are there limitations on the scope of our procedures?

- Are management's assumptions and forecasts appropriate?
- Are the assumptions still appropriate given the changing economy?
- What evidence is there besides what management has provided to us?
- Is the evidence contradictory?

In recent years, audit inspections have regularly pointed to the lack of scepticism in the performance of audits. Two key points emerge from these audit inspection reports:

- **Understanding the assumptions made is not enough**: Simply finding out what the client has done is not the same as auditing it. The auditor must challenge the assumptions and understand how they affect the client's conclusions.
- **The exercise of professional scepticism must be documented**: Often, judgements were made demonstrating appropriate scepticism – perhaps resulting from long conversations with the client – but only the conclusion is documented, with little evidence of the process.

The process of documenting audit evidence and counter-evidence in itself can often help to identify things that don't make sense.

The following example is adapted from the transcript of the ICAEW Audit and Assurance faculty's video on professional scepticism. It illustrates in a helpful way what is meant by documenting the exercise of professional scepticism.

Context example: Documenting professional scepticism

Ben is an audit senior. In the process of auditing the client's calculation for the impairment of accounts receivable, he identified that the discount rate used seemed out of line. He consulted Sophie, the audit manager, and she agreed that the discount rate appears inappropriate.

Ben then asked the client to explain how the discount rate had been calculated. In the course of the client's explanation, it became clear that the discount rate had been based on an incorrect assumption. After two hours of discussions, the client understood the error and agreed to revise the impairment calculation and adjust the financial statements accordingly.

Ben audited the revised impairment calculation and put it on the audit file. However, simply documenting the revised calculation would give no indication of the audit work that had been carried out earlier, nor would it show that professional scepticism had been exercised.

In order for the documentation to be complete, Ben should include a file note to explain the following:

- What issues were discussed with the client
- What the client said
- What evidence was offered
- What questions he then asked
- What further information was provided
- How he verified the information
- The final conclusion

11.1 Discussion among the engagement team

ISA 240 specifically requires the audit engagement team to have discussions around the susceptibility of the financial statements to fraud. Such a discussion should focus on how, and where, material misstatements due to fraud may occur.

Such discussions will facilitate:

- the sharing of insight by the more experienced members of the audit team into how to identify fraud risks;
- the consideration of an appropriate response to fraud risks, including determining who will conduct certain audit procedures; and
- the sharing of results from audit procedures with the rest of the audit team, and determining how any allegations of fraud that come to the auditor's attention will be dealt with.

It is the audit engagement partner's responsibility to decide which of the matters discussed are to be communicated to those team members who are not involved in the discussion.

11.2 Impact of use of audit data analytics

The use of audit data analytics provides both opportunities and threats to professional scepticism. It can be argued that the availability of data at a more granular level should provide the auditor with a better understanding of the entity and its environment enhancing the auditor's ability to apply professional scepticism. In addition the increased use of technology may reduce unintentional bias in audit procedures.

However care must be taken that confidence in the software is not absolute. Auditors must not believe that the results produced by data analytics tools are infallible. Professional judgement cannot be replaced by data analytics tools.

12 Further guidance

Section overview

This section covers a number of topics which have been dealt with in detail in your earlier studies. A brief reminder of the key points is provided below.

12.1 External confirmation

12.1.1 Introduction

You have covered the basic audit of receivables and cash and bank in your Assurance studies. This Appendix revisits this topic in the context of ISA 505, *External Confirmations*. The standard sets out guidance on how a confirmation should be carried out and, although it does not give a list of examples, the principles could be applied to confirmations such as:

- Bank balances and other information from bankers
- Accounts receivable balances
- Inventories held by third parties
- Property deeds held by lawyers
- Loans from lenders
- Accounts payable balances

High profile financial failures such as Barings and Parmalat in Europe heightened awareness of the use and reliability of external confirmations as audit evidence. Accordingly, some regulatory authorities in major jurisdictions around the world called for more rigorous requirements pertaining to the use of confirmations.

The major issue to be dealt with in the revision of this standard during the Clarity Project was to seek a solution that achieved a balance between the conflicting circumstances in which regulators and others have been demanding increasing prescription in the use of confirmations, and the anecdotal evidence from practitioners that responses to confirmation requests may be unreliable or unobtainable.

ISA 505 refers to the guidance on evidence from ISA 500, *Audit Evidence*, and the specific requirement, now in ISA 330, *The Auditor's Responses to Assessed Risks,* to consider, for each material class of transactions, account balance and disclosure, whether external confirmation procedures are to be performed as substantive procedures.

12.1.2 Requirements of ISA 505 Procedures

The auditor maintains control over the confirmation requests, including:

- determining the information to be requested;
- selecting the confirming party;
- designing the confirmation requests, including ensuring that they are correctly addressed and contain return information for replies to be sent directly to the auditor; and
- sending the requests (and second requests, if needed).

refusal

If management refuses to allow a confirmation request to be sent, the auditor shall do the following:

- Enquire as to the reason, and seek evidence as to their validity. (The risk here is that management may claim that the confirmation may cause problems in the context of disputes or litigation, but the auditor must remain sceptical and consider the possibility that this may be an attempt to deny access to evidence that might indicate the existence of fraud.)
- Evaluate the implications of refusal on the risk assessment.
- Perform alternative procedures.

Results

There is always a risk that responses may be intercepted, altered or be in some other way fraudulent. The auditor must be alert to any factors that suggest there is any doubt about the reliability of the responses, such as:

- it was received by the auditor indirectly (for example, was received by the client entity and passed on to the auditor); or
- it appeared not to come from the originally intended confirming party.

In the case of non-responses, the auditor must obtain alternative evidence, the form and nature of which will be affected by the account and the assertion in question.

Evaluating the evidence

The auditor must evaluate whether the confirmation results provide relevant and reliable audit evidence or whether further audit evidence is necessary.

12.1.3 Confirmation of accounts receivable Objectives of confirmation

ISA 505 is relevant to confirmation of accounts receivable. This section recaps the practical application of the standard. The verification of trade accounts receivable by direct communication is a normal means of providing audit evidence to satisfy the objective of checking whether customers exist and owe *bona fide* amounts to the company (**existence and rights and obligations**).

Confirmation will produce a written statement from each respondent that the amount owed at the date of the confirmation is correct. This is, *prima facie*, reliable audit evidence, being from an independent source and in 'documentary' form. The confirmation of accounts receivable on a test basis should not be regarded as replacing other normal audit checks, such as the in-depth testing of sales transactions, but the results may influence the scope of such tests.

Timing

Ideally the confirmation should take place immediately after the year end and hence cover the year end balances to be included in the statement of financial position. However, time constraints may make it impossible to achieve this ideal.

In these circumstances it may be acceptable to carry out the confirmation **before the year end** provided that confirmation is no more than three months before the yearend and internal controls are strong.

Client's mandate

Confirmation is essentially an act of the **client**, who alone can authorise third parties to divulge information to the auditors.

The ISA outlines what the auditors' response should be when management refuse permission for the auditors to contact third parties for evidence.

The auditor must:

- enquire as to management's reasons and seek supporting evidence;
- evaluate the implications on the auditor's assessment of the risks of material misstatement, including fraud;
- perform alternative audit procedures; and
- consider the implications for the audit opinion.

Positive vs negative confirmation

When confirmation is undertaken the method of requesting information from the customer may be either 'positive' or 'negative'.

- Under the **positive** method the customer is requested to confirm the accuracy of the balance shown or state in what respect they are in disagreement.
- Under the **negative** method the customer is requested to reply if the amount stated is disputed.

The positive method is generally preferable, as it is designed to encourage definite replies from those contacted.

The negative method may be used if the client has good internal control, with a large number of small accounts. In some circumstances, say where there is a small number of large accounts and a large number of small accounts, a combination of both methods, as noted above, may be appropriate.

Sample selection

Auditors will normally only contact a sample of receivables balances. If this sample is to yield a meaningful result it must be based on a complete list of all debtors. In addition, when constructing the sample, the following classes of account should receive special attention:

- Old unpaid accounts
- Accounts written off during the period under review
- Accounts with credit balances
- Accounts settled by round sum payments

Similarly, the following should not be overlooked.

- Accounts with nil balances
- Accounts which have been paid by the date of the examination:

Follow up procedures

Auditors must follow up customer disagreements and failure by customers to respond.

Auditors will have to carry out further work in relation to those debtors who:

- **disagree** with the **balance stated** (positive and negative confirmation); or
- **do not respond** (positive confirmation only).

In the case of disagreements, the customer response should have identified specific amounts which are disputed.

Reasons for disagreements
There is a **dispute** between the client and the customer. The reasons for the dispute would have to be identified, and provision made if appropriate against the debt.
Cut-off problems exist, because the client records the following year's sales in the current year or because goods returned by the customer in the current year are not recorded in the current year. Cut-off testing may have to be extended.
The customer may have sent the **monies before** the yearend, but the monies were **not recorded** by the client as receipts until **after** the yearend. Detailed cut-off work may be required on receipts.
Monies received may have been posted to the **wrong account** or a cash in transit account. Auditors should check if there is evidence of other mis-posting. If the monies have been posted to a cash in transit account, auditors should ensure this account has been cleared promptly.
Customers who are also suppliers may **net off balances** owed and owing. Auditors should check that this is allowed.
Teeming and lading, stealing monies and **incorrectly posting** other receipts so that no particular customer is seriously in debt is a fraud that can arise in this area. If auditors suspect teeming and lading has occurred, detailed testing will be required on cash receipts, particularly on prompt posting of cash receipts.

Additional procedures where confirmation is carried out before yearend

The auditors will need to carry out the following procedures where their confirmation is carried out before the yearend.

- Review and reconcile entries on the sales ledger control account for the intervening period.
- Verify sales entries from the control account by checking sales day book entries, copy sales invoices and despatch notes.
- Check that appropriate credit entries have been made for goods returned notes and other evidence of returns/allowances to the sales ledger control account.
- Select a sample from the cash received records and ensure that receipts have been credited to the control account.
- Review the list of balances at the confirmation date and year end and investigate any unexpected movements or lack of them (it may be prudent to send further confirmation requests at the year end to material debtors where review results are unsatisfactory).

CHAPTER 6

- Carry out analytical procedures, comparing receivables ratios at the confirmation date and yearend.

Evaluation and conclusions

All confirmations, regardless of timing, must be properly recorded and evaluated. All **balance disagreements** and **nonreplies** must be **followed up** and their effect on total receivables evaluated.

Differences arising that merely represent **invoices** or **cash in transit** (normal timing differences) generally do not require adjustment, but disputed amounts, and errors by the client, may indicate that further substantive work is necessary to determine whether material adjustments are required.

12.1.4 Bank reports for audit purposes Planning

The auditors should decide from which bank or banks to request confirmation, having regard to the risks in relation to relevant financial statement assertions including bank-related information to be disclosed in notes.

The auditor may be able to identify what banking relationships are in place by reviewing annual facilities letters from the entity's banks. If no such letters are available, the auditor will ask the entity's management to provide the information.

Given the importance of cash to an entity's business and its susceptibility to fraud, the auditor will usually conclude that in the absence of a bank report it will not be possible to obtain sufficient, appropriate audit evidence from other sources.

In planning the submission of the request, the auditor will:

- determine the date by which the bank report is needed;
- determine whether confirmation is needed of additional information, such as trade finance transactions and balances; and
- check that the bank has been given valid authority to disclose information to the auditor.

Preparation and despatch of requests and receipt of replies

Control over the content and despatch of confirmation requests is the responsibility of the auditors. However, banks require the explicit written authority of their customers to disclose information requested. Where possible this should take the form of an ongoing authority. Auditors need to satisfy themselves that an authority is in place and up to date. Replies should be returned directly to the auditors and, to facilitate such a reply, a pre-addressed envelope should be enclosed with the request.

Content of confirmation requests

The form and content of a confirmation request letter will depend on the purpose for which it is required and on local practices.

The most commonly requested information is in respect of balances due to or from the client entity on **current, deposit, loan and other accounts**. The request letter should provide the account description number and the type of currency for the account.

It may also be advisable to request information about **nil balances** on accounts, and accounts which were **closed** in the 12 months before the chosen confirmation date. The client entity may ask for confirmation not only of the balances on accounts but also, where it may be helpful, other information, such as the maturity and interest terms on loans and overdrafts, unused facilities, lines of credit/standby facilities, any offset or other rights or encumbrances, and details of any collateral given or received.

The client entity and its auditors are likely to request confirmation of **contingent liabilities**, such as those arising on guarantees, comfort letter, bills and so on.

Banks often hold **securities** and other items in safe custody on behalf of customers. A request letter may thus ask for confirmation of such items held by the bank.

The procedure is simple but important.

(a) The banks will require **explicit written authority** from their client to disclose the information requested.

(b) The **auditors' request** must **refer** to the **client's letter** of authority and the date thereof. Alternatively it may be countersigned by the client or it may be accompanied by a specific letter of authority.

(c) In the case of joint accounts, **letters of authority** signed by all **parties** will be necessary.

(d) Such **letters of authority** may either **give permission** to the bank to disclose information for a specific request or grant permission for an indeterminate length of time.

(e) Where practicable the request should **reach** the **bank** at least **one month in advance** of the client's **yearend. It is advisable to allow more time at busy periods, such as those covering December and March year ends. Fast track requests** may be made where reporting deadlines are tight. **The request** should state both the year-end date and the date of the authority to disclose.

(f) The **auditors** should themselves **check** that the bank response covers all the information in the standard and other responses.

12.2 Sampling

Definition

Audit sampling: Defined by ISA 530 *Audit Sampling* as:

"The application of audit procedures to less than 100% of items within a population of audit relevance such that all sampling units have a chance of selection in order to provide the auditor with a reasonable basis on which to draw conclusions about the entire population."

12.2.1 Nature of sampling

The audit involves a search for evidence, and sampling is, in part, a method of assessing the quantity and quality of that evidence. In so doing, an assessment needs to be made of an acceptable level of sampling risk ie, the risk that the sample will be unrepresentative of the population.

Sampling can be used to extract evidence for 'tests of details' or for 'tests of controls'. The stages of sampling involve the following:

(a) Sample design and selection

(b) Testing

(c) Evaluation

However, most research suggests that the proportion of evidence that is derived from sampling, particularly in respect of tests of details, has declined in recent years in favour of other sources of evidence. Typically, a small sample of items may be taken by many audit firms for tests of details, where there are no special circumstances – although the precise number of items tested tends to vary significantly.

12.2.2 Sample design

Is it necessary? – While auditing standards require some substantive testing, they do not require tests of detail, as analytical procedures alone may be sufficient in some circumstances.

Sample objectives – It is initially necessary to determine the purpose of the sample. This is likely to be different according to whether the sample is for tests of control or for tests of detail. Even in the latter case, objectives of assessing completeness, accuracy or validity will influence sample objectives.

Population – The selection of an appropriate population from which to sample is important. Consider the following.

- Is the population **homogeneous**? For example, if larger purchases are subject to more internal controls than smaller purchases, then all purchase transactions are not subject to the same risk and may need to be stratified into different samples.
- What is the level of risk expected in the population?
- If testing for understatement (completeness/omission) then it is important to sample from the population making up the initial record then tracing to the final record.
- If testing for overstatement (completeness/accuracy/validity) then it is important to select the sample from the population making up the final record then tracing to the initial record.
- **Directional testing** would not test all items for both over- and understatement. Populations which consist of debits would only be tested for overstatement and credits only tested for understatement. Given the duality of double entry, this means that any one transaction is tested for misstatement.

12.2.3 Types of sampling

ISA 530 permits either of the two basic methods of sampling:

- Statistical sampling
- Judgement sampling

All types of sampling require the exercise of judgement. However, judgement sampling is so called as the sample size and selection are based on the auditor's professional judgement rather than any statistical basis.

The advantages of statistical sampling include the following.

- It provides unbiased sample selection.
- Sample sizes can be based upon probability theory and can more easily be justified in court.
- It provides greater consistency of judgement between different auditors in similar circumstances.
- Evaluation of results can more validly be extrapolated into the population.

Disadvantages include the following.

- Excessive sample sizes can arise.
- Significant judgement in assessing the level of assurance required from sampling (relative to other evidence) is still needed, such that its statistical validity is questionable.

Statistical sampling is now less widely used than was once the case. Methods of sampling include the following.

Random sampling – Each item in the population has an equal chance of selection.

Systematic/Interval sampling – Takes a random start and selects every nth item thereafter (ie, at a constant interval). It is valid if errors are randomly distributed. The interval may be numerical (eg, order numbers) or by value – monetary unit sampling (ie, every nth £ of purchases).

Block/cluster sampling – The selection of a group of transactions occurring together (eg, a test of all sales in the month of June). This is unlikely to be representative of the population, which damages its statistical validity. It is, however, normally quicker to extract the data.

Haphazard selection – Items are selected without following a structured technique. Care must be taken with respect to sample selection bias and completeness of population. It may be appropriate where client records are poorly kept. Haphazard selection is not appropriate when using statistical sampling.

12.2.4 Sample size

Auditors need to acquire **sufficient** evidence and this means that determining sample size is important. Too few items incur undue sampling risk and too many items incur unnecessary costs.

Factors affecting sample size with respect to tests of detail include the following.

- Level of assurance required from sampling – If other sources of evidence are available and indicate low inherent and control risk then sampling may be reduced.
- Tolerable misstatement or tolerable deviation rate – When testing substantively, this is the maximum error the auditor is willing to accept in the sample – which is based on the performance materiality level, but could be set lower for a specific assertion. When tests of controls are being carried out, this is the number of deviations in the sample the auditor is willing to accept without changing the initial assessment of control risk.
- Expected misstatement or expected deviation rate – This is the expected level of error and deviation in the sample.
- Variability of the population – This is not relevant to sampling for tests of control but increased variability will increase sample sizes for substantive tests.
- The size of the population – Other than for very small populations, the size of the population has a minimal effect on sample sizes.

Appendix 2 and 3 to ISA 530 contain useful summaries of the factors influencing sample sizes.

12.2.5 Sample evaluation

For tests of details the auditor is required to project misstatements found.

The misstatements and deviations discovered in the sample need to be extrapolated into the population in order to draw conclusions about whether the population is materially misstated. (In order to do this appropriately it is important that the sample was representative of the population from which it was selected.) Where the estimated misstatement exceeds the tolerable misstatement then additional evidence may be needed.

Consider also the following.

- While management may adjust for misstatements actually discovered, consideration needs to be given to misstatements in unsampled items and whether any global adjustment is appropriate.
- There may be patterns or trends in the misstatements discovered.
- There may be a pattern from previous years, which would add additional insight into the extent of the misstatement in the population.
- Size and incidence of misstatements discovered eg, a few large misstatements or many small misstatements.
- Nature of the misstatements. Are they factual or are they perceived errors of judgement/opinion?
- Whether they are fraudulent.
- Whether a misstatement relates to the statement of financial position or to the statement of profit or loss and other comprehensive income.

For tests of controls an unexpectedly high sample deviation rate may lead to an increase in the assessed risk of material misstatement unless further audit evidence substantiating the initial assessment is obtained.

Note: Future improvements in technology and the use of audit data analytics may enable auditors to perform testing on 100% of a population, and to monitor transactions on a more frequent or even continuous basis(although currently the ability of data analytics to perform 100% testing is restricted to very limited types of information and audit assertions with respect to that information)

12.3 Directional testing

Directional testing is a method of discovering errors and omissions in financial statements.

Directional testing has been discussed in your previous auditing studies. It is a method of undertaking detailed substantive testing. Substantive testing seeks to discover errors and omissions, and the discovery of these will depend on the direction of the test.

Broadly speaking, substantive procedures can be said to fall into two categories:

- Tests to discover **errors** (resulting in over- or understatement)
- Tests to discover **omissions** (resulting in understatement)

12.3.1 Tests designed to discover errors

These tests will start with sampling the final **accounting records** in which the transactions are recorded and check from the entries to supporting documents or other evidence. Such tests should primarily detect any overstatement but also note any understatement through causes other than omission.

12.3.2 Tests designed to discover omissions

These tests must start from **outside the accounting records** and then check to those records. Understatements through omission will never be revealed if the auditor starts with the initial recording of a transaction (eg, an order form) and traces it through the various documents and accounts into the financial statements. There would clearly be no chance of selecting items that have been omitted if sampling was taken from the final accounts.

For most systems auditors would include tests designed to discover both errors and omissions. The type of test, and direction of the test, should be recognised before selecting the test sample. If the sample which tested the accuracy and validity of the sales ledger were chosen from a file of sales invoices then it would not necessarily substantiate the fact that there were no errors in the sales ledger. The approach known as 'directional testing' applies this testing discipline.

12.3.3 Directional testing and double entry

The concept of directional testing derives from the principle of double entry bookkeeping, in that for every **debit** there is a **corresponding credit** (assuming that the double entry is complete and that the accounting records balance). Therefore, any **misstatement** of a **debit entry** will result in either a corresponding **misstatement** of a **credit entry** or a **misstatement** in the opposite direction of **another debit entry**.

By designing audit tests carefully the auditors are able to use this principle in drawing audit conclusions, not only about the debit or credit entries that they have directly tested but also about the corresponding credit or debit entries that are necessary to balance the books. Tests are therefore designed in the following way.

Test item	Example
Test debit items (expenditure or assets) for overstatement by selecting debit entries recorded in the nominal ledger and checking value, existence and ownership	If a non-current asset entry in the nominal ledger of £1,000 is selected, it would be overstated if it should have been recorded at anything less than £1,000 or if the company did not own it, or indeed if it did not exist (eg, it had been sold or the amount of £1,000 in fact represented a revenue expense).
Test credit items (income or liabilities) for understatement by selecting items from appropriate sources independent of the nominal ledger and ensuring that they result in the correct nominal ledger entry	Select a goods despatched note and check that the resultant sale has been recorded in the nominal ledger sales account. Sales would be understated if the nominal ledger did not reflect the transaction at all (completeness) or reflected it at less than full value (say if goods valued at £1,000 were recorded in the sales account at £900, there would be an understatement of £100).

In a ledger account for (say) an asset, the balance would be a debit, but there may be both debit and credit entries in the account. In using directional testing on this asset account balance, the debit entries would be tested for overstatement and the credit entries for understatement. The reason is that the understatement of a credit entry would lead to the overstatement of the asset's debit balance on the account, the verification of which is the primary purpose of the test.

The matrix set out below demonstrates how directional testing is applied to give assurance on all account areas in the financial statements.

		Primary test also gives comfort on			
Type of account	**Purpose of primary test**	**Assets**	**Liabilities**	**Income**	**Expenses**
Assets	Overstatement (O)	U	O	O	U
Liabilities	Understatement (U)	U	O	O	U
Income	Understatement (U)	U	O	O	U
Expense	Overstatement (O)	U	O	O	U

A test for the overstatement of an asset simultaneously gives comfort on understatement of other assets, overstatement of liabilities, overstatement of income and understatement of expenses.

Further question practice

1 Knowledge diagnostic

Before you move on to question practice, confirm you are able to answer the following questions having studied this chapter. If not, you are advised to revisit the relevant learning from the topic indicated.

	Confirm your learning
1.	Can you remember the assertions and how they help you to generate audit evidence?
2.	Are you able to explain what sufficient, appropriate audit evidence means and what you may need to do to make sure that you have it?
3.	Can you distinguish between tests of control, substantive analytical procedures and tests of detail?
4.	Do you know how to use the following audit procedures correctly: inquiry; observation; inspection; recalculation; reperformance; and external confirmation?
5.	Can you explain the various uses of analytical procedures throughout the audit and do you understand how different techniques can be used to generate audit evidence?
6.	Do you know what the terms 'estimation uncertainty' and 'management bias' mean in the context of the audit of accounting estimates?
7.	Can you explain how an initial audit engagement creates additional problems for auditors and describe the procedures that the auditor would use to address these problems?
8.	What are the problems of working both in a team and with others when conducting an audit? In the case of the latter, how will you evaluate the competence, capability and objectivity of others?
9.	Can you explain why the introduction of information technology adds extra risk to the audit and how auditors address these risks?
10.	Can you suggest areas of the audit where increased levels of professional scepticism may be particularly important?
11.	Can you explain how the auditor makes use of external confirmations, sampling techniques and directional testing during the audit?

2 Question practice

Aim to complete all self-test questions at the end of this chapter. The following self-test questions are particularly helpful to further topic understanding and guide skills application before you proceed to the next chapter.

Question	Learning benefit from attempting this question
Strombolix plc	The scenario includes some fairly challenging situations that will require a combination of approaches to generate the necessary audit evidence. This will definitely help you to consider the evidence required in a given set of circumstances.

Question	Learning benefit from attempting this question
TrueBlue Ltd	Although this is quite a short scenario, there is still plenty of opportunity to deploy your analytical procedures and professional scepticism skills.

Once you have completed these self-test questions, it is beneficial to attempt the following questions from the Question Bank for this module. These questions have been selected to introduce exam style scenarios that will help you improve your knowledge application and professional skills development before you start the next chapter.

Question	Learning benefit from attempting this question
Maykem	You will need to identify potential shortcomings in best practice by evaluating the audit procedures that have been completed by the audit assistant. This will therefore help you learn what good audit procedures should look like.
Dormro	An integrated scenario question that requires the identification of additional audit procedures necessary to form an opinion on the group financial statements.
Tydaway	An opportunity to practise writing suitable audit procedures for the audit of a specific part of the financial statements, in this case, inventory.

Refer back to the learning in this chapter for any questions which you did not answer correctly or where the suggested solution has not provided sufficient explanation to answer all your queries. Once you have attempted these questions, you can continue your studies by moving on to the next chapter.

Self-test questions

Answer the following questions.

1 Strombolix plc

Strombolix plc (Strombolix) is a listed company which manufactures and retails paints and other decorating products. You are the senior in charge of the audit of Strombolix for the year ending 30 June 20X2, which is currently in progress.

Background information provided

The company owns a large factory manufacturing paints. These paints are sold retail through Strombolix's six superstores and they are also sold wholesale to other DIY retailers. In addition, the six superstores sell a range of other products from different suppliers. The superstores are each separate divisions, but there are no subsidiaries.

On 23 July 20X2 a bid was announced by Simban plc (Simban) to acquire the entire ordinary share capital of Strombolix. The directors of Strombolix are contesting the bid and are anxious to publish the financial statements to indicate that the company is more profitable than indicated by the Simban offer.

As a result of the bid your audit partner has sent you the following memorandum.

To: A Senior

From: Charles Church (partner)

Date: 24 July 20X2

Subject: Strombolix audit

As you will be aware, Simban made a bid for Strombolix yesterday and this increases the significance of the financial statements that we are currently auditing.

I am having a preliminary meeting with the finance director on 1 August to discuss the conduct of the audit. I would like you to prepare notes for me of any audit and financial reporting issues that have arisen in your work to date that may indicate potential problems. Also include any general audit concerns you may have arising from the takeover bid.

Let me know what you intend to do about these matters and specify any questions that you would like me to raise with the finance director.

Further information

The following issues have been reported to you from junior audit staff during the audit to date.

AUDIT ISSUES

(1) There appears to be a significant increase in trade receivables, due to the fact that many wholesale customers are refusing to pay a total of £50,000 for recent deliveries of a new paint that appears to decay after only a few months of use. Some of the wholesale customers are being sued by their own customers for both the cost of the paint and the related labour costs. No recognition of these events has been made in the draft financial statements.

(2) A special retail offer of '3 for 2' on wallpaper purchased from an outside supplier during the year has been incorrectly recorded, as the offer was not programmed into the

company's IT system. The sales assistants were therefore instructed by store managers to read the bar codes of only two of the three items, and ignore the third 'free' item. The wallpaper sells for £6 per roll and cost £5 per roll from the supplier. A total of 20,000 of these rolls were processed through the IT system by sales assistants during the year.

The reason for the special offer was that a bonus payment of £90,000 will be due to Strombolix from the supplier if 40,000 of these rolls of wallpaper are sold by 31 December 20X2. Strombolix has taken 50% of this amount (ie, £45,000) into its draft statement of profit or loss and other comprehensive income as revenue for the year to 30 June 20X2.

(3) One of the six superstores was opened on 30 May 20X2. The land had been purchased at a cost of £400,000 on 1 August 20X1, but it was only on 1 September 20X1 that the company began to prepare an application for planning permission. This was granted and construction commenced immediately thereafter, being paid for in two progress payments of £1 million each on 1 December 20X1 and on 1 June 20X2. Construction was completed, and the store opened, on 30 May 20X2. All the costs were financed by borrowing at 8% per annum and all the interest incurred up to 30 June 20X2 has been capitalised as part of the cost of the non- current asset in the draft financial statements. There was no interest earned on surplus funds from this loan.

Requirement

Draft the notes required by Charles Church's memorandum.

2 AB Milton Ltd

You are the senior in charge of the audit of AB Milton Ltd for the year ended 31 May 20X1. Details of AB Milton Ltd and certain other companies are given below.

AB Milton Ltd

A building company formed by Alexander Milton and his brother, Brian.

AB Milton Ltd has issued share capital of 500 ordinary £1 shares, owned as shown below.

Alexander Milton	210	42%	Founder and director
Brian Milton	110	22%	Founder and director
Catherine Milton (Brian's wife)	100	20%	Company secretary
Diane Hardy	20	4%	
Edward Murray	60	12%	Director

Edward Murray is a local businessman and a close friend of both Alexander and Brian Milton. He gave the brothers advice when they set up the company and remains involved through his position on the board of directors. His own company, Murray Design Ltd, supplies AB Milton Ltd with stationery and publicity materials.

Diane Hardy is Alexander Milton's ex-wife. She was given her shares as part of the divorce settlement and has no active involvement in the management of the company. Alexander's girlfriend, Fiona Dyson, is the company's solicitor. She is responsible for drawing up and reviewing all key building and other contracts, and frequently attends board meetings so that she can explain the terms of a particular contract to the directors. Her personal involvement with Alexander started in May 20X1 and, since that time, she has spent increasing amounts of time at the company's premises.

Cuts and Curls Ltd

A poodle parlour, of which 50% of the issued shares are owned by Diane Hardy and 50% by Gillian Milton, who is Alexander and Diane's daughter.

Cuts and Curls operates from premises owned by AB Milton Ltd for which it pays rent at the normal market rate.

Campbell Milton Roofing Ltd

A roofing company owned 60% by AB Milton Ltd and 40% by Ian Campbell, the managing director.

Campbell Milton Roofing Ltd carries out regular work for AB Milton Ltd and also does roofing work for local customers. Alexander Milton is a director of Campbell Milton Roofing Ltd and Catherine Milton is the company secretary. All legal work is performed by Fiona Dyson.

Requirements

2.1 Based on the information given above, identify the potential related party transactions you expect to encounter during the audit of AB Milton Ltd and summarise, giving your reasons, what disclosure, if any, will be required in the full statutory accounts.

2.2 Prepare notes for a training session for junior staff on how to identify related party transactions. Your notes should include the following:

(a) A list of possible features which could lead you to investigate a particular transaction to determine whether it is in fact a related party transaction

(b) A summary of the general audit procedures you would perform to ensure that all material related party transactions have been identified

CHAPTER 6

3 TrueBlue Ltd

You are planning the audit of TrueBlue Ltd, a company that has experienced a downturn in trading over recent years. The finance director has provided you with the following information for you to review before a planning meeting with him.

Statement of profit or loss and other comprehensive income extracts

	20X7	20X6	20X5
	£	£	£
Revenue	18,944,487	20,588,370	24,536,570
Cost of sales	14,587,254	14,413,543	17,176,922
Gross profit	4,357,233	6,174,827	7,359,648
Advertising and marketing	554,288	206,688	207,377
Legal costs	14,888	2,889	34,668
Electricity	199,488	204,844	206,488
Travel costs	65,833	30,892	53,588
Audit fee	21,000	21,000	20,488

Statement of financial position extracts

	20X7	20X6	20X5
	£	£	£
Trade receivables	3,477,481	3,553,609	4,089,783
Trade payables	1,056,090	1,027,380	1,164,843

Cost of sales analysis

	20X7	20X6	20X5
	£	£	£
Purchases	9,183,388	9,246,420	10,483,588
Other direct costs	6,419,410	6,894,300	7,087,148
Inventory movement	(1,015,544)	(1,727,177)	(393,814)

Requirements

3.1 Outline the areas of the financial statements you would discuss with the finance director at your planning meeting as a result of the analytical procedures that you perform on these figures, giving your reasons and also set out any further information you would request.

3.2 Explain whether your approach would be different if you had received a tip off that the finance director has been carrying out a fraud on receipts from receivables and, if it would be different, outline how it would be different.

3.3 Describe how you approach the audit of receivables as a result of the tip off about the finance director.

4 Tofalco plc

You are an audit senior in the process of carrying out the final audit for the year ended 30 September 20X0 for Tofalco plc, a construction company with business activities across the UK and Ireland.

The following message is left on your answer machine by Paul Sykes, Head of Audit. "Good morning Jeremy,
Paul Sykes here. Hope all is well with you.

I have left a memo in your mailbox with the items outstanding on the year-end audit of our client Tofalco plc.

Please prepare a memo showing the appropriate financial reporting treatment for each item in the financial statements for the year ended 30 September 20X0 and the audit procedures required to gain assurance in each area.

I am concerned as the directors appear to be unwilling to provide full details of their related parties' remuneration and seem to be denying access to the company board minutes. They are also refusing to recognise the obligations required under IAS 37 with respect to environmental costs. Please give me your opinion on the effects of these non-compliance issues on audit risk and on the form of the audit report to be issued.

Tofalco plc have also asked that we advise them on the way they should work with Investo Ltd, a company to which they plan to outsource their investment activities. Tofalco plc wishes to agree on terms of co-operation that minimise risks of financial loss, fraud and error. Is there any impact on our audit going forward?

Finally, can you prepare a list of the ethical issues you foresee on this assignment. They would be helpful to have to hand.

Call me if you have any queries."

To: Jeremy Wiquad

From: Paul Sykes

Date: 5 November 20X0

Subject: Year-end audit of Tofalco plc – Outstanding points

Construction contracts

Tofalco plc's largest current project is the construction of a water pipeline under the Mediterranean Sea. The project commenced late in 20W9 and completion is not expected until 20X6.

By 30 September 20X0, the following figures apply.

	£m
Sales value of contract	8,500
Costs incurred to date	400
Estimated future costs	7,000
Sales value of work completed to date	560

The directors do not yet believe that the project is sufficiently far advanced for the outcome to be assessed with any degree of certainty. The company's accounting policy is to take attributable profit on the basis of the sales value of the work completed.

Environmental and other provisions

Tofalco plc has a number of long-term obligations arising from the local laws on the environment. Tofalco is obligated to dispose of its scrap machinery in a particular way which minimises the damaging effect on the environment.

The machinery held by Tofalco at the year end has a total carrying amount of £25 million and it is estimated that the present value of the cost to dispose of these machines will be some £2.5 million.

One of Tofalco's biggest customers, Stirly plc, is refusing to pay a sum of £4 million. No provision has been created by the company and the reasons are unclear as to why Stirly plc is holding back payment, with management being vague in their explanations and appearing to be denying access to the company board minutes.

Assets held for sale

On 1 January 20X0, Tofalco plc committed to selling an owner-occupied building which had a carrying amount of £2.16 million at that date. The building was available for immediate sale from that date but the company continued to occupy and use the building until 1 February when the carrying amount was approximately £2.1 million. The recoverable amount is estimated at £1.7 million. The building has yet to be sold by 30 September 20X0.

Issue of convertible loan stock

On 1 March 20X0, Tofalco plc issued £18 million of convertible loan stock, which is either redeemable in three years' time for £20 million, or convertible into 500,000 ordinary £1 shares.

The present values of the cash flows, discounted at the interest rate on a debt instrument with similar terms except that there is no conversion option, are as follows.

	£
Present value of principal	15,902,000
Present value of interest	960,000
	16,862,000

Related parties

Tofalco plc purchases significant quantities of raw materials from Sandstone Ltd, a company whose Finance Director is also a shareholder in Tofalco plc. During the year ended 30 September 20X0 alone, Tofalco plc purchased £230 million worth of raw material from Sandstone Ltd with a credit payment period of three months. The normal credit period provided within the industry is two months.

Requirement

Respond to Paul Sykes's request.

Now go back to the Introduction and ensure that you have achieved the Learning outcomes listed for this chapter.

Answers to Interactive questions

Answer to Interactive question 1

Audit area	Key question	Examples of procedures	Assertions
Non-current assets	Should it be in the accounts at all?	Physically verify Inspect title deeds/invoice/vehicle registration documents Board minutes and other authority thresholds	Existence Rights and obligations
	Is it included at the right amount?	Inspect invoices/contracts Check depreciation	Accuracy, valuation and allocation
	Are there any more?	Review other accounts for items which should be capitalised Check assets physically verified are included in the financial statements	Completeness
	Is it properly disclosed and presented?	Companies Act checklist	Classification Presentation
Receivables	Should it be in the accounts at all?	Circularisation After date cash Inspect invoices	Existence Rights and obligations
	Is it included at the right amount?	Inspect ageing analysis After date cash	Accuracy, valuation and allocation
	Are there any more?	Conclusion derived from sales completeness testing Cut-off work	Completeness
	Is it properly disclosed and presented?	Companies Act checklist	Classification Presentation
Payables	Should it be in the accounts at all?	Suppliers' statement reconciliation Conclusion derived from purchases testing	Existence Rights and obligations
Payables	Is it included at the right amount?	Suppliers' statement reconciliation	Accuracy, valuation and allocation
	Are there any more?	Unpaid invoices review Review payments after year end to check for omitted liabilities Cut-off work Review for obvious omissions of accruals Review payables at last year end to check for omissions this year	Completeness

Audit area	Key question	Examples of procedures	Assertions
		Review knowledge of major suppliers to check for omissions	
	Is it properly disclosed and presented?	Companies Act checklist	Classification Presentation
Inventory	Should it be in the accounts at all?	Attend inventory check – test from records to test counts Cut-off work Consider inventory held for third parties or on consignment	Existence Rights and obligations
	Is it included at the right amount?	Inspect invoices and other costing evidence Review for slow-moving or obsolete items Evidence of slow-moving or damaged items from inventory check	Accuracy, valuation and allocation
	Are there any more?	Attend inventory check – test from test counts to records Cut-off work Consider other locations, inventory held by third parties on consignment	Completeness
	Is it properly disclosed and presented?	Companies Act checklist	Classification Presentation

Answer to Interactive question 2

2.1 The relevant financial statement assertions would be as follows.

- **Completeness**

  There is a risk that all share-based payments may not have been recognised in the financial statements, as the provision of the benefit to the employee may not arise until some point in the future. For example, in this case the options cannot be exercised until the directors have been with the company for three years. In accordance with IFRS 2 the service acquired in a share- based payment should be recognised as received.

- **Accuracy**

  The remuneration expense should reflect the fact that the service received in exchange for the share-based payment will be received over a period of time ie, three years (see calculation below). It also needs to be estimated how many of the five directors will remain with the company and hence how many of the options are likely to vest.

- **Accuracy, valuation and allocation**

  Equity should be increased by the fair value of the options at the grant date (see calculation below).

  Remuneration expense this year and equity recognised in respect of the options will be: (5 × 100,000) × £3/3 years × 4/12 = £166,667

2.2 The relevant financial statement assertions relate to disclosure as follows.

- **Classification**

  Whether the transaction is a related party transaction. 40% would appear to indicate the ability of Wiggam plc to exert significant influence assuming no other entity has control.

- **Completeness**

  Whether there are any other related party transactions between these two parties and/or whether there are any additional related party relationships.

- **Accuracy**

  If the disclosure states that the transaction is on an arm's length basis this must be substantiated.

2.3 The relevant financial statement assertions are:

- **Classification**

  Whether a bond should be classified as debt or equity. In this case it is a compound instrument. The liability and equity component will be shown separately.

- **Accuracy, valuation and allocation**

  The liability component should be computed as the present value of the maximum potential cash flows discounted @ 10% as follows.

Year	**Cash flow**	**DF @ 10%**	**Net present value**
	£		**£**
1	6,000	0.909	5,454
2	106,000	0.826	87,556
Liability			93,010

The residual amount is the equity component (100,000 – 93,010) = £6,990.

Answer to Interactive question 3

3.1 Appropriate – relevance

The relevance of audit evidence should be considered in relation to the overall audit objective of forming an opinion and reporting on the financial statements. The evidence should allow the auditor to conclude on the following:

- Statement of financial position items (existence, rights and obligations, completeness, accuracy, valuation and allocation, classification and presentation)
- Statement of profit or loss items (occurrence, completeness, accuracy, cut-off, classification and presentation)

The representations by management in respect of the completeness of sales are relevant to the first of the objectives when gathering evidence on revenue items. Depending on the system operated by the client and the controls over cash sales there may be no other evidence as to the completeness of sales.

Appropriate – reliable

Reliability of audit evidence depends on the particular circumstances but the standard offers three general presumptions:

- Documentary evidence is more reliable than oral evidence.
- Evidence obtained from independent sources outside the entity is more reliable than that secured solely from within the entity.

- Evidence originated by the auditor by such means as analysis and physical inspection is more reliable than evidence obtained by others.

The oral representations by management would be regarded as relatively unreliable using the criteria in the standard, as they are oral and internal. In the absence of any external or auditor-generated evidence, the auditor should ensure that these representations are included in the letter of representation so that there is at least some documentary evidence to support any conclusions.

Sufficiency

The auditor needs to obtain sufficient relevant and reliable evidence to form a reasonable basis for their opinion on the financial statements. Their judgements will be influenced by such factors as:

- their knowledge of the business and its environment;
- the risk of misstatement; and
- the persuasiveness of the evidence.

3.2 Appropriate – relevance

The flowcharts prepared by the internal audit department will not be directly relevant to the auditor's opinion on individual figures in the financial statements, but rather when the auditor is following the requirement in ISA 315 to obtain an understanding of the entity's information system of recording and processing transactions. The auditor will wish to assess the adequacy of the system as a basis for the preparation of financial statements so the flowcharts will be relevant only if they are sufficiently detailed to allow the auditor to carry out this assessment.

The auditor would also wish to make an initial assessment of internal controls at this stage so the flowcharts will be more relevant if control procedures are specifically identified.

Appropriate – reliable

The assessment of how reliable the flowcharts are would depend on the auditor's overall assessment of the internal audit department. The factors to be considered would include its degree of independence, the scope of its work, whether due professional care had been exercised, the technical competence and the level of resource available to the internal audit department. This assessment should be documented by the external auditor if they are to make use of the flowcharts in their audit planning and design of tests.

Sufficiency

Client-prepared flowcharts are **not** sufficient as a basis for the auditor's evaluation of the system. To confirm that the system does operate in the manner described, the auditor should perform 'walkthrough' checks, tracing a small number of transactions through the system. There is, however, no need for the auditor to prepare their own flowcharts if they are satisfied that those produced by internal audit are accurate.

3.3 Appropriate – relevance

Year-end suppliers' statements provide evidence relevant to the auditor's conclusions on:

- the completeness of payables, as omissions from the purchase ledger listing would be identified by comparing statements received to that listing;
- the existence of payables recorded in the purchase ledger;
- the fact that the liabilities are properly those of the entity (for example, the statements are not addressed to, say, the managing director in his own name); and
- the valuation of payables at the year end with respect to cut-off of invoices and credit notes, and discounts or allowances.

Appropriate – reliable

Suppliers' statements would generally be seen as reliable evidence, being documentary and from sources external to the entity. If the auditor had doubts as to the reliability of this evidence, it could be improved by the auditor originating similar evidence by means of a payables circularisation rather than relying on suppliers' statements received by the client.

Sufficiency

Suppliers' statements would generally be seen as reliable evidence, being documentary and from sources external to the entity. If the auditor had doubts as to the reliability of this evidence, it could be improved by the auditor originating similar evidence by means of a payables circularisation rather than relying on suppliers' statements received by the client.

3.4 **Appropriate – relevance**

The physical inspection of a non-current asset is clearly relevant to the auditor's opinion as to the existence of the asset, and to some extent the completeness of recording of assets; that is, the auditor can check that all the assets inspected have been recorded. In certain circumstances evidence relevant to valuation might be obtained; for example, where a client has written down a building due to impairment in value and the auditor sees it standing unused and derelict.

Appropriate – reliable

Physical inspection of a non-current asset is a clear example of auditor-originated evidence, so would usually be considered more reliable than that generated by others.

Sufficiency

Inspection of a non-current asset would be sufficient evidence as to the existence of the asset (provided it was carried out at or close to the end of the reporting period). Before concluding on the non-current asset figure in the accounts, the auditor would have to consider the results of their work on other aspects, such as the ownership and valuation of the asset.

3.5 **Appropriate – relevance**

The comparison of revenue and expenditure items with prior periods will provide evidence as to:

- completeness of recording, as omissions can be identified and investigated;
- accuracy, in cases where the auditor has appropriate information on which to base expectations, for example, if the number of workers has doubled during the year and a set percentage wage increase had been effected in the year; and
- presentation, as the comparison should highlight any inconsistencies of classification and treatment from year to year.

Appropriate – reliable

Analysis such as this comparison of revenue and expenditure items with the prior periods would again be termed auditor-generated evidence, and would be considered more reliable than evidence generated by others. Ultimately the reliability of such audit evidence depends on the reliability of the underlying data; this should be checked by tests of controls or substantive procedures.

Sufficiency

In addition to the general considerations, such as risk and materiality, the results of a 'comparison' alone would not give very persuasive evidence. It would have to be followed by a detailed investigation of variances (or lack of variances where they were expected). The results should be compared to the auditor's expectations based on their knowledge of the business, and explanations given by management should be verified. The persuasiveness of the evidence should be considered in the light of other relevant testing, for example tests of controls in payments systems and substantive testing of expense invoices.

3.6 **Appropriate – relevance**

The proof in total calculation will provide evidence as to the accuracy of the interest expense. Typically this would be calculated by multiplying the interest rate applicable to the loan to the average amount of the loan for the period. Any significant difference between the total calculated by the auditor and the amount in the financial statements would need to be investigated further.

Appropriate – reliable

As above, the proof in total would again be termed auditor-generated evidence, and would be considered more reliable than evidence generated by others. Ultimately the reliability of such audit evidence depends on the reliability of the underlying data. Timings of repayments would need to be considered when calculating the average level of the loan during the period and the interest rate would need to be agreed to the loan agreement.

Sufficiency

The interest payable on the loan is likely to be relatively low risk but could be material. The proof in total calculation may be sufficient evidence depending on the level of difference between the amount expected by the auditor and the actual amount. Any significant discrepancy would need to be investigated.

Answer to Interactive question 4

4.1 Factors to consider:

Materiality

Property, plant and equipment (PPE) is likely to constitute a material proportion of the assets in the statement of financial position of a manufacturing company. In addition, the depreciation charge may be material to profit.

Depreciation of plant and machinery is charged to cost of sales, and therefore has a direct impact on the gross profit margin of the business.

Inherent risk

Although PPE is generally regarded as having low inherent risk, the following factors may increase the level of risk for Xantippe Ltd.

- Additions to plant may be misclassified as repairs and recognised in profit or loss.
- Repairs expenditure may be capitalised in error.
- Depreciation has a direct impact on profit and can potentially be manipulated by changing the expected useful lives of assets.

Control risk

To determine the degree of reliance that can be placed on internal controls, the following will need to be examined.

- Authorisation of expenditure on new PPE
- Client procedures for periodic review of renewals/repairs accounts
- Client reconciliations between the PPE register and nominal ledger account balances

If reliance can be placed on the above controls, assurance will be obtained that:

- PPE additions are valid business items;

- capital expenditure has been included in PPE; and
- revenue expenditure written off PPE has been accurately recorded.

Strong controls, as confirmed by tests of controls, will enable the level of substantive procedures to be reduced.

4.2 Audit procedures:

Freehold property

- Agree opening balances to prior year working papers/financial statements.
- Inspect the title deeds to the property (or obtain assurance that they are held by the bank) in order to confirm continuing ownership.
- Inquire whether any valuations have been carried out in the year.
- If any valuation shows a fall in value, propose adjustment (if material).
- Inspect the property to confirm (existence) that no provision for fall in value is necessary.
- Confirm from the bank letter (and discussions with management) any charges on the property.
- Confirm all charges are properly disclosed in a note to the financial statements.
- Discuss with directors the reasonableness of their estimate of the useful life of the freehold buildings.
- Reperform the calculation of depreciation, ensuring that the freehold land is not depreciated.

Plant and machinery and motor vehicles

- Confirm opening balances to prior year financial statements.
- Obtain a list of additions in the year which reconciles with the total in the financial statements.
- For a sample of additions – trace to purchase invoices to confirm ownership – review board minutes/capital expenditure requisition for authorisation.
- Review the list of additions to ensure that all items are of a capital nature.
- For a sample of assets on the register, physically inspect to confirm existence.
- Inspect invoices for motor vehicle additions to confirm that capital cost includes VAT but excludes road tax.
- If motor vehicle additions involved a trade-in/part-exchange, discuss financial statement adjustments required with directors (since no disposals accounted for).
- Inspect vehicle registration documents to confirm ownership.
- Compare the depreciation charge (as a percentage of cost) on a category by category basis with that of the prior year to assess reasonableness.
- Reperform depreciation calculations for a sample of assets on the register.
- Obtain a list of disposals in the year which reconciles with the total in the financial statements.
- For a sample of disposals – trace sales proceeds to sales invoice and cash book – reperform calculation of profit on disposal and trace to statement of profit or loss and other comprehensive income.
- Review repairs and renewals accounts to ensure that no items of a capital nature have been written off.

Answer to Interactive question 5

Audit risks

- Revenue has increased by 15.6% as compared with 10 months to October 20X6. There is a risk that revenue is overstated. Investigations would be required as to why this increase has taken place. For example, it could be the result of a change in revenue recognition policy. Revenue may also have been affected by the translation of foreign currency sales which make up a significant proportion of total revenue. It may also be that sales prices have increased and the price lists should be reviewed for changes, including the dates when changes were made. This includes both official prices and discounting policy. It may also be that sales volumes or sales mix have changed. This should be reviewed against budgeted production.
- Gross profit margin has increased. This is because cost of sales has increased by only 7.2% compared to an increase in revenue of 15.6%. This may indicate that the increase in revenue was largely as a result of selling price increases (which would not be reflected in increased costs) rather than volume increases (which would have been reflected in increased cost of sales). This proposition would be true for a retail company but, as Darwin is a manufacturing company, there may be an alternative explanation. This is that cost of sales consists of both variable costs (eg, raw materials) and fixed costs (manufacturing overheads, such as factory rent). If sales volumes have increased significantly between 20X6 and 20X7 then, if fixed costs are significant, one would not expect costs of sales to vary proportionately with sales revenue, but would increase by a smaller percentage. The manufacturing cost structures would therefore need to be reviewed to formulate an expectation of the relationship between cost of sales and revenue when volumes increase.
- There is also a risk that revenue may be overstated due to accounting errors; for example, items in transit to overseas customers being included in both revenue and year-end inventories. This would be consistent with the increase in inventory balance. Alternatively, it could be the result of understatement of purchases.
- Changes in pricing strategy, sales mix or productivity would also have to be considered.
- Operating profit has increased and may be overstated. This could indicate understatement of operating expenses, for example through inadequate accrual for such expenses.
- Increasing inventory values.

  Assuming 360 days in a full year then inventory days have increased significantly:

  10 months to 31 Oct 20X6 4,320/14,966 × 300 days = 87 days

  10 months to 31 Oct 20X7 5,160/16,040 × 300 days = 97 days
- Inventory may therefore be overstated. This could be as a result of errors in the quantity of inventory held or errors/changes in the way the inventory has been valued.
- The business appears to be seasonal. In the 10 months to 31 October 20X6 the average monthly sales were £2,352,000. In the two months to 31 December 20X6 average monthly sales were only £1,776,000. The period to sell the inventory at 31 October 20X7 is therefore likely to be longer than would be implied by the average sales for the 10-month period, as two months of low sales are forthcoming if the pattern of 20X6 is to be repeated. This would imply inventory days of more than 97 days and thus impairment should be considered.

Answer to Interactive question 6

6.1 Observation/Impact

Observations	Impact on audit of trade payables
Gross profit margin has fallen from 24% last year to 21% this year.	Business strategy and performance must be discussed with the directors. The lower margin could arise from genuine business factors including some relating to payables such as: • new suppliers charging higher prices; and • increases in the cost of raw materials used by suppliers. These factors would have to be confirmed during the audit of payables.
Cost of sales has increased by 50% while revenue has increased by 45%.	Where the decline in margin cannot be adequately explained by business factors, accounting errors must be considered. These could include: • an inaccurate cut-off on goods received which misstates purchases and trade payables; and • misclassification between purchases and other expenses. Potential errors would increase the level of work required on payables.
Trade payables have increased by 38%, which is less than the increase in cost of sales.	The scope of circularisation and/or supplier statement reconciliation work may have to be extended if there is an increased number of suppliers, and these have not been recorded.
The trade payables payment period has been reduced slightly from 61 days last year to 56 days this year.	Information on payment terms with new suppliers (eg, for footwear) must be obtained to establish expectations. There is a risk of unrecorded liabilities (eg, due to omission of goods received not invoiced or inaccurate cut-off in the purchase ledger). Review of subsequent cash payments to payables should cover the two months after the year end.
Other payables have risen by 12% – this does not seem consistent with a reduction in the number of shops.	Payables for purchases may be misclassified as other payables.

6.2 Use of audit software

Reperformance of calculations:

- To cast the trade payables ledger file balances for comparison of the total with the balance on the control account in the general ledger.
- To check arithmetic accuracy of individual suppliers' accounts.
- Analytical procedures:
- To calculate the payment period by supplier.

C H A P T E R

6

- To compare the current year balances with the prior year balances of the major suppliers at each year end, and report any significant changes for further review.
- To determine the percentage increase or decrease for each account and in total.

Selection of data for substantive procedures:

- To select, from purchase records, a sample of suppliers for circularisation or review of supplier statement reconciliations.
- To produce a printout of the major trade payables at the year end.
- To produce an exception report of debit balances on the payables ledger.
- To select, from inventory records, receipts immediately before the year end for matching to goods received not invoiced accruals/trade payables.
- To identify unusual transactions (eg, relating to capital acquisitions through hire purchase agreements).
- To identify unusual standing data (eg, accounts for inactive suppliers).

Selection of representative samples for tests of controls:

- Of purchases – to test whether they are properly authorised and matched to goods received notes.
- Of payments – to test whether they are authorised.

Payables circularisation:

- To print requests for statements, monitor replies and produce second requests.

Cut-off:

- To identify goods received documentation unmatched on file, for verification of inventory/payables cut-off.
- To select post year end payments for verification of cash/payables cut-off.

Disclosure:

- To extract total debits to the purchases accounts and total credits in individual suppliers' accounts for comparison and reconciliation.
- To search 'other payables' for:
  - individually significant balances; and
  - names of trade payables.

Answer to Interactive question 7

Gearing ratios

Gearing = Debt ÷ (Debt + Equity)

(1) Book values

(250,000 + 150,000) ÷ (400,000 + 600,000) = 40%

(2) Market values

	£
Equity (V_e) 1,000,000 × 125p	1,250,000
Preference (V_p) 250,000 × 65p	162,500
Loan stock (V_d) 150,000 × 85%	127,500
	1,540,000

(162,500 + 127,500) ÷ 1,540,000 = 18.8%

Comment

There is a significant difference between the book and market values. In particular, the market obviously places value on the equity of the business, showing a potential confidence in the company's future. On a market-based measure, gearing appears to be low and would seem acceptable, although we have no external data to validate this.

Working capital ratios

Receivable days = (150,000 ÷ 2,000,000) × 365 = 27 days

The jewellery is sold 27 days (on average) before payment is received. Given the high value of items, there is a high risk of bad debt. Care must be taken to ensure that credit is granted only to creditworthy clients.

Payable days = (100,000 ÷ 1,200,000) × 365 = 30 days

Harrison plc pays its suppliers after 30 days (on average). This seems a reasonable amount of time, and there seems to be no pressure on liquidity from this perspective.

Inventory days = (300,000 ÷ 1,500,000) × 365 = 73 days

Inventory days seem high at 73 days. However, a wide range of different items need to be displayed in order to attract customers into the shop.

Many items, however, will be made to order, and this should be encouraged – it will help to reduce the number of inventory days.

Non-financial measures

These include the following.

- Daily number of items sold
- Repeat business/customers
- Customer satisfaction
- Time taken for 'made to order' items
- Number of repairs/faulty items sold

These types of measures are important for Harrison plc, as the volume of trade will be relatively small on a daily basis. Each extra sale will generate extra profit, and hence keeping customers happy and satisfied will improve the overall performance of the shop.

Answer to Interactive question 8

8.1 Platforms

It is not necessary to use an auditor's expert to audit the useful lives of the platforms, as there are many other available sources of evidence. Relevant procedures include the following:

- Obtaining weather reports to see whether management's determination of useful lives is consistent with them
- Comparing budgeted oil against actual oil extracted (if the budget was optimistic, so might the useful life be)
- Reviewing published industry comparators (such as Shell and BP); if the useful lives of their platforms as published in financial statements is significantly different, discuss with management why that might be
- Considering whether management's determination of useful lives in the past has been proved accurate

8.2 It is not necessary to use an auditor's expert, as the question states that a 'simple' test is available. The auditors should confirm that the company will be making use of this test during the inventory count to separate the inventory. The auditor should reperform the test on a sample of brass and copper as counted to ensure they have been separated correctly.

Answers to Self-test questions

1 **Strombolix plc**

BRIEFING NOTE

To Charles Church (partner)

From A Senior

Date 25 July 20X2

Subject Strombolix audit

Issues on the audit to date

(1) **Trade receivables Issues arising**

One type of paint has suffered problems of decay after only a short period of use, and customers are refusing to pay for recent deliveries. If these claims are valid (as would be indicated by the fact that the complaints are coming from several different independent sources) this creates a number of issues.

- The most obvious issue is assessing the need to make provision against, or write off, the £50,000 of receivables relating to the claim. If the claim is valid the receivables should be written off immediately.
- Given that the decay only occurs after a few months, at least some of the paint is likely to have been paid for already: thus repayment in respect of these sales is due. Under IAS 37, *Provisions, Contingent Liabilities and Contingent Assets* an obligating event has occurred (the sale of faulty paint) and there is a probable transfer of economic benefits which can be reasonably estimated.
- Provision will also need to be made against any inventories that may be held of this type of paint, as they cannot be sold if faulty. This should include any disposal costs.
- If wholesale customers of Strombolix are being sued by their own customers, it is very probable that they will in turn consider litigation against Strombolix. Part of any claim will be for the paint itself for which provision is to be made as suggested above. Additionally, however, there is likely to be a claim for the labour cost involved for the removal of the old paint, in applying new paint and for disruption. Consideration should be given to making provision for these amounts, but they are more uncertain in their nature, not least because there does not currently appear to be any such legal claim against Strombolix. The situation will need to be monitored up to the time of audit clearance to reassess the situation at that date.
- If wholesale customers of Strombolix are being sued for the faulty paint, consideration should also be given to making similar provisions in respect of the sales by Strombolix of the paint to its own retail customers.
- The necessary provisions are specific provisions and would be allowable for taxation. The tax charge for the year would therefore need to be adjusted to the extent of any provisions made. The deferred tax charge would need to be adjusted accordingly.

Audit procedures

The key audit issue is to establish whether there is a technical fault in the paint. If there is, as seems likely, then it will be necessary to establish the extent of the problem by ascertaining the following in respect of this particular paint.

- The amount of receivables outstanding
- Total sales to date to wholesale and retail customers
- Amount of the paint in inventories
- Review any correspondence on the issue
- Review correspondence with the company's solicitors
- Establish whether Strombolix made the paint itself or whether it was purchased from a supplier, in which case there may be a corresponding claim by Strombolix
- Speak to the company's production/technical director to establish the nature of the problem and whether any other paints may be affected
- Attempt to estimate the non-material costs which customers may incur in replacing the faulty paint
- Review returns inwards and customer compliant files from retail customers in respect of the faulty paint
- Review the latest situation with respect to litigation on a continuing basis up to the time of audit completion

Questions for finance director

- Does the company accept that it was at fault with respect to this paint?
- What attempts have been made to evaluate liability?
- What is the current status of any litigation against the company?

(2) Inventories Issues arising

A special retail offer of '3 for 2' on wallpaper purchased from an outside supplier during the year has been incorrectly recorded, as the offer was not programmed into the company's IT system. The company also intends to take credit for a proportion of a quantity bonus payable by the supplier in respect of this product.

There are two key audit issues.

- There has been a systems error which appears to have gone undetected and unreported for some time. This raises concerns about the operation of the accounting and internal control systems more generally.
- The extent of the substantive errors needs to be established and adjusted.

Systems errors – inventories

- Establish why the special offer was not programmed into the IT system.
- Establish whether any other such programming omissions occurred.
- Investigate why the error was not reported back to programmers from store managers who were instructing sales staff to read only two of the three items.
- Consider the level of understanding of store managers of the IT system, and whether this may have contributed to other similar errors.
- Establish how the error was ultimately detected, and thus what other controls had failed to detect the problem before its discovery.

Substantive errors – inventories Misstatement relating to special offer

- If the third item in each transaction was unrecorded, the IT records will overstate inventory. If 20,000 units have been recorded (if they have all been sold through the special 3 for 2 offer) 10,000 have been unrecorded. This will mean reducing inventories in the IT records by a maximum of £50,000.
- Adjustment will need to be made for any similar errors discovered by the above systems review.

Taking credit for bonus

- Strombolix appears to be intending to take credit for part of the supplier's bonus in its draft financial statements. The bonus is, however, effectively a contingent asset under IAS 37, as the payment is dependent on making total sales of 40,000 units, including some in the future. If this is only probable, disclosure can be made, but a pro rata amount cannot be included in the statement of profit or loss and other comprehensive income in the year to 30 June 20X2.
- If,on the basis of post year end evidence before audit completion, it is virtually certain that sales of 40,000 units of the product will be made, and that settlement will be made by the supplier, then a pro rata recognition is appropriate. However, as the sales appear to be made on the total level of sales made by the supplier to Strombolix (ie, including the 'free' goods and perhaps any goods still in inventories), then the credit would be a maximum of £67,500 (ie, (30,000 ÷ 40,000) × £90,000) if all sales were through the special offer.
- In the absence of near certainty over attaining the bonus, there is an inventory valuation problem. If the bonus is not paid, the NRV of any inventories remaining is less than its cost. For example, a batch of three units would be valued in inventories at £15 (3 × £5), whereas its NRV is only £12 (2 × £6). In this case, consideration should be given to writing down each inventory item to £4 (ie, £12 ÷ 3).

Audit procedures

- Obtain explanations for the systems error.
- Review the company's internal control procedures with respect to the inclusion in the IT system of non-standard sales arrangements.
- Obtain explanations for the non-reporting of the error by store managers.
- Review the scope for similar errors in the system in respect of both detection and reporting.
- Consider whether (and if not, why not) the physical inventory count detected the IT error.
- Evaluate the number of sales of the product made through the '3 for 2' special offer, as opposed to single purchases.
- Review post year end sales to assess the probability of achieving the bonus payment from the supplier.
- Consider the adequacy of the inventory provision in the light of the results of the above.

Questions for finance director

- How did the systems error occur in respect of the special '3 for 2' offer?
- Why did it go undetected?
- What is the justification for taking credit for part of the bonus from the supplier when the target has not been achieved at the year end?

(3) Capitalisation of interest Issues arising

The company had a new superstore constructed during the year, and it borrowed to finance this project. The interest on the borrowing was all capitalised.

IAS 23, *Borrowing Costs* requires borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset to be capitalised as part of the cost of the asset. It defines a qualifying asset as one that takes a substantial period of time to get ready for its intended use or sale (IAS 23.5). The treatment adopted by the company therefore appears to comply with the IAS providing that the borrowing costs are 'directly attributable' to construction ie, they would have been avoided if expenditure on the construction of the asset had not been incurred.

The finance costs on the relevant borrowings become part of the overall asset and are therefore recognised in profit or loss as the asset is depreciated over its useful life, rather than as incurred.

Capitalisation should cease when substantially all the activities necessary to get the asset ready for its intended use or sale are complete (IAS 23.22). It is the availability for use which is important, not when it is actually brought into use. An asset is normally ready for its intended use or sale when its physical construction is complete.

It would appear that the interest capitalised in respect of the new superstore is as follows.

Period	Payment for	Calculation capitalised	Interest
			£
1.8.X1–30.6.X2	Land	11/12 × £400,000 × 8%	29,333
1.12.X1–30.6.X2	Progress payment	7/12 × £1m × 8%	46,667
1.6.X2–30.6.X2	Progress payment	1/12 × £1m × 8%	6,667
			82,667

Assuming that commencement of preparation for planning permission was the earliest date at which the company commenced to 'get the asset ready for use', then the correct interest to be capitalised is as follows.

Period	Payment for	Calculation capitalised	Interest
			£
1.9.X1–30.5.X2	Land	9/12 × £400,000 × 8%	24,000
1.12.X1–30.5.X2	Progress payment	6/12 × £1m × 8%	40,000
			64,000

The difference of £18,667 (£82,667 – £64,000) should be treated as a cost for the year in the statement of profit or loss and other comprehensive income under 'finance costs'. There should also be a corresponding deduction from the cost of the asset in the draft financial statements.

The amount of borrowing costs that must be capitalised is limited by the requirement that the total value of the asset (including borrowing costs) should not exceed the asset's recoverable amount.

The following disclosure should be made where interest is capitalised within non-current assets.

- Aggregate finance costs included in non-current assets
- Finance costs capitalised in the year (including £64,000 in respect of this transaction)
- Finance costs recognised in profit or loss (including £18,667 in respect of this transaction)
- Capitalisation rate used (8%)

Audit procedures

- Loan agreement to be inspected for interest rate and other terms
- Contract for building the superstore and associated documentation to be inspected – particularly for amounts and dates in this context

- Evidence of the date on which activity commenced to 'get the asset ready for use' to be inspected eg, preparation for planning permission
- Evidence of the date on which the asset was ready for use to be gathered (eg, builder's reports and other correspondence)
- Confirm that the policy on interest capitalisation is consistent with that previously adopted when building other stores

Questions for finance director

- Why was there a delay between the purchase of land and the commencement of preparation for planning permission?
- Does he accept that the revised calculation (above) is consistent with IAS 23?

General concerns arising from the takeover bid

The takeover bid is an inherent risk in the context of this audit, particularly as the directors are attempting to defend the bid. In this case they will be attempting to show the company in the best possible light. This may involve disclosing the highest possible profit in the financial statements.

This policy would be consistent with the audit issues discovered, in that there does not appear to be any provision in respect of receivables or inventory in audit issues (1) and (2). Similarly, the amount of interest capitalised in (3) appears to present an overoptimistic figure for profit.

Consideration will thus need to be given to the extent of reliance that can be placed on management assurances and managerial control in this audit, even if they have proved reliable in the past.

Moreover, if the financial statements are misstated there is a possibility of litigation against our firm for third-party negligence if Simban suffers a loss or if it relies on the financial statements – and we know it is relying on the financial statements for the purpose of the takeover. To some extent a report of due diligence before takeover may mitigate some of this risk, but this cannot be relied on entirely.

Consider the impact of time pressure being placed on the audit.

Reconsider materiality levels and the risk assessment in the audit plan in the light of the takeover bid.

2 AB Milton Ltd

2.1 Potential related party transactions

Person/entity	Related party	Why	Transaction
Alexander Milton	α	Director	No transactions mentioned
Brian Milton	α	Director	No transactions mentioned
Brian's wife	α	Wife of director	
Edward Murray	α	Director	Purchases of stationery
Murray Design	α	Entity controlled by a director	
Diane Hardy	×	No longer close family and does not have control or significant influence	
Fiona Dyson	α	Presumed close family and shadow director	Contracts drawn

Person/entity	Related party	Why	Transaction
Cuts and Curls	?	(see below)	Rental agreement
Campbell Milton Roofing	α	Sub of AB Milton	Work done for AB (see below)
Ian Campbell	α / ×	Could be considered key management of group	

Cuts and Curls is not clear cut. For it to be a related party Gillian Milton would need to be in a position to control Cuts and Curls and then due to her relationship with Alexander Milton her company would come under the related party umbrella. Gillian only holds 50% and therefore holds joint control with her mother.

Disclosure

The related party relationship between AB Milton and Campbell Milton Roofing must be disclosed, as it is a relationship between a parent and a subsidiary. This disclosure must be provided irrespective of whether a transaction takes place.

For other related party relationships disclosure is only required where a transaction has taken place. In this case that would apply to the transactions with Edward Murray, Fiona Dyson and potentially Cuts and Curls. Disclosure is required of the nature of the related party relationship as well as information about the transaction and any outstanding balances necessary for users to understand the potential effect of the relationship. Disclosure should include the following as a minimum:

- A description of the relationship
- A description of the transaction and the amounts included
- The amounts due to or from the related party at the end of the year
- Any other element of the transaction necessary for an understanding of the financial statements

2.2 Notes for staff training sessions:

(a) We are required to assess the risk of undisclosed related party transactions and to design our audit procedures in response to that risk. A logical place to start the audit of related party transactions would be to identify all possible related parties. This would always include the following:

- Directors and shadow directors
- Group companies
- Pension funds of the company
- Associates

It is likely that the other related parties would include the following:

- Key management (perhaps identified by which staff have key man cover)
- Shareholder owning > 20% of the shares
- Close relatives and associates of any of the above

All related party transactions must be disclosed. Related party transactions do not necessarily have to be detrimental to the reporting entity, but those which are will be easier to find. The following features, among others, may indicate this:

- Unusually generous trade or settlement discounts
- Unusually generous payment terms
- Recorded in the nominal ledger code of any person previously identified as a related party (for example, director)

- Unusual size of transaction for customers (for example, if the company were paying a suspiciously high legal bill for a building company)

(b) Audit procedures to identify related party transactions are as follows. Risk assessment procedures:

- Discussion by the audit team of the risk of fraud-related misstatements
- Enquiries of management
- Obtaining an understanding of the controls in place to identify related party transactions

Other procedures might include:

- Identification of excessively generous credit terms by reference to aged trade accounts receivable analysis
- Identification of excessive discounts by reference to similar reports
- Scrutiny of cash book for payments made to directors or officers of the company (probably more realistic for smaller entities)
- Review of board minutes for evidence of approval of related party transactions (directors are under a fiduciary duty not to make secret profits)
- Written representations from directors to give exhaustive list of all actual/potential related parties (that is, allow us to make the materiality assessment, not them)
- Review of accounting rewards for large transactions, especially near the year end and with non-established customers/suppliers
- Identification of any persons holding > 20% of the shares in the entity by reference to the shareholders' register

3 TrueBlue Ltd

3.1 Discussion with the finance director Revenue and marketing expense

The trend of falling revenue has continued in 20X7 from previous years. The problem seems worse in view of the fact that 20X7 saw a substantial increase in advertising and marketing expenditure, without which the fall would presumably have been greater. It is important to investigate this situation and the action taken in relation to it, because the company could be facing significant going concern problems if its products are no longer required by the market. However, the revenue fall in 20X7 from 20X6 is not as significant as from 20X5, and it is possible that the sales trend in 20X6 and the beginning of 20X7 has been reversed and the company might be beginning to perform well again.

Additional information required:

- Does the additional marketing spend relate to 20X7 or was it to encourage sales in the future?
- Were there any sales forecasts produced in connection with the marketing spend?
- Can you provide details of sales month by month to show the revenue pattern throughout the year, particularly in relation to the marketing spend?
- Does management have other plans/intentions with regard to boosting revenue, particularly if the additional marketing spend in 20X7 has not produced the expected results?

Gross profit percentage

The gross profit percentage was stable in 20X6 and 20X5 at 30% but it has dropped in 20X7 to 23%. This implies either that there is a mistake in the figures (for example, an expense may have been analysed incorrectly; there may have been an error in final inventory counting or valuation; or some sales may not have been included correctly in revenue hence it has fallen), or that there has been a change in the cost structure or sales mix resulting in this fall.

With revenue falling, if sales are also becoming less profitable, the problem outlined above might be intensified. Alternatively, a new sales mix may be the directors' approach to solving revenue fall and, in the long term, increased sales at a lower margin might be the new situation for the company.

Additional information required:

- The reason for the fall in gross profit percentage
- Analysis of sales by month and product
- Further analysis of cost of sales figures

Receivables

The trade receivables balance has fallen over the three years, which is in line with the fall in revenue. However, it has not fallen at the same rate, which is shown by the fact that the receivables days calculation shows that debts are now taking six more days to collect than they were in 20X5. The significant change occurred in 20X7, with the day calculation falling from 63 to 67 days in 20X7 as opposed to 61 to 63 in 20X6.

The increase could be caused by any of the following factors.

- The marketing event has caused a change in sales patterns/debt collection later in the year (this would be revealed by analysing detailed sales information outlined above).
- Problems with credit control/the company has uncollectible debts on the ledger that should realistically be written off.
- It is possible that a receivables ledger fraud is being carried out.

Credit control problems would constitute a control deficiency that the auditors should note and respond to with regard to their audit. They should assess whether the problems with control extend further than the credit control department, as widespread control issues could significantly affect risk assessment.

If there is a large amount of old debt on the ledger, a truer picture would be presented if it were written off. Similarly, a fraud being carried out on the ledger would affect the true and fair view. Four days represents 1% of the year, and therefore 1% of revenue (taken on an average basis) and it is therefore a material issue.

Further information required:

- Aged analysis of the receivables ledger to identify whether any significant aged debts exist which require writing off
- Remittance advices from customers to assess payment patterns

Inventory, cash and liquidity

The inventory movement assessment in the cost of sales analysis shows that inventory levels at the company have risen consistently at the company over the last three years so that the inventory balance is now £3 million higher than at the start of 20X5. Direct production and purchase costs have remained stable over those years, suggesting that operation levels have not changed to reflect the situation in the market and the falling sales position. This is likely to have had a devastating impact on the cash position of the company. The statement of financial position will show a significantly illiquid position with an inventory pile and a decrease in receivables conversion rate. If it also shows a significant cash deficit then there are immediate concerns about whether the company can continue to finance operations.

Further information required:

- Production levels in 20X7 and management's future intentions concerning production
- Bank statements and statements of cash flows and projections
- Inventory sheets from 20X7 count
- Inventory valuation sheets from 20X7

Other expense items

The other expense items provided in this analysis are immaterial in relation to revenue and therefore the auditor would not focus on them at the planning meeting.

WORKINGS

(1) Gross profit margin

20X7

4,357,233 ÷ 18,944,487 = 23%

20X6

6,174,827 ÷ 20,588,370 = 30%

20X5

7,359,648 ÷ 24,536,570 = 30%

(2) Receivables days

20X7

(3,477,481 ÷ 18,944,487) × 365 = 67 20X6

(3,553,609 ÷ 20,588,370) × 365 = 63 20X5

(4,089,783 ÷ 24,536,570) × 365 = 61

(3) Payables days

20X7

(1,056,090 ÷ 9,183,388) × 365 = 42 20X6

(1,027,380 ÷ 9,246,420) × 365 = 41 20X5

(1,164,843 ÷ 10,483,588) × 365 = 41

3.2 If fraud is suspected

The auditor is required to approach their task with an attitude of professional scepticism. Therefore, in theory, the auditor should not approach the task differently if fraud has been suggested than they would have before. The questions arising from the analytical procedures would be the same, and the auditor would still seek to corroborate the answers and then assess whether they are satisfied with the corroborated answers. Given that the auditor is required to be aware that fraud is a possibility whether they have been tipped off or not, the corroboration of the finance director's answers should have been thorough and based on sources other than the finance director (such as third-party invoices and the opinions/experience of other sources in the company) anyway.

If the auditor has been given a tip off that fraud exists, he should pass on that information to the appropriate level of management. In this case, this would be the audit committee, as the tip off concerns the finance director.

3.3 Approach to the audit of receivables

There is a good source of third-party evidence in relation to the receivables balance; that is, the customers. Usually trade receivables is audited by means of direct confirmation. It is likely that the receivables balance at TrueBlue has been audited by a receivables confirmation in previous years and, if there is a fraud being carried out on this balance, then it has not been uncovered by the audit procedures. It is possible that the audit procedures have become repetitive, that the same (largest) customers have been selected to test year on year and that the finance director has been able to carry out a small scale fraud on smaller balances less likely to be tested, or that the fraud has only been carried out in the current year.

The auditors should carry out a receivables confirmation in this year, as it is the best source of audit evidence. They should increase the sample size to reflect the risk associated with the balance and extend testing to a larger number of customers than has previously been the case.

In addition, the auditors should carry out some transaction testing on sales receipts in the year, tracing the transactions through the system and trying to match receipts with invoices on the sales ledger.

If a fraud has been carried out in this area it casts significant doubt on the controls in this area and the auditors should consider whether controls throughout the accounting function might also not be operating effectively and what impact that has on the rest of the audit.

4 Tofalco plc Memorandum

To Paul Sykes

From Jeremy Wiquad

Date 6 November 20X0

Re Tofalco plc

The memo below covers the financial reporting and auditing issues raised per your request.

Financial reporting treatment and audit procedures required

- **Construction contracts**
  - Given that the outcome cannot be foreseen reliably, no profit should be recognised in the current year. Instead, £400 million should be recognised within cost of sales and, assuming that these costs are recoverable, the same amount within revenues (therefore showing no profit and no loss). The value of the work done in the statement of financial position will therefore be £400 million.

  Audit procedures to gain assurance include:
  - reviewing the contract to confirm the duration and sales value of the contract;
  - reviewing the surveyor's report to confirm the value of the work performed to date;
  - examining internal cost reports and confirming items on a sample basis to invoices; and
  - obtaining a written representation from management with regards to the outcome of the contract.
- **Provisions** – An environmental provision for the £2.5 million present value of the cost of disposing of the machines is required per IAS 37 and should be presented within non-current liabilities. This cost should also be included as part of the cost of the asset. In subsequent years the liability will increase due to the unwinding of the discount and a corresponding finance expense will be shown within profit or loss.

Audit procedures to gain assurance include:

- reviewing the law with regards to the environmental provision and the underlying documentation relating to the £2.5 million estimate provided;
- assessing whether the discount rate used to calculate the present value of the disposal costs is appropriate; and
- discussing with management if there are other areas/machines that require equivalent 'environmentally friendly' costs and that these have been provided for. Include the completeness of these provisions in the company management representation letter.

- **Receivables** – Per IFRS 9, *Financial Instruments* (see Chapter 16), receivables are a financial asset and it appears that an impairment of receivables (the specific debt of Stirly plc) may be needed.

  Audit procedures to gain assurance include:

  - attempting to review board minutes and the correspondence file for any discussion of this issue; and
  - reviewing subsequent events for payment of the amount due.

- **Assets held for sale** – According to IFRS 5, assets are classified as 'held for sale' when, among other criteria, management are committed to the sale and the asset is available for immediate sale. The situation is not entirely clear, but the criteria are probably not fully met until February 20X0, when the recoverable amount is £1.7 million. Therefore an impairment adjustment of £0.4 million is required on the transfer of the asset to the held for sale category. The fact that the building had not been sold by September is not necessarily a concern, as 12 months have yet to elapse. However, this will be a matter for review next year.

  Audit procedures to gain assurance include:

  - reviewing management documentation (eg, correspondence with estate agent and minutes) which confirms management commitment to sell;
  - checking the building is available for sale and not being used internally by the company;
  - checking the selling price is close to the market value of the buildings in the immediate area; and
  - checking the building is advertised for sale and for immediate transfer.

- The **issue of convertible loan stock** constitutes a compound financial instrument which needs to be split between its liability and equity components for presentation in the statement of financial position.

	£
Face value of convertible bonds	18,000,000
PVs of future cash flows of equivalent bonds with no conversion option	16,862,000 Liability
Equity (warrants) (difference between the above)	1,138,000 Equity

- Audit procedures to gain assurance include:

  - reviewing the convertible bond certificate for the face value, interest and conversion terms; and
  - recalculating the present value of the cash flows relating to the equivalent bond without conversion options.

- **Related parties** – As per IAS 24, given the materiality of the transactions involved, all details of the relationship between Tofalco plc and Sandstone Ltd need to be disclosed along with the particulars of the transactions within the notes to the financial statement.

Audit procedures to gain assurance include:

- obtaining a written representation from management that all related parties have been disclosed; and
- reviewing invoice file to ensure that all transactions with Sandstone Ltd have been disclosed.

Effects of non-compliance on the audit risk and form of the auditor's report

- Refusal to provide full details means that we are unable to obtain sufficient appropriate evidence (a limitation on the scope of the audit). If the effect is deemed material, an 'except for' qualified opinion is given. If the effect is deemed 'pervasive', then a disclaimer of opinion is made to the effect that "We do not express an opinion …"
- Failure to disclose full remuneration constitutes a material misstatement (disagreement) in respect of a legal issue (we conclude that the financial statements are not free from material misstatement) and materiality by size is not a factor in this area. As the matter is material irrespective of the sums involved, then an 'except for' qualified opinion will be given.
- Refusal to recognise obligations under IAS 37 constitutes misstatement (disagreement). In the event that these costs are material, an 'except for' qualified opinion is required. In the event they are deemed pervasive, then an adverse opinion is required stating that the financial statements 'do not give a true and fair view'.

Terms of reference of working relationship with Investo Ltd

Terms need to cover key investment risks (eg, Tofalco must set guidelines and approve investment policy).

Internal controls with regards to the operation of the relationship (eg, weekly statements sent to company reconciled with third-party information – eg, contract notes, share certificates, stock exchange confirmation).

Value for money – fee comparability and return.

Impact on future audits

- Future audits will need to include procedures that address the fact that investment activities are outsourced to Investo.
- In reaching preliminary risk assessments, assessments will need to be made of the inherent, detection and control risks related to the investments balance and the terms of reference the client has with Investo Ltd.
- Controls and processes carried out by Tofalco in relation to Investo's services will need to be documented and tested (and if the risk is great enough, those present at Investo also).
- The investments balance may also require substantive testing and so the need to obtain underlying source documentation from Investo Ltd.

Ethical considerations

- Management integrity appears to be questionable in this assignment. Management will need to understand the importance of their behaviour and its implications on the audit and the relationship with the auditor.
- There appears to be non-compliance with the law with regard to environmental regulations and the disclosure of remuneration paid to related parties. These issues are non-negotiable and will lead to a modified audit opinion if not addressed by management.
- We should consider whether it is appropriate for us to accept this assignment given the problems outlined above. If we do decide to resign, we need to follow legal and professional procedures – eg, submitting a statement of circumstances to an AGM and addressing the AGM (if we wish).

Chapter 7

The statutory audit: evaluating and testing internal controls

Introduction

Learning outcomes

- Analyse and evaluate the control environment for an entity based on an understanding of the entity, its operations and its processes
- Evaluate an entity's processes for identifying, assessing and responding to business and operating risks as they impact on the financial statements
- Appraise an entity's accounting information systems and related business processes relevant to corporate reporting and communication including virtual arrangements and cloud computing
- Analyse and evaluate strengths and weaknesses of preventive and detective control mechanisms and processes, highlighting control weaknesses; including weaknesses related to cyber security and corporate data controls
- Evaluate controls relating to information technology and e-commerce; including controls associated with cyber security and corporate data security
- Explain and appraise the entity's system for monitoring and modifying internal control systems
- Devise, explain and evaluate tests of controls
- Explain the respective responsibilities of those charged with governance and auditors in respect of internal control systems

Specific syllabus references for this chapter are: 12(a)–(g), 13(h)

Chapter study guidance

Use this schedule and your study timetable to plan the dates on which you will complete your study of this chapter.

Topic	Practical significance	Study approach	Exam approach	Interactive questions
1	**Introduction** You need to remember the importance of internal controls and how they are relied upon by both the audited entity and the auditors themselves as part of sound governance.	**Approach** Be prepared to refer to earlier parts of the study materials. **Stop and think** Can you remember where we previously discussed internal controls?	This section is a reminder that you must always study your materials holistically and not consider each part in isolation.	N/A

Topic	Practical significance	Study approach	Exam approach	Interactive questions
2	**Respective responsibilities of those charged with governance and auditors** An awareness of these responsibilities will assist the auditor in focusing on the controls necessary for the creation of the financial statements.	**Approach** Work through this section with the auditing standards open book in front of you. **Stop and think** Did you remember all of the various definitions given here?	You may be asked to explain these responsibilities and why they are different to a junior member of staff.	N/A
3	**Evaluating and testing internal controls** You should be able to use tests of control as sources of valuable audit evidence.	**Approach** This will be revision from your previous studies. **Stop and think** Can you remember where you met this content before?	You should use the section on 'tests of controls' as a good recap of the type of audit procedures that a good test of control would contain.	N/A
4	**Service Organisations** If your audit client has outsourced some key financial functions, how do you make sure that you can still get the necessary audit evidence for your opinion?	**Approach** Work through this section with the auditing standards open book in front of you. **Stop and think** Can you tell the difference between type 1 and type 2 reports and do you know when each would be required?	Exam questions that test this content will be easy to spot but you will still need to explain first how service organisations create additional audit risk before you describe the impact it would have on your audit approach.	N/A
5	**Internal controls in an IT environment** When an entity uses IT systems that the auditor needs to access, the auditor needs to understand the various controls in place that govern	**Approach** While this may be revision, it is still important to be able to differentiate general and application controls. **Stop and think** You should consider how cutting edge	While there may be some IT-specific aspects that you will need to explain in an exam question (such as general and application controls that may be necessary in a given scenario) you may also be asked to	N/A

CHAPTER 7

Topic	Practical significance	Study approach	Exam approach	Interactive questions
	the way the IT works, regardless of the data being processed and stored.	technology like data analytics fits into the traditional definition of CAATs.	discuss the impact that introducing new technology (such as cloud computing) might have on a client and its accounting systems.	
6	**Cyber security and corporate data security** This is vital area for all professionals, not just those who work in finance.	**Approach** Work through this section, paying particular attention to the content on GDPR and the advice on how to protect yourself from cyber threats. **Stop and think** Can you think of a situation that either you or an organisation you are familiar with was affected by any of these issues?	Questions on this topic could take many forms, such as an assessment of how well-prepared an organisation is (or is not) against some form of cyber attack, or requesting advice on how an organisation could implement such procedures.	**IQ1: NewForm Ltd** Use this as good practice for evaluating the audit risks from an IT-based environment and explaining how IT application controls can be used in a specific part of the organisation's systems.
7	**Communicating and reporting on internal control** Although the main purpose of the audit is not to identify deficiencies in internal control, should any be identified as a result of the audit work completed, the auditor needs to pass this information on to those charged with governance.	**Approach** You covered this in your previous studies so this should be revision. **Stop and think** Can you explain what makes a deficiency in internal control significant?	You may be asked to explain deficiencies in internal control so make sure you can communicate the reasons why they are deficiencies and what the audited entity should do to address them.	N/A

Once you have worked through this guidance you are ready to attempt the further question practice included at the end of this chapter.

1 Introduction

Section overview

- An entity's system of internal controls informs the auditor's assessment of audit risk and the nature of the audit procedures that would be undertaken during the audit fieldwork stage.
- In addition to the auditing standards, corporate governance codes (such as the UK Corporate Governance Code and the Sarbanes–Oxley Act) also prescribe the respective responsibilities of the auditor and those charged with governance with regards to internal controls. However regulations such as the Sarbanes–Oxley Act has not yet been enacted in Bangladesh.

Internal control is an essential aspect of the entity about which the auditor must gain an understanding at the start of the audit. The effectiveness of the system of internal controls informs the auditor's risk assessment and, consequently, the audit procedures to be carried out at the audit fieldwork stage. Therefore, internal control will have to be considered throughout the audit life cycle
– from planning to finalisation and reporting.

In this chapter, we will revise the auditor's responsibilities with regards to the system of internal control and the consideration of internal controls at different stages of the audit. We will then have a closer look at the implications of service organisations, and the risks and benefits of internal controls in an IT environment.

As you will have seen already, internal control is central to corporate governance. Therefore, we will regularly refer back to our discussions on corporate governance in Chapter 4.

2 Respective responsibilities of those charged with governance and auditors

Section overview

- Auditors are responsible for obtaining audit evidence that provides reasonable assurance that the financial statements are free of material misstatements, some of which may be caused by error.
- Management are responsible for designing and implementing a system of internal control which is capable of preventing, or detecting and correcting, errors in the financial records.
- Auditors are required to assess the system of internal control as part of their audit in order to determine whether to rely on the system of controls or carry out extended tests of details.

2.1 Responsibilities of those charged with governance

As you no doubt already know, the responsibility for the design, implementation and maintenance of an effective system of internal control, one that is capable of preventing, or detecting and correcting, errors in the financial records, lies with those charged with governance (TCWG).

Let's revise some key definitions.

Definitions

Those charged with governance: The person(s) or organisation(s) (for example, a corporate trustee) with responsibility **for overseeing the strategic direction** of the entity and obligations related to the **accountability** of the entity. This includes overseeing the financial reporting process. For some entities in some jurisdictions, those charged with governance may include management personnel, for example, executive members of a governance board of a private or public sector entity, or an owner-manager.

Those charged with governance generally include executive and non-executive directors and the members of the audit committee.

Error: An unintentional misstatement in financial statements, including the omission of an amount or a disclosure.

Internal control: A process designed, implemented and maintained by those charged with governance, management, and other personnel to provide reasonable assurance about the achievement of the entity's objectives with regard to reliability of financial reporting, effectiveness and efficiency of operations and compliance with applicable laws and regulations. It follows that internal control is designed and implemented to address identified business risks that threaten the achievement of any of these objectives.

2.2 Auditor's responsibilities

As we outlined in your earlier studies, the auditor is required to do the following:

- Assess the system of internal controls to determine whether they are capable of preventing or detecting and correcting errors (ISA 315)
- Test the internal controls if required (ISA 330)
- Report deficiencies in internal control to TCWG where they have been identified (ISA 265)

As part of assessing the system of internal controls as part of audit risk assessment, the auditor must do the following:

- Obtain an understanding of controls relevant to the audit
- Evaluate the design of those controls
- Determine whether they have been implemented

The auditor must then test controls if:

- the auditor intends to rely on the operating effectiveness of those controls; or
- substantive procedures alone cannot provide sufficient, appropriate audit evidence.

Finally, the auditor must determine whether the audit work has identified any deficiencies in internal control and, where these deficiencies are significant, communicate the significant deficiencies to TCWG in writing on a timely basis.

In the following sections, we will look at each of these stages in further detail.

Effective internal controls form a crucial part of good corporate governance. For a more detailed discussion on the importance of internal controls, and the auditor's role in relation to internal controls, please refer back to Chapter 4.

3 Evaluating and testing internal controls

Section overview

Sources of audit evidence include tests of controls.

3.1 Evaluation of internal controls for audit purposes: revision

Understanding an entity's internal control assists the auditor in identifying types of potential misstatements and factors that affect the risks of material misstatement, and in designing the nature, timing and extent of further audit procedures.

Step 1 Initially, the auditor must determine which controls are **relevant to the audit**. There is a direct relationship between an entity's objectives and the controls it implements to provide reasonable assurance about their achievement. Many of these controls will relate to financial reporting, operations and compliance, but not all the entity's objectives and controls will be relevant to the auditor's risk assessment.

Step 2 While gaining an understanding of internal controls, the auditor must evaluate the design of the relevant controls, and determine whether the controls are properly implemented.

Evaluating the design of a control involves considering whether the control, individually or in combination with other controls, is capable of effectively preventing, or detecting and correcting, material misstatements.

Implementation of a control means that the control exists and that the entity is using it.

Step 3 Having determined which controls are relevant, and are adequately designed to aid in the prevention of material misstatements in the financial statements, the auditor can then decide whether it is more efficient to place reliance on those controls and perform tests of controls in that area, or to perform substantive testing over that area.

Step 4 If the controls are not adequately designed, the auditor needs to perform sufficient substantive testing over that financial statement area in light of the apparent lack of control and increased risk. Any deficiencies are noted and, where appropriate, these will be communicated to management.

ISA 315 (Revised) divides internal control into **five elements:**

- The control environment
- The entity's risk assessment process
- The information system relevant to financial reporting
- Control activities
- Monitoring of controls

3.2 Tests of controls: revision

You will have covered **tests of controls** in your earlier studies. The following section provides a **summary** of the key points.

Testing of controls means obtaining sufficient, appropriate audit evidence about the operating effectiveness of the controls in preventing or detecting and correcting material misstatements.

Evidence will be required to show that:

- controls were applied at relevant times during the year; and

- those controls were applied consistently (eg, because controls were performed by different people or in different locations).

Tests of control may include the following.

(a) **Inspection of documents** supporting controls or events to gain audit evidence that internal controls have operated properly eg, verifying that a transaction has been authorised.

(b) **Enquiries about internal controls** which leave no audit trail eg, determining who actually performs each function, not merely who is supposed to perform it.

(c) **Reperformance of control procedures** eg, reconciliation of bank accounts, to ensure they were correctly performed by the entity.

(d) **Examination of evidence of management views** eg, minutes of management meetings.

(e) Testing of internal controls operating on **computerised systems** or over the overall information technology function eg, access controls.

(f) **Observation of controls** to consider the manner in which the control is being operated.

Auditors should consider the following:

- **How** controls were applied
- The **consistency** with which they were applied during the period
- **By whom** they were applied

Tests of controls are distinguished from substantive procedures which are designed to detect material misstatements in the financial statements.

Deviations in the operation of controls (caused by change of staff etc) may increase control risk and tests of control may need to be modified to confirm effective operation during and after any change.

Audit procedures will include the test of control and then other procedures (eg, substantive and/or analytical procedures) to confirm the operating effectiveness of that control. Overall, audit procedures may be limited where automated processing is involved, as control errors are less likely eg, computers tend to make fewer mistakes than humans after a given procedure has been correctly programmed.

The use of computer-assisted audit techniques (CAATs) is referred to below.

Please also refer back to Chapter 4 for the auditor's responsibilities for the evaluation of internal controls from a corporate governance perspective.

3.2.1 Relationship between tests of controls and risk assessment procedures

Testing of controls should not be confused with risk assessment procedures which were performed earlier in the audit to assess the design and implementation of controls. However, in some situations risk assessment procedures may provide persuasive evidence on the operation of controls. For example, management review of budgets and investigation of variances on a regular basis is indicative that controls over sales and purchases are operating effectively.

3.2.2 Conclude on the achieved level of control risk

When control testing is complete, **residual audit risk** to be obtained from substantive testing **must be determined**. To determine the remaining detection risk the auditor will use:

- The achieved level of control risk; and
- the assessed level of inherent risk.

This detection risk is then used to decide the **nature and timing of the remaining substantive testing**.

Professional skills focus: Applying judgement

Evaluating the outcome of tests of control will require an understanding of the implications for the audit overall. This in turn will require sound skills of judgement.

4 Service organisations

Section overview

Where the auditor's client uses a service organisation, the auditor may need to obtain evidence of the accuracy of processing systems within a service organisation.

Definition

Service organisation: A third-party organisation that provides services to user entities that are part of those entities' information systems relevant to financial reporting.

ISA 402, *Audit Considerations Relating to an Entity Using a Service Organisation* provides guidance on how auditors carry out their responsibility to obtain sufficient, appropriate audit evidence when the audit client (called the 'user entity' in the standard) uses such an organisation.

The ISA mentions the following service organisation services that may be relevant to the audit (this is not an exhaustive list):

- Maintenance of accounting records
- Other finance functions, such as the tax compliance function
- Management of assets
- Undertaking or making arrangements for transactions as agents of the user entity

CHAPTER 7

4.1 Requirements of the user auditor

Definition

User auditor: An auditor who audits and reports on the financial statements of a user entity.

The ISA states that the objective of the auditor is 'to obtain an understanding of the nature and significance of the services provided by the service organisation and their effect on the user entity's internal control relevant to the audit, sufficient to identify and assess the risks of material misstatement' (ISA 402.7).

The ISA requires the auditor to understand how the user entity uses the services of the service organisation. In obtaining an understanding of the entity, the auditor shall consider the following:

(a) The **nature of the services** provided by the service organisation

(b) The **nature and materiality** of the transactions processed or accounts or financial accounting processes affected by the service organisation

(c) The degree of **interaction** between the activities of the service organisation and those of the user entity

(d) The **nature of the relationship** between the user entity and the service organisation, including the **contractual terms**

(e) If the service organisation maintains all or part of a user entity's accounting records, whether those arrangements impact the work the auditor performs to fulfil reporting responsibilities in relation to accounting records.

When obtaining an understanding of internal control the auditor shall:

(a) evaluate the design and implementation of controls at the user entity that relate to the services provided by the service organisation; and

(b) determine whether this gives sufficient understanding of the effect of the service organisation on the user entity's internal control to provide a basis for the identification and assessment of risks of material misstatement.

If not then the auditor shall do one or more of the following:

(a) Obtain a report from the service organisation's auditors (there are two different types of report, see below)

(b) Contact the service organisation, through the user entity

(c) Visit the service organisation and perform procedures that will provide information about the relevant controls

(d) Use another auditor to perform procedures that will provide information about the relevant controls

4.2 Using reports from service auditors

Definitions

Type 1 report: A report that comprises both of the following:

- A description, prepared by management of the service organisation, of the service organisation's system, control objectives and related controls that have been designed and implemented as at a specified date
- A report by the service auditor with the objective of conveying reasonable assurance that includes the service auditor's opinion on the description of the service organisation's system, control objectives and related controls and the suitability of the design of the controls to achieve the specified control objectives

Type 2 report: A report that comprises both of the following:

- A description, as in a Type 1 report of the system and controls, of their design and implementation as at a specified date or throughout a specified period and, in some cases, their operating effectiveness throughout a specified period
- A report by the service auditor with the objective of conveying reasonable assurance that includes:

- the service auditor's opinion on the description of the service organisation's system, control objectives and related controls, the suitability of the design of the controls to achieve the specified control objectives, and the operating effectiveness of the controls; and
- a description of the service auditor's tests of the controls and the results thereof.

The availability of a report on internal controls generally depends on whether the provision of such a report is part of the contractual terms between the user entity and the service organisation.

Before placing reliance on the report, the user auditor shall do the following:

- Consider the service auditor's **professional competence and independence** from the service organisation
- Consider the **adequacy of the standards** under which the report was issued
- Evaluate whether the **period covered** is appropriate for the auditor's purposes
- Evaluate the **sufficiency and appropriateness** of the report for the understanding of the internal controls relevant to the audit
- Determine whether the user entity has implemented any **complementary controls** that the service organisation, in the design of its service, has assumed will be implemented

While a Type 1 report may be useful to a user auditor in gaining the required understanding of the accounting and internal control systems, an auditor would not use such reports as a basis for reducing the assessment of control risk.

But a Type 2 report may provide such a basis since tests of control have been performed. If this type of report may be used as evidence to support a lower control risk assessment, a user auditor would have to consider whether the controls tested by the service organisation auditor are relevant to the user's transactions (significant assertions in the client's financial statements) and whether the service organisation auditor's tests of controls and the results are adequate.

4.3 Responding to the risks of material misstatement

The user auditor shall:

- determine whether sufficient, appropriate audit evidence concerning the relevant assertions is available from **records held at the user entity**; and if not
- perform further procedures (or use another auditor to perform those procedures at the service organisation on the user auditor's behalf).

4.3.1 Tests of controls

This evidence can be obtained by one or more of the following procedures:

- Obtaining a Type 2 report, if available
- Performing tests of controls at the service organisation
- Using another auditor to perform tests of controls at the service organisation

4.3.2 Substantive procedures

The following procedures may be considered by the auditor:

- Inspecting documents and records held by the user entity
- Inspecting documents and records held by the service organisation (access to records held by the service organisation may be established as part of the contractual arrangement between the user entity and the service organisation)
- Obtaining confirmation of balances and transactions from the service organisation where the user entity maintains independent records of balances and transactions
- Performing analytical procedures on the records maintained by the user entity or on the reports received from the service organisation
- Where a **significant proportion of the audit evidence** is located at the service organisation, substantive procedures may need to be performed at the service organisation by the user auditor or by another auditor on behalf of the user auditor

4.4 Reporting by the user auditor

4.4.1 Modified opinions

If the user auditor is unable to obtain sufficient, appropriate evidence a modified audit opinion may be required. This could be the case when:

- the user auditor is unable to obtain a sufficient understanding of the services provided by the service organisation and does not have a basis for assessing the risks of material misstatement;
- the user auditor's risk assessment includes an expectation that the controls at the service organisation are operating effectively and the user auditor is unable to obtain sufficient appropriate evidence about the operating effectiveness of these controls; or
- sufficient, appropriate evidence is only available from records held at the service organisation, and the user auditor is unable to obtain direct access to these records.

4.4.2 Reference to the work of service auditors

The user auditor **shall not refer to the work of a service auditor** in the user auditor's report containing an **unmodified opinion** unless required by law or regulation to do so. (If such a reference is required, the user auditor's report must indicate that this does not diminish the user auditor's responsibility for the audit opinion.)

If reference to the work of a service auditor is **relevant to an understanding of a modification** to the user auditor's opinion, the user auditor's report must indicate that this does not diminish the user auditor's responsibility for the audit opinion.

5 Internal controls in an IT environment

Section overview

- IT controls comprise general and application controls. General controls establish a framework of overall control over the system's activities whereas application controls are specific controls over the applications maintained by the system.
- Computer-assisted audit techniques (CAATs) can be used by the auditor to test application controls within the client's computer systems.
- Specific considerations will apply where virtual arrangements including cloud computing are used.

5.1 Introduction

We looked at IT-specific risks in the context of carrying out an audit risk assessment in Chapter 5, and introduced the use of CAATs in Chapter 6. Here, we will consider IT controls in more detail, along with how to audit them.

As you should know by now, the internal control activities in a computerised environment fall within two categories: **general controls** and **application controls**.

5.2 General controls

The purpose of general IT controls is to establish a **framework of overall control** over the computer information system's activities to provide a reasonable level of assurance that the overall objectives of internal controls are achieved. They include controls over access security, data centre and network operations, software acquisition, change and maintenance, and application system acquisition, development and maintenance. They are sometimes referred to as supervisory, management or information technology controls. General controls are considered in detail below.

General controls	
Development of computer applications	Standards over systems design, programming and documentation Full testing procedures using test data Approval by computer users and management Segregation of duties so that those responsible for design are not responsible for testing Installation procedures so that data is not corrupted in transition Training of staff in new procedures and availability of adequate documentation
Prevention or detection of unauthorised changes to programs	Segregation of duties Full records of program changes Password protection of programs so that access is limited to computer operations staff Restricted access to central computer by locked doors, keypads Maintenance of program logs Virus checks on software: use of anti-virus software and policy prohibiting use of non-authorised programs or files Back-up copies of programs being taken and stored in other locations Control copies of programs being preserved and regularly compared with actual programs Stricter controls over certain programs (utility programs) by use of read-only memory
Testing and documentation of program changes	Complete testing procedures Documentation standards Approval of changes by computer users and management Training of staff using programs
Controls to prevent wrong programs or files being used	Operation controls over programs Libraries of programs Proper job scheduling
Controls to prevent unauthorised amendments to data files	Physical security over remote terminals Limited access to authorised personnel only Firewalls User identification controls such as passwords Encryption of data
Controls to ensure continuity of operation	Storing extra copies of programs and data files offsite Protection of equipment against fire and other hazards Back-up power sources Emergency procedures Disaster recovery procedures eg, availability of back-up computer facilities Maintenance agreements and insurance

The auditors will wish to test some or all of the above general controls, having considered how they affect the computer applications significant to the audit.

General IT controls that relate to some or all applications are usually interdependent controls, ie, their operation is often essential to the effectiveness of application controls. As application controls may be useless when general controls are ineffective, it will be more efficient to review the design of general IT controls first, before reviewing the application controls.

General IT controls may have a pervasive effect on the processing of transactions in application systems. If these general controls are not effective, there may be a risk that misstatements occur and go undetected in the application systems. Although deficiencies in general IT controls may preclude testing certain IT application controls, it is possible that **manual procedures** exercised by users may provide effective control at the application level.

5.3 Application controls

The purpose of application controls is to establish **specific control procedures over the accounting applications** in order to provide reasonable assurance that all transactions are authorised and recorded, and are processed completely, accurately and on a timely basis. Application controls include data capture controls, data validation controls, processing controls, output controls and error controls. Examples of application controls are shown in the table below.

Application controls	
Controls over input: completeness	Manual or programmed agreement of control totals Document counts One for one checking of processed output to source documents Programmed matching of input to an expected input control file Procedures over resubmission of rejected items
Controls over input: accuracy	Programs to check data fields (for example value, reference number, date) on input transactions for plausibility Digit verification (eg, reference numbers are as expected) • Reasonableness test (eg, sales tax to total value) • Existence checks (eg, customer name) • Character checks (no unexpected characters used in reference) • Necessary information (no transaction passed with gaps) • Permitted range (no transaction processed over a certain value) Manual scrutiny of output and reconciliation to source Agreement of control totals (manual/programmed)
Controls over input: authorisation	Manual checks to ensure information input is: • authorised; and • input by authorised personnel.
Controls over processing	Similar controls to input must be in place when input is completed, for example, batch reconciliations Screen warnings can prevent people logging out before processing is complete

Controls over master files and standing data	One to one checking Cyclical reviews of all master files and standing data Record counts (number of documents processed) and hash totals (for example, the total of all the payroll numbers) used when master files are used to ensure no deletions Controls over the deletion of accounts that have no current balance

Control over input, processing, data files and output may be carried out by IT personnel, users of the system, a separate control group and may be programmed into application software.

5.4 The use of CAATs

Computer-assisted audit techniques (CAATs) can assist the auditor in testing **application controls**. As you will know from your earlier audit studies, there are generally two types of CAATs: **audit software** and **test data**.

Audit software includes **generalised audit software** and **custom audit software**. Generalised audit software includes programs that allow the auditor to carry out tests on computer files and databases. An example of a generalised audit software program is ACL.

Generalised audit software allows auditors to perform a number of functions, such as database access, sample selection, arithmetic functions, statistical analyses and report generation.

The advantages of generalised audit software include the fact that it is easy to use, limited IT programming skills are needed, the time required to develop the application is relatively short, and entire populations can be examined, thus negating the need for sampling. However, the drawbacks of using this type of CAAT are that it involves auditing **after the client has processed the data** rather than while the data is being processed, and it is limited to procedures that can be performed on data that is available electronically.

Custom audit software is normally **written by auditors for specific audit tasks**. It is normally used in situations where the client's computer system is not compatible with the auditor's generalised audit software or where the auditor wants to do some testing that might not be possible with the generalised audit software. However, this type of CAAT can be **expensive and time consuming** to develop and may require a lot of modification if the client changes its accounting application programs.

Test data is used to test the **application controls in the client's computer programs**. Test data is first created for processing and it includes both valid and invalid data which is processed on the client's computer and application programs. The invalid data should therefore be highlighted as errors. Test data allows the auditor to check data validation controls and error detection routines, processing logic controls, arithmetic calculations and the inclusion of transactions in records and files.

The main benefit of test data is that it provides **direct evidence** on the effectiveness of controls in the client's application programs. However, its drawbacks include the fact that it is very time consuming to create the test data, the auditor cannot be certain that all relevant controls are tested and the auditor must make sure that **all valid test data is removed from the client's systems**.

In the table below, we briefly examine ways of testing application controls, including the use of CAATs to do so.

Testing of application controls	
Manual controls exercised by the user	If manual controls exercised by the user of the application system are capable of providing reasonable assurance that the system's output is complete, accurate and authorised, the auditors may decide to limit tests of control to these manual controls.
Controls over system output	If, in addition to manual controls exercised by the user, the controls to be tested use information produced by the computer or are contained within computer programs, such controls may be tested by examining the system's output using either manual procedures or CAATs. Such output may be in the form of magnetic media, microfilm or printouts. Alternatively, the auditor may test the control by performing it with the use of CAATs.
Programmed control procedures	In the case of certain computer systems, the auditor may find that it is not possible or, in some cases, not practical to test controls by examining only user controls or the system's output. The auditor may consider performing tests of control by using CAATs, such as test data, reprocessing transaction data and, in unusual situations, examining the coding of the application program.

5.5 Virtual arrangements and cloud computing

Where an audit client uses virtual arrangements and/or cloud computing there are a number of specific risks and control issues which the auditor needs to address. The ICAEW Information Technology Faculty document *Cloud Adoption: Understanding the Risk of Cloud Services* is a guide for small businesses considering the adoption of a cloud-based strategy, however many of the issues it raises would also be relevant to the auditor when appraising an entity's system. The following questions would be relevant as part of this process:

Back-ups

- Does the cloud service take regular back-ups of client data?
- Does the client have its own back-up strategy?
- Is the cloud service's process for restoring data regularly tested?
- Is there a service level agreement regarding data assurance and does the cloud service perform exercises to ensure that these can be met?

Security

- Is the platform regularly given to third-party 'penetration testers' for potential vulnerabilities, who vigorously test the platform to determine whether an attacker could gain unauthorised access?
- Is there an adequate process in place in the event of a security breach being determined?
- Is data held on the platform stored in an encrypted format?
- Is payment data held on a PCI-DSS compliant platform?
- Are there recognised, standard working processes and procedures in place and adopted (eg, are ISO accreditations held)?
- Is the platform protected against 'denial of service' attacks, where attackers could prevent access to the service indefinitely by flooding the platform with erroneous traffic or requests for information?

Compensation for loss

- Are compensation levels for loss of data written into agreements?

Using the service

- Are there contractual commitments regarding availability of service and performance levels?
- What is the provider's capability to develop new features ie, is there a realistic roadmap?
- To what extent are features integrated?
- Are responsibilities for ongoing support documented?

Professional skills focus: Assimilating and using information

Being able to differentiate between general and application controls will allow the auditor to assess a system and how robust it is. This demonstrates the ability to assimilate information about the system for the purpose of evaluating the system.

6 Cyber security and corporate data security

Section overview

Businesses need to keep their data secure whether it is in hard copy or electronic format. As business operations increasingly use digital technology the issue of cyber security is an essential consideration as part of the audit.

6.1 Introduction

There has always been a need for companies to keep information, or data, safe. This might be to ensure confidentiality of customer details, to protect company 'secrets' or to ensure the integrity of data. Where records and data are held in a hard copy format, as would have been the case in the past, data security centres around physical security. This might simply involve a lock on a filing cabinet. Increasingly, however, data is stored electronically. As a result, if a business is to keep its data secure it must address the issue of cyber security. Addressing cyber security threats will be a key part of its corporate data security strategy.

6.2 Nature and consequences of cyber threats

One of the key issues which is transforming the current IT risk landscape is cyber security. As companies are increasingly involved in digital technology, mobile technology and cloud computing so the associated risks have also increased. Potential threats may arise from a number of sources. The Deloitte publication *Cybersecurity: The Changing Role of the Audit Committee and Internal Audit* identifies these as follows:

- Cyber criminals
- Hactivists (agenda driven)
- Nation states
- Insiders/partners
- Competitors
- Skilled individual hacker

It also identifies the following risks resulting from an attack:

- Theft of IP/strategic plans
- Financial fraud
- Reputational damage
- Business disruption
- Destruction of critical infrastructure
- Threats to health and safety

(Source: Deloitte (2015) Cybersecurity: The Changing Role of the Audit Committee and Internal Audit. [Online]. Available from: www2.deloitte.com/content/dam/Deloitte/sg/Documents/risk/sea- risk-cyber-security-changing-role-in-audit-noexp.pdf: p.10 [Accessed 27 May 2022])

The ICAEW IT Faculty document, *Audit insights: Cyber Security – Taking Control of the Agenda*, available from: https://www.icaew.com/-/media/corporate/files/technical/audit-and-assurance/audit- insights/audit-insights-cyber-security-2016.ashx [Accessed 27 May 2022], highlights the constantly evolving nature of cyber risks as follows:

- Threats change as attackers get more sophisticated and find new ways of breaking into systems. New attackers also emerge, as easy-to-use tools reduce the level of skill required to carry out attacks.
- Vulnerabilities change as businesses digitally transform their business models and ways of working, potentially creating new weaknesses in business processes eg, mobile ways of working, or adoption of the internet of things.
- Existing controls and assurance models are superseded by new approaches. For example, moving to cloud-based systems has made traditional assurance models around IT controls more difficult to apply.
- The impact of failures increases as businesses capture more data and rely more heavily on digitally-based services. A slow or poor response to a major breach is very quickly and publicly shared over social media, increasing at least short-term reputational damage. In addition there are increasing amounts of regulation, particularly regarding data protection and personal data which companies need to consider. For example, new or forthcoming legislation in the EU includes the following:
- The **General Data Protection Regulation** (**GDPR**): The General Data Protection Regulation (GDPR), enacted by the European Union in May 2018, stands as a benchmark in data protection legislation, influencing numerous countries worldwide. It mandates adherence to core principles including transparency, legality, integrity, confidentiality, accountability, accuracy, and storage limitations. Within the GDPR, data is classified into various categories such as physical, physiological, mental, genetic, economic, social, and cultural. Personal data, defined as information capable of identifying an individual, necessitates the maintenance of processing records to demonstrate compliance.

In the UK, the GDPR came into force on 25 May 2018, bringing it in line with the rest of the EU where similar legislation already exists. The GDPR updates and replaces the existing regulatory framework around the protection and use of personal data (see section 6.2.1 below for an overview of this legislation).

Despite sporadic provisions in legislations like the Digital Security Act, ICT Act, Telecommunications Act, and Article 43 of the Constitution of Bangladesh, a comprehensive data protection regime is yet to materialize in Bangladesh. Nonetheless, efforts towards establishing such a framework are underway, albeit in the nascent stages, with no set date for its enactment.

- In the UK, the **Network Information Security** (**NIS**) directive, which specifies obligations regarding cyber security in certain industry sectors, largely associated with the critical national infrastructure and major information processing activities

In June 2014 the Bank of England announced a new framework for cyber-security testing in the financial services sector and the Information Commissioner is becoming more proactive in examining the privacy policies of major technology companies such as Facebook.

The Bangladesh Bank also issued Guideline on ICT Security for Banks and Non-Bank Financial Institutions in May 2015.

(Source: ICAEW IT Faculty document: Audit insights: Cyber Security – Taking Control of the Agenda: p.7)

The number of high profile cases of breaches which have been reported in the press demonstrates the challenging environment in which companies now operate. For example in 2014 a breach of Apple's iCloud resulted in the publication of the private photos of celebrities. In August 2015 hackers stole and published details related to more than 30 million individuals registered with the Ashley Madison online dating website resulting in class suit actions against the company.

(Source: ICAEW IT Faculty document: Audit insights: Cyber Security – Closing the Cyber Gap: p.4)

6.2.1 GDPR UK

The following table summarises the key points that are relevant to all accountants in UK in this area.

GDPR components	Implications in practice for accountants
Organisations must only collect **personal data** (including **sensitive personal data**, such as biometric data used to identify an individual) when it can demonstrate that it has a **valid business need** for that data. The GDPR distinguishes between data **controllers** who specify how and why data is processed and data **processors** who act on the controller's behalf and deal directly with data itself. Both are liable under the GDPR.	Data can only be obtained for a **legitimate business need** and cannot be collected in case it might be useful at some stage in the future. This means that accountants need to consider carefully what data they really need and be able to justify it: • This includes data on employees, customers and suppliers for all accountants and firms • For firms, this also includes the details of any testing completed (eg, payroll and supplier statements)
Personal data must be **stored** securely. It must then be **deleted** when it is no longer required.	This can include both **physical** storage of data (eg, in filing cabinets) and **electronic** storage – given the vast amounts of data generated in the 21st Century due to advances in technology such as big data and audit data analytics, this creates a significant risk for all accountants, especially as many organisations now use 'cloud-based' data storage.
All organisations need to **demonstrate** how they have **complied** with the GDPR – essentially this means accountability and transparency of all data usage.	**Non-compliance** is obviously a significant issue for all accountants, given the potential size of the fines that could be levied.

<table>
<tr><th>GDPR components</th><th>Implications in practice for accountants</th></tr>
<tr><td> Governance protocols require the completion of a Data Protection Impact Assessment (DPIA) in situations when risk is enhanced (such as when using new technology or when processing might lead to a high risk to individuals). Breaches in the GDPR also need to be disclosed – fines for non-compliance can reach either €20 million or 4% of an organisation's global turnover. </td><td>Being able to demonstrate compliance requires an understanding of the original purpose for collecting such data to ensure that it is lawful and that consent was obtained from individuals before any personal data is collected.</td></tr>
<tr><td colspan="2"> The GDPR confers a series of rights on anyone whose personal data may be collected by an organisation: The right to be informed (usually via some form of privacy notice)
The right of access to your personal data and confirmation that it is being used
The right of rectification if errors exist
The right of erasure (sometimes referred to as 'the right to be forgotten')
The right to restrict processing should you not wish your data to be used
The right to data portability across different services should you wish
The right to object (for example if you object to your data being used for marketing purposes)
Rights in relation to automated decision-making and profiling (essentially, to ensure that all decisions about your data are made using human not machine judgement) Any non-compliance in relation to any of these rights may lead to fines and penalties, so they should form part of any DPIA carried out. </td></tr>
</table>

(Source: The Information Commissioner's Office (ICO) (2017) *Overview of the General Data Protection Regulation (GDPR*). Available online: https://ico.org.uk/media/for-organisations/data- protection-reform/overview-of-the-gdpr-1-13.pdf [Accessed 27 May 2022].)

Context example: BA and Marriott Hotels

In July 2019, the UK Information Commissioner's Office imposed fines on British Airways (BA) and the Marriott Hotel chain of £183 million and £99 million respectively in relation to data breaches.

Previously, the largest UK penalty for this offence was £500,000 imposed on Facebook in relation to its involvement in the Cambridge Analytica scandal in 2014. The reason for such a drastic increase in these penalties is the fact that the GDPR is now in force. Clearly, this new legislation is designed to remind organisations of the responsibilities they bear when dealing with other people's data, despite claims from both companies that external entities were the source of the breach in each case.

(Sources: BBC News Website (2019) British Airways faces record £183m fine for data breach (Available online) https://www.bbc.co.uk/news/business-48905907 [Accessed 27 May 2022]; BBC News Website (2019) UK Watchdog plans to fine Marriott £99m (Available online). https://www.bbc.co.uk/news/technology-48928163 [Accessed 27 May 2022])

6.3 Corporate governance and cyber security

6.3.1 Board of directors

Although there is no specific guidance as such (eg, in Corporate Governance Codes) the ultimate responsibility for risk assessment and control, from whatever source lies with the board of directors. In larger organisations responsibility for cyber security may lie specifically with the chief information security officer (CISO). In many smaller organisations it may be the CEO or a chief risk officer.

6.3.2 Audit committee

As the Deloitte publication *Cybersecurity: The Changing Role of the Audit Committee and Internal Audit* explains, the audit committee may perform a useful role in "overseeing risk management activities and monitoring management's policies and procedures" (Deloitte, p.5).

Responsibilities might include:

- setting expectations and accountability for management;
- assessing the adequacy of resources; and
- liaising with other groups in enforcing and communicating expectations regarding security and risk.

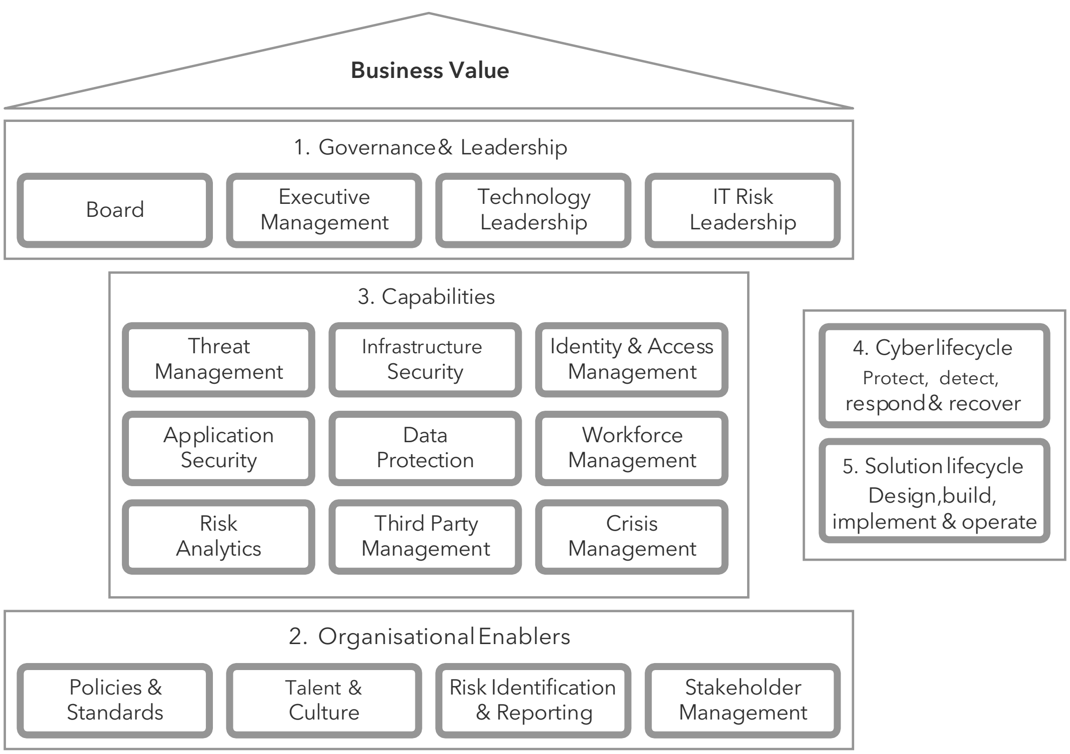
6.3.3 Internal audit function

The internal audit function can aid in the identification of the company's strengths and weaknesses. It can evaluate whether there is effective cyber risk management and also evaluate and review cyber security related controls.

6.4 Cyber risk management

The Deloitte publication suggests that organisations adopt the following 'Framework for Cyber Risk Management'.

Figure 7.1: Framework for cyber risk management



CHAPTER 7

The five functions (governance and leadership, organisational enablers, capabilities, cyber lifecycle and solution lifecycle) provide a 'strategic view of an organisation's management of cyber security risks'.

The ICAEW IT Faculty document, *Audit insights: Cyber Security – Taking Control of the Agenda* refers to the 'three lines of defence' model. This applies controls, assurance and oversight at three different levels in the organisation as follows:

- The first line is at an operational level, with controls built into processes and local management responsible for their operation in practice ie, identifying and managing risks on a day-to-day basis.
- The second line is at functional specialism level, for example the role of cyber-security specialists and a chief information officer ie, providing oversight and expertise.
- The third line is at the level of internal audit functions or independent assurance providers ie, providing assurance and challenge concerning the overall management of the risks.

6.5 Risks external to the entity

As identified in the ICAEW IT Faculty document: *Audit insights: Cyber Security – Closing the Cyber Gap* the issue is becoming an increasingly relevant aspect of supply chain risk management as many high profile security breaches have come as a result of issues at suppliers, including IT service providers, suppliers of non-IT goods and services and contractors. Obtaining assurance in this respect is not an easy process meaning that companies are having to identify where the biggest risk lies rather than simply focusing on the highest value suppliers. In addition, companies have had to consider widening the scope of assurance processes so that they apply to all stages of the transaction, rather than just at the procurement stage as has historically been the case. The most common method used, particularly by large companies, is questionnaires which are sent to suppliers to enable their processes to be evaluated and risks identified.

6.6 Cyber security economics

Implementing effective cyber security measures is expensive and boards need to be able to justify the level of expenditure to their shareholders. This can be difficult particularly in an environment where increased investment does not appear to prevent breaches. In the past costs have been measured against the benefits of reduced losses caused by these breaches. However as this issue has risen up the board agenda companies are beginning to view the benefits of this expenditure in a different context. As identified in the ICAEW IT Faculty document: *Audit insights: Cyber Security – Closing the Cyber Gap* these could include:

- a brand enhanced by the strong security culture;
- the ability to bid for contracts in a particular supply chain; and
- reduced insurance premiums.

6.7 Audit implications

As with any risk which a business faces the auditor must understand and evaluate the risk together with the effectiveness of associated controls. In relation to cyber security the auditor will need to pay particular attention to the control environment and specific control procedures put in place by management.

6.7.1 Control environment

The following features would be an indication to the auditor that the control environment in respect of cyber security is strong:

- Responsibility for cyber security elevated to board level, preferably to a designated individual eg, a risk officer

- Evidence of active board oversight, including clear lines of responsibility and identification of key business data and associated risks
- Cyber security policies and procedures embedded in operations and monitored for effectiveness
- Evaluation of the entity's risk appetite and procedures to highlight risks which breach this level
- Non-executive directors and audit committee members with appropriate skills and training to understand the issues
- Recruitment of competent in-house professionals with relevant expertise and/or use of consultants
- Encouragement of communication between IT specialists and the board, internal auditors and the audit committee
- Creation of an environment where staff are comfortable to report concerns and/or actual instances of breaches of security without fear of reprisals

The ICAEW IT Faculty document, *Audit insights: Cyber Security – Taking Control of the Agenda* includes a series of checklists for boards. Whilst these take the perspective of the business they provide an indication of what would constitute a strong control environment and the factors which the auditor should consider when evaluating the control environment.

Checklist for boards	**Considerations for the auditor**
Be ready to respond	Consider the most serious possible breach and ask whether the organisation, and board, are ready to cope. What would they do if competitors accessed their IP? How does the business reassure customers if their data is stolen?
Build intelligence	What does the business know about specific threats, the actors and their possible methods? How have other major breaches happened, and how do the defences put in place by the business compare? What are their peers doing to manage their risk? How can they get ahead of the regulators?
Be specific and real	How can critical data actually be accessed and by whom? What controls are in place, and how does the business know whether they are working? How are any breaches detected?
Link to strategic change	How are major strategic initiatives changing the risks? What is the impact of any M&A activity? What are the risks attached to new products or market expansion?
Attach consequences	What behaviour is unacceptable because of cyber risks? How does the business know if non-compliance is occurring? What happens to employees who do not follow the rules?
Tailor activities	How relevant is cyber security training to specific roles and responsibilities? Do higher-risk jobs have higher levels of training and awareness-raising activities? Are staff clear about the purpose of good cyber behaviour?
Hold boards to the same level of accountability	Are boards expected to follow the same rules as staff? Is the board clear as to the purpose and consequences of non-compliance? Does the board see itself as a role model for good cyber behaviour? Do members of the board act as role models?
Remember insider risk	What is in place to detect suspicious behaviour or patterns? How are disgruntled or disaffected staff identified? Does the business know how much system access potentially disaffected staff have?

Checklist for boards	Considerations for the auditor
Implement cyber-by-design	Are new products and services designed with cyber risks in mind? Do business change projects consider cyber risk early on? What are the risks of poor design?
Continually review and re- evaluate	Are designs building in flexibility and resilience to cope with changing cyber risks? How often are cyber risks reviewed? How are changing risks incorporated into existing processes?
Take difficult decisions	Is the business prepared to delay major change or strategic projects if the security is not good enough? Is the business using a 'sticking plaster' approach to an old infrastructure?
Embed cyber into start-ups	If investing in new businesses, are cyber risks considered?

6.7.2 Control procedures

The auditor would also need to identify and evaluate the effectiveness of specific control procedures. This work is likely to involve the IT audit specialists.

The Deloitte publication *Cybersecurity: The Changing Role of the Audit Committee and Internal Audit* identifies that in order to be effective cyber defence needs to be:

- Secure: Are controls in place to guard against known and emerging threats?
- Vigilant: Can the company detect malicious or unauthorised activity, including the unknown?
- Resilient: Can we act and recover quickly to reduce impact?

Specific procedures to address these issues could include the following:

- Perimeter defences
- Vulnerability management
- Asset management
- Identity management
- Data protection procedures
- Threat intelligence eg, sharing intelligence with others within the same industry
- Security monitoring
- Behavioural analysis
- Risk analytics
- Incident response procedures
- Forensics
- Business continuity/disaster recovery procedures
- Crisis management

Professional skills focus: Structuring problems and solutions

An awareness of both the control environment and control procedures should help an auditor assess the impact of any cyber threats. This is an example of structuring a problem to achieve an effective solution.

Interactive question 1: NewForm Ltd

NewForm Ltd (NewForm), a client of your firm, has recently established an e-commerce division within its existing business to provide an additional outlet for its product range, which consists of upmarket casual wear for adults. An objective in introducing the new division was to have a completely paperless ordering, payment and despatch system.

The new e-commerce system is administered centrally by NewForm and deals with customer orders and credit card payments. Customers are able to place orders and pay for the goods online.

Inventories for customer orders are held remotely by Key Distributors (KD), which is a completely separate business from NewForm. Once online payment by credit card is cleared by NewForm, despatch details are forwarded to KD electronically. KD then despatches customer orders.

Inventories are ordered by NewForm for delivery direct to KD.

Requirements

1.1 In planning the audit of NewForm, identify and explain four key audit risks that may arise from the development of the new e-commerce division.

1.2 Identify and explain the application controls which you think are necessary for the integrity of the ordering and payments system.

See **Answer** at the end of this chapter.

7 Communicating and reporting on internal control

Section overview

Auditors are required to report to those charged with governance on material deficiencies in controls which could adversely affect the entity's ability to record, process, summarise and report financial data potentially causing material misstatements in the financial statements.

The specific responsibilities of the auditor in relation to communicating deficiencies in internal control are set out in ISA 265, *Communicating Deficiencies in Internal Control to Those Charged With Governance and Management*. The auditor is required to report significant deficiencies in internal controls, where they have been identified, to those charged with governance and management (already covered in Chapter 4).

Definitions

Deficiency: A deficiency in internal control exists when:

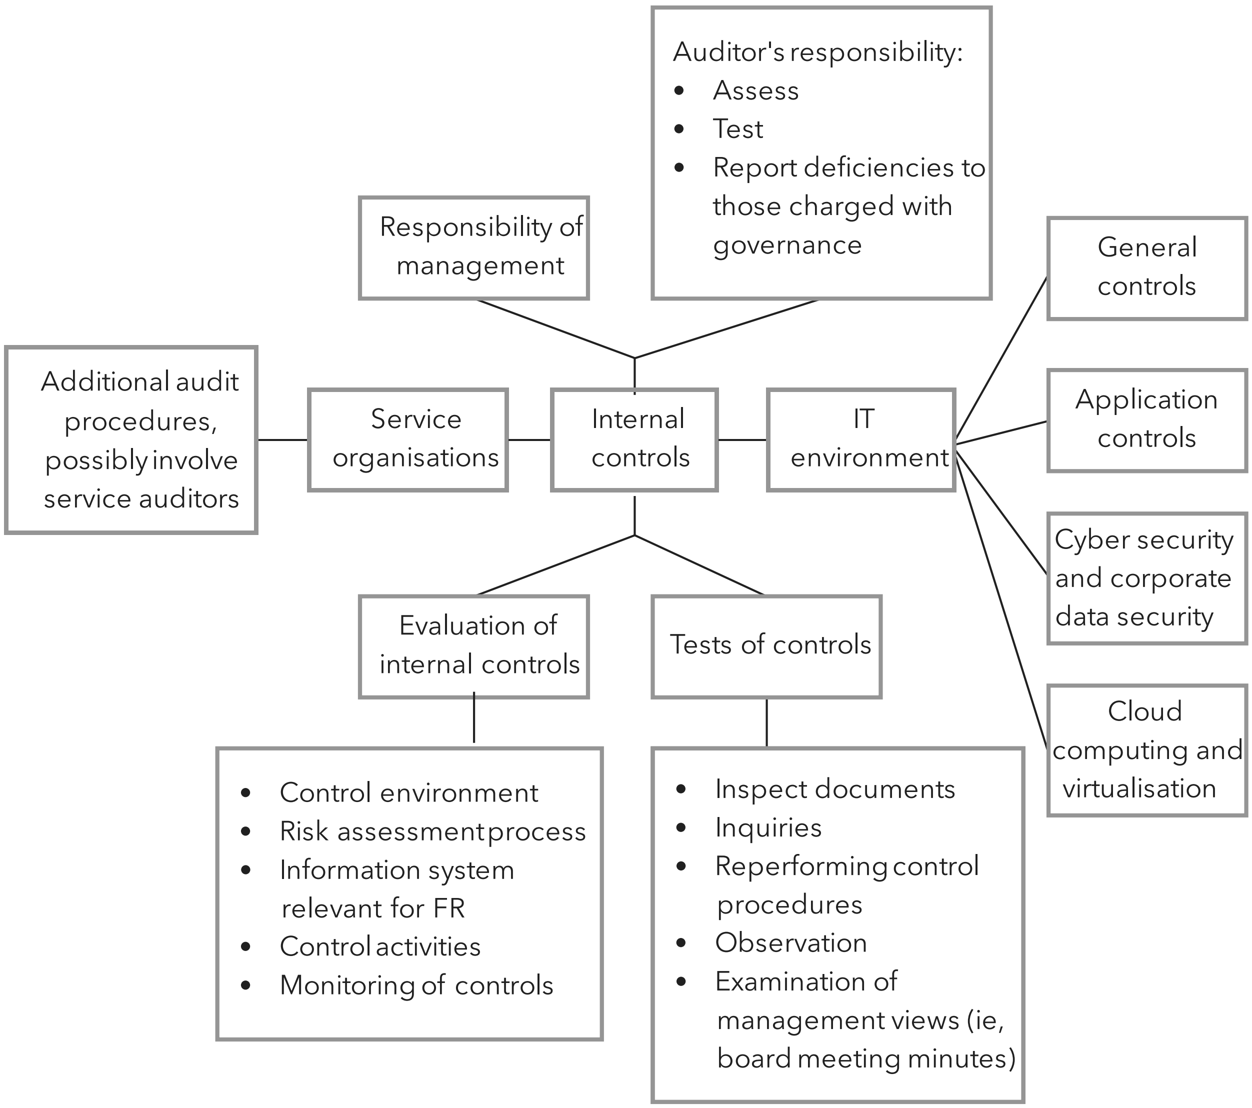
- a control is designed, implemented or operated in such a way that it is unable to prevent, or detect and correct, misstatements in the financial statements on a timely basis; or
- a control necessary to prevent, or detect and correct, misstatements in the financial statements on a timely basis is missing.

Significant deficiency in internal control: Those which in the auditor's professional judgement are of sufficient importance to merit the attention of those charged with governance.

Professional skills focus: Concluding, recommending and communicating

The process of reporting to those charged with governance on material deficiencies in internal control requires strong communication skills as well as the ability to conclude that the deficiency might be significant.

Summary



Auditor's responsibility:
• Assess
• Test
• Report deficiencies to those charged with governance
Responsibility of management
General controls
Additional audit procedures, possibly involve service auditors
Service organisations
Internal controls
IT environment
Application controls
Cyber security and corporate data security
Evaluation of internal controls
Tests of controls
Cloud computing and virtualisation
• Control environment
• Risk assessment process
• Information system relevant for FR
• Control activities
• Monitoring of controls
• Inspect documents
• Inquiries
• Reperforming control procedures
• Observation
• Examination of management views (ie, board meeting minutes)

Further question practice

1 Knowledge diagnostic

Before you move on to question practice, confirm you are able to answer the following questions having studied this chapter. If not, you are advised to revisit the relevant learning from the topic indicated.

	Confirm your learning
1.	Can you explain the importance of internal controls as part of the auditor's role?
2.	Can you distinguish between the relative responsibilities of those charged with governance and the auditor?
3.	Can you explain how the auditor evaluates internal controls and recommend suitable tests of control to support the audit opinion?
4.	Can you explain the impact on the audit of an entity choosing to outsource some of its core functions? What factors will this impact be dependent on?
5.	Do you know the difference between general and application controls in an IT context? Are you aware of the impact that new technology such as cloud computing can have on the audit?
6.	Can you explain the various cyber threats that an organisation is at risk from and how such cyber threats are mitigated?
7.	How should the auditor communicate deficiencies in internal control and what makes such a deficiency significant?

2 Question practice

Aim to complete all self-test questions at the end of this chapter. The following self-test questions are particularly helpful to further topic understanding and guide skills application before you proceed to the next chapter.

Question	Learning benefit from attempting this question
Dodgy Burgers plc	Being able to consider suitable audit procedures for testing relevant internal controls.
Happy Flights plc	This question tests how well you can discuss cyber security issues in the context of a broader audit engagement.

Once you have completed these self-test questions, it is beneficial to attempt the following questions from the Question Bank for this module. These questions have been selected to introduce exam style scenarios that will help you improve your knowledge application and professional skills development before you start the next chapter.

Question	Learning benefit from attempting this question
UHN requirement (4)	You need to be able to explain the board's responsibilities and accountability for cyber security.
Newpenny requirement (2)	You should be able to evaluate Rosa's suggestion of placing more reliance on operating effectiveness of controls.
Johnson Telecom requirement (3)	As part of the key risks from derivatives trading, you need to consider the necessary general and application IT controls that would be required.

Refer back to the learning in this chapter for any questions which you did not answer correctly or where the suggested solution has not provided sufficient explanation to answer all your queries. Once you have attempted these questions, you can continue your studies by moving on to the next chapter.

Technical reference

1 ISA 315

- Risk assessment procedures – **ISA 315.13–.18**
- Understanding the entity and its environment – **ISA 315.19–.27**
- Assessing the risks of material misstatement – **ISA 315.28–.37**
- Financial statement assertions – **ISA 315.A190**
- Documentation – **ISA 315.32**

2 ISA 330

- Overall responses to risk assessment – **ISA 330.5**
- Response at assertion level – **ISA 330.6–.7**
- Evaluation of sufficiency and appropriateness of evidence – **ISA 330.25–.27**

Self-test questions

Answer the following questions.

1 Dodgy Burgers plc

The board of directors of your client, Dodgy Burgers plc, which runs a chain of 30 burger restaurants across the country, has just completed a review of the structure of the business and relevant controls which are in place within the business. This review was completed in the year ended 31 March 20X8.

A partner of your firm asked for a copy of the report that the directors completed to assist in the identification of controls that the directors had implemented to mitigate business risk. The partner would like to use this as a basis for testing and placing reliance on these controls to reduce the amount of audit work undertaken for the audit for the year ended 31 March 20X8.

Listed below are some extracts from the report.

Health and safety issues

The following systems have now been introduced.

(1) The new internal audit department set up in September 20X7 will make spot checks on the various shops to ensure that the new Health and Safety policies are being followed. Reports of these visits will be sent to the board within two weeks of the visit. The internal audit department plans to visit all the branches within one year.

(2) All staff will receive Health and Safety training, particularly on the areas of food handling, storage, preparation, cooking and hygiene. This will be implemented immediately and by the end of 20X8 we will have trained all staff.

Competition

Our main competitor, Chip Butty, has begun buying properties and setting up shops in the vicinity of our existing branches within the large city centres. This has been a recurrent theme through 20X8 so far and we expect this to continue into 20X9. We have identified this as a threat to our sales income and consider that action is required.

To counteract the potential loss in sales we have embarked on three new marketing initiatives.

(1) Advertising on all major local television networks, comparing our burgers to the inferior Chip Butty products

(2) Promoting our new toys, sold in conjunction with Dotty Films, which are free with all kiddy packs

(3) Employing a part-time member of staff to visit the competition's premises and reporting on any new initiatives Chip Butty embarks upon

Branch cash controls

As our business is primarily cash based, we were concerned over the potential for theft of cash takings.

We have decided to implement a new policy in this area to monitor the takings from each branch more closely.

All tills in every branch will include a standard float of £150. At the end of each day the takings will be counted and bagged from each till, leaving the £150 float. A printout from the till will be made detailing the daily takings. The physical cash will need to be reconciled to the till balance. Cash will then be banked and the reconciliation emailed to head office.

Discount prices will be set in the till to ensure that no meals can be sold at below the discounted price.

Increased turnaround in branches

We have identified a capacity problem in our branches, given the limited seating area at each of the branches during peak times.

Following a cost-benefit review of the branches it was decided not to increase these areas, as we feel that it would not be cost effective due to the huge increase in rates that would be incurred, the building costs and lost time due to renovation.

The board is prepared to accept the risk that some customers may be lost during peak times, but may in the future consider some form of takeaway discount at peak times.

Environmental policy

We felt it was necessary to reassure the public that as a company our policies are 'environmentally friendly' as this was key to a consumer business such as ours. The increased cost of the packaging products has been passed on in full via a small price increase, as we have been able to negotiate an excellent package with our suppliers and the waste contractors.

We have therefore introduced the following.

(1) Recycled packaging in all our branches, which has been clearly labelled to show that it is made from paper used from managed forests

(2) Waste separation at branches, which is collected on a daily basis by an external contractor who pays us £30 for each ton of paper and plastic collected

Requirement

Answer the following questions:

(1) Identify the business risks set out in the board report and state the risk category (ie, financial, operational or compliance). For each risk identified state the strategy management have adopted to deal with the risk.

(2) For each of the risks identified set out the audit procedures that would need to be completed before reliance could be placed on the controls in place.

2 Happy Flights plc

Happy Flights plc (HF), a listed company is a low-cost airline that was established 15 years ago and has since grown rapidly. You are a senior on the audit of HF for its year ended 30 June 20X6.

As part of the audit planning procedures the assignment manager, Geraint Johns, visited the finance director of HF, Rory Hiller, and identified a number of risk areas (**Exhibit 1**).

Geraint rang you immediately after the meeting:

I have just been to visit HF and there are a number of issues that have arisen. The audit team needs to discuss these matters at a planning meeting so we can determine our approach. I would like you to prepare a memorandum for the meeting which explains in detail the key audit risks including any cyber-security related issues, arising from these matters. I would also like you to identify the audit procedures that we will need to carry out in respect of each of these risks. If there are any financial reporting issues on these matters could you also explain these as part of the memorandum.

Requirement

Prepare the memorandum requested by the assignment manager.

Exhibit: Risk areas Plane crash

You will be aware that on 20 June 20X6 one of the HF planes crashed with a loss of 56 lives and a further 121 injuries. The cause of the crash has not yet been established. Indeed, it is unclear whether HF is to blame. Some legal claims have begun to arrive at HF headquarters but it is still early in the investigation process. Final settlement, if applicable, may take some years.

Operating issues

HF has suffered declining profits in recent years and recorded an operating loss for the first time in the year to 30 June 20X5.

As a consequence, there have been continuing cash flow problems which have been partially alleviated by special measures adopted this year, including:

- significant discounts for bookings made, and paid for in full, at least six months before travel;
- extension of short-term leases on existing aircraft, rather than leasing new aircraft (all planes are leased); and
- significant new fixed-term borrowings.

Database system

A new database system for bookings was introduced in January 20X4 by IT consultants. The purpose of the new system was to allow data on HF's flight availability to be accessed by travel agents and other flight booking agencies around the world. Agencies can all make bookings on the same system.

The database system is used not just for bookings but also as part of the receivables accounting system for agents to collect money from customers and pay to HF after deducting their commission. The data collected then feeds into the financial statements.

Unfortunately, since installation, the following problems have been discovered, either in the database system, or relating to operatives using the system:

- It is HF's policy to overbook its flights by 5% of seat capacity. However, there have been a number of instances where overbookings have far exceeded 5% due to processing delays.
- The system has crashed on a number of occasions causing delays in processing and loss of data.
- A computer virus penetrated the system, although it did not cause any damage and was quickly removed.
- Cash received in advance has been recorded as revenue at the date of receipt by HF.

Now go back to the Introduction and ensure that you have achieved the Learning outcomes listed for this chapter.

Answers to Interactive questions

Answer to Interactive question 1

1.1 Key risks from the development of the e-commerce division

There are a number of concerns that an auditor of NewForm should address in relation to its new e-commerce division. However, the general rule is that the scale of risk that is related to e-commerce is directly proportional to the number of users and the value of their transactions, which is critical to NewForm's proposal. The key areas are likely to be as follows.

- Consider what cyber security issues have been addressed by the company. For example, there may be difficulties with ensuring the integrity of the payments system and protecting customer data (including bank details) from hackers, which will result in an increased focus on revenue from online sales.
- Cyber attacks could also lead to disruption or suspension of the e-commerce platform resulting in loss of sales and reputational damage.
- There may be breaches of data protection regulations regarding customer details resulting from fraud (eg, cyber attacks) or poor procedures. This could result in the company being exposed to litigation and fines, which may require provisions in the financial statements.
- Consider what additional inventory control measures have been implemented. Inventories are presumably fairly high value, and hence will be material to NewForm's activities. What measures have been implemented to track customer orders? What procedures have been put in place to deal with returned goods in relation to checking claims relating to returned goods and authorisation/processing of refunds? This may be a particular difficulty, given the remote nature of the shipment of goods.
- Assess if NewForm has the technical skills to develop and support a new e-commerce division of the type proposed.
- Evaluate if consideration has been given to ensuring the continuity of operations, given the increasing reliance of the business on technology. Specific issues include:
  - Lack of resources may undermine effective contingency plans; this may force a business to accept a higher tolerance of errors in the system, thus leading to a deeper inherent risk within the organisation
  - Inadequate controls surrounding the interaction of e-commerce applications with other business critical applications
  - Undermining of otherwise effective controls, eg, from inadequate recognition and use of controls, combined with inadequate monitoring of control compliance
- Inventories are held remotely, and thus control over a significant asset is exercised largely by a third party.
- Online ordering creates problems of security and data protection.
- Lack of audit trail in a paperless system.
- Dependence on a sole distributor.

1.2 Application controls

A number of application controls may be relevant, for example the following:

- Pre-processing authorisation
  - Customer password systems
  - Credit payment authorisation
  - Customer account balance limit tests
- Validation tests
  - Consistency with previous orders in terms of value

Answers to Self-test questions

1 Dodgy Burgers plc

Risk/Audit procedure

(1) Business risk and category	Management strategy to combat risk	(2) Audit procedures to be completed in order to place reliance on the controls in place
Health and safety		
• Partially cooked burgers have been sold. • This constitutes an operational risk (failure to comply will result in the company being shut down) and compliance risk (breach of Health and Safety regulations).	• Management has set up a Health and Safety training programme.	• Obtain a copy of the Health and Safety policy and review to ensure that the policies are adequate. File on the permanent audit file for future reference. • Hold discussions with the branch managers on a sample basis to ensure that the policy has been implemented if staff do not reach the required standard. • Review the training course to establish what procedures are being taught to the staff, and what follow up has been implemented if staff do not reach the required standard.
	• Internal audit spot checks on Health and Safety are to be carried out at the branches.	• Assess the internal audit department staff to ensure they have the appropriate authority, and are technically competent to complete the review. • Discuss with the internal audit department how the branches have been selected for sampling. • Review copies of the internal audit reports to identify: - the issues found; - how they have been resolved; - what follow-up work was required; and - how this was monitored.

CHAPTER 7

(1) Business risk and category	Management strategy to combat risk	(2) Audit procedures to be completed in order to place reliance on the controls in place
		• Discuss with the directors how many visits have been completed in the year and whether they received all the copies of the reports. • Review correspondence files and external Health and Safety visits during the period before the internal audit department was setup. • Provided that the internal visits are effective, audit procedures can be limited to the period before the internal audit department was set up, as this is likely to be the higher audit risk area.
New competitor		
• A new competitor has set up in major cities within the vicinity of Dodgy Burgers plc. • This constitutes an operational risk (could lead to going concern problems and, ultimately, closure). • The instigation of a major advertising campaign itself constitutes a compliance risk (Advertising Standards need to be complied with). • The campaign and promotional gifts lead to financial risk (large cash outlay).	• Advertising campaigns and promotional gifts. • New staff member employed to visit rivals.	• Review gross profit margins to assess if there has been a major impact on sales. • Discuss with the directors and review the national press to identify what impact this competition is likely to have and whether or not they are aiming for the same market. • Review the advertising expenses account to ensure that adverts have been bought and paid for. • Review correspondence from the Advertising Standards Authority to ensure no complaints have been logged as a result of the advert. • Review contracts with the television companies to ensure that primetime slots had been given. • Review sales accounts to establish that sales have increased in the period during or following the advertising campaigns.

(1) Business risk and category	Management strategy to combat risk	(2) Audit procedures to be completed in order to place reliance on the controls in place
		• Review the employment records to ensure that the staff member has been employed on a part-time basis and review the contract/job description. • Review the reports sent to the board to establish if suitable observations have been made and have been acted on.
Cash controls		
• Risk of theft of cash takings (financial risk).	• New controls implemented to set till floats and provide reconciliations to head office on a daily basis.	• Review returns from branches to head office on a sample basis. • Discuss the differences identified with head office staff and review the action taken.
Limited seating		
• Lack of seating in most branches during peak times (operational risk – loss of customers).	• No strategy has been put in place due to cost-benefit considerations but takeaway discount at peak times may be considered in the future.	There is therefore no control as such to rely on but there are potential going concern issues. • Discuss with branch managers the number of customers at peak times, and the level of complaints re the lack of seating area. • Discuss with the directors the impact this may have in the future if competitors are close by to the branches, loss of customer may increase. • Spot check the branches on a sample basis to establish the customers leaving without purchasing to confirm the extent of problem highlighted by the directors.
Recycled products		
• A lack of confidence from the public in Dodgy Burgers plc's environmental policies (operational and compliance risk).	• The use of recycled packaging. • Waste separations and collections.	• Review the contracts with the suppliers to ensure that recycled packages are clearly specified and the price is comparable to the original prices of non-recycled products.

(1) Business risk and category	Management strategy to combat risk	(2) Audit procedures to be completed in order to place reliance on the controls in place
		• Review the branch returns to ensure that delivery notes have been signed for the waste collection and the receipts match the tonnage collected. Ensure that these are in line with expectations from the preliminary analytical procedures on the accounts. • Review the new packaging for evidence that the recycled symbols have been correctly displayed. • Discuss with the branch managers if any further costs have been incurred from having to separate the waste for collection, or whether separate bins have been provided in the branches for the public to use.

2 Happy Flights plc

Memorandum

To Geraint Johns (Assignment Manager)

From A Senior

Date 24 July 20X6

Subject Happy Flights – audit risks

(1) Plane crash

Financial reporting issues

The plane crash occurred in the year to 30 June 20X6, thus potentially gives rise to a liability that might need to be recognised in the current period. This might include:

- civil litigation by those passengers injured and the relations of those killed;
- criminal penalties against HF and/or its directors;
- if health and safety regulations have been breached then further penalties and constraints may apply; or
- liability for employees killed and injured.

Any litigation may be in several jurisdictions according to the location of the crash and the nationality of the passengers, thus the issues may be complex and take some time to resolve.

While such liabilities may ultimately be substantial they may also turn out to be small if the fault lies with airport authorities or other causes. It seems likely that these issues will be unresolved when the financial statements are authorised for issue thus it is unclear whether a contingency or a provision would arise. If there is significant uncertainty, or if there is a low probability of a claim, this might indicate a contingency, but more information would be needed to draw a firmer conclusion (see below).

Audit risks

A key audit risk is the lack of information on which to base a judgement in respect of the following:

- Whether any liability is probable or only possible
- The amount and timing of such a liability is unlikely to be known at the date of audit completion

According to IAS 37 where the amount of an obligation cannot be measured with sufficient reliability then it should be disclosed as a contingent liability. In this case it would not be recognised in the financial statements. If the information available is still fundamentally unclear at the date the financial statements are authorised for issue, then this may be the most appropriate treatment.

If the company is insured then recovery of any insurance should be regarded as a separate matter from the provision/contingency question.

Going concern – Notwithstanding the treatment of the provision/contingency then going concern is likely to be an issue. Given that the company is already struggling financially, any claim may prove to be a significant additional factor in assessing going concern. However, insurance recovery may be considered in making any such assessment.

There may, however, be other more immediate going concern issues arising from the crash other than the settlement of litigation.

These include:

- reduction in passenger numbers, as the reputation for safety may have diminished;
- grounding of aircraft by health and safety regulators perhaps resulting in loss of revenues, cancellations and delays; and
- reconsideration of leasing older planes resulting in additional costs.

Audit procedures

- Review claims against HF received by audit completion.
- Review correspondence with HF's legal advisers and consider taking independent legal advice regarding the amount and probability of any claim against HF.
- Review any announcements by investigation teams and any correspondence with HF regarding causes of the crash and the extent HF was to blame up to the date of audit completion (eg, 'black box' flight recorder evidence).
- Consider the possibility of counter claims by HF against others responsible for the crash by considering legal advice.
- Review any correspondence with Health and Safety Executive regarding grounding of planes or possible causes of the crash.
- Review flight bookings since crash for evidence of a decline in reputation and fall in future sales.
- Assess impact on budgeted cash flows to consider impact on going concern.

(2) Operating issues Financial reporting issues

- The decline in operating profits is further evidence of going concern problems.
- If the short-term leases have been extended then they will need to be recognised as right-of-use assets in the statement of financial position.

Audit risks

The key audit risk is going concern. If there is adequate disclosure in the financial statements by the directors regarding the uncertainties about going concern then an unmodified audit opinion will be issued but the audit report will include a separate section headed 'Material Uncertainty Related to Going Concern'. However, if the directors do not disclose going concern uncertainties appropriately, it may be necessary to modify the audit opinion.

The receipt of cash from customers in advance is likely to cause concern if the company does have going concern issues, as this may amount to fraudulent trading if the customers, as unsecured creditors, are unable to recover their payment.

The additional borrowing also increases financial risk and makes profit more sensitive to changes in the level of operating activity.

Audit procedures

As already noted, cash flow forecasts will need to be reviewed up to the date of audit completion to assess the future viability of the company. This should include the following:

- Examining overdraft and other lending facilities (eg, for 'headroom' against existing liabilities, for interest rates and for capital repayment dates). Build a picture of future financial commitments.
- Identifying the level of advanced payments and discuss with the directors the issue of continuing the policy of advanced payments and the implications for fraudulent trading.
- Examining budgets and cash flow projections as part of going concern. Review to assess future expected changes in liquidity.
- Examining lease contracts to assess the lease renewals position in order to ascertain future levels of commitment.

(3) Database system Audit risks

General systems issues

The nature of the fault needs to be identified ie, there may be issues with the work and or hardware/software supplied by the consultants. Some of the problems appear to be with the people operating the systems rather than the system itself. These are employees of the company so this effect also needs to be assessed.

Cyber security may also be an issue as a virus was able to circumvent existing security

measures. There appear to be two control risks in the IT system:

- The maintenance and control of the database itself and the information contained therein
- The online processing of transactions

Separate controls are needed over each of these aspects.

Specific issues

Excess bookings – risks include the following:

- A system error appears to have arisen, as the system should not accept unintentional double bookings. The level of confidence in the system is thus reduced, thereby increasing our assessment of control risk.
- Revenue may have been double counted if two bookings have been taken.

System crashing – risks include the following:

- Loss of data is a major problem, as it not only affects operating capability but also reduces confidence in IT controls over financial statement assertions as the database feeds into the financial statements.
- There may be a risk of corruption of data as well as loss of data. This may have been a cause of the above double bookings.

Computer virus – risks include the following:

- Loss of future data if it reoccurs
- Corruption of data
- Loss of confidentiality of information
- Risk of fraud from 'hacking' into system to create false bookings or false payments

Advance payments recognised as revenue:

- If payments are recognised as revenue on receipt, then revenue is overstated if payments occur in one financial year and the flight occurs in the next financial year. The risk is that all such payments recognised in advance have not been identified.

Financial reporting issues

The key financial reporting issue is the inappropriate recognition of revenue for advance payments by customers. While this can be corrected in the draft financial statements in the current year, it may have also have occurred in the previous year. If material, this should be recognised as a prior period error. Retained earnings brought forward should be adjusted and the relevant revenue should be correctly recognised in the current year with comparatives adjusted.

Audit procedures

The control risk relating to the IT system needs to be established. If reliance cannot be placed on the IT system it may not be possible to test income for understatement due to lack of relevant, reliable audit evidence. This may lead to a modified audit opinion on the basis of insufficient evidence (limitation of scope).

Regarding online processing, tests of controls with respect to the following may be relevant:

- Access controls, passwords (eg, review logs of access and user authorisation)
- Programming (review programming faults discovered, actions taken to amend faults, reoccurrence of same faults)
- Firewall (consider response to virus and why firewall failed to detect it; procedures for updating firewalls; best practice review)
- Use of CAATs to interrogate the system's ability to detect and prevent errors and fraud

Regarding database itself:

- Review procedures manuals for database management system. This is the software that creates, operates and maintains the database.
- Review data independence procedures (the data should be independent of the application such that the structure of the data can be changed independently of the application).
- Consider the wider database control environment. This includes the general controls and who has access to change particular aspects of the database.
- General controls might include: a standard approach for development and maintenance of application programs; access rights; data resource management; data security, cyber-security and data recovery.

Chapter 8

The statutory audit: finalisation, review and reporting

Introduction

Learning outcomes

- Appraise the appropriateness of the going concern basis of accounting and evaluate relevant going concern disclosures
- Appraise and assess the significance of events after the reporting period
- Evaluate, quantitatively and qualitatively, using analytical procedures and appropriate data analysis tools, the results and conclusions obtained from audit procedures
- Conclude and justify the nature of the report on an audit engagement, and formulate an opinion for a statutory audit, which are consistent with the results of the audit evidence gathered
- Compose suitable extracts for reports (for example any report to the management or those charged with governance issued as part of the engagement)
- Appraise 'other information' in the annual report and report on material misstatements in this information and material inconsistencies with the financial statements

Chapter study guidance

Use this schedule and your study timetable to plan the dates on which you will complete your study of this chapter.

Topic	Practical significance	Study approach	Exam approach	Interactive questions
1	**Review and audit completion** In order to be ready to conclude the audit, there are several completion standards that the auditor must address.	**Approach** Most of this is revision from your previous studies so run through it again with your auditing standards open book in front of you. **Stop and think** Note how AI and RPA can be applied to this completion stage.	If this is examined, you will need to refer to the appropriate auditing standard to ensure that each of these completion tasks has been addressed.	N/A
2	**Subsequent events** This section should serve as a reminder that there will always be events that could affect the audit regardless of when they occur.	**Approach** This is also revision so make sure you remember the key messages. **Stop and think** Do you remember	You should always be alert to the risk that subsequent events could derail the audit at any point so read the scenario carefully.	**IQ1: Subsequent events** To answer this question, you will need to ask yourself when the oil leak actually took place.

Topic	Practical significance	Study approach	Exam approach	Interactive questions
		this from your previous studies?		
3	**Going concern** Confirming the going concern status of an entity is fundamental to preparing a set of financial statements: consequently, the auditor needs to know how to assess this.	**Approach** Responsibilities, indicators and responses to going concern issues are all revision from your previous studies, so make sure you find the relevant sections of ISA 570 in your auditing standards open book. **Stop and think** Reporting responsibilities are complex and depend on how well any going concern issues have been disclosed by management – can you remember what to do in various situations?	Going concern can straddle many different disciplines in an exam question, from the use of analytical procedures to assess viability and qualitative evaluation via the scenario all the way through to how the auditor's report could be affected in various situations. You therefore need to practise questions in order to be fully prepared.	**IQ2: Going concern** This is a very practical example that requires good analytical skills as well as sound logic when deciding the most appropriate responses to your analysis.
4	**Comparatives** The auditor's responsibilities to audit the financial statements extend to include the previous year's figures as well.	**Approach** This will be revision from your previous studies so make sure you remember where to find this content. **Stop and think** Do this year's comparatives match last year's figures? Should they?	Comparative figures are usually presented as part of a set of financial statements but the requirements of ISAs 510 and 710 may be tested by a scenario which includes change of some kind (such as a new auditor or a change in accounting policies).	N/A
5	**Written representations** Another of the auditor's 'pre-flight checks' before they	**Approach** Without obtaining these representations, the auditor does not	These could form part of the overall evidence that the auditor needs to collect, so you	**IQ3: Written representations** This is a good test of whether you understand (a) the

Topic	Practical significance	Study approach	Exam approach	Interactive questions
	can issue their opinion is to obtain representations from management.	have all the evidence they need for their opinion. **Stop and think** Can you remember what happens if the client refuses to provide these representations to the auditor?	should be prepared for any situations where representations might be required.	purpose of obtaining representations and (b) the process.
6	**The auditor's report** This is the auditor's opportunity to explain what they have achieved during the course of the engagement and requires great skill and judgement to prepare.	**Approach** There are many elements to this section: the report structure, key audit matters, any necessary modifications and the auditor's responsibilities for other information. None of this is new material but you still need to be prepared in case it is examined. **Stop and think** Can you differentiate between situations where you might only need to modify the auditor's report and those where the audit opinion requires modifying?	There is plenty of scope for questions on the auditor's report to appear in your exam – this content may also be added to another requirement where you need to consider the impact of your findings on the auditor's report and/or the opinion. Be prepared!	**IQ4: Forming an audit opinion** This is a great illustration of the job of the auditor – unless you can explain that there is a problem with the accounting treatment here, there is a risk that you will issue an unmodified opinion despite the possible presence of accounting irregularities. Reporting therefore requires strong corporate reporting knowledge in conjunction with your audit reporting knowledge. Don't forget about materiality!
7	**Other reporting responsibilities** Some engagements require specific reporting which you also need to be familiar with.	**Approach** You should have covered most of this in your previous studies so this should be revision. **Stop and think** How do you think XBRL tagging fits into the new digital workplace?	Questions on these topics may only represent a handful of marks, but you still need to be prepared to explain the auditor's responsibilities if required.	N/A

Topic	Practical significance	Study approach	Exam approach	Interactive questions
8	**Appendix** You need to be familiar with the various modifications to the auditor's report under different circumstances.	**Approach** You covered this in your previous studies so this should be revision. **Stop and think** Can you find each of these in the auditing standards open book?	You need to know which parts of the report would need to be modified under certain situations and explain the reasons why.	N/A

Once you have worked through this guidance you are ready to attempt the further question practice included at the end of this chapter.

1 Review and audit completion

Section overview

- Towards the end of an audit, a series of reviews and evaluations are carried out.
- This is an important aspect of quality management.

1.1 Introduction

Auditing initially may be carried out on components, with opinions being formed on elements of the financial statements in isolation. However, it is essential that auditors step back from the detail and assess the financial statements as a whole, based on knowledge accumulated during the audit process. In particular, the following procedures will need to be performed at the review and completion stage of the audit:

- Consider governance issues
- Review the financial statements
- Perform completion procedures
- Report to the board
- Prepare the auditor's report

Review and reporting issues have been covered in the Audit and Assurance Workbook at the Professional Level, however, there have been some substantial changes over recent years in this area affecting the auditor's responsibilities relating to 'other information' and auditor's reports in particular. The following ISAs are relevant to this stage of the audit:

- ISA 260 (Revised), *Communication With Those Charged With Governance*
- ISA 520, *Analytical Procedures*
- ISA 560, *Subsequent Events*
- ISA 570 (Revised), *Going Concern*
- ISA 700 (Revised), *Forming an Opinion and Reporting on Financial Statements*
- ISA 701 , *Communicating Key Audit Matters in the Independent Auditor's Report*
- ISA 705 (Revised), *Modifications to the Opinion in the Independent Auditor's Report*
- ISA 706 (Revised), *Emphasis of Matter Paragraphs and Other Matter Paragraphs in the Independent Auditor's Report*
- ISA 710, *Comparative Information – Corresponding Figures and Comparative Financial Statements*
- ISA 720 (Revised), *The Auditor's Responsibilities Relating to Other Information*

In the remainder of this chapter we will look at a number of key aspects of these ISAs in more detail. A summary is also provided in the technical reference at the end of the chapter.

1.2 Governance issues

1.2.1 Quality management

We have looked at the importance of quality management in Chapter 1 of this Workbook. Quality is an important consideration throughout the audit. In particular, for the audit of listed entities, ISA 220 (Revised), *Quality Management for an Audit of Financial Statements* states that the auditor's report should not be dated until the completion of the engagement quality review (ISA 220.36d).

This includes ensuring that:

- the work has been carried out in accordance with professional and regulatory requirements;
- a proper evaluation of the firm's independence was carried out;
- significant matters are given further consideration;
- appropriate consultations have taken place and been documented;
- where appropriate the planned work is revised;
- the work performed supports the conclusions;
- the evidence obtained supports the audit opinion;
- the objectives of the audit have been achieved; and
- the auditor's report is appropriate in the circumstances.

In addition, under Sarbanes–Oxley, a concurring or second partner review should be performed by another partner not associated with the audit or by an independent reviewer (see Chapter 4 for more details of the Sarbanes–Oxley Act 2002 or SOX).

In its 'Strategy 2018/21: Budget and Levies 2018/19 (March 2018)' the UK FRC reiterated that "promoting high audit quality and assurance" was one of its **strategic priorities** – this is underpinned by its ongoing system of monitoring the quality of firms and their work, including periodic audit quality thematic reviews on issues such as materiality (see Chapter 5).

1.2.2 Governance evidence

Important governance evidence will be obtained from the following sources:

- Written representation letters from management (see later in this chapter)
- Information about contingent liabilities and commitments (Chapter 13)
- Information about related parties (Chapter 9)

1.3 Financial statement review

1.3.1 Introduction

Once the bulk of the substantive procedures have been carried out, the auditors will have a draft set of financial statements which should be supported by appropriate and sufficient audit evidence. At the beginning of the end of the audit process, it is usual for the auditors to undertake an **overall review** of the financial statements. This review, in conjunction with the conclusions drawn from the other audit evidence obtained, gives the auditors **a reasonable basis for their opinion** on the financial statements. It should be carried out by a senior member of the audit team, with appropriate skills and experience.

1.3.2 Compliance with accounting regulations

The auditors should consider whether:

- the **information presented** in the financial statements is **in accordance with local/national statutory requirements**; and
- the **accounting policies** employed are in accordance with accounting standards, properly disclosed, consistently applied and appropriate to the entity.

An important consideration in assessing the presentation of the financial statements is the adequacy of disclosure..

When examining the **accounting policies**, auditors should consider:

- policies commonly adopted in particular industries;
- policies for which there is substantial authoritative support;

- whether any departures from applicable accounting standards are necessary for the financial statements to give a true and fair view; and
- whether the financial statements reflect the substance of the underlying transactions and not merely their form.

When compliance with local/national statutory requirements and accounting standards is considered, the auditors may find it useful to use a **checklist**.

1.3.3 Review for consistency and reasonableness

The auditors should consider whether the financial statements are consistent with their knowledge of the entity's business and with the results of other audit procedures, and the manner of disclosure is fair. The principal considerations are as follows.

- Whether the financial statements adequately reflect the **information** and **explanations** previously obtained and conclusions previously reached during the course of the audit
- Whether the review reveals any **new factors** which may affect the presentation of, or disclosure in, the financial statements
- Whether analytical procedures applied when completing the audit, such as comparing the information in the financial statements with other pertinent data, **produce results** which assist in arriving at the overall conclusion as to whether the financial statements as a whole are consistent with their knowledge of the entity's business
- Whether the **presentation** adopted in the financial statements may have been unduly influenced by the **directors' desire** to present matters in a favourable or unfavourable light
- The potential impact on the financial statements of the **aggregate of uncorrected misstatements** (including those arising from bias in making accounting estimates) identified during the course of the audit

1.3.4 Analytical procedures

In Chapter 6, we discussed how **analytical procedures** are used as part of the **overall review procedures** at the end of an audit. The procedures may be similar to those performed at the planning stage as risk assessment procedures but, at the end of the audit, the purpose of the procedures is to corroborate the conclusions drawn during detailed testing. This may also involve reviewing results derived from data analytics tools.

As at other stages, significant fluctuations and unexpected relationships must be investigated and documented.

1.3.5 Summarising misstatements

During the course of the audit, misstatements will be discovered which may be material or immaterial to the financial statements. It is very likely that the client will adjust the financial statements to take account of these during the course of the audit. At the end of the audit, however, some misstatements may still be uncorrected and the auditors will summarise these **uncorrected misstatements**.

An example is provided below.

Context example: Schedule of uncorrected misstatements

		SoPL (Current period) Dr £	SoPL (Current period) Cr £	SoFP (Current period) Dr £	SoFP (Current period) Cr £	SoPL (Prior period) Dr £	SoPL (Prior period) Cr £	SoFP (Prior period) Dr £	SoFP (Prior period) Cr £
(a)	ABCLtd debt unprovided	10,470			10,470	4,523			4,523
(b)	Opening/ closing inventory underval'd*	21,540			21,540		21,540	21,540	
(c)	Closing inventory underval'd		34,105	34,105					
(d)	**Opening unaccrued expenses**								
	Telephone*		453	453		453			453
	Electricity*		905	905		905			905
(e)	**Closing unaccrued expenses**								
	Telephone	427			427				
	Electricity	1,128			1,128				
(f)	Obsolete inventory write -off	2,528			2,528	3,211			3,211
	Total	36,093	35,463	35,463	36,093	9,092	21,540	21,540	9,092
	Cancelling items*	21,540			21,540				
			453	453					
			905	905					
		14,553	34,105	34,105	14,553				

The summary of misstatements will list misstatements not only from the current year (adjustments (c) and (e)) but also those in the previous year(s). This will allow misstatements to be highlighted which are reversals of misstatements in the previous year. For example, in this instance last year's closing inventory was undervalued by £21,540 (adjustment (b)). Inventory in the prior year statement of financial position should be increased (Dr) and profits increased (Cr). At the start of the current accounting period the closing inventory adjustment is reversed out so that the net effect on the cumulative position is zero. This also applies to the adjustment to last year's accrued expenses (adjustment (d)). Cumulative misstatements may also be shown, which have increased from year to year, for example adjustments (a) and (f). It is normal to show both the statement of financial position and the effect on profit or loss, as in the example given here. This may also be extended to the entire statement of profit or loss and other comprehensive income.

1.3.6 Evaluating the effect of misstatements

ISA 450, *Evaluation of Misstatements Identified During the Audit* states that the objective of the auditor is to evaluate:

(a) the effect of identified misstatements on the audit, and

(b) the effect of uncorrected misstatements, if any, on the financial statements. (ISA 450.3)

All misstatements identified during the audit should be accumulated, other than those that are clearly trivial (ISA 450.5). (The ISA explains that 'clearly trivial' does not mean the same as 'not material'; it implies something of a wholly different – smaller – order of magnitude.) The auditor must document any threshold used to define what has been considered to be clearly trivial.

The aggregate of uncorrected misstatements comprises the following:

(a) **Specific misstatements** identified by the auditors, including the net effect of uncorrected misstatements identified during the audit of the previous period if they affect the current period's financial statements

(b) Their **best estimate** of **other misstatements** which cannot be quantified specifically

ISA 450 distinguishes between the following:

- **Factual misstatements** – about which there is no doubt
- **Judgemental misstatements** – differences arising from judgements of management including those concerning recognition, measurement, presentation and disclosure in the financial statements (including the selection or application of accounting policies) that the auditor considers unreasonable or inappropriate
- **Projected misstatements** – the auditor's best estimate of misstatements in populations, involving the projection of misstatements identified in samples to entire populations

  (ISA 450.A6)

  If the auditors consider that the **aggregate** of misstatements may be material, they must consider reducing audit risk by extending audit procedures or requesting management to adjust the financial statements (which management may wish to do anyway).

  If the aggregate of the uncorrected misstatements that the auditors have identified approaches the materiality level, the auditors should consider whether it is likely that undetected misstatements, when taken with aggregated uncorrected misstatements, could exceed the materiality level. Thus, as aggregate uncorrected misstatements approach the materiality level the auditors should consider reducing the risk by:

- performing **additional audit procedures**; and
- requesting management to **adjust the financial statements** for identified misstatements.

The schedule will be used by the audit manager and partner to decide whether the client should be requested to make adjustments to the financial statements to correct the misstatements.

Professional skills focus: Structuring problems and solutions

Audits are generally very procedural and as such can be quite complex when trying to complete all the stages in order to form an audit opinion and report it accordingly. Knowledge of the various auditing standards here will provide a sound structure for ensuring that all the necessary elements of the engagement have been completed.

1.4 Artificial intelligence (AI) and robotic process automation (RPA)

In Chapter 5 we discussed the advances in audit data analytics and how artificial intelligence (AI) and robotic process automation (RPA) have helped auditors to increase the scope, detail and accuracy of testing large populations of data. This software can even be programmed to summarise findings and prioritise the results of testing, making the process of evaluation more efficient as the parameters that are used to identify items of significance can now be programmed with much more subtlety (for example, the patterns of behaviours which may be indicative of fraudulent activity within an account category such as expenses claims).

2 Subsequent events

Section overview

Auditors must review events after the reporting period and determine whether those events impact on the year-end financial statements.

2.1 Events after the reporting period

In accordance with ISA 560, *Subsequent Events*, subsequent events include:

- events occurring **between the period end and the date of the auditor's report**; and
- facts discovered **after the date of the auditor's report**.

IAS 10, *Events After the Reporting Period* deals with the treatment in financial statement of events, favourable and unfavourable, occurring after the period end. It identifies two types of event:

(a) Those that provide further evidence of **conditions that existed at the period end**

(b) Those that are indicative of **conditions that arose subsequent to the period end**

The extent of the auditor's responsibility for subsequent events depends on when the event is identified.

Note: While ISA 560 does not deal with matters relating to the auditor's responsibilities for other information obtained after the date of the auditor's report which are addressed in ISA 720 (Revised), *The Auditor's Responsibilities Relating to Other Information*, this type of other information may bring to light a subsequent event relevant to the application of ISA 560.

2.2 Events occurring up to the date of the auditor's report

The auditor must perform procedures designed to obtain **sufficient, appropriate audit evidence** that all events **up to the date of the auditor's report** that may require adjustment of, or disclosure in, the financial statements have been identified. In summary, these procedures consist of making enquiries of management about changes or risks, and inspecting relevant documentation (such as board minutes and any internally available financial information such as management accounts).

These procedures should be applied to any matters examined during the audit which may be susceptible to change after the period end, in addition to tests on specific related transactions eg, cut-off tests.

The ISA lists **procedures** to identify subsequent events which may require adjustment or disclosure. They should be performed as near as possible to the date of the auditor's report.

Reviews and updates of these procedures may be required, depending on the length of the time between the procedures and the signing of the auditor's report and the susceptibility of the items to change over time.

When the auditor becomes aware of events which materially affect the financial statements, the auditor should consider whether such events are **properly accounted for and adequately disclosed** in the financial statements.

2.3 Facts discovered after the date of the auditor's report but before the financial statements are issued

The financial statements are the **management's responsibility**. They should therefore inform the auditors of any material subsequent events **between the date of the auditor's report and the date the financial statements are issued**. The auditors do **not** have any obligation to perform procedures, or make inquiries regarding the financial statements **after the date of their report**.

If, after the date of the auditor's report but before the financial statements are issued, the auditor becomes aware of a fact that, had it been known to the auditor at the date of the auditor's report, may have caused the auditor to amend the auditor's report, the auditor shall:

- Discuss the matter with the management;
- Consider whether the financial statements need amendment; and if so
- Inquire how management intends to address the matter in the financial statements.

When the financial statements are amended, the auditors shall do the following:

- **Extend the procedures** discussed above to the **date of their new report**
- Carry out any other appropriate procedures
- Issue a new auditor's report dated no earlier than the date of approval of the amended financial statements

If the auditor believes the financial statements need to be amended, and management does not amend them:

- If the auditor's report **has not yet been released** to the entity, the auditor shall modify the opinion in line with ISA 705 and then provide the auditor's report.
- If the auditor's report **has already been released** to the entity, the auditor shall notify those who are ultimately responsible for the entity (the management or possibly a holding company in a group) not to issue the financial statements or auditor's reports before the amendments are made. If the financial statements are issued anyway, the auditor shall take action to **seek to prevent reliance on the auditor's report**. The action taken will depend on the auditor's legal rights and obligations and the advice of the auditor's lawyer.

2.4 Facts discovered after the financial statements have been issued

Auditors have **no obligations** to perform procedures or make inquiries regarding the financial statements **after they have been issued**. This may include the period up until the financial statements are authorised for issue by those charged with governance.

When, after the financial statements have been issued, the auditor becomes aware of a fact which existed at the date of the auditor's report and which, if known at that date, may have caused the auditor to modify the auditor's report, the auditor should consider whether the financial statements need revision, discuss the matter with management, and take action as appropriate in the circumstances.

The ISA gives the appropriate procedures which the auditors should undertake when management revises the financial statements.

- **Carry out the audit procedures** necessary in the circumstances.

- **Review the steps taken by management** to ensure that anyone in receipt of the previously issued financial statements together with the auditor's report thereon is informed of the situation.
- **Issue a new report** on the revised financial statements.

(ISA 560.15)

The new auditor's report should include an **emphasis of matter paragraph** or **other matter paragraph** referring to a note to the financial statements that more extensively discusses the reason for the revision of the previously issued financial statements and to the earlier report issued by the auditor.

(ISA 560.16)

Where local regulations allow the auditor to restrict the audit procedures on the financial statements to the effects of the subsequent event which caused the revision, the new auditor's report should contain a statement to that effect.

Where management does **not** revise the financial statements but the auditors feel they should be revised, or if management does not intend to take steps to ensure anyone in receipt of the previously issued financial statements is informed of the situation, the auditors should consider taking steps to prevent reliance on their report. The actions taken will depend on the auditor's legal rights and obligations and legal advice received. In Bangladesh , the auditor has a legal right to make statements at the AGM.

Where the auditor becomes aware of a fact relevant to the audited financial statements which **did not exist** at the date of the auditor's report, there are no statutory provisions for revising the financial statements. In this situation, the auditor discusses with those charged with governance whether they should withdraw the financial statements. Where those charged with governance decide not to do so, the auditor may wish to take advice on whether it might be possible to withdraw their report. In either case, other possible courses of action include those charged with governance or the auditors making a statement at the AGM.

Professional skills focus: Assimilating and using information

Gaining full visibility of the timescales involved in a scenario is essential for the satisfactory resolution of a requirement. This will therefore help you fully visualise the problem so it can be resolved.

Interactive question 1: Subsequent events

You are the auditor of Extraction, an oil company. You have recently concluded the audit for the year ended 31 December 20X7 and the auditor's report was signed on 28 March 20X8. The financial statements were also authorised for issue on this date. On 1 April, you are informed that the company has identified a major oil leak which has caused significant environmental damage.

Requirement

Identify and explain the implications of the information regarding the oil spill. See **Answer** at the end of this chapter.

3 Going concern

Section overview

- The auditor will test whether the going concern basis of accounting is appropriate to ensure it applies to the audit client.
- Financial risk is indicated by the following circumstances:
- Financial indications
- Operating indications
- Other indications

3.1 Reporting consequences

If an entity is a going concern it is ordinarily viewed as continuing in business for the foreseeable future with neither the intention nor the necessity of liquidation, ceasing trading or seeking protection from creditors pursuant to laws or regulations. Accordingly, assets and liabilities are recorded on the basis that the entity will be able to realise its assets and discharge its liabilities **in the normal course of business**.

However, if management determines that it intends to, or has no realistic alternative but to, liquidate the entity or cease trading, then **the financial statements should not be prepared on the going concern basis.** This is specified by IAS 10, *Events After the Reporting Period*. The entity should instead adopt a basis of preparation that is considered more appropriate in the circumstances, although no specific guidance is provided in IAS 10. In practice, the most obvious method is **break-up** or **liquidation basis**. Specific accounting consequences will include the need to consider the following:

- Impairment of assets
- Recognition of provisions eg, for onerous contracts

Disclosure of the change of basis of preparation should be provided in accordance with IAS 1, *Preparation of Financial Statements*. In addition, the directors of listed companies must report specifically on the going concern status of the company..

3.2 Financial risk

The possibility of a business not being a going concern is one of the financial risks to which a business is exposed. Financial risks are those risks arising from the financial activities of the company, for example:

- Raising capital
- The capital structure
- Financial consequences of an operation eg, operating in an overseas environment

As a consequence of the original capital structure or subsequent operation, there may be a risk due to a shortage of finance or an inability to manage finance in accordance with a company's day to day requirements.

ISA 570 (Revised), *Going Concern* identifies events and conditions that may cast doubt about the entity's ability to use the going concern basis of accounting, under the headings of **financial, operating** and **other** (ISA 570, para. A3).

The significance of such indications can often be **mitigated** by other factors, for example:

(a) the effect of an entity being unable to make its normal debt repayments may be counterbalanced by management's plans to maintain **adequate cash flows** by alternative means, such as by disposal of assets, rescheduling of loan repayments, or obtaining additional capital.

(b) the loss of a principal supplier may be mitigated by the availability of a suitable alternative source of supply.

3.3 ISA 570, *Going Concern*

The following is a summary of the key points from the revised ISA.

Management's responsibility

(a) ISA 570 states that when preparing accounts, management should make an explicit **assessment** of the entity's ability to continue as a going concern.

(b) When management are making the assessment, the following factors should be considered:

  (1) The **degree of uncertainty** about the events or conditions being assessed increases significantly the further into the future the assessment is made.

  (2) Judgements are made on the basis of the **information available** at the time.

  (3) Judgements are affected by the **size** and **complexity** of the entity, the **nature** and **condition** of the business and the **degree** to which it is **affected** by **external factors**.

Auditor's responsibilities

(a) When planning and performing audit procedures and in evaluating the results thereof, the auditor shall consider whether there are events or conditions that may cast significant doubt on the entity's ability to continue as a going concern.

(b) The auditor's objectives are as follows:

  (1) To obtain sufficient appropriate audit evidence regarding, and conclude on, the appropriateness of management's use of the going concern basis of accounting

  (2) To conclude, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the entity's ability to continue as a going concern

  (3) To report in accordance with ISA 570 (ISA 570.9)

(c) The auditor shall remain alert for evidence of events or conditions and related business risks which may cast doubt on the entity's ability to continue as a going concern throughout the audit. If such events or conditions are identified, the auditor shall consider whether they affect the auditor's assessments of the risk of material misstatement.

(d) Management may already have made a preliminary assessment of going concern. If so, the auditors would review potential problems management had identified, and management's plans to resolve them. Alternatively auditors may identify problems as a result of discussions with management.

(e) The auditor shall evaluate management's assessment of the entity's ability to continue as a going concern maintaining professional scepticism and an awareness of the risk of **management bias** throughout the audit. The auditors shall consider:

  (1) the **process** management used and the **robustness** of the assessment of the company's risks;

  (2) the **assumptions** on which management's assessment is based; and

  (3) management's **plans** for future action.

(f) If management's assessment covers a period of **less than 12 months** from the end of the reporting period, the auditor shall ask management to extend its assessment period to 12 months from the end of the reporting period.

(ISA 570.14-1)

(g) Management shall not need to make a detailed assessment if the entity has a history of profitable operations and ready access to financial resources. In this case, the auditor's evaluation of the assessment may be made without performing detailed procedures if sufficient evidence is available from other audit procedures. The extent of the auditor's procedures is influenced primarily by the excess of the financial resources available to the entity over the financial resources that it requires.

(ISA 570.A9)

(h) The auditor shall inquire of management as to its knowledge of events or conditions beyond the period of assessment used by management that may cast significant doubt on the entity's ability to continue as a going concern. The auditor remains alert to the possibility that there may be known events, scheduled or otherwise, or conditions that will occur beyond the period of assessment used by management that may bring into question the appropriateness of management's use of the going concern basis of accounting in preparing the financial statements. If such events or conditions are identified, the auditor may need to request management to evaluate the potential significance of the event or condition on its assessment of the entity's ability to continue as a going concern.

(ISA 570.A14)

As the degree of uncertainty increases as an event or condition gets further into the future, the indications of going concern issues would need to be significant before the auditor would consider it necessary to take any further action based on this information. The auditor's responsibility to carry out procedures to identify issues beyond the period of assessment would normally be limited to inquiries of management.

(ISA (UK) 570.A14)

Additional audit procedures

(a) When events or conditions have been identified which may cast significant doubt on the entity's ability to continue as a going concern, the auditor shall do the following:

(1) Evaluate management's plans for future actions based on its going concern assessment

(2) Where the entity has prepared a cash flow forecast and analysis of this is significant in the evaluation of management's plans for future action:

- Evaluate the reliability of the underlying data
- Determine whether there is adequate support for the assumptions underlying the forecast

(3) Consider whether any additional facts or information have become available since the date of management's assessment

(4) Seek written representations from management regarding its plans for future action and the feasibility of these plans

(b) When questions arise on the appropriateness of the going concern assumption, some of the normal audit procedures carried out by the auditors may take on an **additional significance**. Auditors may also have to carry out **additional procedures** or update information obtained earlier. The ISA lists various procedures which the auditors shall carry out in this context.

(1) **Analyse and discuss cash flow**, profit and other relevant forecasts with management.

(2) **Analyse and discuss** the entity's latest available **interim financial statements**.

(3) **Read the terms of debentures and loan agreements** and determine whether they have been breached.

(4) **Read minutes** of the meetings of shareholders, the board of directors and important committees for reference to financing difficulties.

(5) **Inquire** of the entity's lawyer regarding **litigation and claims**.

(6) **Confirm the existence, legality and enforceability** of arrangements to provide or maintain financial support with related and third parties.

(7) **Assess** the **financial ability** of such parties to **provide additional funds**.

(8) Evaluate **the entity's plans to deal with unfulfilled customer orders**.

(9) Perform audit procedures regarding **subsequent events** to identify those that either mitigate or otherwise affect the entity's ability to continue as a going concern.

(10) **Confirm** the existence, terms, and adequacy of **borrowing facilities**.

(11) **Obtain and review** reports of **regulatory actions**.

(12) **Determine the adequacy** of support for any planned **disposals of assets**.

(c) Based on the audit evidence obtained, the auditor shall determine if, in the auditor's judgement, a material uncertainty exists related to events or conditions that, alone or in aggregate, may cast significant doubt on the entity's ability to continue as a going concern. The auditor must document the extent of their concern (if any) about the entity's ability to continue as a going concern.

Going concern – auditor conclusions and reporting

Use of going concern basis of accounting appropriate but a material uncertainty exists

(a) The auditor shall determine whether the financial statements:

(1) adequately disclose the **events and conditions** that may cast significant doubt on the entity's ability to continue as a going concern and **management's plans** to deal with these; and

(2) disclose clearly that there is a **material uncertainty** which may cast significant doubt about the company's ability to continue as a going concern.

(b) If **adequate disclosure** is made in the financial statements, the auditor shall express an unmodified opinion but include a separate section under the heading 'Material Uncertainty Related to Going Concern'. This must draw attention to the note in the financial statements that discloses the matter and must state that these events or conditions indicate that a material uncertainty exists that may cast significant doubt on the entity's ability to continue as a going concern and that the auditor's opinion is not modified in this respect.

(ISA 570.22 and Appendix: Illustration 1)

(c) If **adequate disclosure is not made** in the financial statements, the auditor shall express a qualified or adverse opinion, as appropriate. In the Basis for Qualified or Adverse Opinion section of the auditor's report the auditor must state that there is a material uncertainty which may cast significant doubt on the company's ability to continue as a going concern and that the financial statements do not adequately disclose this.

(ISA 570.23)

Management unwilling to make or extend its assessment

- If management is unwilling to make or extend its assessment when requested to do so by the auditor, the auditor shall consider the need to modify the auditor's report as a result of the inability to obtain sufficient appropriate evidence. A qualified opinion or a disclaimer of opinion in the auditor's report may be appropriate. (ISA 570.A35)

Use of going concern assumption is inappropriate

- If the going concern basis has been used but in the auditor's judgement this is not appropriate, the auditor shall express an **adverse opinion**.

Communication with those charged with governance

Unless all those charged with governance are involved with managing the entity the auditor must communicate with those charged with governance events or conditions that cast significant doubt on the entity's ability to continue as a going concern, including the following details:

- Whether the events or conditions constitute a material uncertainty
- Whether management's use of the going concern basis of accounting is appropriate
- The adequacy of related disclosure
- Where applicable the implications for the auditor's report

(ISA 570.25)

Significant delay

If there is a significant delay in the approval of the financial statements the auditor must enquire as to the reasons for this. Where it is believed that the delay could be related to going concern issues the auditor must perform additional audit procedures and consider the effect on the auditor's conclusion regarding the existence of a material uncertainty.

Professional skills focus: Applying judgement

When evaluating a company's going concern status, it is rarely a case of 'yes' or 'no' but instead is more likely to be 'maybe' and 'it depends'. You will need to identify those factors from the scenario that point you in the right direction and reach an overall conclusion about this using your professional judgement.

3.4 Other guidance

The responsibility for assessing the company's ability to continue as a going concern and for disclosing significant uncertainties rests with the directors. The UK Financial Reporting Council (FRC) has published *Guidance on Risk Management, Internal Control and Related Financial and Business Reporting* in September 2014 which replaces an *Update for Directors: Going Concern and Liquidity Risk*. This is primarily directed at companies subject to the UK Corporate Governance Code and aims to bring together elements of best practice for risk management. Appendix A specifically deals with going concern and provides guidance on how to determine whether to adopt the going concern basis, how to determine whether there are material uncertainties and relevant disclosures.

In April 2016 UK FRC issued *Guidance on the Going Concern Basis of Accounting and Reporting on Solvency and Liquidity Risk*. This provides guidance to directors of companies that do not apply the UK Corporate Governance Code. This includes principles for best practice. It summarises the main requirements as follows:

Main requirement	Micro-entity	Small company	Large or medium- sized company
Financial statements			
Assessment of appropriateness of the going concern basis of accounting	α	α	α
Disclosure when there are material uncertainties or when the company does not prepare financial statements on a going concern basis of accounting	×	×	×
Additional disclosures that may be required to give a true and fair view	×	α	α
Other relevant financial statement disclosures	×	×	α
Strategic report			
The strategic report must contain a description of the principal risks and uncertainties facing the company	×	×	α

Note: In June 2012, the Sharman Inquiry issued its Final Report and Recommendations. This includes recommendations regarding going concern assessment and disclosure (see Chapter 4).

Interactive question 2: Going concern

You are the senior on the audit of Truckers Ltd whose principal activities are road transport and warehousing services, and the repair of commercial vehicles.

You have been provided with extracts from the draft accounts for the year ended 31 October 20X5.

	Draft 20X5 £'000	Actual 20X4 £'000
Summary statement of profit or loss		
Revenue	10,971	11,560
Cost of sales	(10,203)	(10,474)
Gross profit	768	1,086
Administrative expenses	(782)	(779)
Interest payable and similar charges	(235)	(185)
Net (loss) profit	(249)	122
Summary statement of financial position		
Non-current assets	5,178	4,670
Current assets		
Inventory (parts and consumables)	95	61
Receivables	2,975	2,369
	3,070	2,430
Current liabilities		
Bank loan	250	-
Overdraft	1,245	913
Trade payables	1,513	1,245
Lease obligations	207	-

	Draft 20X5	Actual 20X4
	£'000	£'000
Other payables	203	149
	3,418	2,307
Non-current liabilities		
Bank loan	750	1,000
Lease obligations	473	
	1,223	1,000
Net assets	3,607	3,793

You have been informed by the managing director that the fall in revenue is due to the following factors:

- The loss, in July, of a longstanding customer to a competitor
- A decline in trade in the repair of commercial vehicles

Due to the reduction in the repairs business, the company has decided to close the workshop and sell the equipment and spares inventory. No entries resulting from this decision are reflected in the draft accounts.

During the year, the company replaced a number of vehicles, funding them by a combination of leasing and an increased overdraft facility. The facility is to be reviewed in January 20X6 after the audited accounts are available.

The draft accounts show a loss for 20X5 but the forecasts indicate a return to profitability in 20X6, as the managing director is optimistic about generating additional revenue from new contracts.

Requirements

2.1 State the circumstances particular to Truckers Ltd which may indicate that the company is not a going concern. Explain why these circumstances give cause for concern.

2.2 Describe the audit procedures to be performed in respect of going concern at Truckers Ltd. See **Answer** at the end of this chapter.

4 Comparatives

Section overview

- ISA 710 provides guidance on corresponding figures and comparative financial statements.
- The auditor should obtain sufficient, appropriate audit evidence that the corresponding figures meet the requirements of the applicable financial reporting framework.

4.1 ISA 710, *Comparative Information*

ISA 710, *Comparative Information – Corresponding Figures and Comparative Financial Statements* establishes standards and provides guidance on the auditor's responsibilities regarding comparatives.

Comparatives are presented differently under different countries' financial reporting frameworks. Generally comparatives can be defined as **corresponding amounts** and **other disclosures** for the preceding financial reporting period(s), presented for comparative purposes. Because of these variations in countries' approach to comparatives, the ISA refers to the following frameworks and methods of presentation.

Corresponding figures are amounts and other disclosures for the prior period included as an integral part of the current period financial statements, and are intended to be read only in relation to the amounts and other disclosures relating to the current period (referred to as 'current period figures'). The level of detail presented in the corresponding amounts and disclosures is dictated primarily by its relevance to the current period figures.

Comparative financial statements are amounts and other disclosures for the prior period included for comparison with the financial statements of the current period but, if audited, are referred to in the auditor's opinion. The level of information included in those comparative financial statements is comparable with that of the financial statements of the current period.

Comparatives are presented in compliance with the relevant financial reporting framework. The essential audit reporting differences are that:

- for **corresponding figures**, the auditor's report only refers to the financial statements of the current period; and
- for **comparative financial statements**, the auditor's report refers to each period for which financial statements are presented.

ISA 710 provides guidance on the auditor's responsibilities for comparatives (the audit procedures are essentially the same for both approaches) and for reporting on them under the two frameworks.

4.2 Audit procedures

The auditor must obtain sufficient, appropriate audit evidence that the comparative information meets the requirements of the applicable financial reporting framework.

Audit procedures performed on the comparative information are usually limited to checking that the comparative information has been correctly reported and is appropriately classified. Auditors must assess whether the following are true:

- **Accounting policies** used for the comparative information are **consistent** with those of the current period or whether appropriate adjustments and/or disclosures have been made.
- Comparative information **agrees** with the **amounts** and other disclosures presented in the prior period or whether appropriate adjustments and/or disclosures have been made. This will include checking whether related opening balances in the accounting records were brought forward correctly.

If the auditor becomes aware of a possible material misstatement in the comparative information while performing the current period audit, then additional audit procedures should be performed to obtain sufficient, appropriate audit evidence to determine whether a material misstatement exists.

Written representations are required for all periods referred to in the auditor's opinion and specific representations are also required regarding any restatement made to correct a material misstatement in prior period financial statements that affect the comparative information. In the case of corresponding figures representations are requested for the current period only because the auditor's opinion is on those financial statements which include corresponding figures.

When the financial statements of the prior period:

- have been audited by other auditors, or
- were not audited,

then the incoming auditors must assess whether the corresponding figures meet the conditions specified above and also follow the guidance in ISA 510, *Initial Audit Engagements – Opening Balances*.

4.3 Reporting

When the comparatives are presented as corresponding figures, the auditor should issue an auditor's report in which the **comparatives are not specifically identified** because the auditor's opinion is on the current period financial statements **as a whole**, including the corresponding figures.

The auditor's report will only make any specific reference to corresponding figures in the circumstances described below.

(a) When the auditor's report on the prior period, as previously issued, included a qualified opinion, disclaimer of opinion, or adverse opinion and the matter which gave rise to the modification is unresolved:

 (1) if the effects or possible effects of the matter on the current period's figures are material, the auditor's opinion on the current period's financial statements should be modified and the basis for modification paragraph of the report should refer to both periods in the description of the matter; or

 (2) in other cases the opinion on the current period's figures should be modified and the basis for modification paragraph should explain that the modification is due to the effects or possible effects of the unresolved matter on the comparability of the current period's figures and the corresponding figures.

(b) In performing the audit of the current period financial statements, the auditors, in certain unusual circumstances, may become aware of a **material misstatement** that affects the prior period financial statements on which an unmodified report has been previously issued. If the prior period financial statements have not been revised and reissued, and the corresponding figures have not been properly restated and/or appropriate disclosures have not been made, the auditor shall express a qualified opinion or an adverse opinion in the report on the current period financial statements, modified with respect to the corresponding figures included therein.

4.4 Incoming auditors: additional requirements

When the prior period financial statements were audited by other auditors, **in some countries** the **incoming auditors can refer to the predecessor auditor's report** on the corresponding figures in the incoming auditor's report for the current period.

When the auditor decides to refer to another auditor, the incoming auditor's report should indicate:

- that the financial statements of the prior period were audited by the predecessor auditor;
- the type of opinion expressed by the predecessor auditor and, if the opinion was modified, the reasons therefore; and
- the date of that report.

The situation is slightly different if the prior period financial statements were **not audited**.

When the prior period financial statements are not audited, the incoming auditor must state in the auditor's report that the corresponding figures are unaudited.

However, the inclusion of such a statement does not relieve the auditors of the requirement to perform appropriate procedures regarding opening balances of the current period. If there is insufficient evidence about corresponding figures or inadequate disclosures, the auditor should **consider the implications for their report**.

In situations where the incoming auditor identifies that the corresponding figures are materially misstated, the auditor should request management to revise the corresponding figures or, if management refuses to do so, appropriately **modify the report**.

Note: In some countries the predecessor auditor must allow the successor auditor access to all relevant information in respect of the audit, including relevant working papers. For example, In the UK in accordance with Companies Act 2006 a predecessor auditor must allow the successor auditor access to all relevant information in respect of the audit, including relevant working papers. However no such regulation currently exists in Bangladesh.

5 Written representations

Section overview

- Written representations are normally obtained towards the end of the audit as a letter written by management and addressed to the auditor.
- Where there is doubt as to the reliability of written representations or if management refuse to provide representations, the auditor will need to reassess the level of assurance obtained from this source of evidence.

5.1 Representations

ISA 580 , *Written Representations* covers this area and states that the objectives of the auditor are as follows:

- To obtain written representations from management and, where appropriate, those charged with governance that they believe that they have fulfilled their responsibility for the preparation of the financial statements and for the completeness of the information provided to the auditor.
- To support other audit evidence relevant to the financial statements or specific assertions in the financial statements.
- To respond appropriately to the representations or if representations are not provided.

5.2 Management from whom written representations are requested

"The auditor shall request written representations from management with appropriate responsibilities for the financial statements and knowledge of the matters concerned."

(ISA 580.9)

ISA 580 requires the auditor to determine the appropriate individuals from whom to seek written representations. In most cases this is likely to be management, as they would be expected to have sufficient knowledge of the way in which the entity's financial statements have been prepared. However, the ISA goes on to point out that in circumstances where others are responsible for the financial statements, for example those charged with governance, then they should be requested to provide the representations.

The ISA emphasises the need for management to make **informed representations**. In some cases the auditor may request that management confirms that it has made appropriate inquiries to enable it to do so.

5.3 Written representations

5.3.1 Management's responsibilities

ISA 580 specifies a number of general representations which management must provide. These are as follows:

- That management has fulfilled its responsibility for the **preparation and presentation** of the financial statements as set out in the terms of the audit engagement.
- Whether the financial statements are prepared and presented **in accordance with the applicable financial reporting framework**.
- That management has provided the auditor with **all the relevant information**.
- That **all transactions** have been recorded and are reflected in the financial statements.
- A description of **management's responsibilities**.

Notes

1 In Bangladesh, considering the Companies Act, 1994 and the Securities and Exchange Rules, 1987, auditor may obtain representation on the following additional matters:

- proper books of accounts as required by law have been kept by the Company;
- the statement of financial position and statement of profit or loss and other comprehensive income dealt with by the report are in agreement with the books of accounts and returns; and
- the expenditures incurred were for the purposes of the Company's business.

2. In case of banks and financial institutions similar additional representation can be obtained by the auditor considering industry specific laws and regulations.

5.3.2 Other written representations

Other written representations may be required regarding specific issues. These may be required due to the provisions of other ISAs (a list is given in Appendix 1 of ISA 580) or to support other audit evidence. In particular, written representations may be sought where sufficient, appropriate evidence cannot be obtained independently. This might be the case where an assertion is affected by judgement or management intent. For example, management intent would be an important factor in the valuation basis used to value investments.

However, the ISA stresses that written representations **do not provide sufficient, appropriate audit evidence on their own**. The fact that management has provided reliable written representations does not affect the nature and extent of other audit evidence that the auditor obtains.

The auditor may also consider it necessary to obtain other representations about the following.

- Whether the selection and application of accounting policies are appropriate
- Whether the following have been recognised, measured and presented (where relevant):
  - Plans or intentions that may affect the carrying value or classification of assets and liabilities
  - Liabilities, both actual and contingent

- Title to, or control over, assets, the liens or encumbrances on assets, and assets pledged as collateral
- Aspects of laws, regulations and contractual agreements that may affect the financial statements

- That management has communicated to the auditor all deficiencies in internal control of which management is aware

5.3.3 Threshold amount

The ISA allows for the possibility that the auditor may agree a 'threshold amount' above which matters cannot be regarded as clearly trivial.

5.4 Date of written representations

"The date of the written representations shall be as near as practicable to, but not after, the date of the auditor's report on the financial statements. The written representations shall be for all the financial statements and periods referred to in the auditor's report."

(ISA 580.14)

Because written representations are audit evidence, the auditor's report cannot be dated before the date of the written representations.

Where a representation about a specific issue has been obtained during the course of the audit the auditor may request an updated written representation.

5.5 Form of written representations

"The written representation shall be in the form of a representation letter addressed to the auditor. If law or regulation requires management to make written public statements about its responsibilities and the auditor determines that such statements provide some or all of the representations required by paragraphs 10 or 11 (covered in paragraph 5.3.1 above), the relevant matters covered by such statements need not be included in the representation letter."

(ISA 580.15)

Appendix 2 of ISA 580 provides an illustrative example of a representation letter. It is not a standard letter, and representations will vary from one period to the next and from one company to another.

5.6 Doubts as to reliability

Where the auditor has concerns about the **competence, integrity and ethical values** of the management, the auditor must consider the effect this will have on the reliability of both oral and written representations.

In particular, if written representations are **inconsistent** with other audit evidence the auditor will need to perform audit procedures in an attempt to resolve the matter. If the situation remains unresolved, the auditor will need to consider the potential effect on the audit opinion.

Where the auditor concludes that representations about management's responsibilities regarding the preparation and presentation of financial statements and information provided to the auditor are not reliable, the audit opinion will be a **disclaimer**.

5.7 Written representations not provided

ISA 580 requires the following procedures to be followed where written representations are not provided.

- Discuss the matter with management

- Re-evaluate the integrity of management and evaluate the effect that this may have on the reliability of representations (oral and written) and evidence in general
- Take appropriate actions, including determining the possible effect on the audit opinion

Where management **does not provide representations about management's responsibilities** regarding the preparation and presentation of financial statements and information provided to the auditor, the audit opinion will be a **disclaimer**.

Interactive question 3: Written representations

You are an audit manager reviewing the completed audit file of Leaf Oil.

(1) There have been no events subsequent to the period end requiring adjustment in the financial statements.

(2) The company has a policy of revaluing properties on an annual basis. A large revaluation gain has been recorded for two properties in the year, on the basis that the directors believe that the property market is going to boom next year. However, the directors have not provided supporting evidence for the revaluation, and a survey of business property values in the area does not show any increase.

(3) The directors confirm that the company owns 75% of the newly formed company, Subsidiary, at the year end.

(4) The directors confirmed that the 500 gallons of oil in Warehouse B belong to Leaf Oil.

Requirement

Comment on whether you would expect to see these matters referred to in the written representation letter.

See **Answer** at the end of this chapter.

6 The auditor's report

Section overview

- Auditors must provide clear and understandable auditor's reports on the financial statements audited.
- As well as the standard auditor's report, the wording of the report may be changed to express a modified opinion, or an emphasis of matter or other matter paragraph may be added to the report.
- Listed company auditor's reports include a description of key audit matters.
- Modifications result either from material misstatements (disagreements) in the financial statements or from an inability to obtain sufficient, appropriate audit evidence (limitation on scope).
- The auditor's report must include a separate section with a heading 'Other Information'.
- Auditors must form, and then critically appraise, their audit opinion on the financial statements.
- Auditor's reports can be made available electronically; in this situation the auditor must ensure that their report is not misrepresented.

6.1 The standard unmodified auditor's report

ISA 700 (Revised) states that the auditor's report must contain the following:

(a) Title

The term 'independent auditor' is usually used in the title to distinguish the auditor's report from reports issued by others.

(ISA 700.21)

(b) Addressee

The auditor's report shall be addressed, as appropriate, based on the circumstances of the engagement. In Bangladesh in case of a public interest entity, the auditor is required to report to the company's members.

(ISA 700.22)

(c) Auditor's opinion

This is now required to be the first section of the auditor's report. It must have the heading 'Opinion' and in Bangladesh, in case of a public interest entity that is a company registered under the Companies Act, 1994, when an unmodified opinion is expressed, it must state clearly that the financial statements give a true and fair view.

(ISA 700.23 & .25)

This section must also:

- identify whose financial statements have been audited;
- state that the financial statements have been audited;
- identify the title of each statement comprising the financial statements;
- refer to the notes, including the summary of accounting policies; and
- specify the date of, or period covered by, each financial statement comprising the financial statements.

(ISA 700.24)

(d) Basis for opinion

This section must immediately follow the 'Opinion' section and must have the heading 'Basis for opinion'. It must include the following information:

- States that the audit was conducted in accordance with ISAs
- Refers to the section of the auditor's report that describes the auditor's responsibilities under the ISAs
- Includes a statement that the auditor is independent of the entity in accordance with relevant ethical requirements
- States whether the auditor believes that the audit evidence the auditor has obtained is sufficient and appropriate to provide a basis for the auditor's opinion.

(ISA 700.28)

Going concern

Where applicable the auditor must report on going concern in accordance with ISA 570 (see earlier section of this chapter).

(ISA 700.29)

Key audit matters

In the Bangladesh, a key audit matters section must be included in accordance with ISA 701 for audits of complete set of general purpose financial statements of listed entities. When the auditor is otherwise required by law or regulation or decides to communicate key audit matters in the auditor's report, the auditor shall do so in accordance with ISA 701

(ISA 700.30-31)

Other information

Where applicable, the auditor's report also includes a separate section with a heading 'Other information' (see later in this chapter).

(ISA 700.32 and ISA 720.21)

Responsibilities for the financial statements

The auditor's report must include a section with the heading 'Responsibilities of those charged with governance for the Financial Statements'. This includes a statement describing the responsibility of those charged with governance for:

- preparing financial statements that give a true and fair view;
- such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement; and
- assessing the ability of the entity to continue as a going concern, assessing whether the use of the going concern basis of accounting is appropriate and disclosing matters relating to going concern.

Auditor's responsibilities for the audit of the financial statements

ISA 700's requirements regarding the description of the auditor's responsibilities is extensive. These include statements:

- of the objectives of the auditor;
- that reasonable assurance is a high level of assurance but is not a guarantee that an audit will always detect a material misstatement;
- that misstatements can arise from fraud or error; and
- that the auditor exercises professional judgment and maintains professional scepticism throughout the audit.

This section also includes a description of an audit and includes the following points:

- The auditor assesses risks of material misstatement, designs and performs audit procedures and obtains sufficient, appropriate evidence to provide a basis for the audit opinion.
- The auditor obtains an understanding of internal control relevant to the audit.
- The appropriateness of accounting policies is assessed.
- The auditor concludes on the appropriateness of management's use of the going concern basis of accounting and whether a material uncertainty exists.
- The auditor communicates with those charged with governance regarding the planned scope and timing of the audit and significant findings.

(ISA 700.37– .40a)

For audits of listed entities the auditor's responsibilities section will also include the following:

- Confirmation that the auditor has provided those charged with governance with a statement that the auditor has complied with relevant ethical requirements regarding independence

- Where key audit matters are communicated a statement that the auditor determines these matters to be of the most significance in the audit. This applies to all entities for which key audit matters are communicated (not just listed companies).

(ISA 700.40b&c)

As per ISA the description of the auditor's responsibilities may be given in the body of the auditor's report, within an appendix to the auditor's report or by cross reference to the description maintained on a website by an appropriate authority, if any.

(ISA 700.41)

(e) Other reporting responsibilities

If the auditor addresses other reporting responsibilities in addition to those under ISAs, these must be addressed in a separate section of the auditor's report.

For example, in Bangladesh the Companies Act, 1994 and the Securities and Exchange Rules, 1987 require the auditor to report if a company has maintained proper books of accounts.

(ISA 700.43)

Additional requirements may apply for audits of bank and non-bank financial institutions

(ISA 700.45

(f) Name of the engagement partner

The name of the engagement partner shall be included in the auditor's report on financial statements of public interest entities as per FRC Notification number 146 dated 21 December 2020.

(g) Auditor's signature

The audit report shall be signed by the audit engagement partner. In case of a public interest entity, the name of the firm and the engagement partner and the FRC registration number shall be mentioned in the signature panel of the audit report.

(h) Auditor's address

The report must name the location where the auditor is based.

(i) Date of the report

The date of the report is the date on which the auditor signs the report expressing an opinion on the financial statements. It must be no earlier than the date on which the auditor has obtained sufficient appropriate audit evidence.

6.2 Key audit matters

The IAASB project on auditor's reports resulted in the issue of a new auditing standard. This standard has been adopted by the FRC as ISA 701, *Communicating Key Audit Matters in the Independent Auditor's Report*. It applies to the **audits of all public interest entities** but can be applied to other audits when the auditor believes it to be necessary. The key points in this ISA are summarised below.

6.2.1 Determining key audit matters (KAMs)

Definition

Key audit matters (KAMs): Those matters, that in the auditor's professional judgment, were of most significance in the audit of the financial statements of the current period. KAMs are selected from matters communicated with those charged with governance.

ISA 701 identifies the purpose of including this information as being to:

- enhance the communicative value of the auditor's report;
- provide additional information to intended users; and
- assist users in understanding significant audit matters and the judgments involved.

(ISA 701.2)

Note: The inclusion of a KAM section does not constitute a modification of the auditor's report and cannot be used as a substitute for a modified opinion. In addition, the KAM section cannot be used as a substitute for disclosures that should have been made.

ISA 701 suggests a three-step 'filtering' approach to determining what constitutes a KAM:

Step 1 The auditor starts by considering **all the matters communicated with those charged with governance**

Step 2 From these the auditor will assess which of these matters required **significant audit attention**. This process will involve taking into account areas of higher/significant risk, significant auditor/management judgment and the effect of significant events or transactions that occurred in the period

Step 3 The auditor will then select from those matters identified in Step 2 the matters which were of **most significance** in the audit

Step 3 is clearly the most important step of the process in which the auditor is required to apply judgment in evaluating the relative significance of different issues.

In making this decision the auditor would consider the following:

- Matters which resulted in significant interaction with those charged with governance
- The importance of the matter to the intended users' understanding of the financial statements as a whole
- The nature/complexity/subjectivity of selection of accounting policies
- The nature and materiality of misstatements (corrected and uncorrected)
- The nature and extent of audit effort needed to address the matter
- Whether there were issues in applying audit procedures
- Extent of related control deficiencies
- Whether the matter affected more than one area of the financial statements

(ISA 701.A27 &. A29)

6.2.2 Disclosure

Where relevant the auditor's report must include a separate section with the heading 'Key Audit Matters'. This includes an introduction followed by information about each individual KAM. The introductory material states that:

- the matters described are the matters of 'most significance'; and
- the auditor does not provide a separate opinion on these matters.

(ISA 701.11)

The description of an individual KAM would include the following:

- Why the matter was considered to be one of the most significant in the audit
- How the matter was addressed in the audit

Reference should also be made to any related disclosures in the financial statements. The following information must also be provided:

- A description of the most significant assessed risks of material misstatement
- A summary of the auditor's responses to those risks
- Key observations arising in respect to those risks

(ISA 701.13–.13-2)

The ICAEW Audit and Assurance Faculty published a report in 2017 titled '**The start of a conversation**

– The extended audit report ' to support all parties involved in this form of communication. Clearly, this process is still in its infancy, but presenting it in terms of a dialogue is intended to support the perception that it is a two-way process. The report also suggests metrics that could be used to assess the quality of this dialogue in respect of KAMs: (i) the average number of KAMs in a report; and (ii) most common topics making up KAMs.

Here is an example of how KAMs could appear, taken from the IAASB's guidance publication *Auditor Reporting – Illustrative Key Audit Matters*:

Key audit matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the financial statements of the current period. These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

Goodwill

Under IFRSs, the Group is required to annually test the amount of goodwill for impairment. This annual impairment test was significant to our audit because the balance of XX as of December 31, 20X1 is material to the financial statements. In addition, management's assessment process is complex and highly judgmental and is based on assumptions, specifically [describe certain assumptions], which are affected by expected future market or economic conditions, particularly those in [name of country or geographic area].

Our audit procedures included, among others, using a valuation expert to assist us in evaluating the assumptions and methodologies used by the Group, in particular those relating to the forecasted revenue growth and profit margins for [name of business line]. We also focused on the adequacy of the Group's disclosures about those assumptions to which the outcome of the impairment test is most sensitive, that is, those that have the most significant effect on the determination of the recoverable amount of goodwill.

The Company's disclosures about goodwill are included in Note 3, which specifically explains that small changes in the key assumptions used could give rise to an impairment of the goodwill balance in the future.

Revenue recognition

The amount of revenue and profit recognized in the year on the sale of [name of product] and aftermarket services is dependent on the appropriate assessment of whether or not each long- term aftermarket contract for services is linked to or separate from the contract for sale of [name of product]. As the commercial arrangements can be complex, significant judgment is applied in selecting the accounting basis in each case. In our view, revenue recognition is significant to our audit as the Group might inappropriately account for sales of [name of product] and long-term service agreements as a single arrangement for accounting purposes and this would usually lead to revenue and profit being recognized too early because the margin in the long-term service agreement is usually higher than the margin in the [name of product] sale agreement.

Our audit procedures to address the risk of material misstatement relating to revenue recognition, which was considered to be a significant risk, included:

- Testing of controls, assisted by our own IT specialists, including, among others, those over: input of individual advertising campaigns' terms and pricing; comparison of those terms and pricing data against the related overarching contracts with advertising agencies; and linkage to viewer data; and
- Detailed analysis of revenue and the timing of its recognition based on expectations derived from our industry knowledge and external market data, following up variances from our expectations.

(Source: IAASB guidance publication, (2015) *Auditor Reporting – Illustrative Key Audit Matters*)

In very limited circumstances it may be the case that KAMs exist but cannot or should not be disclosed. These might include circumstances where law or regulation does not allow disclosure or where the adverse consequences of disclosure would outweigh the public interest benefit.

(ISA 701.14b)

It is also possible, although again very rare, that there may be no KAMs to disclose in the KAMs section. Where this is the case a KAM section is still included in the auditor's report but a statement is made that there are no KAMs to communicate. ISA 701.A58 provides the following illustration of the appropriate wording in this situation:

[Except for the matter described in the Basis for Qualified (Adverse) Opinion section or Material Uncertainty Related to Going Concern section,] We have determined that there are no [other] key audit matters to communicate in our report.

6.2.3 Interaction between descriptions of key audit matters and other elements included in the auditor's report

Where a matter results in a modified audit opinion, the matter by definition would be a KAM. However modified audit opinions must be reported in accordance with ISA 705 (Revised), *Modifications to the Opinion in the Independent Auditor's Report* and as a result a description of the matter will be included in the 'Basis for modified opinion' paragraph and **not in the KAM section.** The KAM section must however include a reference to the basis for modified opinion paragraph.

ISA 701 also makes particular reference to going concern issues. As we have seen in section 3 of this chapter in accordance with ISA 570 if **adequate disclosure** is made in the financial statements of a material uncertainty relating to going concern, the auditor expresses an unmodified opinion but includes a separate section under the heading 'Material Uncertainty Related to Going Concern'. The matter is **not also described as a KAM**, although the KAM section should include a reference to the 'Material Uncertainty Related to Going Concern' section.

(ISA 701.15)

6.2.4 Communication with those charged with governance

The auditor is required to communicate to those charged with governance either the KAMs included in the auditor's report or the fact that there are no KAMs.

(ISA 701.17)

6.2.5 Documentation

Audit documentation must include the 'significant audit matters' from which the KAMs were then selected and the rationale for determining whether each of these is a KAM or not. Where the auditor has concluded that there are no KAMs, or that a KAM is not able to be disclosed the reasons for this should be documented.

(ISA 701.18)

6.3 Modified opinions, emphasis of matter and other matter paragraphs

6.3.1 Modifications to the audit opinion

Modifications to the audit opinion are covered by ISA 705 (Revised), *Modifications to the Opinion in the Independent Auditor's Report*.

ISA 705 requires a modified opinion when:

(a) the auditor concludes that, based on the evidence obtained, the financial statements as a whole are **not free from material misstatement**; or

(b) the auditor is **unable to obtain sufficient appropriate audit evidence** to conclude that the financial statements as a whole are free from material misstatement.

and, in the auditor's judgement, the effect of the matter is or may be **material** to the financial statements.

There are **three** types of modified opinion:

- Qualified opinion
- Disclaimer of opinion
- Adverse opinion

6.3.2 Determining the type of modification

In accordance with ISA 705 there are different types and degrees of modified opinion.

- A material misstatement (disagreement) may lead to a **qualified opinion** or an **adverse opinion**.
- An inability to obtain sufficient, appropriate evidence (limitation on scope) may lead to a **qualified opinion** or a **disclaimer of opinion**.
- The degree of modification depends on whether the auditor considers that the misstatement, or possible misstatement, is pervasive to the financial statements.

Definition

Pervasive effects: Pervasive effects on the financial statements are those that, in the auditor's judgement:

- are not confined to specific elements, accounts or items of the financial statements;
- if so confined, represent or could represent a substantial proportion of the financial statements; or
- in relation to disclosures, are fundamental to users' understanding of the financial statements.

(ISA 705.5)

The following table based on the table from ISA 705.A1 summarises the different types of modified opinion, and we will look at the detail of each of these in turn:

Nature of circumstances	Material but not pervasive	Material and pervasive
Financial statements are materially misstated (disagreement)	Qualified opinion Except for …	Adverse opinion (Auditors state that the financial statements do not give a true and fair view)
Inability to obtain sufficient, appropriate audit evidence (limitation on scope)	Qualified opinion Except for … might	Disclaimer of opinion (Auditors state they are unable to form an opinion on the truth and fairness of the financial statements as a whole)

The ISA (ISA 705.7–.9) describes these different modified opinions and the circumstances leading to them as follows.

(a) A **qualified opinion** must be expressed when the auditor concludes that an unmodified opinion cannot be expressed but that the effect of any misstatement, or the possible effect of undetected misstatements, is material but not pervasive. A qualified opinion should be expressed as being "except for the effects of the matter to which the qualification relates".

(b) A **disclaimer of opinion** must be expressed when the auditor has not been able to obtain sufficient appropriate audit evidence and accordingly is unable to express an opinion on the financial statements. In rare circumstances involving multiple uncertainties the auditor may issue a disclaimer even though sufficient appropriate evidence has been obtained regarding each of the individual uncertainties, due to the potential interaction of these uncertainties and their possible cumulative effect on the financial statements.

(c) An **adverse opinion** must be expressed when the auditor has obtained sufficient appropriate audit evidence and concludes that misstatements, individually or in aggregate, are both material and pervasive to the financial statements.

Basis for opinion paragraph

Where the auditor modifies the opinion on the financial statements, the title of the basis paragraph should also be modified to read 'Basis for Qualified Opinion', 'Basis for Adverse Opinion' or 'Basis for Disclaimer of Opinion' as appropriate.

Misstatement

The auditor may disagree with management about matters such as the acceptability of accounting policies selected, the method of their application, or the adequacy of disclosures in the financial statements. The ISA states that if such disagreements are material to the financial statements, the auditor should express a qualified or an adverse opinion.

See Appendix Illustrations 1 and 2.

Inability to obtain evidence

The standard identifies three circumstances where there might be an inability to obtain sufficient evidence:

(a) **Circumstances beyond the entity's control** (such as where the entity's accounting records have been destroyed).

(b) **Circumstances relating to the nature or timing of the auditor's work** (for example, when the timing of the auditor's appointment is such that the auditor is unable to observe the counting of physical inventory). It may also arise when, in the opinion of the auditor, the entity's accounting records are inadequate or when the auditor is unable to carry out an audit procedure believed to be desirable. In these circumstances, the auditor would attempt to carry out reasonable alternative procedures to obtain sufficient, appropriate audit evidence to support an unqualified opinion.

(c) A limitation on the scope of the auditor's work may sometimes be **imposed by management** (for example, when management prevents the auditor from observing the counting of physical inventory). This would constitute a limitation on scope if the auditor was unable to obtain sufficient, appropriate evidence by performing alternative procedures.

If the auditor experiences a limitation on scope after they have accepted appointment which is both material and pervasive they should consider withdrawal from the audit where it is practicable and possible under applicable law or regulation. Where this is not the case the auditor must disclaim an opinion on the financial statements.

When the limitation in the terms of a **proposed** engagement is such that the auditor believes the need to express a disclaimer of opinion exists before the appointment has been accepted, the auditor would usually not accept such a limited audit engagement, unless required by statute. Also, a statutory auditor would not accept such an audit engagement when the limitation infringes on the auditor's statutory duties.

See Appendix Illustrations 3 and 4.

6.3.3 Emphasis of matter and other matters

ISA 706 (Revised), *Emphasis of Matter Paragraphs and Other Matter Paragraphs in the Independent Auditor's Report* deals with circumstances where the auditor considers it necessary to draw users' attention to important matters.

Definition

Emphasis of matter paragraph: A paragraph included in the auditor's report that refers to a matter **appropriately presented or disclosed** in the financial statements that, in the auditor's judgement, is of such importance that it is fundamental to users' understanding of the financial statements.

(ISA 706.7a)

Examples

- An uncertainty relating to the future outcome of exceptional litigation or regulatory action
- Early application of a new accounting standard that has a pervasive effect on the financial statement before its effective date
- A major catastrophe that has had, or continues to have, a significant effect on the entity's financial position

Other ISAs specify circumstances in which it may be necessary to include an emphasis of matter paragraph for example ISA 560, *Subsequent Events* which was covered earlier in this chapter.

This paragraph must be included in a separate section of the auditor's report with an appropriate heading including the term 'Emphasis of Matter'. This section must also state that the auditor's report is not modified in this respect.

(ISA 706.9)

Note: In some circumstances matters identified as KAMs may also be fundamental to users' understanding of the financial statements. In this situation however, the matter is **not** disclosed in an emphasis of matter paragraph as well as being disclosed as a KAM. Instead the auditor must consider highlighting the importance of the matter, for example, by presenting it more prominently in the KAM section. (ISA 706.A2)

Where a matter is not determined to be a KAM but is fundamental to users' understanding an emphasis of matter paragraph would be included in the auditor's report.

(ISA 706.A3)

Definition

Other matter paragraph: A paragraph included in the auditor's report that refers to a matter **other than those presented or disclosed in the financial statements** that, in the auditor's judgement, is relevant to users' understanding of the audit, the auditor's responsibilities or the auditor's report.

(ISA 706.7b)

This paragraph must also be included as a separate section in the auditor's report headed 'Other Matter' or another appropriate heading.

Note: An 'Other Matter' paragraph would not be included where the matter has been determined to be a KAM (ISA 706.10).

An example of an emphasis of matter paragraph is contained in the **Appendix** to this chapter.

See **Illustration 5.**

Professional skills focus: Applying judgement

It's very unlikely that in an exam you will be presented with an organisation where everything runs smoothly and there are no tricky decisions to have to make. Emphasis of matter paragraphs, other matter paragraphs and key audit matters are all areas where the auditor needs to display sound judgement in how to communicate the events before them in the most effective way. Use the questions at your disposal to understand how each of these works.

6.4 Current issues

6.4.1 The act of communication

In essence, the auditor's job is straightforward. They carry out tests and inquiries and evaluate evidence received with the purpose of drawing an audit opinion. They then **communicate** that opinion, in the form of an auditor's report, as we have been discussing. This can cause problems.

The communication problem is caused by a number of different problems that can be identified under three headings, although some of the problems are broadly linked between categories. The three problematic areas are as follows:

- Understandability
- Responsibility
- Availability

6.4.2 Understandability

Although the essence of the auditor's role is simple, in practice it is surrounded by auditing standards and guidance, as it is a **technical** art. It also involves **relevant language**, or 'jargon', that non-auditors may not understand.

Communicating the audit opinion in a way that people can understand is a challenge. ISA 700 (Revised) together with ISA 701 go some way to addressing those challenges (see earlier sections).

6.4.3 Responsibility

Connected with the problem of what the audit is and what the audit opinion means is the question of what the auditors are **responsible** for. As far as the **law** is concerned, auditors have a restricted number of duties. **Professional standards** and other bodies, put other duties on auditors.

Users of financial statements, and the public, may not have a very clear perception of what the auditors are responsible for and what the audit opinion relates to, or what context it is in.

The issue of **auditor's liability** ties in here. Auditor's reports are addressed to shareholders, to whom auditors have their primary and legal responsibility. However, audited financial statements are used by significantly more people than that. Should this fact be addressed in the auditor's report?

6.4.4 Availability

The fact that a significant number of people use audited financial statements has just been mentioned. Auditor's reports are publicly available, as they are often held on **public record**. This fact alone may add to any perception that exists that auditors address their report to more than just shareholders.

The problem of availability is exacerbated by the fact that many companies publish their **financial statements** on their **website**. This means that millions of people around the world have access to the auditor's report.

This issue may cause misunderstanding:

- **Language** barriers may cause additional understandability problems.
- It may not be clear **which financial information** an auditor's report refers to.
- The auditor's report may be subject to **malicious tampering** by hackers or personnel.

If an auditor's report is published electronically, auditors lose control of the **physical positioning** of the report; that is, what it is published with. This might significantly impact on understandability and also perceived responsibility.

When financial information is available electronically, auditors must ensure that their report is not misrepresented.

Interactive question 4: Forming an audit opinion

You are an audit senior. You are nearing the end of the audit of Russell Ltd for the year ended 30 June 20X7. The financial statements show a profit before tax of £14 million (20X6: £6 million) and a statement of financial position total of £46 million (20X6: £30 million). The following points have arisen on the audit:

(1) Russell Ltd owns a number of its retail premises, which it revalues annually. This year several of its shops did rise sharply in value due to inflated property prices in their locality. Russell Ltd also capitalises refits of its shops. Four shops were refitted in the year. The total increase in assets due to refits and revaluations is £20 million. Russell Ltd does not revalue its factory premises, which are recognised in the statement of financial position at £250,000.

(2) Russell Ltd makes approximately 20% of its sales via an internet site from which it sells the products of Cairns plc. Russell Ltd earns commission of 15% on these sales. Customers place their order on the internet site and pay for goods by providing their credit card details. Once Russell Ltd has received authorisation from the credit card company the order is passed to Cairns plc. The product is then shipped directly to the customer and all product returns and credit card related issues are dealt with by Cairns plc. The total

product sales achieved through the internet site and despatched to customers in the year were £6,000,000. This amount has been recognised as revenue for the year ended 30 June 20X7.

Requirement

Comment on the matters you will consider in relation to the implications of the above points on the auditor's report of Russell Ltd.

See **Answer** at the end of this chapter.

6.5 The Auditor's Responsibilities Relating to Other Information

ISA 720 (Revised), *The Auditor's Responsibilities Relating to Other Information* has been adopted in Bangladesh.

6.5.1 What is other information?

Definitions

Other information: Financial and non-financial information (**other than** financial statements and the auditor's report) included in an entity's annual report (such as summaries of key financial results, explanations of critical accounting estimates and financial measures or ratios).

Misstatement of the other information: This exists when the other information is incorrectly stated or otherwise misleading (including because it omits or obscures information necessary for a proper understanding of a matter disclosed in the other information).

(ISA 720.12 and Appendix 1)

ISA 720.2 makes it clear that the auditor does not express an opinion on the other information.

The auditor is required, however, to read the other information and do the following:

(a) Consider whether there is a material inconsistency between the other information and the financial statements

(b) Consider whether there is a material inconsistency between the other information and the auditor's knowledge obtained in the audit

(c) Respond appropriately when the auditor identifies that such a material inconsistency appears to exist, or when the auditor otherwise becomes aware that other information appears to be materially misstated

(d) Report in accordance with ISA 720

6.5.2 Access to other information

In order for the auditor to satisfy their obligations under ISA 720, timely access to other information will be required. The auditors therefore must make arrangements with the client to obtain such information **before the date of their report** where possible. Where some or all of the documents will not be available until after the date of the auditor's report the auditor must request a written representation that the information will be provided as soon as it is available.

(ISA 720.13)

6.5.3 Material inconsistency or material misstatement of other information

If, on reading the other information, the auditor identifies a **material inconsistency or becomes aware that the other information appears to be materially misstated**, the auditor must determine whether:

- The audited financial statements need to be amended
- The other information needs to be amended
- Or whether the auditor's understanding of the entity and its environment needs updating.

The auditor should seek to resolve the matter through **discussion** with those charged with governance.

If an amendment is necessary in the **audited financial statements** and the entity refuses to make the amendment, the auditor should express **a qualified or adverse opinion**.

If an amendment is necessary in the **other information obtained before the date of the auditor's report** and the entity refuses to make the amendment, the auditor shall communicate this to those charged with governance and:

(a) include in the 'Other information' section of the auditor's report a statement describing the uncorrected material misstatement; or

(b) withdraw from the engagement.

(ISA 720.18)

If a material misstatement exists in other information obtained after the date of the auditor's report the actions taken by the auditor depend on whether a correction is made. If the other information is corrected the auditors will perform additional procedures which will normally include checking that the correction has been made properly and reviewing the steps taken by management to inform parties who have already received the information.

(ISA 720.A48)

If the other information is not corrected the specific action taken would depend on the auditor's legal rights and obligations. As a result it is likely that the auditor will seek legal advice.

6.5.4 Reporting

When the auditor's report in required to include an 'Other Information' section. This must include the following:

(a) A statement that management is responsible for other information

(b) Identification of other information obtained before the date of the auditor's report (and, for the audit of a listed entity, other information, if any expected to be obtained after the date of the auditor's report)

(c) A statement that the auditor's opinion does not cover the other information and that the auditor does not express an audit opinion or any form of assurance conclusion on this (however, see section 6.5.5)

(d) A description of the auditor's responsibilities relating to reading, considering and reporting on other information

(e) When other information has been obtained before the date of the auditor's report, either:

  - a statement that the auditor has nothing to report; or
  - where there is a material uncorrected misstatement a statement that describes this.

(ISA 720.22)

6.5.5 Current issues

In December 2018, the UK FRC published 'Audit Quality Thematic Review: Other Information in the Annual Report 'to highlight the variation in approach taken by UK firms when auditing other information. This is the first time that the UK FRC has reviewed the work of auditors in this area and it complements other recent Thematic Reviews covering the quality of audit work performed in the UK. In summary, the UK FRC found that more could be done by auditors and audit committees regarding other information disclosures to inform users of financial statements adequately on non-financial and other qualitative factors.

Professional skills focus: Concluding, recommending and communicating

You have already seen from your studies that questions on the auditor's report usually require some form of conclusion to be drawn, so you must make sure you don't sit on the fence and commit to a specific course of action. This is central to the auditor's primary role of communication.

7 Other reporting responsibilities

Section overview

- Auditors may have to report on entire special purpose financial statements or simply one element of those financial statements.
- Auditors may have to report on summary financial statements.

7.1 Special Considerations – Audits of Financial Statements Prepared in Accordance with Special Purpose Frameworks

7.1.1 Introduction

ISA 800 (Revised), *Special Considerations – Audits of Financial Statements Prepared in Accordance with Special Purpose Frameworks* is effective for periods ending on or after 15 December 2016.

7.1.2 Overview

The ISA aims to address special considerations that are relevant to complete sets of financial statements prepared in accordance with **another comprehensive basis of accounting**.

The aim of the ISA is simply to identify additional audit requirements relating to these areas. To be clear, all other ISAs still apply to the audit engagement.

7.1.3 General considerations

- Before undertaking a special purpose audit engagement, the auditor should ensure there is agreement with the client as to the **exact nature of the engagement** and the **form and content of the report** to be issued.
- To avoid the possibility of the auditor's report being used for purposes for which it was not intended, the auditor may wish to **indicate in the report the purpose for which it is prepared and any restrictions on its distribution and use**.

7.1.4 Special purpose frameworks

In the context of the ISA, special purpose frameworks refer to accounts which are prepared in situations other than within a Companies Act statutory audit. Specific examples of special purpose frameworks given in the ISA include the following:

- **Tax basis** of accounting for a set of financial statements that accompany an entity's tax return
- **Cash receipts and payments basis** of accounting for cash flow information that an entity

may be requested to prepare for creditors

- The **financial reporting provisions established by a regulator** to meet that regulator's requirements
- The **financial reporting provisions of a contract,** such as a bond, indenture, a loan agreement and a project grant

The auditor's report in these circumstances should include an emphasis of matter that indicates the basis of accounting used or should refer to the note to the financial statements giving that information. The opinion should state whether the financial statements are prepared, in all material respects, in accordance with the identified basis of accounting.

The auditor must specifically describe the financial reporting framework as a special purpose framework in the auditor's report. The auditor must also specifically state that the audit has been carried out in accordance with ISAs, including ISA 800 and/or ISA 805.

7.1.5 Special Considerations – Audits of Single Financial Statements and Specific Elements, Accounts or Items of a Financial Statement

ISA 805 (Revised), *Special Considerations – Audits of Single Financial Statements and Specific Elements, Accounts or Items of a Financial Statement* relates to **individual elements of financial statements**, such as the liability for accrued benefits of a pension plan and a schedule of employee bonuses. This ISA is effective for periods ending on or after 15 December 2016.

Many financial statement items are interrelated. Therefore, when reporting on a component the auditor will not always be able to consider it in isolation and will need to examine other financial information. This will need to be considered when assessing the scope of the engagement and determining whether the audit of a single statement or single element is practicable.

The auditor's report should indicate the applicable financial reporting framework adopted or the basis of accounting used, and should state whether the component is prepared in accordance with this.

Reporting considerations

Engagements that involve reporting on a single statement or specific element **in conjunction with auditing the entity's complete set of financial statements**	• The auditor shall express a separate opinion for each. • The auditor shall ensure that management presents the single financial statement or element in such a way that it is clearly differentiated from the complete set of financial statements.
The auditor's opinion on the entity's complete set of financial statements is **modified** or includes an **emphasis of matter** or **other matter** paragraph, a material uncertainty related to going concern, communication of key audit matters or a statement describing an uncorrected material misstatement of other information	• The auditor must determine whether this will affect the opinion on the single financial statement or element.

The auditor has expressed an **adverse opinion** or **disclaimed an opinion** on the entity's complete set of financial statements	• The auditor **must not** include an unmodified opinion on a single financial statement or element that forms part of those financial statements **in the same report** (as this would contradict the adverse opinion or disclaimer on the complete set of financial statements). • The auditor **must not** express an unmodified opinion on a single financial statement of a complete set of financial statements even if the report on the single financial statement is not published with the auditor's report containing the adverse opinion or disclaimer. • The auditor may express an unmodified opinion on an element of the financial statements if: - not prohibited by law; - the opinion is published separately; and - the element does not form a major portion of the entity's complete set of financial statements.

7.1.6 Engagements to Report on Summary Financial Statements

ISA 810 , *Engagements to Report on Summary Financial Statements* was revised by the IAASB in March 2016. It has not been adopted in Bangladesh by the FRC and is effective for periods ending on or after 15 December 2016 . The key point which this ISA makes is that the auditor should **not express an opinion on the summarised financial statements** unless they have **expressed an audit opinion on the financial statements from which they have been derived**.

Reporting considerations: Form of report

Unmodified opinion on summary financial statements	Unless law specifies otherwise, the wording should be: • the accompanying summary financial statements are consistent in all material respects with the audited financial statements, in accordance with (the applied criteria); or • the accompanying summary financial statements are a fair summary of the audited financial statements, in accordance with (the applied criteria).

When the auditor's report on the audited financial statements includes a **qualified opinion**, an **emphasis of matter** or an **other matter** paragraph, a material uncertainty related to going concern, a KAM section or a statement describing an uncorrected material misstatement of the other information	If the auditor is satisfied that an unmodified opinion, as above, is appropriate for the summary financial statements, the report must: • state that the auditor's report on the audited financial statements includes a qualified opinion, an emphasis of matter or an other matter paragraph, a material uncertainty related to going concern, a KAM section or a statement describing an uncorrected material misstatement of the other information; • explain the basis for the above; and • state the effect on the summary financial statements if any.
When the auditor's report on the audited financial statements contains an **adverse opinion**, or a **disclaimer**	The auditor must: • state that the auditor's report on the audited financial statements contains an adverse opinion or disclaimer of opinion; • explain the basis for the adverse opinion or disclaimer; and • state that it is inappropriate to express an opinion on the summary financial statements.
Modified opinion on the summary financial statements	If the summary financial statements are **not** consistent in all material respects with the audited financial statements (or **not** a fair summary of the audited financial statements) and management does not agree to make changes, the auditor shall express an **adverse opinion**.

7.2 XBRL tagging of information in audited financial statements

In September 2009, HMRC announced that the Company Tax Return, including the supporting statutory accounts and tax computations, must be delivered electronically using the Inline XBRL format. XBRL stands for eXtensible Business Reporting Language. XBRL stands as a software standard crafted to enhance the communication of financial data, streamlining its compilation and sharing. Employing tags to label individual financial data components, XBRL enables programmable utilization by compatible software. Facilitating seamless data transmission between businesses, such requirements are presently absent in Bangladesh. The aim of this section is to acquaint students with this pivotal concept.

7.2.1 Audit

In the UK, Guidance for auditors is contained in *Bulletin 2010/1 XBRL Tagging of Information in Audited Financial Statements – Guidance for Auditors*.

Although HMRC is requiring financial statements supporting a company's tax return to be transmitted using iXBRL, there is no requirement for an audit of data or of the XBRL tagging. The Bulletin states that ISAs do not impose a general requirement on the auditor to check XBRL tagging of financial statements as part of the audit. Furthermore, because the XBRL tagging is simply a machine-readable rendering of the data within the financial statements, rather than a discrete document, it does not constitute 'other information' either.

While the auditor does not provide assurance as to the accuracy of the tagging, audit clients may request non-audit services, including the following:

- Performing the tagging exercise
- Undertaking an agreed-upon procedures engagement
- Providing advice on the selection of individual tags
- Supplying accounts preparation software that automates the tagging
- Training management in XBRL tagging

If this type of service is provided, ethical issues must be considered.

In December 2017, the UK FRC's Financial Reporting Lab published *Deep-dive: Digital future of corporate reporting* suggesting that more still needs to be done to unlock the potential of XBRL.

8 Appendix (Illustrations)

Note: As per ISA 705, illustrations 1–4 in this Appendix illustrate the requirements of the ISAs .

Illustration 1

Qualified opinion – Material misstatement of the financial statements Qualified opinion

We have audited the financial statements of ABC Company (the Company), which comprise the statement of financial position as at December 31, 20X1, and the statement of comprehensive income, statement of changes in equity and statement of cash flows for the year then ended, and notes to the financial statements, including a summary of significant accounting policies. In our opinion, except for the effects of the matter described in the Basis for Qualified Opinion section of our report, the accompanying financial statements give a true and fair view of the financial position of the Company as at December 31, 20X1, and of its financial performance and its cash flows for the year then ended in accordance with International Financial Reporting Standards (IFRSs).

Basis for qualified opinion

The company's inventories are carried in the statement of financial position at xxx. Management has not stated the inventories at the lower of cost and net realisable value but has stated them solely at cost, which constitutes a departure from IFRSs. The Company's records indicate that, had management stated the inventories at the lower of cost and net realisable value, an amount of xxx would have been required to write the inventories down to their net realisable value. Accordingly cost of sales would have increased by xxx, and income tax, net income and shareholders' equity would have been reduced by xxx, xxx and xxx, respectively.

We conducted our audit in accordance with International Standards on Auditing (ISAs). Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are independent of the Company in accordance with the ethical requirements that are relevant to our audit of the financial statements in [jurisdiction], and we have fulfilled our other ethical responsibilities in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our qualified opinion.

(Source: Illustration 1 (extract) ISA 705 (Revised), *Modifications to the Opinion in the Independent Auditor's Report*)

Illustration 2

Adverse opinion. Material misstatement of the consolidated financial statements Adverse

opinion

We have audited the consolidated financial statements of ABC Company and its subsidiaries (the Group), which comprise the consolidated statement of financial position as at 31 December 20X1, and the consolidated statement of comprehensive income, consolidated statement of changes in equity and consolidated statement of cash flows for the year then ended, and notes to the consolidated financial statements, including a summary of significant accounting policies.

In our opinion, because of the significance of the matter discussed in the Basis for Adverse Opinion section of our report, the accompanying consolidated financial statements do not give a true and fair view of the consolidated financial position of the Group as at December 31, 20X1, and of its consolidated financial performance and its consolidated cash flows for the year then ended in accordance with International Financial Reporting Standards (IFRSs).

Basis for adverse opinion

As explained in Note X, the Group has not consolidated subsidiary XYZ Company that the Group acquired during 20X1 because it has not yet been able to determine the fair values of certain of the subsidiary's material assets and liabilities at the acquisition date. This investment is therefore accounted for on a cost basis. Under IFRSs, the Company should have consolidated this subsidiary and accounted for the acquisition based on provisional amounts. Had XYZ Company been consolidated, many elements in the accompanying consolidated financial statements would have been materially affected. The effects on the consolidated financial statements of the failure to consolidate have not been determined.

We conducted our audit in accordance with International Standards on Auditing (ISAs). Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Consolidated Financial Statements section of our report. We are independent of the Group in accordance with the ethical requirements that are relevant to our audit of the consolidated financial statements in [jurisdiction], and we have fulfilled our other ethical responsibilities in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our adverse opinion.

(Source: Illustration 2 (extract) ISA 705 (Revised), *Modifications to the Opinion in the Independent Auditor's Report*)

Illustration 3

Qualified opinion – Due to auditor's inability to obtain sufficient audit evidence regarding a foreign associate

Qualified opinion

We have audited the consolidated financial statements of ABC Company and its subsidiaries (the Group), which comprise the consolidated statement of financial position as at December 31, 20X1, and the consolidated statement of comprehensive income, consolidated statement of changes in equity and consolidated statement of cash flows for the year then ended, and notes to the consolidated financial statements, including a summary of significant accounting policies.

In our opinion, except for the possible effects of the matter described in the Basis for Qualified Opinion section of our report, the accompanying consolidated financial statements give a true and fair view of the financial position of the Group as at December 31, 20X1, and of its consolidated financial performance and its consolidated cash flows for the year then ended in accordance with International Financial Reporting Standards (IFRSs).

Basis for qualified opinion

The Group's investment in XYZ Company, a foreign associate acquired during the year and accounted for by the equity method, is carried at xxx on the consolidated statement of financial position at December 31, 20X1, and ABC's share of XYZ's net income of xxx is included in ABC's income for the year then ended. We were unable to obtain sufficient appropriate audit evidence about the carrying amount of ABC's investment in XYZ as at December 31, 20X1, and ABC's share of XYZ's net income as we were denied access to the financial information, management, and the auditors of XYZ. Consequently, we were unable to determine whether any adjustments to these amounts were necessary.

We conducted our audit in accordance with International Standards on Auditing (ISAs). Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Consolidated Financial Statements section of our report. We are independent of the Group in accordance with the ethical requirements that are relevant to our audit of the consolidated financial statements in [jurisdiction], and we have fulfilled our other ethical responsibilities in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our qualified opinion.

(Source: Illustration 3 (extract) ISA 705 (Revised), *Modifications to the Opinion in the Independent Auditor's Report*)

Illustration 4

Disclaimer of opinion. Due to the auditor's inability to obtain sufficient appropriate audit evidence about a single element of the consolidated financial statements

Disclaimer of opinion

We were engaged to audit the consolidated financial statements of ABC Company and its subsidiaries (the Group), which comprise the consolidated statement of financial position as at December 31, 20X1, and the consolidated statement of comprehensive income, consolidated statement of changes in equity and consolidated statement of cash flows for the year then ended, and notes to the consolidated financial statements, including a summary of significant accounting policies.

We do not express an opinion on the accompanying consolidated financial statements of the Group. Because of the significance of the matter described in the Basis for Disclaimer of Opinion section of our report, we have not been able to obtain sufficient appropriate audit evidence to provide a basis for an audit opinion on these consolidated financial statements.

Basis for Disclaimer of opinion

The Group's investment in its joint venture XYZ Company is carried at xxx on the Group's consolidated statement of financial position, which represents over 90% of the Group's net assets as at December 31, 20X1. We were not allowed access to the management and the auditors of XYZ Company, including XYZ Company's auditor's audit documentation. As a result, we were unable to determine whether any adjustments were necessary in respect of the Group's proportional share of XYZ Company's assets that it controls jointly, its proportional share of XYZ Company's liabilities for which it is jointly responsible, its proportional share of XYZ's income and expenses for the year, and the elements making up the consolidated statement of changes in equity and consolidated cash flow statement.

(Source: Illustration 4 (extract) ISA 705 (Revised), *Modifications to the Opinion in the Independent Auditor's Report*)

Illustration 5

Emphasis of matter paragraph

We draw attention to note X of the financial statements, which describes the effects of a fire in the Company's production facilities. Our opinion is not modified in respect of this matter.

(Source: Appendix 4 (extract) ISA 706 (Revised), *Emphasis of Matter Paragraphs and Other Matter Paragraphs in the Independent Auditor's Report*)

Note: This paragraph is inserted after the conclusions relating to going concern section.

Illustration 6

Unqualified opinion. Material uncertainty that may cast significant doubt about the company's ability to continue as a going concern. Disclosure is adequate

Opinion

In our opinion the financial statements:

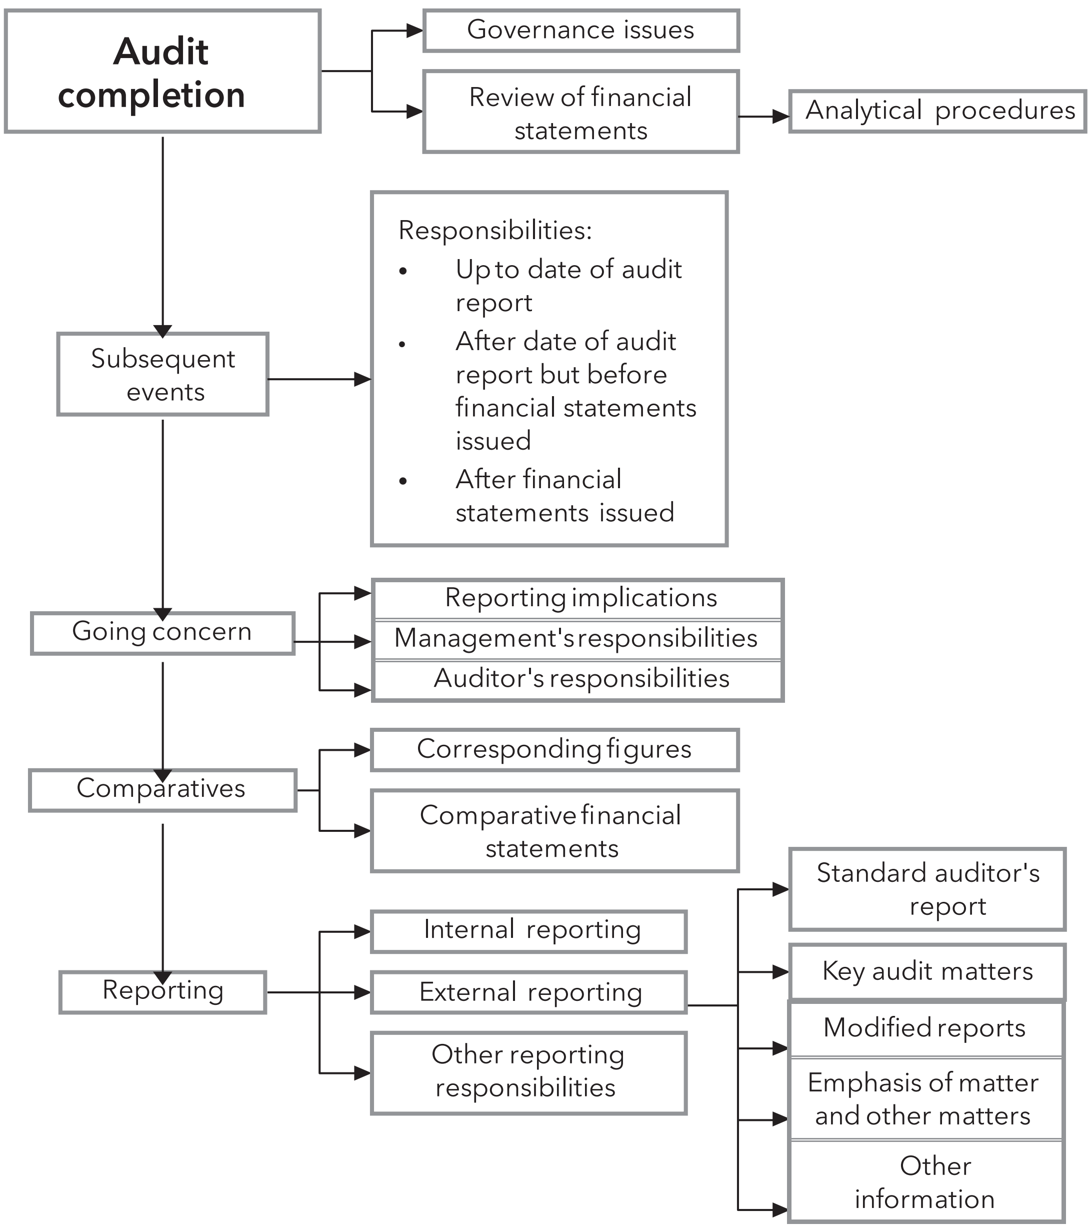
- Give a true and fair view of the state of the company's affairs as at [*date*] and of its [profit/loss] for the year then ended;
- Have been properly prepared in accordance with United Kingdom Generally Accepted Accounting Practice; and
- Have been prepared in accordance with the requirements of the Companies Act 2006.

Material uncertainty related to going concern

We draw attention to note [X] in the financial statements, which indicates that [brief description of events or conditions identified that may cast significant doubt on the entity's ability to continue as a going concern]. As stated in note [X], these events or conditions, along with the other matters as set forth in note [X], indicate that a material uncertainty exists that may cast significant doubt on the company's ability to continue as a going concern. Our opinion is not modified in respect of this matter.

(Source: Appendix 4 (extract) UK FRC, *Bulletin: Illustrative Auditor's Reports on United Kingdom Private Sector Financial Statements*)

Summary



Audit completion
Governance issues
Review of financial statements
Analytical procedures
Subsequent events
Responsibilities:
• Up to date of audit report
• After date of audit report but before financial statements issued
• After financial statements issued
Going concern
Reporting implications
Management's responsibilities
Auditor's responsibilities
Comparatives
Corresponding figures
Comparative financial statements
Reporting
Internal reporting
External reporting
Other reporting responsibilities
Standard auditor's report
Key audit matters
Modified reports
Emphasis of matter and other matters
Other information

Further question practice

1 Knowledge diagnostic

Before you move on to question practice, confirm you are able to answer the following questions having studied this chapter. If not, you are advised to revisit the relevant learning from the topic indicated.

	Confirm your learning
1.	Do you know the various stages of the audit completion process and can you find the necessary standards in your open book?
2.	Can you distinguish between the various responsibilities that the auditor needs to fulfil at different stages of the audit, including right up to the date of the AGM?
3.	Do you know how to identify and communicate the most appropriate conclusion regarding the audited entity's going concern status?
4.	Can you explain the auditor's responsibilities for dealing with comparatives and written representations?
5.	Do you know how to structure the auditor's report, whether it is modified or requires some form of modification?
6.	Can you explain when you would apply the various modifications to the audit opinion and what form they would take?
7.	Can you explain the auditor's responsibilities regarding other engagements (for example, summary financial statements)?
8.	Can you find the various modifications to the auditor's report in the auditing standards open book?

2 Question practice

Aim to complete all self-test questions at the end of this chapter. The following self-test questions are particularly helpful to further topic understanding and guide skills application before you proceed to the next chapter.

Question	Learning benefit from attempting this question
Branch plc	This will allow you to critically appraise extracts from a draft auditor's report in line with your knowledge of how it should look and the facts presented in the scenario.
SafeAsHouses plc	This question is a typical example of being 'thrown in at the deep end' on a problematic engagement that is nearing its completion. How should you respond?

Once you have completed these self-test questions, it is beneficial to attempt the following questions from the Question Bank for this module. These questions have been selected to introduce exam style scenarios that will help you improve your knowledge application and professional skills development before you start the next chapter.

Question	Learning benefit from attempting this question
UHN requirement (3)	Although the question asks for key areas of audit risk, you will need to consider the going concern status of UHN and the impact (if any) that this could have on the auditor's report and opinion.
Tawkcom	The question asks for an overview of the auditor's responsibilities under ISA 701 on key audit matters – do you know what these are?
Biltmore requirement (3)	You need to be able to discuss impact on the auditor's report if necessary changes are not made to the draft financial statements.

Refer back to the learning in this chapter for any questions which you did not answer correctly or where the suggested solution has not provided sufficient explanation to answer all your queries. Once you have attempted these questions, you can continue your studies by moving on to the next chapter.

Self-test questions

Answer the following questions.

1 Branch plc

You are an audit partner. Your firm carries out the audit of Branch plc, a listed company. Because the company is listed, you have been asked to perform a second partner review of the audit file for the year ended 30 June 20X7 before the audit opinion is finalised. Reported profit before tax is £1.65 million and the statement of financial position total is £7.6 million.

You have read the following notes from the audit file:

"Earnings per share

The company has disclosed both basic and diluted earnings per share. The diluted earnings per share has been incorrectly calculated because the share options held by a director were not included in the calculations. Disclosed diluted earnings per share are 22.9p. Had the share options held by the director been included, this figure would have been 22.4p. This difference is immaterial.

Financial performance statement

The directors have currently not amended certain financial performance ratios in this statement to reflect the changes made to the financial statements as a result of the auditor's work. The difference between the reported ratios and the correct ratios is minimal.

Opinion

We recommend that an unmodified audit opinion be issued."

You have noted that there is no evidence on the audit file that the corporate governance statement to be issued as part of the annual report has been reviewed by the audit team. You are aware that the company does not have an audit committee.

You are also aware that the director exercised his share options last week.

Requirement

Comment on the suitability of the proposed audit opinion and other matters arising in the light of your review. Your comments should include an indication of what form the auditor's report should take.

2 SafeAsHouses plc

SafeAsHouses plc (SAH) was incorporated and commenced trading on 1 June 20X0 to retail small household electronics products via free magazines inserted into newspapers. It has established a presence in the market, but the early years of business have been a struggle with low profitability as it has sought to create market share. On 1 June 20X2, it set up a 100% owned subsidiary, eSAH, with a view to redirecting the business to internet-based sales in the hope of reducing printing and physical distribution costs of its free magazine. SAH plans to obtain an AIM listing in the near future.

Your firm acts as auditors to both companies and you have recently been drafted into the audit because the existing senior has been taken ill. **Exhibit 1** comprises draft statements of financial position and notes for both companies. **Exhibit 2** comprises audit file notes prepared by the previous audit senior.

The audit manager has asked you to take over the detailed audit work and to identify for her in a briefing note those issues arising in the work to date that are likely to be problematic. Given the late stage of the audit, and the consequent delays because of audit staff sickness, only the major issues are to be highlighted in your briefing note to the manager. The audit manager is concerned that, because the FD is new, the retention of the audit is potentially at risk and that there should be no further delay in the audit. The FD is pressing for these matters to be finalised and the accounts to be signed quickly.

Requirement

Prepare the briefing note as requested.

Exhibit 1: Draft statements of financial position

The draft statements of financial position of SAH (parent company only) and eSAH at 31 May 20X3 are as follows.

		SAH		eSAH
	£'000	**£'000**	**£'000**	**£'000**
Non-current assets at cost		1,895		408
Less depreciation		(400)		(25)
		1,495		383
Current assets				
Inventories	422		–	
Receivables	550		225	
Bank			5	
	972		230	
Current liabilities	(662)		(313)	
Net current assets/(liabilities)		310		(83)
		1,805		300
Non-current liabilities				
8% debentures		(1,000)		
		805		300
Financed by				
Issued ordinary share capital		200		300
Share premium account		100		–
Retained earnings		505		
		805		300

Additional information

(1) Current liabilities

	SAH	eSAH
	£'000	**£'000**
Bank overdraft	92	–
Trade payables	430	300
Other payables	40	–
Accruals	100	13
	662	313

(2) Property in SAH had been revalued during the year. The revaluation amounted to £0.5 million.

(3) Debentures were issued at par on 1 June 20X0 and are due for redemption at par on 31 December 20X4.

Exhibit 2: Audit file notes

(1) eSAH has received £120,000 as a payment on account from a customer on 27 May 20X3 for delivery of goods to the customer by SAH in the following months. eSAH has a confirmed contract for this and has recorded the amount in revenue for the year.

(2) eSAH has capitalised software development costs to the amount of £408,000 during the year. There are no specific details as yet, but it appears to relate almost entirely to the development of new e-based sales systems. £186,000 of the capitalised amount related to computers and consulting support staff time bought and brought in specifically to help test the new system. eSAH is adopting its standard five-year, straight-line depreciation policy with respect to the £408,000.

(3) I have gathered together some data relating to SAH before performing analytical procedures, but have yet to get around to doing it. The relevant data is:

Year end May	**20X1**	**20X2**	**20X3**
Revenue (£'000)	500	1,140	990
Gross profit margins (%)	22	19	17
Profit/(loss) retained in the year (£'000)	2	45	(42)

I understand eSAH's provisional revenue to the year end 31 May 20X3 to be about £500,000, and gross profitability was at 10%. Inventory has remained constant during the year ended 31 May 20X3 in SAH.

(4) SAH is planning to pay a dividend for the first time this year of about £50,000. This has yet to be finalised and has not been provided for in the financial statements. The FD said he would get back to me once the figure has been finalised.

(5) The FD has suggested that the format of the business of eSAH is completely different from that of SAH and is insisting on not consolidating the results of eSAH on the grounds that it would undermine a true and fair view of the financial statements.

There are some debt covenants relating to the debenture (in SAH) of which we should be aware. I have not done any work on these, as yet.

- Net current assets are to remain positive.
- Overdraft balances are to be no more than £150,000 at all times.
- Receivables days and payable days are not to exceed 180 days each. Calculations to be based on year-end figures.
- Bank consent is required for any significant changes in the structure of the business.
- I understand that a breach of any of these conditions converts the debenture into a loan repayable on demand.

When eSAH was incorporated, bank consent was obtained in accordance with the covenants. Consent was obtained on the basis that the covenants would now apply on a consolidated basis.

Now go back to the Introduction and ensure that you have achieved the Learning outcomes listed for this chapter.

Answers to Interactive questions

Answer to Interactive question 1

Implications

(1) Accounting treatment

(a) The accounting treatment of the oil spill depends on when the event (ie, the oil spill) took place.

(b) If the oil spill took place before the financial statements were authorised for issue the spill is an event after the reporting period. The key question then is whether it should be treated as an adjusting or non-adjusting event in accordance with IAS 10.

(c) Although the spill has only come to light on 1 April, it is possible that the leak was present at the reporting date but was not detected at this time. If this were the case, then the event would be an adjusting event and the financial statements should include a provision for the costs of rectifying the damage, including that caused to the environment. If it can be demonstrated that the leak occurred after the year end and that the effects are material, which is probable in this case, the nature of the event and an estimate of the financial effect should be disclosed.

(d) If the leak took place after 28 March ie, when the financial statements were authorised for issue, the event would not be recognised in the financial statements for 20X7 but would be recognised in 20X8.

(e) It is likely that expert evidence would need to be sought to determine how the leak has occurred and therefore to estimate when the leak might have started.

(2) Auditor's responsibility

(a) Once the auditor's report has been signed, the auditor does not have any responsibility to perform audit procedures regarding subsequent events. However, the fact that the oil spill is revealed so soon after the signing of the auditor's report may call into question whether the directors were attempting to conceal information and avoid a provision being made in the current year financial statements. It also calls into question whether all other relevant information has been given to the auditors up to this date.

(b) As the financial statements have not been issued, the auditor should consider the need to amend the financial statements. This will depend on the application of IAS 10 as described above. If the financial statements are amended to provide for an adjusting event or disclose a non-adjusting event, additional audit procedures will be required and a new auditor's report would be issued.

Answer to Interactive question 2

2.1 Circumstances/concern

Circumstances	Why cause for concern?
Fall in gross profit % achieved	While the fall in absolute revenue has been explained the fall in gross profit margin is more serious.
	This will continue to be a problem, as expenses seem constant and interest costs are growing.

Circumstances	Why cause for concern?
	This will make a future return to profitability difficult.
Losses £249,000	Such levels of losses by comparison to 20X4 profits will make negotiations with the bank difficult, especially with the loss of a major customer.
Increased receivables balance and increased ageing 20X4 74.8 days 20X5 96.7 days	Worsening debt collection is bad news when the company is making losses and has a deteriorating liquidity position.
	The increase in average debt collection period may be due to an irrecoverable receivable on the account of the major customer lost in the year.
	An irrecoverable receivable write-off would cause much increased losses.
Worsening liquidity ratio 20X4 1.03 20X5 0.87	This is a significant fall which will worsen further if an allowance for irrecoverable receivables is required.
	The company has loan and lease commitments which possibly may not be met.
Increasing reliance on short-term finance	This does not secure the future.

Summary – If the company is not a going concern the financial statements would be truer and fairer if prepared on a break-up basis. Material adjustments may then be required to the financial statements.

2.2 Audit procedures

- Analyse post-reporting date sale proceeds for non-current assets, inventory, cash received from customers.
- Review the debt ageing and cash recovery lists. Ask directors if outstanding amounts from lost customer are recoverable.
- Discuss the optimistic view of likely future contracts with the MD. Orders in the post-reporting date period should be reviewed to see if they substantiate his opinion.
- Obtain his opinion about future contracts in a written representation letter.
- Review bank/loan records to assess the extent to which the company has met its loan and lease commitments in the post-reporting date period.
- Review sales orders/sales ledger for evidence of additional lost custom in post-reporting date period.
- Obtain cash flow and profit forecasts:
  - Discuss assumptions with the directors
  - Perform sensitivity analysis flexing the key assumptions ie, interest rates, date of payment of payables and receipts from customers
- Check all commitments have been cleared in accordance with legal agreements:
  - Agree budgets to any actual results achieved in the post-reporting date period
  - Assess reasonableness of assumptions in the light of the success of the achievement of the company's budgets set for 20X5. Discuss with the directors any targets not achieved

  - Reperform calculations
  - Ensure future budgeted profits are expected to meet likely interest charges
- Review bank records to ensure that the company is operating within its overdraft facility in the post-reporting date period. Review bank certificate for terms and conditions of the facility. Review bank correspondence for any suggestion the bank is concerned about its current position.
- Ask management whether the new vehicle fleet is attracting new contracts as anticipated. Scrutinise any new contracts obtained and check improved gross profit margins will be achieved.
- Obtain written representation as to the likelihood of the company operating for 12 months from the date of approval of the financial statements.

Answer to Interactive question 3

Matters

(1) I would expect to see this referred to in a written representation letter. Appendix 1 to ISA 580 cross refers to the requirement in ISA 560, *Subsequent Events* that management should inform auditors of relevant subsequent events.

(2) This should not appear on a written representation letter, even though management opinion is involved. This indicates an incorrect accounting treatment which the auditors should be in disagreement with the directors over.

(3) This should not appear on a written representation letter, as there should be sufficient alternative evidence for this matter. The auditor should be able to obtain registered information about Subsidiary from the companies' registrar.

(4) This should not appear on a written representation letter. The auditors should be able to obtain evidence from Leaf Oil that the inventory belongs to them.

Answer to Interactive question 4

Matters

(1) Non-current assets

There are two issues here. The first is whether Russell Ltd's policy of revaluations is correct and the second is whether Russell Ltd should capitalise refit costs.

The most important thing to consider is materiality, as only material items will affect the audit opinion. The revaluations and refit total is material to the statement of financial position. It is possible that any revaluation of the factory premises would also be material.

(a) Revaluation policy

Per IAS 16, non-current assets may be held at cost or valuation. Where a company applies a revaluation policy, IAS 16 requires that all revaluations are made with sufficient regularity that the carrying amount does not vary materially from that which would be determined if fair value were used. Russell Ltd revalues annually, so meets the latter requirement.

Russell Ltd revalues property and IAS 16 requires that all items in the same class of assets be revalued, so the question arises as to whether it should also revalue the factory. This might have a material effect on the statement of financial position.

IAS 16 states that a 'class' of property, plant and equipment is a grouping of assets of a similar nature and use in an entity's operations. Although the IAS implies that buildings comprise one class, in this case the nature and use of the two kinds of building are quite distinct. Therefore creating two classes (retail premises and manufacturing premises) would appear reasonable.

(b) Refits

Assets should be held at cost or valuation as discussed above. However, in some cases, IAS 16 allows the cost of refits to be added to the original cost of the asset. This is when it is probable that future economic benefits in excess of the originally assessed standard of performance of the existing asset will flow to the entity. A retail shop will be subject to refitting and this refitting may enhance its value. However, it is possible in a shop that such refitting might be better classified as expenditure on fixtures and fittings. Russell Ltd's policy should be consistent and comparable so, if they have followed a policy of capitalising refits into the cost of the shop in the past, this seems reasonable.

Conclusion

The issues relating to non-current assets were material and could have affected the auditor's report. However, having considered the issues, it appears that there are no material misstatements relating to these issues. As there appears to have been no problem in obtaining sufficient appropriate evidence in relation to non-current assets, the audit opinion would be unmodified in relation to these issues.

(2) Revenue recognition

The key question is the nature of the revenue earned by Russell Ltd on the internet sales. Russell Ltd is acting as an agent for Cairns plc. At no point do the risks and rewards of ownership of the goods sold on the internet pass to Russell Ltd. This is evidenced by the fact that goods are sent directly to the customer by Cairns plc and they are responsible for all after-sales issues. The revenue earned by Russell Ltd is therefore the commission on sales generated rather than the sales price of the goods sold. Equally there will be no recognition of cost of sales or inventory in respect of these items.

Therefore the current treatment in the financial statements is incorrect.

In accordance with IFRS 15, *Revenue from Contracts with Customers* commission received by a party acting as an agent should be recognised as earned. As Russell Ltd has no further obligations once the initial transaction has been undertaken the commission should be recognised at this time.

Commission of approximately £900,000 should be recognised (£6,000,000 × 15%). An additional adjustment may be required in respect of sales made not despatched. The £6,000,000 trading revenue should be eliminated with any associated costs of sale and inventory. These amounts are likely to be material to the financial statements.

Conclusion

The financial statements should be revised, as they do not comply with IFRS 15. If management refuse to adjust the financial statements the auditor will need to qualify the audit opinion on the grounds of a misstatement (disagreement) which is material but not pervasive.

Answers to Self-test questions

1 Branch plc

Earnings per share

The problem in the EPS calculation relates to share options held by a director. As they are held by a director, it is unlikely that they are immaterial, as matters relating to directors are generally considered to be material by their nature. The fact that EPS is a key shareholder ratio which is therefore likely to be material in nature to the shareholders should also be considered.

As the incorrect EPS calculation is therefore material to the financial statements, the audit opinion should be modified in this respect, unless the directors agree to amend the EPS figure. This would be a qualified opinion using the term 'except for' on the grounds of material misstatement (disagreement with the accounting treatment).

Share options

The share options have not been included in the EPS calculations. The auditors must ensure that the share options have been correctly disclosed in information relating to the director in both the financial statements and the other information, and that these disclosures are consistent with each other. If proper disclosures have not been made, the auditor will have to modify the audit opinion due to lack of disclosure in this area which also represents a material misstatement.

Exercise of share options

The fact that the director has exercised his share options after the year end does not require disclosure in the financial statements. However, it is likely that he has exercised them as part of a new share issue by the company and, if so, the share issue would be a non-adjusting event after the reporting period that would require disclosure in the financial statements. We should check if this is the case and, if so, whether it has been disclosed. Non-disclosure would be further grounds for opinion modification as a material misstatement.

Financial performance statement

The financial performance statement forms part of the other information that the auditor is required to review under ISA 720. The auditor's report would include an 'Other Information' section in accordance with this standard. The ISA states that the auditors should seek to rectify any apparent misstatements in this information. The ratio figures are misstated, and the auditor should encourage the directors to correct them, regardless of the negligible difference.

The ISA refers to material items. The ratios will be of interest to shareholders, being investor information, and this fact may make them material by their nature. However, as the difference is negligible in terms of value, on balance, the difference is probably not sufficiently material for the auditors to make any specific reference to this in their auditor's report.

Corporate governance statement

For the company to meet stock exchange requirements, the auditors must review the corporate governance statement. For our own purposes, we should document that we have done so. As having an audit committee is a requirement of the Corporate Governance Code and the company does not have one, the corporate governance statement should explain why the company does not comply with the Code in this respect.

We would not modify our audit opinion over the corporate governance statement, although we would make reference to it in the 'Other Information' section, if we do not feel the disclosure is sufficient in respect of the non-compliance with the requirement to have an audit committee.

The audit opinion would not be modified in this respect. We are also required to report by exception if we have identified information that is:

- inconsistent with the information in the audited financial statements; or
- materially misstated based on the knowledge acquired by the auditor in the course of the audit.

Overall conclusion

None of the matters discussed above, either singly or seen together, are pervasive to the financial statements. The auditor's report should be modified on the material matter of the incorrect EPS calculation and the inadequate disclosures on EPS (and possibly the undisclosed share issue as well) by means of a qualified opinion and a basis section that explains this qualified opinion. We should also review the corporate governance statement: if the statement does not adequately address the issue of the company not having an audit committee, we will need to address this in the 'Other Information' of our report. Our audit opinion will not be modified in this respect.

2 SafeAsHouses plc

BRIEFING NOTES TO MANAGER

To Audit Manager **From** Audit Senior **Date** July 20X3

Client SafeAsHouses (hereafter SAH) and eSAH

Subject Major issues arising in audit work performed to date

There are a host of issues that need to be addressed. Some are important, and these are those I have highlighted for your attention.

While there may now be some urgency with respect to completing the audit it is not acceptable for us to be rushed in forming our judgement. This creates a threat to our objectivity through possible intimidation.

Incorrect financial statements

The financial statements are incorrectly stated for SAH. There is no revaluation reserve and it seems, after looking at the retained earnings in the analytical procedures, that the revaluation has been credited to profit or loss. Retained earnings should therefore be £5,000 and the revaluation reserve balance should be £500,000. (The revaluation would also be recognised as other comprehensive income in the statement of profit or loss and other comprehensive income.) The implication of this is that the company has insufficient distributable reserves to pay the proposed dividend. There also appears to be little cash to pay any dividend given the overdraft in SAH.

The intention not to consolidate the 100% subsidiary is unlikely to be allowed. IFRS 10, *Consolidated Financial Statements* does not allow exclusion of a subsidiary from consolidation on the basis of differing activities.

The company does not appear to have established a sinking fund for the redemption of the debenture. There is not enough cash in the financial statements to approach the figure required and the profitability of SAH is not sufficient to generate the amount required in the months remaining. eSAH does not appear to be generating any cash at all. Nevertheless, the company appears to have had or raised £300,000 to launch eSAH.

Moreover, in SAH, revenue and profit margins have been falling since 20X1. We will need to ascertain why this has happened and consider any explanations received in conjunction with available forecast figures.

I am seriously concerned at the levels of receivables and payables in both companies. Not enough cash is coming into the businesses and not enough, it appears, is being used to pay the payables. There is a solvency issue pending which may well be crystallised when one considers the debt covenants.

Net current assets

These stand at £310,000 for SAH and are clearly positive, which satisfies the constraint in place from the debt covenant. However, there are some issues in eSAH that indicate that its net current assets figures (already negative) may have to be further adjusted downward.

(1) The treatment of the payment on account of £120,000 is incorrect and does not accord with prudent revenue recognition rules. The payment should not have been taken to revenue, but credited to an account in short-term payables. This adjustment will reduce net current assets to (£203,000).

(2) This means that the provisional revenue figure for eSAH of £500,000 should be reduced by £120,000 to £380,000. There is also an intra-group element that requires adjustment in that SAH still presumably holds the inventory to which the amount of £120,000 relates.

(3) In general, the inventory figure in SAH looks large and we will have to prepare an audit programme that challenges this figure in order to establish its accuracy. Given its central role in relation to the covenants, this will be important.

Other issues

(1) The development costs of the software seem to be correctly treated under IAS 38, *Intangible Assets* in that an intangible asset may be recognised as arising from development (or from the development phase of an internal project) if the following can be demonstrated.

  (a) The technical feasibility of completing the intangible asset so that it will be available for use or sale.

  (b) The entity's intention to complete the intangible asset and use or sell it.

  (c) Its ability to use or sell the intangible asset.

  This would also appear to relate to the testing costs since they meet the criteria of development activities under the standard ('the design, construction and testing of a chosen alternative for new or improved materials, devices, products, processes, systems or services', para 59).

  More generally, the testing costs of £186,000 look substantial in relation to the overall £408,000 spent. This may have indicated some problems with the software. We should establish why the testing costs were so high and, if there were problems, obtain assurance of their resolution.

(2) The depreciation provision in eSAH's accounts does not seem to accord with its stated policy. They have charged only £25,000 out of a maximum of £81,600 (£408,000 ÷ 5). This would imply a charge only relating to 3.6 months of the year. We will need to ascertain what the depreciation policy is and exactly what capitalised costs have been incurred.

(3) I am suspicious that eSAH has made a nil profit in the year. It looks too coincidental and may have been the result of an arbitrary calculation on, say, depreciation with which I have some doubts anyway.

(4) The investment in the subsidiary eSAH has not been separately presented in SAH's accounts.

£300,000 will need to be recorded as a non-current asset investment once it has been identified where the incorrect debit has been recorded (possibly in the 'non-current assets' total figure).

(5) Overdraft. Unless we see a cash flow forecast demonstrating a dramatic improvement I cannot see how breaching the overdraft condition can be avoided. Two forces are at work in relation to this. First, the debenture interest at 8% suggests a repayment schedule of £130,000 per annum. Allied to significant investment in the subsidiary, cash flow may well be strained in the forthcoming year. Second, unless a refinancing package is agreed, I cannot see how the company can redeem its debenture. I cannot see any course of action at this stage other than to require disclosures on the grounds of going concern.

Receivable and payable days

I have calculated these on a consolidated basis. The relevant figures are

Receivables: (550 + 225)/(990 + (500 – 120)) × 365 = 206 days (assuming revenues are all on credit)

With inventory remaining constant in SAH (and no inventory values in eSAH), then cost of sales is equivalent to purchases. Assuming these are all on credit then

Trade payables: (430 + 300)/((990 × 83%) + ((500 – 120) × 90%)) × 365 = 229 days

The covenant is exceeded. Once this is reported, the debenture holders will be able to enforce the conversion of the debenture into a loan repayable on demand.

I consider it highly likely that the company SAH will become insolvent. It will then be up to the debenture holders to assess if a reorganisation plan is viable. In particular we will need to do the following:

- See and investigate what projections are available for SAH with a view to considering the viability of the business.
- These projections will have implications for the plans for a listing in the near future which look too ambitious as there is likely to be too much uncertainty for the business to be floated successfully.
- Assess if there are any refinancing arrangements in place or proposed that would underpin the survival of the company.
- Look to correspondence with financiers to ascertain evidence of refinancing or a relaxation of the covenants.

Chapter 9

Reporting financial performance

Introduction

Learning outcomes

- Explain how different methods of recognising and measuring assets and liabilities can affect reported financial performance
- Explain and appraise accounting standards that relate to reporting performance: in respect of presentation of financial statements; revenue; operating segments; continuing and discontinued operations; EPS; interim reporting
- Formulate and evaluate accounting and reporting policies for single entities and groups of varying sizes and in a variety of industries
- Calculate and disclose, from financial and other qualitative data, the amounts to be included in an entity's financial statements according to legal requirements, applicable financial reporting standards and accounting and reporting policies
- Appraise the significance of inconsistencies and omissions in reported information in evaluating performance
- Compare the performance and position of different entities allowing for inconsistencies in the recognition and measurement criteria in the financial statement information provided
- Make adjustments to reported earnings in order to determine underlying earnings and compare the performance of an entity over time
- Demonstrate and explain, in the application of audit procedures, how relevant ISAs affect audit risk and the evaluation of audit evidence

Chapter study guidance

Use this schedule and your study timetable to plan the dates on which you will complete your study of this chapter.

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
1	**IAS 1, *Presentation of Financial Statements*** IAS 1 forms the basis of financial reporting, setting out the formats of the financial statements and their structure and content.	**Approach** This section will be largely revision from your earlier studies. However, it includes a recent Practice Statement on materiality judgements that you will not have met before, so work through this part carefully. **Stop and think** Is it possible for a financial report to	IAS 1 formats will be 'taken as read' in your exam. One issue that could come up is that of other comprehensive income, and whether an item may be reclassified from other comprehensive income to profit or loss.	N/A

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
		provide too much information?		
2	**IFRS 8, *Operating Segments*** External users of financial statements rely on the limited disaggregation provided as a result of the requirements of accounting standards such as the disclosure of segmental information.	**Approach** This topic is new at Advanced Level, so needs to be worked through carefully. The best way to learn is by looking at the summary in 3.6.1 and the example and proforma in 3.6.3 and 3.6.4. **Stop and think** How does disaggregation of data help facilitate the assessment of a company's performance?	As IFRS 8 is a disclosure standard, it is likely to come up in the context of financial analysis and also audit.	**IQ1: Segments** This question tests reportable segments requiring application of size criteria and aggregation.
3	**IFRS 5, *Non-current Assets Held for Sale and Discontinued Operations*** External users of financial statements rely on the limited disaggregation provided as a result of the requirements of accounting standards such as the disclosure of discontinued operations.	**Approach** You have studied this topic at Professional Level, so work through quickly then do the interactive question. **Stop and think** How do standards such as IFRS 5 and IFRS 8 help provide disaggregated information to users?	Both assets held for sale and discontinued operations are regularly tested, both in the single silo FR question and the integrated question. Scenarios are often very detailed and IFRS 5 will interact with other standards, such as IAS 10.	**IQ2: Held for sale** This question asks you to apply the held-for-sale criteria. Make sure you come to a conclusion.
4	**IAS 24, *Related Party Disclosures*** Related party transactions happen in any size of entity, and are perfectly legal, but need to be disclosed.	**Approach** You have met this standard in your earlier studies but as it comes up quite regularly, it is best to approach it as if learning it from scratch.	As a disclosure standard, IAS 24 is often tested in the context of audit. It can also come up in the context of group accounts.	**IQ4: Related party transactions** This question tests related parties in a group context.

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
		Stop and think What is the significance in terms of the company's performance of disclosing related party transactions?		
5	**IFRS 1, *First-time Adoption of International Financial Reporting Standards*** While this standard is within the syllabus, and has affected companies in practice, it is not as significant for your exam.	**Approach** This standard is examinable at Level C and has not yet been examined, so read through but not at the expense of other standards in this chapter. **Stop and think** Questions will generally feature companies that already use IFRS rather than adopting it for the first time.	As yet undetermined as this standard has not been examined.	**IQ5: IFRS 1** Read through the question and 'audit' the answer.
6	**IAS 34, *Interim Financial Reporting*** The preparation of interim financial statements may present a number of challenges. It is common for some business arrangements, such as supply pricing agreements, bonus schemes, taxation and overhead allocation, to be based on annualised approaches. The measurement and presentation of such information may therefore be complex.	**Approach** IAS 34, *Interim Financial Reporting* (a new topic at Advanced Level) lays down the principles and guidelines for the production of interim reports. **Stop and think** What does IAS 34 say about holiday pay?	The key point to remember if IAS 34 comes up in an exam is that an entity should use the same recognition and measurement principles in its interim statements as it does in its annual financial statements.	**IQ6: Interim financial statements** This short question deals with the appropriate tax rate to apply to the profits in an interim report.

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
7	**IFRS 14, *Regulatory Deferral Accounts*** This is a fairly minor standard for the purposes of your studies	**Approach** IFRS 14, *Regulatory Deferral Accounts* is in the syllabus, but is not a key topic and has not yet been examined. **Stop and think** IFRS 14 tackles an accounting mismatch. Can you think of another IFRS that does this?	This standard has not yet been examined and is given Level C in the syllabus. However, it could still be examined, though not in as much detail as some of the other IFRS.	N/A
8	**Audit focus – general issues with reporting performance** This is a brief section outlining general issues with performance in the context of ISA 200	**Approach** Read through quickly **Stop and think** Is the auditor concerned only with fraud?	An exam will test specifics rather than general points.	N/A
9	**Audit focus – specific issues** This section gives detailed guidance on the audit of: • Segment information • Held-for-sale assets • Related parties • First-time adoption of IFRS	**Approach** Work through all of this section, focusing particularly on the audit of related parties as this comes up a lot. **Stop and think** How would the auditor determine whether the IFRS 5 held for sale criteria have been met?	Many questions have a scenario in which you are asked to explain the financial reporting treatment and then discuss audit issues. It makes sense to do the FR first as the audit follows on from that. However, questions may also be set in which the financial reporting arises from the audit issue. This approach is a key difference from Professional Level.	**IQ7: Audit procedures – held-for-sale assets** This question is in the style of (though shorter) one you might get as part of Question 3.

Once you have worked through this guidance you are ready to attempt the further question practice included at the end of this chapter.

1 IAS 1, *Presentation of Financial Statements*

Section overview

- IAS 1, *Presentation of Financial Statements* sets down the format of financial statements, containing requirements as to their presentation, structure and content.

1.1 Main features

1.1.1 Titles of financial statements

- The three main financial statements under IAS 1 are as follows:
- Statement of financial position
- Statement of profit or loss and other comprehensive income
- Statement of cash flows

You may still see the older names, particularly balance sheet for statement of financial position as these titles are not mandatory.

1.1.2 Reporting owner changes in equity and comprehensive income

IAS 1 classifies changes in equity in a period as either:

- **owner changes** in equity; or
- **non-owner changes** in equity.

Owner changes in equity arise from transactions with owners in their capacity as owners, eg, dividends paid and issues of share capital. These are presented in the statement of changes in equity.

Non-owner changes in equity (known as 'comprehensive income') include:

- the profit or loss for the period; and
- income or expenditure recognised directly in equity (known as 'other comprehensive income').

These are presented in the statement of profit or loss and other comprehensive income.

Summary

	IAS 1
Profit or loss for period	Statement of profit or loss and other comprehensive income
Non-owner transactions recognised directly in equity	
Owner transactions	Statement of changes in equity

1.1.3 Presentation of comparatives

IAS 1 requires disclosure of comparative information in respect of the previous period. It also requires inclusion of a statement of financial position as at the beginning of the earliest comparative period when an entity:

- retrospectively applies an accounting policy;
- retrospectively restates items in the financial statements; or
- reclassifies items in the financial statements.

In effect this will result in the presentation of three statements of financial position when there is a prior period adjustment.

1.2 Materiality and aggregation

Entities must be able to use judgement when presenting their financial reports. Accordingly, the following are required by IAS 1 paragraph 30A:

(a) Materiality. Information should not be obscured by aggregating or by providing immaterial information. Materiality considerations apply to the parts of the financial statements. Materiality considerations still apply, even when a standard requires a specific disclosure.

(b) Statement of financial position and statement of profit or loss and other comprehensive income. The list of line items to be presented in these statements can be disaggregated and aggregated as relevant and additional guidance is given on subtotals in these statements. An entity's share of other comprehensive income of equity-accounted associates and joint ventures should be presented in aggregate as single line items based on whether or not it will subsequently be reclassified to profit or loss.

Information is material if omitting, misstating or obscuring it could reasonably be expected to influence decisions that the primary users of general-purpose financial statements make on the basis of those financial statements, which provide financial information about a specific reporting entity. In other words, materiality is an entity-specific aspect of relevance based on the nature or magnitude, or both, of the items to which the information relates in the context of an individual entity's financial report. (IAS 1: para. 7)

The IASB has amended the definition of 'material' to make it clear that obscuring information has the same effect as omitting or misstating it. Obscuring information means making the information so difficult to find or so difficult to understand, that it may as well have been omitted.

This addresses the issue that too much information can be just as problematic as the omission or misstatement of information.

1.2.1 Practice Statement 2: Making Materiality Judgements

The IASB issued Practice Statement 2: *Making Materiality Judgements* in 2017. This is a tool to aid management in using judgement to decide what information is material and what is not; it is a non- mandatory document and does not have the status of an IFRS® Standard.

The key point is a four-step process for making materiality judgements:

Step 1 Identify information that has the potential to be material. This step requires consideration of IFRS requirements and the common information needs of primary users.

Step 2 Assess whether the information identified is material. Both quantitative and qualitative factors should be considered.

Step 3 Organise the information within the draft financial statements so that it supports clear and concise communication.

Step 4 Review the information provided as a whole, considering whether it is material individually and in combination with other information. At this stage information may need to be added or removed.

Professional skills focus: Assimilating and using information

This Practice Statement is an example of where two professional skills interact. In order to apply judgement, you need to identify the relevant information, taking into account IFRS requirements and users' information needs.

Professional skills focus: Applying judgement

Having assimilated and organised the information (steps 1 to 3 of the Practice Statement process), you will be in a position to make judgements about whether it is material. Other information may be needed to support the judgements.

1.3 Statement of financial position

Note that reserves other than share capital and retained earnings may be grouped as 'other components of equity'.

Statement of financial position as at 31 December 20X7

	31 Dec 20X7 $m	31 Dec 20X6 $m

Total liabilities	X	X
Total equity and liabilities	X	X

1.4 Statement of profit or loss and other comprehensive income

The statement of profit or loss and other comprehensive income presents the total comprehensive income of an entity for a period.

Total comprehensive income is the change in equity during a period resulting from transactions and other events, other than those changes resulting from transactions with owners in their capacity as owners. It includes all components of profit or loss and of 'other comprehensive income'.

Other comprehensive income includes income and expenses that are not recognised in profit or loss, but instead recognised directly in equity. It includes:

- changes in the revaluation surplus;
- remeasurements (actuarial gains and losses) on defined benefit plans recognised in accordance with IAS 19, *Employee Benefits* (Chapter 18);
- gains and losses arising from translating the financial statements of a foreign operation (Chapter 21);
- gains and losses on remeasuring investments in equity instruments where an irrevocable election has been made to record changes in OCI (Chapter 16); and
- the effective portion of gains and losses on hedging instruments in a cash flow hedge (Chapter 17).

1.4.1 Presentation of other comprehensive income

The **blurring of distinctions** between different items in OCI is the result of an underlying **general lack of agreement** among users and preparers about **which items should be presented in OCI** and which should be part of the profit or loss section. For instance, a common misunderstanding is that the split between profit or loss and OCI is on the basis of realised versus unrealised gains. This is not, and has never been, the case.

This lack of a consistent basis for determining how items should be presented can lead to the somewhat inconsistent use of OCI in financial statements.

Professional skills focus: Applying judgement

This is an example where judgement can shade into subjectivity, and more specific guidance is needed to focus the judgement of the preparer of financial statements.

IAS 1 approach

Entities are required to group items presented in OCI on the basis of **whether they would be reclassified** to (recycled through) profit or loss at a later date, when specified conditions are met.

The amendment does not address which items are presented in OCI or which items need to be reclassified.

Income tax

IAS 1 requires an entity to disclose income tax relating to each component of OCI. This is because these items often have tax rates different from those applied to profit or loss. This may be achieved by either:

- presenting individual components of OCI net of the related tax; or
- presenting individual components of OCI before tax, with one amount shown for the aggregate amount of income tax relating to those components.

Presentation

IAS 1 allows comprehensive income to be presented in two ways:

(a) A single statement of profit or loss and other comprehensive income; or

(b) A statement displaying components of profit or loss plus a second statement beginning with profit or loss and displaying components of OCI (statement of profit or loss and other comprehensive income).

The recommended format of a single statement of profit or loss and other comprehensive income is as follows:

Statement of profit or loss and other comprehensive income for the year ended 31 December 20X7

	20X7	20X6
	$m	$m
Revenue	X	X
Cost of sales	(X)	(X)
Gross profit	X	X
Other income	X	X
Distribution costs	(X)	(X)
Administrative expenses	(X)	(X)
Other expenses	(X)	(X)
Finance costs	(X)	(X)
Share of profit of associates	X	X
Profit before tax	X	X
Income tax expense	(X)	(X)
Profit for the year from continuing operations	X	X
Loss for the year from discontinued operations		(X)
PROFIT FOR THE YEAR	X	X
Other comprehensive income:		
Items that will not be reclassified to profit or loss:		
Gains on property revaluation	X	X
Investment in equity instruments	(X)	X
Actuarial gains (losses) on defined benefit pension plans	(X)	X
Share of gain (loss) on property revaluation of associates	X	(X)
Income tax relating to items that will not be reclassified	X	(X)
	(X)	X
Items that may be reclassified subsequently to profit or loss:		
Exchange differences on translating foreign operations	X	X
Cash flow hedges	(X)	(X)

	20X7 $m	20X6 $m
Income tax relating to items that may be reclassified	(X)	(X)
	X	X
Other comprehensive income for the year, net of tax	(X)	X
TOTAL COMPREHENSIVE INCOME FOR THE YEAR	X	X
Profit attributable to:		
Owners of the parent	X	X
Non-controlling interests	X	X
	X	X
Total comprehensive income attributable to:		
Owners of the parent	X	X
Non-controlling interests	X	X
	X	X
Earnings per share ($)		
Basic and diluted	X	X

Alternatively, components of OCI could be presented in the statement of profit or loss and other comprehensive income net of tax.

Statements of profit or loss

Throughout this Workbook, income and expense items which are included in the 'top half' of the statement of profit or loss and other comprehensive income are referred to as recognised in profit or loss, or recognised in the income statement.

Income and expense items included in the 'bottom half' of the statement of profit or loss and other comprehensive income are referred to as recognised in other comprehensive income.

For exam purposes, you must ensure that you clarify where in the statement of profit or loss and other comprehensive income an item is recorded, by referring to recognition:

- in profit or loss; or
- in other comprehensive income.

1.5 Statement of changes in equity

All changes in equity arising from transactions with owners in their capacity as owners are shown in the statement of changes in equity.

Non-owner transactions are not permitted to be shown in the statement of changes in equity other than in aggregate.

Statement of changes in equity for the year ended 31 December 20X7

	Share capital	Retained earnings	Trans. of foreign ops	Inv. in equity instrum en	Cash flow	Revaluat ion surplus	Total	Non-controlling interest	Total equity
	£'000	£'000	£'000	£'000	£'000	£'000	£'000	£'000	£'000
Balance at 1 Jan 20X7	X	X	(X)	X	X	–	X	X	X
Changes in acc'g policy	–	X	–	–	–	–	X	–	X
Restated balance	X	X	(X)	X	X	–	X	X	X
Changes in equity during 20X7									
Issueof share capital	X	–	–	–	–	–	X	–	X
Dividends	–	(X)	–	–	–	–	(X)	(X)	(X)
Total comp. income for the year	–	X	X	X	X	X	X	X	X
Transfer to retained earn'gs	–	X	–	–	–	(X)	–	–	–
Balance at 31 Dec 20X7	X	X	X	X	X	X	X	X	X

A comparative statement for the prior period is alsorequired. Here is an example of a statement of changes in equity with somereal figures in, to give you a better idea of what it looks like:

Olive Group: statement of changes in equity for the year ended 30 June 20X9

Share Balance	Share capital	Retained earnings	Inv. in equity instrum'ts	Revaluat'n surplus	Total	Non-controlling interest	Total equity
	£m	£m	£m	£m	£m	£m	£m

Share capital issued	1,320				1,320		1,320
Dividends		(216)			(216)	(120)	(336)
Total comp. incomefor the year		(1,296)	72	48	(1,176)	528	(648)
Balance at 30 June 20X9	15,600	9,384	456	144	25,584	1,680	27,264

2 IFRS 8, *Operating Segments*

Section overview

An important aspect of reporting financial performance is **segment reporting**. This is covered by IFRS 8, *Operating Segments*.

IFRS 8 is a **disclosure standard**.

- **Segment reporting** is necessary for a better understanding and assessment of:
  - past performance;
  - risks and returns; and
  - informed judgements.
- IFRS 8 adopts the **managerial approach** to identifying segments.
- The standard gives guidance on how segments should be **identified** and **what information should be disclosed** for each.

It also sets out **requirements for related disclosures** about products and services, geographical areas and major customers.

1.1 Introduction

Large entities produce a wide range of products and services, often in several different countries. Further information on how the overall results of entities are made up from each of these product or geographical areas will help the users of the financial statements. This is the reason for **segment reporting**.

- The entity's **past performance** will be better understood.
- The entity's **risks and returns** may be better assessed.
- More **informed judgements** may be made about the entity as a whole.

Risks and returns of a **diversified, multinational company** can be better assessed by looking at the individual risks and rewards attached to groups of products or services or in different geographical areas. These are subject to differing rates of profitability, opportunities for growth, future prospects and risks.

1.2 Objective and scope

An entity must disclose information to enable users of its financial statements to evaluate the nature and financial effects of the business activities in which it engages and the economic environments in which it operates.

Only entities whose **equity or debt securities are publicly traded** (ie, on a stock exchange) need disclose segment information. In group accounts, only **consolidated** segmental information needs to be shown. (The statement also applies to entities filing or in the process of filing financial statements for the purpose of issuing instruments.)

1.3 Definition of operating segment

Definition

Operating segment: This is a component of an entity:

- that engages in business activities from which it may earn revenues and incur expenses (including revenues and expenses relating to transactions with other components of the same entity);

- whose operating results are regularly reviewed by the entity's chief operating decision maker to make decisions about resources to be allocated to the segment and assess its performance; and
- for which discrete financial information is available.

The term 'chief operating decision maker' identifies a function, not necessarily a manager with a specific title. That function is to allocate resources and to assess the performance of the entity's operating segments.

1.4 Aggregation

Two or more operating segments may be **aggregated** if the segments have **similar economic characteristics**, and the segments are similar in all of the following respects:

- The nature of the products or services
- The nature of the production process
- The type or class of customer for their products or services
- The methods used to distribute their products or provide their services
- If applicable, the nature of the regulatory environment

1.5 Determining reportable segments

An operating segment is reportable where:

- It meets the definition of an operating segment; and
- Any of the following size criteria are met:
  - Segment **revenue** ≥ 10% of total (internal and external) revenue
  - Segment **profit or loss** ≥ 10% of the profit of all segments in profit (or loss of all segments making a loss if greater)
  - Segment **assets** ≥ 10% of total assets

At least **75% of total external revenue** must be reported by operating segments. Where this is not the case, additional segments must be identified (even if they do not meet the 10% thresholds).

2.5.1 Aggregating segments

Two or more operating segments **below** the thresholds may be aggregated to produce a reportable segment if the segments have similar economic characteristics, and the segments are similar in a **majority** of the aggregation criteria above.

Evidence of similar economic characteristics is given by **similar long-term financial performance**. For example, similar long-term average gross margins for two operating segments would be expected if their economic characteristics were similar.

2.5.2 Non-reportable segments

Operating segments that do not meet **any of the quantitative thresholds** may be reported separately if management believes that information about the segment would be useful to users of the financial statements.

Non-reportable segments are required by IFRS 8 to be combined and disclosed in an 'all other segments' category separate from other reconciling items in the reconciliations required by IFRS8. Entities must disclose the sources of revenue in the 'all other segments' category.

Professional skills focus: Structuring problems and solutions

IFRS 8 provides a framework for structuring the problem of comparing like with like and identifying important areas of the business. First segments need to be identified – not always easy in real life or in the exam. Then the relevant disclosures need to be made.

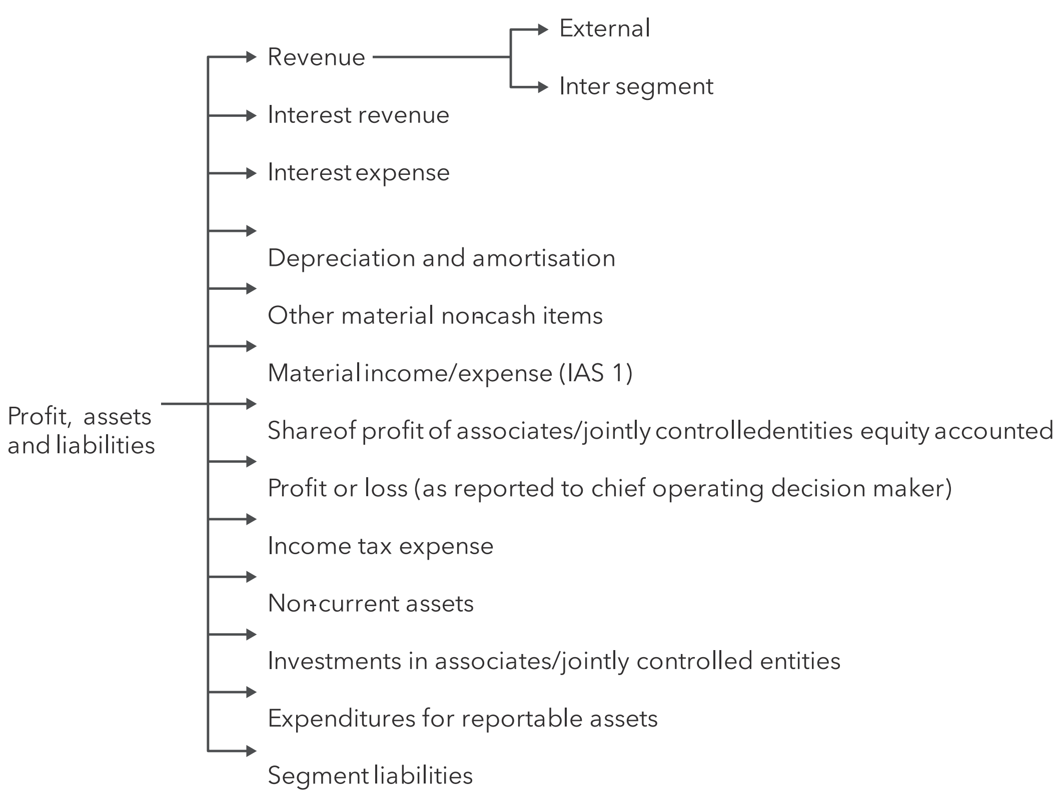
1.6 Disclosures

1.6.1 Segment disclosures

Disclosures required by the IFRS are extensive and best learned by looking at the example and pro forma, which follow the list. Disclosure is required of:

- Factors used to identify the entity's reportable segments
- **Types of products and services** from which each reportable segment derives its revenues
- For each reportable segment:
  - Operating segment profit or loss
  - Segment assets
  - Segment liabilities
  - Certain income and expense items

Figure 9.1: IFRS 8 Disclosures



A **reconciliation** of each of the above material items to the entity's reported figures is required.

Reporting of a measure of **profit or loss** by segment is compulsory. Other items are disclosed if included in the figures reviewed by or regularly provided to the chief operating decision maker.

1.6.2 Entity-wide disclosures

The following disclosures are required for the whole entity:

- **External revenue** by each product and service (if reported basis is not products and services)
- **Geographical information**:

Geographical areas → External revenue / Non-current assets by:
- entity's country of domicile, and
- all foreign countries (subdivided if material)

Notes

1 External revenue is allocated based on the customer's location.

2 Non-current assets exclude financial instruments, deferred tax assets, post-employment benefit assets, and rights under insurance contracts.

- Information about **reliance on major customers** (ie, those who represent more than 10% of external revenue)

1.6.3 Disclosure example from IFRS 8

The following example is adapted from the IFRS 8 *Implementation Guidance*, which emphasises that this is for illustrative purposes only and that the information must be presented in the most understandable manner in the specific circumstances.

The hypothetical company does not allocate tax expense (tax income) or non-recurring gains and losses to reportable segments. In addition, not all reportable segments have material noncash items other than depreciation and amortisation in profit or loss. The amounts in this illustration, denominated as dollars, are assumed to be the amounts in reports used by the chief operating decision maker.

	Car parts	**Motor vessel**	**Software**	**Electronics**	**Finance**	**All other**	**Totals**
	$	**$**	**$**	**$**	**$**	**$**	**$**
Revenues from external customers	3,000	5,000	9,500	12,000	5,000	1,000	35,500
Inter-segment revenues	–	–	3,000	1,500	–	–	4,500
Interest revenue	450	800	1,000	1,500	–	–	3,750
Interest expense	350	600	700	1,100	–	–	2,750
Net interest revenue	–	–	–	–	1,000	–	1,000
Depreciation and amortisation	200	100	50	1,500	1,100	–	2,950
Reportable segment profit	200	70	900	2,300	500	100	4,070
Other material non-cash items:							
Impairment of assets	–	200	–	–	–	–	200
Reportable segment assets	2,000	5,000	3,000	12,000	57,000	2,000	81,000
Expenditure for reportable segment non-current assets	300	700	500	800	600	–	2,900
Reportable segment liabilities	1,050	3,000	1,800	8,000	30,000	–	43,850

- 'All other' segment results are attributable to four operating segments of the company which do not meet the quantitative thresholds. Those segments include a small property business, an electronics equipment rental business, a software consulting practice and a warehouse leasing operation. None of those segments has ever met any of the quantitative thresholds for determining reportable segments.
- The finance segment derives a majority of its revenue from interest. Management primarily relies on net interest revenue, not the gross revenue and expense amounts, in managing that segment. Therefore, as permitted by IFRS 8, only the net amount is disclosed.

1.6.4 Suggested pro forma

Information about profit or loss, assets and liabilities

	Segment A	Segment B	Segment C	All other segments	Inter segment	Entity total
Revenue – external customers	X	X	X	X	–	X
Revenue – inter segment	X	X	X	X	(X)	–
	X	X	X	X	(X)	X

Information about geographical areas	Country of domicile	Foreign countries	Total
Revenue – external customers	X	X	X
Non-current assets	X	X	X

Interactive question 1: Segments

Endeavour, a public limited company, trades in six business areas which are reported separately in its internal accounts provided to the chief operating decision maker. The results of these segments for the year ended 31 December 20X5 are as follows.

Operating segment information as at 31 December 20X5

	External revenue £m	Internal revenue £m	Total revenue £m	Segment profit/ (loss) £m	Segment assets £m	Segment liabilities £m
Chemicals:						
Europe	14	7	21	1	31	14
Rest of world	56	3	59	13	78	34
Pharmaceuticals wholesale	59	8	67	9	104	35
Pharmaceuticals retail	22	0	22	(2)	30	12
Cosmetics	12	3	15	2	18	10
Hair care	11	1	12	4	21	8
Body care	18	24	42	(6)	54	19
	192	46	238	21	336	132

Requirement

Which of the operating segments of Endeavour constitute a 'reportable' operating segment under IFRS 8, *Operating Segments* for the year ending 31 December 20X5?

See **Answer** at the end of this chapter.

3 IFRS 5, *Non-current Assets Held for Sale and Discontinued Operations*

Section overview

IFRS 5 requires assets and groups of assets that are 'held for sale' to be **presented separately** on the face of the statement of financial position and the results of discontinued operations to be presented separately in the statement of profit or loss and other comprehensive income. This is required so that users of financial statements will be better able to make **projections** about the financial position, profits and cash flows of the entity based on continuing operations only.

Definition

Disposal group: A group of assets to be disposed of, by sale or otherwise, together as a group in a single transaction, and liabilities directly associated with those assets that will be transferred in the transaction. (In practice a disposal group could be a subsidiary, a cash-generating unit or a single operation within an entity.)

(IFRS 5)

A disposal group could form a group of cash-generating units, a single cash-generating unit or be part of a cash-generating unit.

The disposal group should include goodwill if it is a cash-generating unit (or group of cash-generating units to which goodwill has been allocated under IAS 36). Only goodwill recognised in the statement of financial position can be included in the disposal group. If a previous generally accepted accounting practice (GAAP) allowed goodwill to be recorded directly in reserves, this goodwill does not form part of a disposal group.

A disposal group may include current and non-current assets and current and non-current liabilities. However, only liabilities that will be transferred as part of the transaction are classified as part of the disposal group. If any liabilities remain with the vendor, these are not included in the scope of IFRS 5.

IFRS 5 does not apply to certain assets covered by other accounting standards:

- Deferred tax assets (IAS 12)
- Assets arising from employee benefits (IAS 19)
- Financial assets (IFRS 9)
- Investment properties accounted for in accordance with the fair value model (IAS 40)
- Agricultural and biological assets that are measured at fair value less estimated point of sale costs (IAS 41)
- Insurance contracts (IFRS 4)

3.1 Classification of assets held for sale

A non-current asset (or disposal group) should be classified as **held for sale** if its carrying amount will be recovered **principally through a sale transaction** rather than **through continuing use**. A number of detailed criteria must be met:

- The asset must be **available for immediate sale** in its present condition.
- Its sale must be **highly probable** (ie, significantly more likely than not).

For the sale to be highly probable, the following must apply.

- Management must be **committed** to a plan to sell the asset.
- There must be an active programme to **locate a buyer**.
- The asset must be marketed for sale at a **price that is reasonable** in relation to its current fair value.
- The sale should be expected to take place **within one year** from the date of classification.
- It is unlikely that significant changes to the plan will be made or that the plan will be withdrawn.

An asset (or disposal group) can still be classified as held for sale, even if the sale has not actually taken place within one year. However, the delay must have been **caused by events or circumstances beyond the entity's control** and there must be sufficient evidence that the entity is still committed to sell the asset or disposal group. Otherwise the entity must cease to classify the asset as held for sale.

Subsidiaries acquired exclusively with a view to resale

If an entity acquires a disposal group (eg, a subsidiary) exclusively with a view to its subsequent disposal it can classify the asset as held for sale only if the sale is expected to take place within one year and it is highly probable that all the other criteria will be met within a short time (normally three months).

Abandoned assets

An asset that is to be **abandoned** should not be classified as held for sale. This is because its carrying amount will be recovered principally through continuing use. However, a disposal group that is to be abandoned may meet the definition of a discontinued operation and therefore separate disclosure may be required (see below).

Interactive question 2: Held for sale

On 1 December 20X3, a company became committed to a plan to sell a manufacturing facility and has already found a potential buyer. The company does not intend to discontinue the operations currently carried out in the facility. At 31 December 20X3 there is a backlog of uncompleted customer orders. The subsidiary will not be able to transfer the facility to the buyer until after it ceases to operate the facility and has eliminated the backlog of uncompleted customer orders. This is not expected to occur until Spring 20X4.

Requirement

How should the manufacturing facility be accounted for as at 31 December 20X3?

See **Answer** at the end of this chapter.

3.2 Measurement of assets held for sale

A non-current asset (or disposal group) that is held for sale should be measured at the **lower of** its **carrying amount** and **fair value less costs to sell** (net realisable value).

An impairment loss should be recognised where fair value less costs to sell is lower than carrying amount. Note that this is an exception to the normal rule. IAS 36, *Impairment of Assets* requires an entity to recognise an impairment loss only where an asset's recoverable amount is lower than its carrying value. Recoverable amount is defined as the higher of **net realisable value** and **value in use**. IAS 36 does not apply to assets held for sale.

Non-current assets held for sale **should not be depreciated**, even if they are still being used by the entity.

A non-current asset (or disposal group) that is **no longer classified as held for sale** (for example, because the sale has not taken place within one year) is measured at the **lower of the following**:

- Its **carrying amount** before it was classified as held for sale, adjusted for any depreciation that would have been charged had the asset not been held for sale
- Its **recoverable amount** at the date of the decision not to sell

3.3 Presenting discontinued operations

Definition

Discontinued operation: A component of an entity that has either been disposed of, or is classified as held for sale, and:

- represents a separate major line of business or geographical area of operations;
- is part of a single co-ordinated plan to dispose of a separate major line of business or geographical area of operations; or
- is a subsidiary acquired exclusively with a view to resale.

Operations and cash flows that can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity.

An entity should **present and disclose information** that enables users of the financial statements to evaluate the financial effects of **discontinued operations** and disposals of non-current assets or disposal groups.

An entity should disclose a **single amount** on the **face of the statement of profit or loss and**

other comprehensive income (or statement of profit or loss where presented separately) comprising the total of:

- the **post-tax profit or loss** of discontinued operations; and
- the post-tax gain or loss recognised on the **measurement to fair value less costs to sell** or on the disposal of the assets or disposal group(s) constituting the discontinued operation.

An entity should also disclose an **analysis** of the above single amount into:

- the revenue, expenses and pre-tax profit or loss of discontinued operations;
- the related income tax expense;
- the gain or loss recognised on the measurement to fair value less costs to sell or on the disposal of the assets or the discontinued operation; and
- the related income tax expense.

This may be presented either on the face of the statement of profit or loss and other comprehensive income or in the notes. If it is presented on the face of the statement of profit or loss and other comprehensive income it should be presented in a section identified as relating to discontinued operations, ie, separately from continuing operations. This analysis is not required where the discontinued operation is a newly acquired subsidiary that has been classified as held for sale.

An entity should disclose the **net cash flows** attributable to the operating, investing and financing activities of discontinued operations. These disclosures may be presented either on the face of the statement of cash flows or in the notes.

Gains and losses on the remeasurement of a disposal group that is not a discontinued operation but is held for sale should be included in profit or loss from continuing operations.

Interactive question 3: Closure

On 20 October 20X3 the directors of a parent company made a public announcement of plans to close a steel works. The closure means that the group will no longer carry out this type of operation, which until recently has represented about 10% of its total revenue. The works will be gradually shut down over a period of several months, with complete closure expected in July 20X4. At 31 December 20X3 output had been significantly reduced and some redundancies had already taken place. The cash flows, revenues and expenses relating to the steel works can be clearly distinguished from those of the subsidiary's other operations.

Requirement

How should the closure be treated in the financial statements for the year ended 31 December 20X3?

See **Answer** at the end of this chapter.

3.4 Presentation of a non-current asset or disposal group classified as held for sale

Non-current assets and disposal groups classified as held for sale should be **presented separately** from other assets in the statement of financial position. The liabilities of a disposal group should be presented separately from other liabilities in the statement of financial position.

- Assets and liabilities held for sale **should not be offset**.
- The **major classes** of assets and liabilities held for sale should be **separately disclosed** either on the face of the statement of financial position or in the notes.

3.5 IFRS 5 and impairment

There are particular rules on impairment in the context of IFRS 5. These are covered in Chapter 12, section 1.4 of this Workbook.

3.6 Additional disclosures

In the period in which a non-current asset (or disposal group) has been either classified as held for sale or sold, the following should be disclosed.

(a) A **description** of the non-current asset (or disposal group)

(b) A description of the **facts and circumstances** of the disposal

(c) Any **gain or loss** recognised when the item was classified as held for sale

(d) If applicable, the **segment** in which the non-current asset (or disposal group) is presented in accordance with IFRS 8, *Operating Segments*

Where an asset previously classified as held for sale is **no longer held for sale**, the entity should disclose a description of the facts and circumstances leading to the decision and its effect on results.

4 IAS 24, Related Party Disclosures

Section overview

The objective of IAS 24 is to ensure that an entity's financial statements contain the disclosures necessary to draw attention to the possibility that its financial position and/or profit or loss may have been affected by the existence of related parties or by related party transactions.

4.1 Overview of material from earlier studies

Scope

IAS 24 requires disclosure of related party transactions, and outstanding balances, in the separate financial statements of:

- a parent;
- a venturer; or
- an investor.

What constitutes a related party?

A related party is a person or entity that is related to the entity that is preparing its financial statements.

(a) A **person** or a close member of that person's family is **related** to a reporting entity if that person:

  (1) has control or joint control over the reporting entity;

  (2) has significant influence over the reporting entity; or

  (3) is a member of the key management personnel of the reporting entity or of a parent of the reporting entity.

(b) An **entity** is related to a reporting entity if any of the following conditions apply:

  (1) The entity and the reporting entity are members of the same group (which means that each parent, subsidiary and fellow subsidiary is related to the others).

(2) One entity is an associate or joint venture of the other entity (or an associate or joint venture of a member of a group of which the other entity is a member).

(3) Both entities are joint ventures of the same third party.

(4) One entity is a joint venture of a third entity and the other entity is an associate of the third entity.

(5) The entity is a post-employment defined benefit plan for the benefit of employees of either the reporting entity or an entity related to the reporting entity. If the reporting entity is itself such a plan, the sponsoring employers are also related to the reporting entity.

(6) The entity is controlled or jointly controlled by a person identified in (a).

(7) A person identified in (a)(1) has significant influence over the entity or is a member of the key management personnel of the entity (or of a parent of the entity).

(8) The entity, or any member of a group of which it is a part, provides key management personnel services to the reporting entity or the parent of the reporting entity.

Exclusions

- **Two entities simply because they have a director or other key management in common** (notwithstanding the definition of related party above, although it is necessary to consider how that director would affect both entities)
- **Two venturers, simply because they share joint control over a joint venture**
- Certain other bodies, simply as a result of their **role in normal business dealings** with the entity:
  - Providers of finance
  - Trade unions
  - Public utilities
  - Government departments and agencies
- **Any single customer, supplier, franchisor, distributor or general agent** with whom the entity transacts a significant amount of business, simply by virtue of the resulting economic dependence

What constitutes a related party transaction?

Definition

Related party transaction: A transfer of resources, services or obligations between related parties, regardless of whether a price is charged.

What must be disclosed?

- **A related party relationship between parent and subsidiaries**
- **Compensation**, being the consideration in exchange for their services, received by key management personnel
- **Disclosures** required about related parties **only if transactions have taken place between them during the period**:
  - The nature of the relationship (but remember this must always be disclosed in respect of a parent)
  - The amount of the transactions
  - The amount of any balance outstanding at the year end
  - The terms and conditions attaching to any outstanding balance (for example, whether

  security or guarantees have been provided and what form the payment will take)
  - If an amount has been provided against or written off any outstanding balance due
- **Disclosure** of the fact that transactions are on an **arm's length basis** (the term 'arm's length' continues to be used in the context of IAS 24, even though it has been removed from the definition of fair value in IFRS 13 (see Chapter 2, section 4))

Interactive question 4: Related party transactions

P owns S and a number of other subsidiaries. The following details relate to amounts due to the key management personnel (KMP) of P and of S for the year ended 31 December 20X5.

	£
Salaries and related taxes payable by S to its KMP for services rendered to S	500,000
Salaries and related taxes payable by P to S's KMP for services rendered to S	60,000
Salaries and related taxes payable by S to its KMP for services rendered to P	20,000
Pension benefits accruing within the group-wide pension scheme to S's KMP for services rendered to S	50,000
Share options granted under the group-wide share option scheme to S's KMP for services rendered to S 28,000	
	658,000

Requirement

What transactions should be disclosed as key management personnel compensation in the financial statements of S?

See **Answer** at the end of this chapter.

4.2 Application of substance over form

Under IAS 24 attention should be directed to the **substance** of the relationship rather than focusing on its legal form. For example, the following **are not related parties**:

- Two entities **simply because they have a director** (or other member of key management personnel) **in common**, or because a member of key management personnel of one entity has significant influence over the other entity
- Two venturers **simply because they share joint control over a joint venture**
- Providers of finance, trade unions, public utilities and government departments and agencies of a government that does not control, jointly control or significantly influence the reporting entity **simply by virtue of their normal dealings with an entity**
- A customer, supplier, franchisor, distributor or general agent, with whom an entity transacts a significant volume of business, **simply by virtue of the resulting economic dependence**

Context example: Related parties

The following examples illustrate the application of the definition of a related party to practical situations:

(a) Alan Jones owns 30% of Benson Co and Clark Co owns 40% of Benson Co. The remaining 30% is held by many unconnected shareholders.

Benson Co is the reporting entity:

Alan Jones is a related party under definition (a)(2) and Clark Co is a related party under definition (b)(2)

Clark Co is the reporting entity:

Benson Co is a related party under definition (b)(2)

(b) Alan Jones and Benson Co have joint control over Clark Co Benson Co is the reporting entity:
Clark Co is a related party under definition (b)(2) Clark Co is the reporting entity:
Alan Jones is a related party under definition (a)(1) and Benson Co is a related party under definition (b)(2)

(c) Alan Jones is a non-executive director of Benson Co Benson Co is the reporting entity:
Alan Jones falls within the definition of Benson Co's key management personnel and is a related party under definition (a)(3)

(d) Alan Jones owns 70% of Benson Co and is a director of Clark Co Benson Co is the reporting entity:
Alan Jones is a related party under definition (a)(1) and Clark Co is a related party under definition (b)(7)

Clark Co is the reporting entity:

Alan Jones falls within the definition of Clark Co's key management personnel and is a related party under definition (b)(3)

Benson Co is a related party under definition (b)(6)

5 IFRS 1, *First-time Adoption of International Financial Reporting Standards*

Section overview

- IFRS 1 gives guidance to entities applying IFRS Standards for the first time.

The adoption of a new body of accounting standards will inevitably have a significant effect on the accounting treatments used by an entity and on the related **systems and procedures**. In 2005 many countries adopted IFRS for the first time and over the next few years other countries are likely to do the same.

In addition, many Alternative Investment Market (AIM) companies and public sector companies adopted IFRS Standards for the first time for accounting periods ending in 2009 and 2010. US companies are likely to move increasingly to IFRS, although the US Securities and Exchange Commission did not give any definite timeline for this in its 2012 work plan.

IFRS 1, *First-time Adoption of International Financial Reporting Standards* was issued to ensure that an entity's first IFRS financial statements contain high quality information that fulfil the following criteria:

- It is transparent for users and comparable over all periods presented.
- It provides a suitable starting point for accounting under IFRS Standards.
- It can be generated at a cost that does not exceed the benefits to users.

5.1 General principles

An entity applies IFRS 1 in its first IFRS financial statements.

An entity's first IFRS financial statements are the first annual financial statements in which the entity adopts IFRS Standards by an **explicit and unreserved statement of compliance** with IFRS Standards.

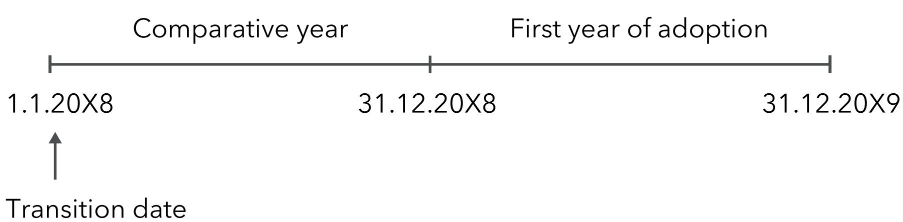
Any other financial statements (including fully compliant financial statements that did not state so) are not the first set of financial statements under IFRS Standards.

5.2 Opening IFRS statement of financial position

An entity **prepares and presents** an **opening IFRS statement of financial position** at the date of transition to IFRS Standards as a starting point for IFRS accounting.

Generally, this will be the beginning of the **earliest comparative period shown** (ie, full retrospective application). Given that the entity is applying a change in accounting policy on adoption of IFRS 1, IAS 1, *Presentation of Financial Statements* requires the presentation of **at least three statements of financial position** (and two of each of the other statements).

Context example: Opening IFRS SOFP



Preparation of an opening IFRS statement of financial position typically involves adjusting the amounts reported at the same date under previous GAAP.

All adjustments are recognised **directly in retained earnings** (or, if appropriate, another category of equity) not in profit or loss.

5.3 Estimates

Estimates in the opening IFRS statement of financial position must be consistent with estimates **made at the same date under previous GAAP** even if further information is now available (in order to comply with IAS 10).

5.4 Transition process

(a) **Accounting policies**

The entity should select accounting policies that comply with IFRS Standards effective **at the end of the first IFRS reporting period**.

These accounting policies are used in the opening IFRS statement of financial position and throughout all periods presented. The entity does not apply different versions of IFRS Standards effective at earlier dates.

(b) **Derecognition of assets and liabilities**

A previous GAAP statement of financial position may contain items that do not qualify for recognition under IFRS.

Eg, IFRS Standards do not permit capitalisation of research, staff training and relocation costs.

(c) **Recognition of new assets and liabilities**

New assets and liabilities may need to be recognised.

Eg, deferred tax balances and certain provisions such as environmental and decommissioning costs.

(d) **Reclassification of assets and liabilities**

Eg, compound financial instruments need to be split into their liability and equity components.

(e) **Measurement**

Value at which asset or liability is measured may differ under IFRS Standards.

Eg, discounting of deferred tax assets/liabilities not allowed under IFRS Standards.

5.5 Main exemptions from applying IFRS Standards in the opening IFRS statement of financial position

(a) **Property, plant and equipment, investment properties and intangible assets**

- Fair value/previous GAAP revaluation may be used as a substitute for cost at date of transition to IFRS Standards.

(b) **Business combinations**

For business combinations **before** the date of transition to IFRS Standards:

- The same classification (acquisition or uniting of interests) is retained as under previous GAAP.
- For items requiring a cost measure for IFRS Standards, the carrying value **at the date of the business combination** is treated as deemed cost and IFRS rules are applied from thereon.
- Items requiring a fair value measure for IFRS Standards are revalued at the date of transition to IFRS Standards.
- The carrying value of goodwill at the date of transition to IFRS Standards is the amount as reported under previous GAAP.

(c) **Employee benefits**

- Unrecognised actuarial gains and losses can be deemed zero at the date of transition to IFRS Standards. IAS 19 is applied from then on.

(d) **Cumulative translation differences on foreign operations**

- Translation differences (which must be disclosed in a separate translation reserve under IFRS Standards) may be deemed zero at the date of transition to IFRS Standards. IAS 21 is applied from then on.

(e) **Adoption of IFRS Standards by subsidiaries, associates and joint ventures**

If a subsidiary, associate or joint venture adopts IFRS Standards later than its parent, it measures its assets and liabilities **either**:

- at the amount that would be included in the parent's financial statements, based on the parent's date of transition; **or**
- at the amount based on the subsidiary (associate or joint venture)'s date of transition.

Disclosure

- A **reconciliation of previous GAAP equity** to IFRS Standards is required at the date of transition to IFRS Standards and for the most recent financial statements presented under previous GAAP.
- A **reconciliation of profit** for the most recent financial statements presented under previous GAAP.

5.6 Organisational and procedural changes

The technical changes involved in adopting a new body of standards will provide a challenge to company management and their advisers.

These are some of the key issues:

- **Accurate assessment of the task involved.** Underestimation or wishful thinking may hamper the effectiveness of the conversion and may ultimately prove inefficient.
- **Proper planning.** This should take place at the overall project level, but a detailed task analysis could be drawn up to control work performed.
- **Human resource management.** The project must be properly structured and staffed.
- **Training.** Where there are skills gaps, remedial training should be provided.
- **Monitoring and accountability.** A relaxed 'it will be all right on the night' attitude could spell danger. Implementation progress should be monitored and regular meetings set up so that participants can personally account for what they are doing as well as flag up any problems as early as possible. Project drift should be avoided.
- **Achieving milestones.** Successful completion of key steps and tasks should be appropriately acknowledged, ie, what managers call 'celebrating success', so as to sustain motivation and performance.
- **Physical resources.** The need for IT equipment and office space should be properly assessed.
- **Process review.** Care should be taken not to perceive the conversion as a one-off quick fix. Any change in future systems and processes should be assessed and properly implemented.
- **Follow-up procedures.** Good management practice dictates that follow-up procedures should be planned and in place to ensure that the transfer is effectively implemented and that any necessary changes are identified and implemented on a timely basis.
- **Contractual terms**. These may be affected, such as covenants related to borrowing facilities based on statement of financial position ratios. The potential effect of the new standards on these measurements should be assessed and discussed with the lenders at an early stage.

Interactive question 5: IFRS 1

Europa is a listed company incorporated in Molvania. It will adopt International Financial Reporting Standards (IFRS Standards) for the first time in its financial statements for the year ended 31 December 20X8.

The directors of Europa are unclear as to the impact of IFRS 1, *First-time Adoption of International Financial Reporting Standards*.

Advise the directors of Europa on the following.

Requirements

5.1 The procedure for preparing IFRS financial statements for the first time (as required by IFRS 1).

5.2 The practical steps that the company should take in order to ensure an efficient transfer to accounting under IFRS.

5.3 In its previous financial statements for 31 December 20X6 and 20X7, which were prepared under local GAAP, the company:

(1) made a number of routine accounting estimates, including accrued expenses and provisions; and

(2) did not recognise a provision for a court case arising from events that occurred in September 20X7. When the court case was concluded on 30 June 20X8, Europa was required to pay $10 million and paid this on 10 July 20X8, after the 20X7 financial statements were authorised for issue.

In the opinion of the directors, the company's estimates of accrued expenses and provisions under local GAAP were made on a basis consistent with IFRS Standards.

5.4 Discuss how the matters above should be dealt with in the financial statements of Europa for the year ended 31 December 20X8.

See **Answer** at the end of this chapter.

CHAPTER 9

6 IAS 34, *Interim Financial Reporting*

Section overview

IAS 34 recommends that **publicly traded entities should produce interim financial reports** and, for entities that do publish such reports, it lays down principles and guidelines for their production.

The following definitions are used in IAS 34.

Definitions

Interim period: A financial reporting period shorter than a full financial year.

Interim financial report: A financial report containing either a complete set of financial statements (as described in IAS 1) or a set of condensed financial statements (as described in this standard) for an interim period.

6.1 Scope of IAS 34

IAS 34 does not make the preparation of interim financial reports **mandatory**, taking the view that this is a matter for governments, securities regulators, stock exchanges or professional accountancy bodies to decide within each country. The IASB does, however, strongly recommend to governments and regulators that interim financial reporting should be a requirement for companies whose equity or debt securities are **publicly traded**.

IAS 34 encourages publicly traded entities:

- to provide an interim financial report for **at least the first six months of their financial year** (ie, a half year financial report); and
- to make the report **available no later than 60 days** after the end of the interim period.

Thus, a company with a year ending 31 December would be required as a minimum to prepare an interim report for the half year to 30 June and this report should be available before the end of August.

6.2 Minimum components

IAS 34 specifies the **minimum component elements** of an interim financial report as follows:

- Condensed statement of financial position

- Condensed statement of profit or loss and other comprehensive income, presented either as a single condensed statement or a statement of profit or loss and a statement showing other comprehensive income
- Condensed statement of changes in equity
- Condensed statement of cash flows
- Selected note disclosures

IAS 34 applies where an entity is required to or chooses to publish an interim financial report in accordance with IFRS Standards.

An interim report complying with IFRS Standards may be:

- a complete set of financial statements at the interim reporting date complying in full with IFRS Standards; or
- a condensed interim financial report prepared in compliance with IAS 34.

The rationale for allowing only condensed statements and selected note disclosures is that entities need not duplicate information in their interim report that is contained in their report for the previous financial year. Interim statements should **focus more on new events, activities and circumstances**.

6.3 Form and content

Where **full financial statements** are given as interim financial statements, IAS 1 should be used as a guide, otherwise IAS 34 specifies minimum contents.

The **condensed statement of financial position** should include, as a minimum, each of the major components of assets, liabilities and equity as were in the statement of financial position at the end of the previous financial year, thus providing a summary of the economic resources of the entity and its financial structure.

The **condensed statement of profit or loss and other comprehensive income** should include, as a minimum, each of the component items of total comprehensive income as were shown in the statement of profit or loss and other comprehensive income for the previous financial year, together with the earnings per share and diluted earnings per share.

The **condensed statement of cash flows** should show, as a minimum, the three major subtotals of cash flow as required in statements of cash flows by IAS 7, namely: cash flows from operating activities, cash flows from investing activities and cash flows from financing activities.

The **condensed statement of changes in equity** should include, as a minimum, each of the major components of equity as were contained in the statement of changes in equity for the previous financial year of the entity.

6.3.1 Selected explanatory notes

IAS 34 states that **relatively minor changes** from the most recent annual financial statements need not be included in an interim report. However, the notes to an interim report should include the following (unless the information is contained elsewhere in the report).

- A statement that the **same accounting policies and methods of computation** have been used for the interim statements as were used for the most recent annual financial statements. If not, the nature of the differences and their effect should be described. (The accounting policies for preparing the interim report should only differ from those used for the previous annual accounts in a situation where there has been a change in accounting policy since the end of the previous financial year, and the new policy will be applied for the annual accounts of the current financial period.)
- Explanatory comments on the **seasonality or 'cyclicality'** of operations in the interim period. For example, if a company earns most of its annual profits in the first half of the

year, because sales are much higher in the first six months, the interim report for the first half of the year should explain this fact

- The **nature and amount** of items during the interim period affecting assets, liabilities, capital, net income or cash flows, that are unusual, due to their nature, incidence or size
- The **issue or repurchase** of equity or debt securities
- Nature and amount of any **changes in estimates** of amounts reported in an earlier interim report during the financial year, or in prior financial years if these affect the current interim period
- **Dividends paid** on ordinary shares and the dividends paid on other shares
- **Segmental results** for entities that are required by IFRS 8, *Operating Segments* to disclose segment information in their annual financial statements
- Any **significant events since the end of the interim period**
- Effect of changes in the composition of the entity during the interim period including the acquisition or disposal of subsidiaries and long-term investments, restructurings and discontinued operations
- Any significant change in a **contingent liability or a contingent asset** since the date of the last annual statement of financial position

Changes in the business environment such as changes in price, costs, demand, market share and prospects for the full year should be discussed in the management discussion and analysis of the financial review.

The entity should also disclose the fact that the interim report has been produced **in compliance with**
IAS 34 on interim financial reporting.

Worked example: Disclosure

Give some examples of the type of disclosures required according to the above list of explanatory notes.

Solution

The following are examples:

- Write down of inventories to net realisable value and the reversal of such a write down
- Recognition of a loss from the impairment of property, plant and equipment, intangible assets, or other assets, and the reversal of such an impairment loss
- Reversal of any provisions for the costs of restructuring
- Acquisitions and disposals of items of property, plant and equipment
- Commitments for the purchase of property, plant and equipment
- Litigation settlements
- Corrections of fundamental errors in previously reported financial data
- Any debt default or any breach of a debt covenant that has not been corrected subsequently
- Related party transactions

Professional skills focus: Concluding, recommending and communicating

IAS 34 is concerned with communication – publicly traded entities need more information to be communicated than do private companies. While a private company would often produce management accounts, these would be for internal purposes and not communicated to the public.

6.4 Periods covered

The standard requires that interim financial reports should provide financial information for the following periods or as at the following dates.

- **Statement of financial position data** as at the end of the current interim period, and comparative data as at the end of the most recent financial year
- **Statement of profit or loss and other comprehensive income data** for the current interim period and cumulative data for the current year to date, together with comparative data for the corresponding interim period and cumulative figures for the previous financial year
- **Statement of cash flows data** should be **cumulative** for the current year to date, with comparative cumulative data for the corresponding interim period in the previous financial year
- **Data for the statement of changes in equity** should be for both the current interim period and for the year to date, together with comparative data for the corresponding interim period, and cumulative figures, for the previous financial year

6.5 Materiality

Materiality should be assessed in relation to the interim period financial data. It should be recognised that interim measurements **rely to a greater extent on estimates** than annual financial data.

6.6 Recognition and measurement principles

A large part of IAS 34 deals with recognition and measurement principles, and guidelines as to their practical application. The **guiding principle** is that an entity should use the **same recognition and measurement principles in its interim statements as it does in its annual financial statements**.

This means, for example, that a cost that would not be regarded as an asset in the year-end statement of financial position should not be regarded as an asset in the statement of financial position for an interim period. Similarly, an accrual for an item of income or expense for a transaction that has not yet occurred (or a deferral of an item of income or expense for a transaction that has already occurred) is inappropriate for interim reporting, just as it is for year-end reporting.

Applying this principle of recognition and measurement may result, in a subsequent interim period or at the yearend, in a **remeasurement** of amounts that were reported in a financial statement for a previous interim period. **The nature and amount of any significant remeasurements should be disclosed**.

6.6.1 Revenues received occasionally, seasonally or cyclically

Revenue that is received as an occasional item, or within a seasonal or cyclical pattern, should not be anticipated or deferred in interim financial statements, if it would be inappropriate to anticipate or defer the revenue for the annual financial statements. In other words, the principles of revenue recognition should be applied consistently to the interim reports and year-end reports.

6.6.2 Costs incurred unevenly during the financial year

These should only be anticipated or deferred (ie, treated as accruals or prepayments) if it would be appropriate to anticipate or defer the expense in the annual financial statements. For example, it would be appropriate to anticipate a cost for property rental where the rental is paid in arrears, but it would be inappropriate to anticipate part of the cost of a major advertising campaign later in the year, for which no expenses have yet been incurred.

The standard goes on, in an appendix, to deal with **specific applications** of the recognition and measurement principles. Some of these examples are explained below, by way of explanation and illustration.

6.6.3 Payroll taxes or insurance contributions paid by employers

In some countries these are assessed on an annual basis, but paid at an uneven rate during the course of the year, with a large proportion of the taxes being paid in the early part of the year, and a much smaller proportion paid later on in the year. In this situation, it would be appropriate to use an estimated average annual tax rate for the year in an interim statement, not the actual tax paid. This treatment is appropriate because it reflects the fact that the taxes are assessed on an annual basis, even though the payment pattern is uneven.

6.6.4 Cost of a planned major periodic maintenance or overhaul

The cost of such an event later in the year must not be anticipated in an interim financial statement **unless** there is a legal or constructive obligation to carry out this work. The fact that a maintenance or overhaul is planned and is carried out annually is not of itself sufficient to justify anticipating the cost in an interim financial report.

6.6.5 Other planned but irregularly occurring costs

Similarly, these costs, such as charitable donations and employee training costs, should not be accrued in an interim report. These costs, even if they occur regularly and are planned, are nevertheless discretionary.

6.6.6 Year-end bonus

A year-end bonus should not be provided for in an interim financial statement **unless** there is a constructive obligation to pay a year-end bonus (eg, a contractual obligation, or a regular past practice) and the size of the bonus can be reliably measured.

Worked example: Bonus

An entity's accounting year ends on 31 December each year and it is currently preparing interim financial statements for the half year to 30 June 20X4. It has a contractual agreement with its staff that it will pay them an annual bonus equal to 10% of their annual salary if the full year's output exceeds one million units. Budgeted output is 1.4 million units and the entity has achieved budgeted output during the first six months of the year. Annual salaries are estimated to be £100 million, with the cost in the first half year to 30 June being £45 million.

Requirement

How should the bonus be reflected in the interim financial statements?

Solution

It is probable that the bonus will be paid, given that the actual output already achieved in the year is in line with budgeted figures, which exceed the required level of output. So a bonus of £4.5 million should be recognised in the interim financial statements at 30 June 20X4.

6.6.7 Holiday pay

The same principle applies here. If holiday pay is an enforceable obligation on the employer, then any unpaid accumulated holiday pay may be accrued in the interim financial report.

6.6.8 Non-monetary intangible assets

The entity might incur expenses during an interim period on items that might or will generate non- monetary intangible assets. IAS 38, *Intangible Assets* requires that costs to generate non-monetary intangible assets (eg, development expenses) should be recognised as an expense when incurred **unless** the costs form part of an identifiable intangible asset. Costs that were initially recognised as an expense cannot subsequently be treated as part of the cost of an intangible asset instead. IAS 34 states that interim financial statements should adopt the same approach. This means that it would be inappropriate in an interim financial statement to 'defer' a cost in the expectation that it will eventually be part of a non-monetary intangible asset that has not yet been recognised: such costs should be treated as an expense in the interim statement.

6.6.9 Depreciation

Depreciation should only be charged in an interim statement on non-current assets that have been acquired, not on non-current assets that will be acquired later in the financial year.

6.6.10 Foreign currency translation gains and losses

These should be calculated by the same principles as at the financial year end, in accordance with IAS 21.

6.6.11 Tax on income

An entity will include an expense for income tax (tax on profits) in its interim statements. The **tax rate** to use should be the estimated average annual tax rate for the year. For example, suppose that in a particular jurisdiction, the rate of tax on company profits is 30% on the first £200,000 of profit and 40% on profits above £200,000. Now suppose that a company makes a profit of £200,000 in its first half year, and expects to make £200,000 in the second half year. The rate of tax to be applied in the interim financial report should be 35%, not 30%, ie, the expected average rate of tax for the year as a whole. This approach is appropriate because income tax on company profits is charged on an annual basis, and an effective annual rate should therefore be applied to each interim period.

As another illustration, suppose a company earns pre-tax income in the first quarter of the year of £30,000, but expects to make a loss of £10,000 in each of the next three quarters, so that net income before tax for the year is zero. Suppose also that the rate of tax is 30%. In this case, it would be inappropriate to anticipate the losses, and the tax charge should be £9,000 for the first quarter of the year (30% of £30,000) and a negative tax charge of £3,000 for each of the next three quarters, if actual losses are the same as anticipated.

Where the tax year for a company does not coincide with its financial year, a separate estimated weighted average tax rate should be applied for each tax year, to the interim periods that fall within that tax year.

Some countries give entities tax credits against the tax payable, based on amounts of capital expenditure or research and development, etc. Under most tax regimes, these credits are calculated and granted on an annual basis; therefore it is appropriate to include anticipated tax credits within the calculation of the estimated average tax rate for the year, and apply this rate to calculate the tax on income for the interim period.

Worked example: Taxation charge

An entity's accounting year ends on 31 December 20X4, and it is currently preparing interim financial statements for the half year to 30 June 20X4. Its profit before tax for the six month period to 30 June 20X4 is £6 million. The business is seasonal and the profit before tax for the six months to 31 December 20X4 is almost certain to be £10 million. Income tax is calculated as 25% of reported annual profit before tax if it does not exceed £10 million. If annual profit before tax exceeds £10 million the tax rate on the whole amount is 30%.

Requirement

Under IAS 34 what should the taxation charge be in the interim financial statements?

Solution

The taxation charge in the interim financial statements is based upon the weighted average rate for the year. In this case the entity's tax rate for the year is expected to be 30%. The taxation charge in the interim financial statements will be £1.8 million.

Interactive question 6: Interim financial statements

The Alshain Company's profit before tax for the six months to 30 September 20X6 was £4 million. However, the business is seasonal and profit before tax for the six months to 31 March 20X7 is almost certain to be £8 million. Profit before tax equals taxable profit for this company.

Alshain operates in a country where income tax on companies is at a rate of 25% if annual profits are below £11 million and a rate of 30% where annual profits exceed £11 million. These tax rates apply to the entire profit for the year.

Requirement

Under IAS 34, *Interim Financial Reporting*, what should be the income tax expense in Alshain's interim financial statements for the half year to 30 September 20X6?

See **Answer** at the end of this chapter.

6.6.12 Inventory valuations

Within interim reports, inventories should be valued in the same way as year-end accounts. It is recognised, however, that it will be necessary to rely more heavily on estimates for interim reporting than for year-end reporting.

In addition, it will normally be the case that the net realisable value of inventories should be estimated from selling prices and related costs to complete and dispose at interim dates.

Worked example: Inventory valuations

An entity's accounting year ends on 31 December 20X4, and it is currently preparing interim financial statements for the half year to 30 June 20X4. The price of its products tends to vary. At 30 June 20X4, it has inventories of 100,000 units, at a cost per unit of £1.40. The net realisable value of the inventories is £1.20 per unit at 30 June 20X4. The expected net realisable value of the inventories at 31 December 20X4 is £1.55 per unit.

Requirement

How should the value of the inventories be reflected in the interim financial statements?

Solution

The value of the inventories in the interim financial statements at 30 June 20X4 is the lower of cost and NRV at 30 June 20X4. This is:

100,000 × £1.20 = £120,000

6.7 Use of estimates

Although accounting information must be reliable and free from material error, it may be necessary to sacrifice some accuracy and reliability for the sake of timeliness and cost benefits. This is particularly the case with interim financial reporting, where there will be much less time to produce reports than at the financial year end. The standard therefore recognises that estimates will have to be used to a greater extent in interim reporting, to assess values or even some costs, than in year-end reporting.

An appendix to IAS 34 gives some examples of the use of estimates.

- **Inventories.** An entity might not need to carry out a full inventory count at the end of each interim period. Instead, it may be sufficient to estimate inventory values using sales margins.
- **Provisions.** An entity might employ outside experts or consultants to advise on the appropriate amount of a provision, as at the year end. It will probably be inappropriate to employ an expert to make a similar assessment at each interim date. Similarly, an entity might employ a professional valuer to revalue non-current assets at the year end, whereas at the interim date(s) the entity will not rely on such experts.
- **Income taxes.** The rate of income tax (tax on profits) will be calculated at the year end by applying the tax rate in each country/jurisdiction to the profits earned there. At the interim stage, it may be sufficient to estimate the rate of income tax by applying the same 'blended' estimated weighted average tax rate to the income earned in all countries/jurisdictions.
- **Classification of current and non-current assets and liabilities.** The investigation for classifying assets and liabilities as current and non-current may be more thorough at annual reporting dates than at interim ones.
- **Pensions.** IAS 19, *Employee Benefits* encourages the use of a professionally qualified actuary in the measurement of the plan's defined benefit obligations. For interim reporting purposes reliable estimates may be obtained by extrapolation of the latest actuarial valuation.
- **Contingencies.** Normally the measurement of contingencies may involve formal reports giving the opinions of experts. Expert opinions about contingencies and uncertainties relating to litigation or assessments may or may not be needed at interim dates.
- **Revaluations and fair value accounting.** Where an entity carries assets at fair value such as non- current assets in accordance with IAS 16, *Property, Plant and Equipment* or investment properties in accordance with IAS 40, *Investment Property*, it may rely on independent professional valuations at annual reporting dates, though not at interim reporting dates.
- **Intercompany reconciliations.** Intercompany balances that are reconciled at a detailed level at the year end may be reconciled at a less detailed level at the interim reporting date.
- **Specialised industries.** Interim period measurement in specialised industries may be less precise than at year end due to their complexity, and the cost and time investment that is required.
- **Impairment.** Any impairment losses recognised in an interim financial statement must not be reversed in subsequent interim or annual financial statements.

The principle of **materiality** applies to interim financial reporting, as it does to year-end reporting. In assessing materiality, it needs to be recognised that interim financial reports will rely more heavily on estimates than year-end reports. Materiality should be assessed in relation to the interim financial statements themselves, and should be independent of 'annual materiality' considerations.

6.8 IFRS 13, amendments

IFRS 13, *Fair Value Measurement* amended IAS 34, requiring interim reports to make the disclosures required by paragraphs 91–93(h), 94–96, 98 and 99 of IFRS 13, *Fair Value Measurement* and paragraphs 25, 26 and 28–30 of IFRS 7, *Financial Instruments: Disclosures*.

7 IFRS 14, *Regulatory Deferral Accounts*

Section overview

- IFRS 14, *Regulatory Deferral Accounts* permits entities adopting IFRS for the first time to continue to account, with some limited changes, for 'regulatory deferral account balances' in accordance with their previous GAAP, both on initial adoption of IFRS and in subsequent financial statements.
- Regulatory deferral account balances, and movements in them, are presented separately in the statement of financial position and statement of profit or loss and other comprehensive income. Specific disclosures are required.

IFRS 14, *Regulatory Deferral Accounts* was issued in January 2014 and is effective for an entity's first annual IFRS financial statements for a period beginning on or after 1 January 2016. IFRS 14 is an interim standard, applicable to first-time adopters of IFRS that provide goods or services to customers at a price or rate that is subject to rate regulation by the Government eg, the supply of gas or electricity.

The following definitions are used in IFRS 14.

Definitions

Rate regulation: A framework for establishing the prices that can be charged to customers for goods and services and that framework is subject to oversight and/or approval by a rate regulator.

Rate regulator: An authorised body that is empowered by statute or regulation to establish the rate or range of rates that bind an entity.

Regulatory deferral account balance: The balance of any expense (or income) account that would not be recognised as an asset or a liability in accordance with other Standards, but that qualifies for deferral because it is included, or is expected to be included, by the rate regulator in establishing the rate(s) that can be charged to customers.

7.1 Objective

The objective of IFRS 14 is to specify the financial reporting requirements for 'regulatory deferral account balances' that arise when an entity provides goods or services to customers at a price or rate that is subject to rate regulation.

7.2 Scope of IFRS 14

IFRS 14 is permitted, but not required, to be applied where an entity conducts rate-regulated activities and has recognised amounts in its previous GAAP financial statements that meet the definition of 'regulatory deferral account balances' (sometimes referred to as 'regulatory assets' and 'regulatory liabilities').

7.3 Main issues

Rate regulation is a means of ensuring that specified costs are recovered by the supplier, and that prices charged to customers are fair. These twin objectives mean that prices charged to customers at a particular time do not necessarily cover the costs incurred by the supplier at that time. In this case, **the recovery of such costs is deferred and they are recognised through future sales**.

This leads to a mismatch. IFRS does not have specific requirements in respect of accounting for this mismatch. However, established practice is that amounts are recognised in profit or loss as they arise.

In some jurisdictions, however, local GAAP allows or requires a supplier of rate-regulated activities to recognise costs to be recovered either as a separate regulatory deferral account or as part of the cost of a related asset.

The IASB is currently working on a comprehensive project to address this issue, but the project is not complete. In the meantime, IFRS 14 permits first-time adopters of IFRS to **continue to recognise amounts related to rate regulation in accordance with their previous GAAP** when they adopt IFRS. This is effected through an exemption from paragraph 11 of IAS 8, *Accounting Policies, Changes in Accounting Estimates and Errors,* which generally requires an entity to consider the requirements of IFRS Standards dealing with similar matters and the requirements of the *Conceptual Framework* when setting its accounting policies.

An entity may change its policy for regulatory deferral accounts in accordance with IAS 8, but only if the change makes the financial statements more relevant and reliable to users.

7.4 Presentation

The amounts of regulatory deferral account balances are separately presented in an entity's financial statements.

7.5 Disclosures

Specific disclosures are required in order to enable users to assess:

- the nature of, and risks associated with, the rate regulation that establishes the price(s) the entity can charge customers for the goods or services it provides; and
- the effects of rate regulation on the entity's financial statements.

8 Audit focus – general issues with reporting performance

Section overview

The auditor must consider the risk of fraud in general, and the risk of creative accounting in particular, when auditing financial performance.

ISA 200, *Overall Objectives of the Independent Auditor and the Conduct of an Audit in Accordance with the International Standards on Auditing* states the auditor's overall objectives as follows:

- To obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, thereby enabling the auditor to express an opinion on whether the financial statements are prepared, in all material respects, in accordance with an applicable financial reporting framework

- To report on the financial statements, and communicate as required by the ISAs, in accordance with the auditor's findings

(ISA 200.11)

Note that the auditor is concerned with material misstatements arising both as a result of **error**, and as a result of **fraud**.

We looked at creative accounting, a form of fraudulent financial reporting, in Chapter 5. We will look at the audit approach to fraud and creative accounting in more detail in Chapter 24.

Another point which is worth drawing out is the need for the auditor to report and communicate **as required by the ISAs**. As ISA 200 makes clear, **the auditor must fully understand and comply with all the ISAs relevant to the audit**.

9 Audit focus – specific issues

Section overview

This section looks at some of the audit issues related to certain financial reporting treatments covered earlier in this chapter.

9.1 Presentation and disclosure of segment information

ISA 501, *Audit Evidence – Specific Considerations for Selected Items* governs the auditor's approach to auditing segment information.

Auditors are required to obtain sufficient, appropriate audit evidence regarding the presentation and disclosure of segment information by:

(a) obtaining an understanding of the methods used by management in determining segment information:
   - evaluating whether such methods are likely to result in disclosure in accordance with the applicable financial reporting framework,
   - where appropriate, testing the application of such methods; and

(b) performing analytical procedures or other audit procedures appropriate in the circumstances.

(ISA 501.13)

When the ISA talks about obtaining an understanding of management's methods, the following may be relevant:

- Sales, transfers and charges between segments, elimination of inter-segment amounts
- Comparisons with budgets and other expected results; for example, operating profits as a percentage of sales
- Allocations of assets and costs among segments
- Consistency with prior periods, and the adequacy of the disclosures with respect to inconsistencies

It is important to stress that **auditors only have a responsibility in relation to the financial statements taken as a whole**. Auditors are not required to express an opinion on the segment information presented on a standalone basis.

9.2 Held-for-sale assets

As we have seen above, IFRS 5 requires that assets which meet the criteria 'held for sale' are shown **at the lower of carrying amount and fair value less costs to sell**, that held-for-sale assets are **classified separately** on the statement of financial position and the results of discontinued operations are presented separately on the statement of profit or loss and other comprehensive income.

Audit procedures to ensure assets meet the criteria include the following:

- Make enquiries/obtain written representations from management concerning intentions
- Review minutes of management for evidence of firm plan to sell
- Ascertain whether appropriate estate agent appointed (by reviewing contract between the parties)
- Review sale particulars
- Comparison of sale price per sale particulars to fair value
- Confirm likelihood of completion within a year by asking estate agent

Interactive question 7: Audit procedures – held-for-sale assets

Robinson Ltd has a balance of £250,000 in respect of assets classified as held for sale in the financial statements for the year ended 31 December 20X7.
This is in respect of two assets as follows:

- £70,000 relates to production machinery used for a product which is to be withdrawn. Production will be run down until the end of January 20X8 so that outstanding orders can be completed. The plant will then be serviced and uninstalled in early February.
- £180,000 relates to a piece of land which was classified as held for sale on 1 October. (You should assume that the IFRS 5 criteria are satisfied.) On this date the land's fair value was estimated to be £210,000 with costs to advertise the asset as being available for sale estimated at £6,000. The £180,000 represents the carrying value of the land on the basis that it is lower than fair value less costs to sell. Robinson Ltd has adopted a revaluation policy for land.

Requirements

Do the following for each of the above assets:

(a) Identify the key audit issue

(b) State the audit procedures which would be performed to address this issue

See **Answer** at the end of this chapter.

9.3 Related parties

Related parties are often involved in cases of **fraudulent financial reporting**, as highlighted in many major corporate scandals. Transactions with related parties provide scope for distorting financial information in financial statements and hiding the economic substance of transactions or fraud in companies.

The overall aim of ISA 550, *Related Parties* is to enhance the auditor's consideration of related parties and related party transactions with a focus on risk assessment, including the recognition of fraud risk factors. The firm must establish an approach that requires the auditor to assess the risks of misstatement and design audit procedures to address these. In particular, the ISA includes the following:

- Clearer responsibilities for the auditor, with a distinction being made between circumstances where the accounting framework includes disclosure and other reporting requirements for related parties, and circumstances where either there are no such requirements or they are inadequate

- Clearer distinction between the risk assessment procedures and the further audit procedures
- A definition of a related party, which is to be used as a minimum level for audit purposes where the applicable financial reporting framework establishes minimal or no related party requirements

9.4 Related parties: key issues

Readers of financial statements normally assume that transactions reflected in financial statements are made with **independent parties** unless told otherwise.

Readers will also normally assume that a company is owned by a number of shareholders and is **not subject to control or significant influence** by any one person or company unless told otherwise, eg, through disclosure of the identity of the parent company and significant shareholdings disclosure.

Where a company does business with 'related parties', for instance with shareholders or directors, these assumptions may not be valid.

9.5 The audit of related parties

9.5.1 Scope

ISA 550 provides guidance on the auditor's responsibilities, and audit procedures regarding related parties and transactions with such parties.

ISA 550 is applicable whether or not IAS 24, *Related Party Disclosures* is a requirement of the reporting framework for the entity concerned. **ISA 550, therefore, applies to private companies as well as listed companies.** ISA 550 provides the following definition.

Definition

Related party: A party that is either:

(a) a related party as defined in the applicable financial reporting framework; or

(b) where the applicable financial reporting framework establishes minimal or no related party requirements:

(1) a person or other entity that has control or significant influence, directly or indirectly through one or more intermediaries, over the reporting entity;

(2) another entity over which the reporting entity has control or significant influence, directly or indirectly through one or more intermediaries; or

(3) another entity that is under common control with the reporting entity through having:

- common controlling ownership;
- owners who are close family members; or
- common key management.

However, entities that are under common control by a state (ie, a national, regional or local government) are not considered related unless they engage in significant transactions or share resources to a significant extent with one another.

(ISA 550.10)

9.5.2 Responsibilities

Management is responsible for the identification of related parties and the disclosure of transactions with such parties. Management should set up **appropriate internal controls** to ensure that related parties are identified and disclosed along with any related party transactions.

It may not be self-evident to management whether a party is related. Furthermore, many accounting systems are not designed to either distinguish or summarise related party transactions, so management will have to carry out additional analysis of accounting information.

The auditor has a responsibility to perform audit procedures to identify, assess and respond to the risks of material misstatement arising from the entity's failure to appropriately account for or disclose related party relationships, transactions or balances.

9.5.3 Risks

The following **audit risks** may arise from a failure to identify a related party.

- Failure of the financial statements to comply with IAS 24.
- There may be a misstatement in the financial statements – transactions may be on a non arm's length basis and thus may result in assets, liabilities, profit or loss being overstated or understated. For example, special tax rates may apply to profits reported on sales to related parties.
- The reliance on a source of audit evidence may be misjudged. An auditor may rely on what is perceived to be third-party evidence when in fact it is from a related party. More generally, reliance on management assurances may be affected if the auditor were made aware of non- disclosure of a related party.
- The motivations of related parties may be outside normal business motivations and thus may be misunderstood by the auditor if there is non-disclosure. In the extreme, this may amount to fraud.

The inherent risk linked to related party transactions (RPT) can be high, especially where management is **unaware** of the existence of all the related party relationships or transactions, or where there is an opportunity for collusion, concealment or manipulation by management. There is an increased risk that the auditor may fail to detect a RPT, where:

- there has been no charge made for a RPT (ie, a zero cost transaction);
- disclosure would be sensitive for directors or have adverse consequences for the company;
- the company has no formal system for detecting RPTs;
- RPTs are with a party that the auditor could not reasonably expect to know is a related party;
- RPTs from an earlier period have remained as an unsettled balance;
- management have concealed, or failed to disclose fully, related parties or transactions with such parties; and
- the corporate structure is complex.

Note: The term 'arm's length' continues to be used in the context of IAS 24 even though it has been removed from the definition of fair value in IFRS 13.

9.5.4 Risk assessment procedures

In planning the audit, the auditor needs to consider **the risk of undisclosed related party transactions**. This is a difficult area because IAS 24 does not have consideration for materiality. Thus, even small RPTs should be disclosed by a company. Indeed, related party relationships where there is control (eg, a subsidiary) need to be disclosed even where there are no transactions with this party.

The auditor needs to perform the following procedures:

(a) The engagement team shall discuss the risks of fraud-related misstatements.

Matters to be addressed would include the importance of maintaining professional scepticism and circumstances which may indicate the existence of related party relationships or transactions that management has not identified.

(b) Make inquiries of management about the identities of related parties and any RPTs. This includes:

(1) the identity of related parties, including changes from prior period;

(2) the nature of the relationships between the entity and its related parties;

(3) whether any transactions occurred between the parties and, if so;

(4) what controls the entity has to identify, account for and disclose related party relationships and transactions;

(5) what controls the entity has to authorise and approve significant transactions and arrangements with related parties; and

(6) what controls the entity has to authorise and approve significant transactions and arrangements outside the normal course of business.

(c) Obtain an understanding of controls established to identify, account for and disclose RPTs and to authorise and approve significant transactions with related parties / outside the normal course of business.

Where controls are ineffective or non-existent, the auditor may be unable to obtain sufficient, appropriate audit evidence and will need to consider the impact of this on the audit opinion.

The auditor is also required to be alert for related party information when reviewing records or documents. In particular, the auditor must inspect bank and legal confirmations and minutes of meetings of the shareholders and those charged with governance. Where these procedures reveal significant transactions outside the entity's normal course of business, the auditor must inquire of management about the nature of these transactions and whether a related party could be involved.

9.5.5 Responses to the risks of material misstatement

In accordance with ISA 330, the auditor must design and perform further audit procedures to obtain sufficient, appropriate evidence about the assessed risks of material misstatement. These may include:

- confirming or discussing the transactions with intermediaries eg, banks, lawyers or agents;
- confirming the purposes, specific terms or amounts of the transaction with the related party; and
- reading the financial statements of the related party for evidence of the transaction in the related party's accounting records.

Where the risk of misstatement may be due to fraud additional procedures may apply:

- Inquiries of and discussion with management and those charged with governance
- Inquiries of the related party
- Inspection of significant contracts with the related party
- Background research eg, internet
- Review of employee whistleblowing reports

Identification of previously unidentified or undisclosed related parties or significant related party transactions

If the auditor identifies related parties or significant related party transactions that management has not previously identified or disclosed to the auditor, the auditor must do the following:

- Promptly communicate the relevant information to the other members of the engagement team
- Where the applicable reporting framework establishes related party requirements request management to identify all transactions with the newly identified related parties and inquire as to why the entity's controls have failed to identify and disclose the transaction
- Perform appropriate substantive audit procedures

These might include making inquiries regarding the nature of the entity's relationships with the newly identified related party, conducting an analysis of accounting records for transactions with the newly identified related party and verifying the terms and conditions of the newly identified related party transaction

- Reconsider the risk that other unidentified related parties or significant related party transactions may exist
- If the non-disclosure by management appears intentional and therefore indicates possible fraud evaluate the implications for the rest of the audit

Identified significant related party transactions outside the entity's normal course of business

Where significant related party transactions outside the entity's normal course of business are identified, the auditor must do the following:

- Inspect the underlying contracts and agreements and evaluate whether:
  - the business rationale or lack of suggests fraud;
  - the terms are consistent with the management's explanations; and
  - the transaction has been appropriately accounted for and disclosed.
- Obtain audit evidence that transactions have been appropriately authorised and approved

Management assertions

If management has made assertions in the financial statements to the effect that a related party transaction was conducted on terms equivalent to those prevailing in an arm's length transaction, the auditor must obtain evidence to support this. The nature of the evidence obtained will depend on the support management has obtained to substantiate their claim but may involve:

- considering the appropriateness of management's process for supporting the assertion;
- verifying the source of internal and external data supporting the assertion and testing it for accuracy, completeness and relevance; and
- evaluating the reasonableness of any significant assumptions on which the assertion is based.

9.5.6 Evaluation of accounting and disclosure

The auditor is required to evaluate whether related parties and related party transactions have been properly accounted for and disclosed and do not prevent the financial statements from achieving fair presentation.

9.5.7 Written representations

The auditor is required to obtain written representations from management and, where appropriate, those charged with governance that all related parties and related party transactions have been disclosed to the auditor and that these have been appropriately accounted for and disclosed.

An entity may require its management and those charged with governance to sign individual declarations in relation to related party matters. It may be helpful if any such declarations are addressed jointly to a designated official of the entity and also to the auditor.

9.5.8 Documentation

The auditor is required to include in the audit documentation the identity of related parties and the nature of related party relationships.

Note: The law regarding transactions with directors was covered in earlier Chapter of this Workbook.

9.6 Related parties: practical application

The following five point action plan can be used for auditing related parties:

- Plan your work on the audit of related party relationships and transactions thoroughly.
- Focus on the risk of material misstatement that might arise from related party transactions.
- Understand the internal controls at the company to identify related parties and to record related party transactions.
- Design procedures to respond to risks identified.
- Perform completion procedures.

9.6.1 Identifying undisclosed related parties

It is often difficult to identify related party relationships and transactions which should have been disclosed, but are not.

ISA 550 points out that the existence of the following relationships may indicate the presence of control or significant influence:

(a) Direct or indirect equity holdings or other financial interests in the entity

(b) The entity's holdings of direct or indirect equity or other financial interests in other entities

(c) Being part of those charged with governance or key management (that is, those members of management who have the authority and responsibility for planning, directing and controlling the activities of the entity)

(d) Being a close family member of any person referred to in subparagraph (c)

(e) Having a significant business relationship with any person referred to in subparagraph (c)

The related parties described in subparagraph (c) above, and by extension those described in (d) and (e), are often the hardest to identify. While entities related through equity interest should be fairly clearly documented, auditors frequently struggle to identify related party transactions established through connected persons.

The following risk assessment procedures are relevant when testing for the existence of undisclosed related parties:

- **Enquire of management** and the directors as to whether transactions have taken place with related parties that are required to be disclosed by the disclosure requirements that are applicable to the entity
- **Review prior year working papers** for names of known related parties
- **Review minutes** of meetings of shareholders and directors and other relevant statutory records, such as the register of directors' interests
- **Review accounting records** for large or unusual transactions or balances, in particular transactions recognised at or near the end of the financial period

- **Review confirmations of loans receivable and payable** and confirmations from banks. Such a review may indicate the relationship, if any, of guarantors to the entity
- **Review investment transactions**, for example purchase or sale of an interest in a joint venture or other entity
- **Enquire** as to the **names of all pension and other trusts** established for the benefit of employees and the names of their management and trustees
- **Enquire** as to the **affiliation** of directors and officers with other entities
- **Review the register of interests in shares** to determine the names of principal shareholders
- **Enquire of other auditors** currently involved in the audit, or predecessor auditors, as to their knowledge of additional related parties
- **Review the entity's tax returns**, returns made under statute and other information supplied to regulatory agencies for evidence of the existence of related parties
- **Review invoices and correspondence from lawyers** for indications of the existence of related parties or related party transactions

9.7 First-time adoption of IFRS

Companies adopting IFRS for the first time are required to produce comparative financial statements, restating prior period figures in accordance with IFRS.

Auditing the financial statements of a company adopting IFRS for the first time poses a special challenge to the auditor, as set out in ISA 710, *Comparative Information: Corresponding Figures and Comparative Financial Statements*. We have discussed the auditing of comparatives in detail in earlier chapters.

9.7.1 Scope of the audit

Comparative financial statements refer to a **full set of financial statements for the prior period**, included in the current period's annual report. This differs from **corresponding figures**, where prior period figures are set out next to current period figures in a set of financial statements for comparison.

While the auditor does not express an opinion on corresponding figures, where comparative financial statements are issued, the auditor is required to **express an opinion on both the restated prior period and the current period**.

9.7.2 Audit procedures

ISA 710 requires the auditor to evaluate:

- Whether the comparative information agrees with the amounts and other disclosures presented in the prior period or, when appropriate, have been restated; and
- Whether the accounting policies reflected in the comparative information are consistent with those applied in the current period or, if there have been changes in accounting policies, whether those changes have been properly accounted for and adequately presented and disclosed.

If the auditor identifies any possible misstatement, they should carry out additional audit procedures to obtain sufficient, appropriate audit evidence about whether a material misstatement actually exists.

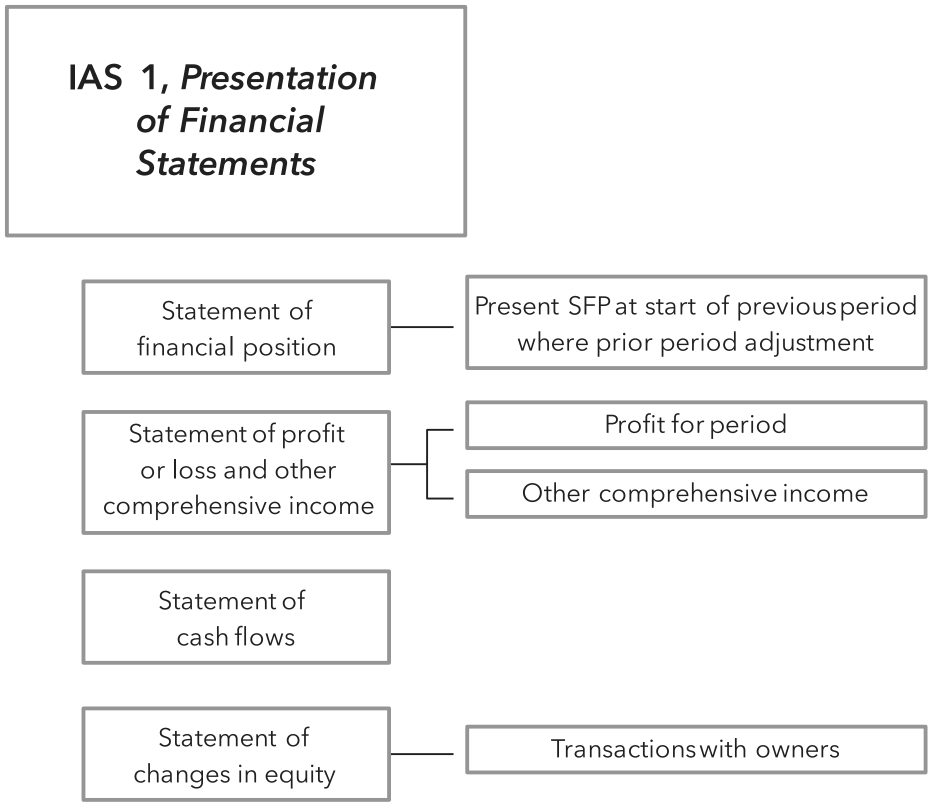
In addition, auditors must obtain **written representations** for all the periods referred to in the auditor's report. This means that written representations must be obtained for the restated period, as well as the current period.

9.7.3 Audit reporting

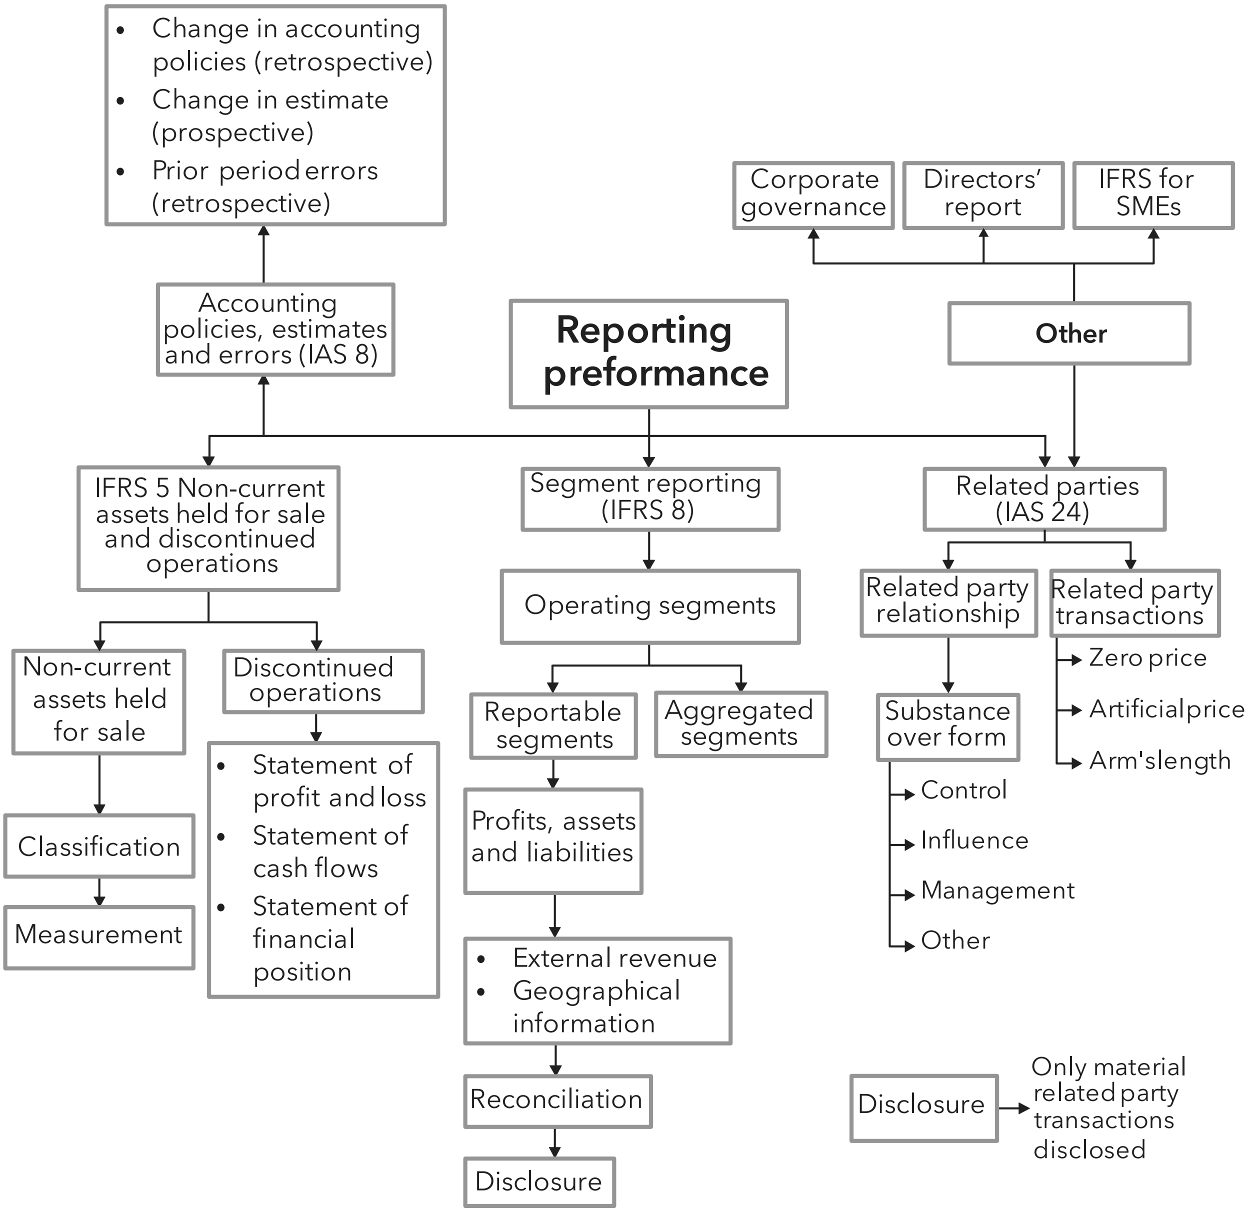
ISA 710 states that 'the auditor's opinion shall refer to each period for which the financial statements are presented'.

It is possible for different audit opinions to be expressed for each period. Where a modified audit opinion is given for the restated period, an **Other Matter** paragraph should be included, explaining the reason for the modification.

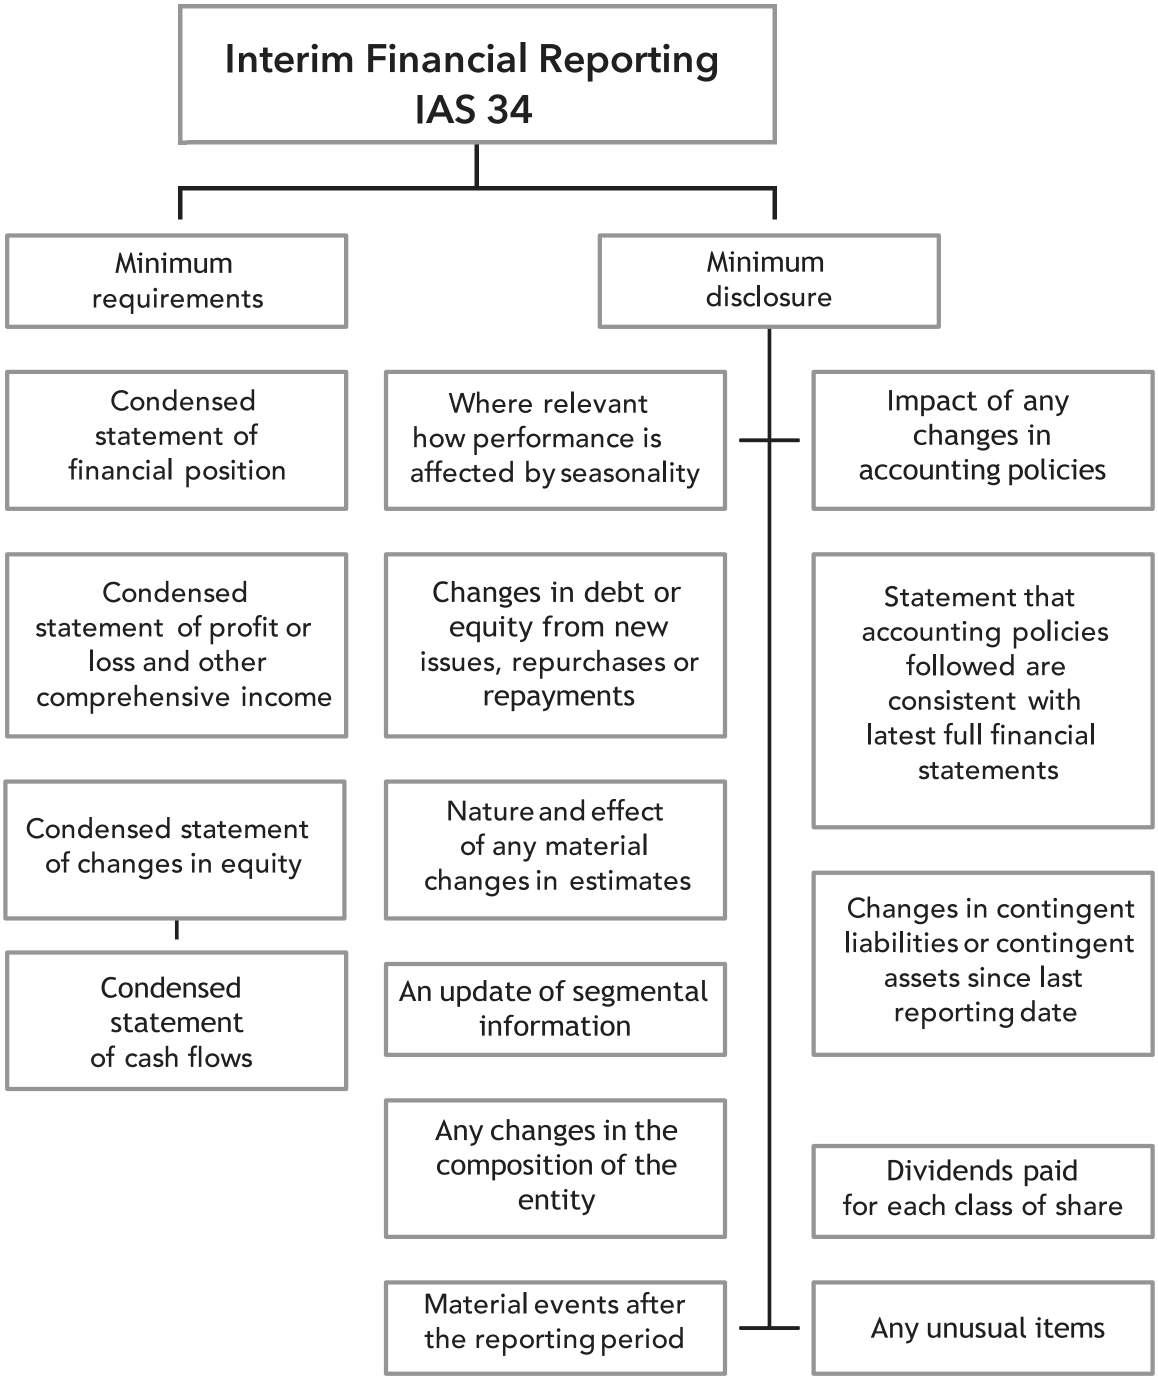
Summary



IAS 1, *Presentation of Financial Statements*
Statement of financial position
Present SFP at start of previous period where prior period adjustment
Statement of profit or loss and other comprehensive income
Profit for period
Other comprehensive income
Statement of cash flows
Statement of changes in equity
Transactions with owners



Change in accounting policies (retrospective)
Change in estimate (prospective)
Prior period errors (retrospective)
Accounting policies, estimates and errors (IAS 8)
Reporting preformance
Corporate governance
Directors' report
IFRS for SMEs
Other
IFRS 5 Non-current assets held for sale and discontinued operations
Segment reporting (IFRS 8)
Related parties (IAS 24)
Non-current assets held for sale
Discontinued operations
Classification
Measurement
Statement of profit and loss
Statement of cash flows
Statement of financial position
Operating segments
Reportable segments
Aggregated segments
Profits, assets and liabilities
External revenue
Geographical information
Reconciliation
Disclosure
Related party relationship
Related party transactions
Substance over form
Control
Influence
Management
Other
Zero price
Artificial price
Arm'slength
Disclosure
Only material related party transactions disclosed



Interim Financial Reporting
IAS 34
Minimum requirements
Minimum disclosure
Condensed statement of financial position
Condensed statement of profit or loss and other comprehensive income
Condensed statement of changes in equity
Condensed statement of cash flows
Where relevant how performance is affected by seasonality
Changes in debt or equity from new issues, repurchases or repayments
Nature and effect of any material changes in estimates
An update of segmental information
Any changes in the composition of the entity
Material events after the reporting period
Impact of any changes in accounting policies
Statement that accounting policies followed are consistent with latest full financial statements
Changes in contingent liabilities or contingent assets since last reporting date
Dividends paid for each class of share
Any unusual items

Further question practice

1 Knowledge diagnostic

Before you move on to question practice, confirm you are able to answer the following questions having studied this chapter. If not, you are advised to revisit the relevant learning from the topic indicated.

	Confirm your learning
1.	Do you understand the IAS 1 rules on presenting comparatives? (Topic 1)
2.	Do you understand what is meant by an operating segment? (Topic 3)
3.	Can you measure assets held for sale as per IFRS 5? (Topic 4)
4.	What are the minimum components of interim financial statements under IFRS 34? (Topic 7)
5.	Do you understand the role of the auditor in relation to segment information? (Topic 10)

2 Question practice

Aim to complete all self-test questions at the end of this chapter. The following self-test questions are particularly helpful to further topic understanding and guide skills application before you proceed to the next chapter.

Question	Learning benefit from attempting this question
AZ	This is a very good question to revise your knowledge of IAS 1 and preparation of financial statements, which you covered at Professional Level.
Ndombe	This tests IFRS 5, specifically classifying and valuing non-current assets held for sale. This should be assumed knowledge from earlier studies, but if you struggle you may need to go back to your earlier study material.
Mareotis	This is a comprehensive question on related parties, an area that could be tested as part of a longer question.

Once you have attempted the self-test questions, you can continue your studies by moving onto the next chapter. In later chapters, we will recommend questions from the Question Bank for you to attempt.

Refer back to the learning in this chapter for any questions which you did not answer correctly or where the suggested solution has not provided sufficient explanation to answer all your queries. Once you have attempted these questions, you can continue your studies by moving on to the next chapter.

Technical reference

1 **IFRS 8, *Operating Segments***

- Requires an entity to report its operating segments based on the data reported **internally to management**. Geographical disclosures of **external revenue** and **non-current assets** are also required. – **IFRS 8 Paragraph 20–22**
- The minimum disclosure is of **profit/loss** by segment.
- Geographical disclosures of **external revenue** and **non-current assets** are also required.

2 **IFRS 5, *Non-current Assets Held for Sale and Discontinued Operations***

- Discontinued operations
- Definition – **IFRS 5.31–32**
- Disclosures on the face of the statement of profit or loss and other comprehensive income: – **IFRS 5.33(a)**
- A single amount comprising the total of:
  - The post-tax profit or loss of discontinued operations, and
  - The post-tax gain or loss recognised on related assets
- Disclosures on the face or in the notes – **IFRS 5.33(b) (c)**
- An analysis of the single amount on the face
- Comparative figures must be restated – **IFRS 5.34**
- Narrative disclosures are also required – **IFRS 5.41**

3 **IAS 24, *Related Party Disclosures***

- Definition of a related party and related party transaction – **IAS 24.9**
- Exclusions from definition of related party – **IAS 24.11**
- Disclosures – **IAS 24.12, 16, 17, 18**

4 **IFRS 1, *First-time Adoption of International Financial Reporting Standards***

- Opening IFRS SOFP – **IFRS 1.6**
- Accounting policies – **IFRS 1.7–12**
- Estimates – **IFRS 1.23-33**
- Transition process – **IFRS 1 App C,D**
- Exemptions – **IFRS 1.20–33**
- Disclosure

5 **IAS 34, *Interim Financial Reporting***

- Minimum components of an interim financial report – **IAS 34.8**
- Form and content of interim financial statements – **IAS 34.9–11**
- Selected explanatory notes – **IAS 34.16**
- Disclosure of compliance with IFRS Standards – **IAS 34.19**
- Periods for which interim financial statements are required to be presented – **IAS 34.20**
- Materiality – **IAS 34.23**

6 **IAS 1, *Presentation of Financial Statements***

- Applies to all general purpose financial statements
- Links back to much in the IASB Framework
- Presentation and disclosure rules apply only to material items – **IAS 1.31 and IAS 1.7**
- Statement of financial position – **IAS 1.54, 56, 60, 66, 69, 79**

7 **Disclosure in annual financial statements**

- If an estimate of an amount reported in an interim period is changed significantly during the final interim period of the financial year but a separate financial report is not published for that final interim period, the nature and amount of that change in estimate shall be disclosed in a note to the annual financial statements for that financial year. – **IAS 34.26**

8 **Recognition and measurement**

- An entity should apply the same accounting policies in its interim financial statements as are applied in its annual financial statements, except for accounting policy changes made after the date of the most recent annual financial statements that are to be reflected in the next annual financial statements. However, the frequency of an entity's reporting (annual, half-yearly, or quarterly) should not affect the measurement of its annual results. To achieve that objective, measurements for interim reporting purposes should be made on a year-to-date basis. – **IAS 34.28**

9 **Revenues received seasonally, cyclically, or occasionally**

- Revenues that are received seasonally, cyclically, or occasionally within a financial year shall not be anticipated or deferred as of an interim date if anticipation or deferral would not be appropriate at the end of the entity's financial year. – **IAS 34.37**

10 **Costs incurred unevenly during the financial year**

- Costs that are incurred unevenly during an entity's financial year shall be anticipated or deferred for interim reporting purposes if, and only if, it is also appropriate to anticipate or defer that type of cost at the end of the financial year. – **IAS 34.39**
- Applying the recognition and measurement principles – **IAS 34.40**
- Use of estimates – **IAS 34.41**
- Restatement of previously reported interim periods – **IAS 34.43**

11 **IFRS 14, *Regulatory Deferral Accounts***

- Specifies the financial reporting requirements for 'regulatory deferral account balances' that arise when an entity provides goods or services to customers at a price or rate that is subject to rate regulation. – **IFRS 14.1**
- Eligible entities can continue to apply the accounting policies used for regulatory deferral account balances under the basis of accounting used immediately before adopting IFRS ('previous GAAP') when applying IFRS Standards, subject to the presentation requirements of IFRS 14. – **IFRS 14.11**
- The impact must be presented separately. – **IFRS 14.20**
- Specific disclosures are required. – **IFRS 14.27**

12 **ISA 501**

- Audit of segment information – **ISA 501.13**

13 ISA 550

- Definition of related parties – **ISA 550.10**
- Auditor's responsibilities in relation to related parties – **ISA 550.3–7**
- Audit procedures in respect of related parties – **ISA 550.11–28**

14 ISA 710

- Audit procedures in respect of comparative financial statements – **ISA 710.7–9**
- Audit reporting in respect of comparative financial statements – **ISA 710.10–19**

Self-test questions

Answer the following questions.

1 AZ

AZ is a quoted manufacturing company. Its finished products are stored in a nearby warehouse until ordered by customers. AZ has performed very well in the past, but has been in financial difficulties in recent months and has been reorganising the business to improve performance.

The trial balance for AZ at 31 March 20X3 was as follows:

	$'000	**$'000**
Sales		124,900
Cost of goods manufactured in the year to 31 March 20X3 (excluding depreciation)	94,000	
Distribution costs	9,060	
Administrative expenses	16,020	
Restructuring costs	121	
Interest received		1,200
Loan note interest paid	639	
Land and buildings (including land $20,000,000)	50,300	
Plant and equipment	3,720	
Accumulated depreciation at 31 March 20X2:		
Buildings		6,060
Plant and equipment		1,670
Investment properties (at market value)	24,000	
Inventories at 31 March 20X2	4,852	
Trade receivables	9,330	
Bank and cash	1,190	
Ordinary shares of $1 each, fully paid		20,000
Share premium		430
Revaluation surplus		3,125
Retained earnings at 31 March 20X2		28,077
Ordinary dividends paid	1,000	
7% loan notes 20X7		18,250
Trade payables		8,120
Proceeds of share issue		2,400
	214,232	214,232

Additional information provided:

(1) The property, plant and equipment are being depreciated as follows:

Buildings 5% per annum straight line.

Plant and equipment 25% per annum reducing balance.

Depreciation of buildings is considered an administrative cost while depreciation of plant and equipment should be treated as a cost of sale.

(2) On 31 March 20X3 the land was revalued to $24,000,000.

(3) Income tax for the year to 31 March 20X3 is estimated at $976,000. Ignore deferred tax.

(4) The closing inventories at 31 March 20X3 were $5,180,000. An inspection of finished goods found that a production machine had been set up incorrectly and that several production batches, which had cost $50,000 to manufacture, had the wrong packaging. The goods cannot be sold in this condition but could be repacked at an additional cost of $20,000. They could then be sold for $55,000. The wrongly packaged goods were included in closing inventories at their cost of $50,000.

(5) The 7% loan notes are 10-year loans due for repayment by 31 March 20X7. Interest on these loan notes needs to be accrued for the six months to 31 March 20X3.

(6) The restructuring costs in the trial balance represent the cost of a major restructuring of the company to improve competitiveness and future profitability.

(7) No fair value adjustments were necessary to the investment properties during the period.

(8) During the year the company issued 2 million new ordinary shares for cash at $1.20 per share. The proceeds have been recorded as 'Proceeds of share issue'.

Requirement

Prepare the statement of profit or loss and other comprehensive income and statement of changes in equity for AZ for the year to 31 March 20X3 and a statement of financial position at that date.

Notes to the financial statements are not required, but all workings must be clearly shown.

2 Viscum

The Viscum Company accounts for non-current assets using the cost model.

On 25 April 20X6 Viscum classified a non-current asset as held for sale in accordance with IFRS 5, *Non-current Assets Held for Sale and Discontinued Operations*. At that date the asset's carrying amount was £30,000, its fair value was estimated at £22,000 and the costs to sell at £3,000.

On 15 May 20X6 the asset was sold for net proceeds of £18,400.

Requirement

In accordance with IFRS 5, what amount should be included as an impairment loss in Viscum's financial statements for the year ended 30 June 20X6?

3 Reavley

The Reavley Company accounts for non-current assets using the cost model.

On 20 July 20X6 Reavley classified a non-current asset as held for sale in accordance with IFRS 5, *Non-current Assets Held for Sale and Discontinued Operations*. At that date the asset's carrying amount was £19,500, its fair value was estimated at £26,500 and the costs to sell at £1,950.

The asset was sold on 18 October 20X6 for £26,000.

Requirement

In accordance with IFRS 5, at what amount should the asset be stated in Reavley's statement of financial position at 30 September 20X6?

4 Smicek

The Smicek Company classified an asset as being held for sale on 31 December 20X6. The asset had been purchased for a cost of £1.2 million on 1 January 20X4, and then had a 12-year useful life. On 31 December 20X6 its carrying amount was £900,000, its fair value was £860,000 and the expected sale costs were £20,000.

On 31 December 20X7 the board of Smicek, having failed to sell the asset during 20X7, decided to reverse their original decision and therefore use the asset in the business. At 31 December 20X7 the asset had a fair value of £810,000 and expected sale costs of £20,000. The directors estimate that annual cash flows relating to the asset would be £200,000 per year for the next 6 years. The effect of discounting is not material.

Requirement

What is the effect on profit or loss of Smicek's ceasing to classify the asset as held for sale, according to IFRS 5, *Non-current Assets Held for Sale and Discontinued Operations*?

5 Ndombe

The Ndombe Company classified a group of assets as held for sale on 31 December 20X6. Their fair value less costs to sell was £1,180,000.

During 20X7 the company decided that one of the assets, a polishing machine, should no longer be treated as an asset held for sale. The sale of the other assets was delayed due to events beyond the control of Ndombe and the company remains committed to their sale, which is highly probable in 20X8.

Asset values and dates are as follows:

	Polishing machine	**Other assets**
	£	**£**
Cost at 1 January 20X5	400,000	1,500,000
Accumulated depreciation to 31 December 20X6	(160,000)	(600,000)
Carrying amount on 31 December 20X6	240,000	900,000
Useful life	5 years	5 years
Fair value less costs to sell 31 December 20X6	210,000	970,000
Fair value less costs to sell 31 December 20X7	190,000	880,000
Value in use at 31 December 20X7	170,000	810,000

Requirement

Under IFRS 5, *Non-current Assets Held for Sale and Discontinued Operations* what are the amounts that should be shown under assets on the statement of financial position at 31 December 20X6 and 31 December 20X7?

6 Sapajou

The Sapajou Company bought a property with a useful life of 10 years for £1,200,000 on 1 January 20X4.

On 1 July 20X6 the board of Sapajou made a decision to sell the property, and immediately vacated it and advertised it for sale. At this date fair value less costs to sell was estimated at £880,000.

Negotiations with a buyer appeared successful, and a sale was provisionally agreed for 1 August 20X7 for £880,000. At the last minute the buyer withdrew and Sapajou had to re-advertise the property.

A new buyer was found in November 20X7 and a new price was agreed at fair value less costs to sell of £995,000. The sale is scheduled to take place in February 20X8.

Requirement

What are the amounts that should be included in profit or loss for the years ending 31 December 20X6 and 31 December 20X7?

7 Sulafat

The Sulafat Company has a 70% subsidiary Vurta and is a venturer in Piton, a joint venture company. During the financial year to 31 December 20X6, Sulafat sold goods to both companies.

Consolidated financial statements are prepared combining the financial statements of Sulafat and Vurta.

Requirement

Which transactions should be disclosed under IAS 24, *Related Party Disclosures*, in the **separate** financial statements of Sulafat for 20X6?

8 Phlegra

In the year ended 31 December 20X7, the Phlegra Company undertook transactions with the following entities to the value stated.

(1) The Nereidum Company, one of whose non-executive directors is an executive director of Phlegra: £300,000.

(2) The Chub Company, which sources 100% of its raw materials requirements from Phlegra: £190,000.

Requirement

Under IAS 24, *Related Party Disclosures*, what is the total amount to be disclosed in respect of transactions with related parties in Phlegra's financial statements for the year ended 31 December 20X7?

9 Mareotis

The Mareotis Company is a partly owned subsidiary of the Bourne Company. In the year ended 31 December 20X7 Mareotis undertook transactions with the following entities to the value stated.

(1) The Hayles Company, in which the Wrasse Company holds 55% of the equity. Bourne holds 40% of the equity of Wrasse and has the power to appoint 3 out of the 5 members of

Wrasse's board of directors: £300,000.

(2) The Galaxius Company, which is controlled by Danielle (the aunt of Agnes, a member of Mareotis's board of directors): £500,000.

Requirement

Under IAS 24, *Related Party Disclosures*, what is the total amount of transactions with related parties to be disclosed in Mareotis's financial statements for the year ended 31 December 20X7?

10 Marmoset

The Marmoset Company offers the service of transport consultations. Its accounting year ends on 31 December each year and it is currently preparing half-yearly interim financial statements for the six months to 30 June 20X7.

During 20X7 the directors drew up a plan to introduce a new bonus scheme for all junior consultants in order to provide incentives and improve retention. The details of the scheme were announced to employees the day before the interim financial statements were released on 15 August 20X7. Under the planned scheme any bonus would be paid on 31 March 20X8.

The bonus will be equal to 1% of profit before tax (calculated before recognising the bonus) of the year ended 31 December 20X7.

The business is seasonal such that 60% of the annual profit before tax is earned in the first six months of the year. The profit before tax in the interim financial statements for the six months to 30 June 20X7 is £6 million.

Requirement

What amount should be recognised in profit or loss for Marmoset for the six months to 30 June 20X7 in respect of the bonus, according to IAS 34, *Interim Financial Reporting*?

11 Aconcagua

The Aconcagua Company sells fashion shoes, the price of which varies during the year. Its accounting year ends on 31 December and it prepares half-yearly interim financial statements.

At 30 June 20X7 it has inventories of 2,000 units which cost £30 each. The net realisable value of the inventories at 30 June, when the shoes are out of season, is £20 each. No sales are expected in the period to 31 December 20X7, but the expected net realisable value of the shoes at that date (when they are about to come back into season) is £28 each.

Requirement

Should any changes in inventory values be reflected in the interim financial statements of Aconcagua for the six months ending 30 June 20X7 and for the six months ending 31 December 20X7, according to IAS 34, *Interim Financial Reporting*?

Now go back to the Introduction and ensure that you have achieved the Learning outcomes listed for this chapter.

Answers to Interactive questions

Answer to Interactive question 1

IFRS 8, *Operating Segments* states that an operating segment is separately reportable if it has been identified as a separate operating segment meeting the operating segment definition, and:

- its reported revenue is 10% or more of the combined revenue (external and internal) of all operating segments, **or**
- the absolute amount of its reported profit or loss is 10% or more of the greater of the combined profit of all operating segments that did not report a loss and the combined reported loss of all operating segments that reported a loss, **or**
- its assets are 10% or more of the combined assets of all operating segments.

	Revenue as % of total revenue (£238m)	Profit or loss as % of profit of all segments in profit (£29m)	Assets as % of total assets (£336m)
Chemicals *	33.6%	48.3%	32.4%
Pharmaceuticals wholesale	28.2%	31.0%	31.0%
Pharmaceuticals retail	9.2%	6.9%	8.9%
Cosmetics	6.3%	6.9%	5.4%
Hair care	5.0%	13.8%	6.3%
Body care	17.6%	20.7%	16.1%

* The chemicals segments are aggregated due to their similar economic characteristics

At 31 December 20X5 four of the six operating segments are reportable operating segments:

Chemicals

All size criteria are met. **Pharmaceuticals wholesale** All size criteria are met.

Pharmaceuticals retail

The Pharmaceuticals retail segment is not separately reportable, as it does not meet the quantitative thresholds. It can, however, still be reported as a separate operating segment if management believes that information about the segment would be useful to users of the financial statements.

Alternatively, the group could consider amalgamating it with the Pharmaceuticals wholesale segment, providing the two operating segments have similar economic characteristics and share a **majority** of the 'aggregation' criteria which, excluding the type of customer, may be the case.

Otherwise it would be disclosed in an 'All other segments' column.

Cosmetics

The Cosmetics segment does not meet the quantitative thresholds and therefore is not separately reportable. It can also be reported separately if management believes the information would be useful to users. Alternatively the group may be able to amalgamate it with the Body care segment, providing the operating segments have similar economic characteristics and share a majority of the 'aggregation' criteria. Otherwise it would also be disclosed in an 'All other segments' column.

Hair care

The Hair care segment is separately reported due to its profitability being greater than 10% of total segments in profit.

Body care

All size criteria are met.

Note: IFRS 8.15 states that at least 75% of total external revenue must be reported by operating segments. This condition has been met, as the reportable segments account for 82% of total external revenue (158/192).

Answer to Interactive question 2

The facility will not be transferred until the backlog of orders is completed; this demonstrates that the facility is not available for immediate sale in its present condition. The facility cannot be classified as 'held for sale' at 31 December 20X3. It must be treated in the same way as other items of property, plant and equipment: it should continue to be depreciated and should not be separately disclosed.

Answer to Interactive question 3

Because the steel works is being closed, rather than sold, it cannot be classified as 'held for sale'. In addition, the steel works is not a discontinued operation. Although at 31 December 20X3 the group was firmly committed to the closure, this has not yet taken place and therefore the steel works must be included in continuing operations. Information about the planned closure could be disclosed in the notes to the financial statements.

Answer to Interactive question 4

In its financial statements S must disclose all benefits provided in exchange for services rendered to S (but not those rendered to P), whether they are provided by S, by P, or on behalf of S (as are the pension benefits and the share options). All the amounts listed should be disclosed by S, with the exception of the £20,000 payable in respect of services rendered to P.

Answer to Interactive question 5

5.1 Europa's first IFRS financial statements will be for the year ended 31 December 20X8. IFRS 1 requires that at least one year's comparative figures are presented and therefore the date of transition to IFRS Standards is the beginning of business on 1 January 20X7 (or close of business on 31 December 20X6).

Therefore the procedure for adopting IFRS Standards is:

- Identify accounting policies that comply with IFRS Standards effective at 31 December 20X8 (the reporting date for the first IFRS financial statements).
- Restate the opening statement of financial position at 1 January 20X7 (the date of transition) using these IFRS Standards retrospectively, by:
  - Recognising all assets and liabilities whose recognition is required by IFRS Standards
  - Not recognising items as assets or liabilities if IFRS Standards do not permit such recognition
  - Reclassifying items that were recognised under previous GAAP as one type of asset, liability or component of equity, but are a different type of asset, liability or component of equity under IFRS Standards

    - Measuring all recognised assets and liabilities in accordance with IFRS Standards

    The company will almost certainly need to change some of its accounting policies and to adjust some of the amounts that it reported previously at the same dates using previous GAAP. It should recognise these adjustments directly in retained earnings (ie, in equity).

- Explain the effect of the transition from previous GAAP to IFRS Standards, by presenting:
    - A reconciliation of equity reported under previous GAAP to equity under IFRS Standards at the date of transition and at the latest previous GAAP reporting date
    - A reconciliation of the profit or loss reported under previous GAAP to profit or loss reported under IFRS Standards for the last period presented under previous GAAP

If Europa presented a statement of cash flows under previous GAAP, it should also explain any material adjustments to the statement of cash flows.

Although the general rule is that all IFRS Standards should be applied retrospectively, a number of exemptions are available. These are intended to cover cases in which the cost of complying fully with a particular requirement would outweigh the benefits to users of the financial statements. Europa may choose to take advantage of any or all of the exemptions.

5.2 Changing from previous GAAP to IFRS Standards is likely to be a complex process and should be carefully planned. Although previous GAAP and IAS/IFRS may follow broadly the same principles, there are still likely to be many important differences in the detailed requirements of individual standards.

If Europa has foreign subsidiaries outside Molvania it will need to ensure that they comply with any previous reporting requirements. This may mean that subsidiaries have to prepare two sets of financial statements: one using their previous GAAP; and one using IFRS Standards (for the consolidation).

The process will be affected by the following:

- The differences between previous GAAP and IFRS Standards as they affect the group financial statements in practice. The company will need to carry out a detailed review of current accounting policies, paying particular attention to areas where there are significant differences between previous GAAP and IFRS Standards. These will probably include deferred tax, business combinations, employee benefits and foreign currency translation. It should be possible to estimate the effect of the change by preparing pro forma financial statements using IFRS Standards.
- The level of knowledge of IFRS Standards of current finance staff (including internal auditors). It will probably be necessary to organise training and the company may need to recruit additional personnel.
- The group's accounting systems. Management will need to assess whether computerised accounting systems can produce the information required to report under IFRS Standards. They will also need to produce new consolidation packages and accounting manuals.

Lastly, the company should consider the impact of the change to IFRS Standards on investors and their advisers. For this reason management should try to quantify the effect of IFRS Standards on results and other key performance indicators as early as possible.

5.3 **Advice**

(1) **Accounting estimates**

Estimates under IFRS Standards at the date of transition must be consistent with those made at the same date under previous GAAP (after adjustments to reflect any difference in accounting policies). The only exception to this is if the company has subsequently discovered that these estimates were in error. This is not the case here and therefore the estimates are not adjusted in the first IFRS financial statements.

(2) **Court case**

The treatment of this depends on the reason why Europa did not recognise a provision under previous GAAP at 31 December 20X7.

If the requirements of previous GAAP were consistent with IAS 37, *Provisions, Contingent Liabilities and Contingent Assets*, presumably the directors concluded that an outflow of economic benefit was not probable and that the recognition criteria were not met. In this case, Europa's assumptions under IFRS Standards are consistent with its previous assumptions under previous GAAP. Europa does not recognise a provision at 31 December 20X7 and accounts for the payment in the year ended 31 December 20X8.

If the requirements of previous GAAP were not consistent with IAS 37, Europa must determine whether it had a present obligation at 31 December 20X7. The directors should take account of all available evidence, including any additional evidence provided by events after the reporting period up to the date the 20X7 financial statements were authorised for issue in accordance with IAS 10, *Events After the Reporting Period*.

5.4 The outcome of the court case confirms that Europa had a liability in September 20X7 (when the events that resulted in the case occurred), but this event occurred after the 20X7 financial statements were authorised for issue. Based on this alone, the company would not recognise a provision at 31 December 20X7 and the $10 million cost of the court case would be recognised in the 20X8 financial statements. If the company's lawyers had advised Europa that it was probable that they would be found guilty and suggested the expected settlement amount before the financial statements were authorised for issue, the provision would be recognised in the 20X7 financial statements reporting under IFRS Standards for that amount.

Answer to Interactive question 6

30% × £4m = £1.2m

The tax rate for the entire year is applied to the profits for the interim period.

Answer to Interactive question 7

(a) **Production machinery**

In this case the key issue is whether or not the asset should be classified as held for sale. In accordance with IFRS 5 a held-for-sale asset must be available for immediate sale. In this instance this does not appear to be the case, as the asset is still required for production purposes until after the year end. It should only be classified as held for sale at the end of January 20X8 when it has been serviced and uninstalled. Relevant audit evidence would include orders to be fulfilled compared to goods made by this machine compared to available inventory, budgets and inquiries of production staff.

Land

The key issue is the valuation of the land. As the entity has adopted the revaluation model the land should have been revalued to fair value (£210,000) immediately before being reclassified as held for sale. Any gain would be recognised in the revaluation surplus and disclosed as other comprehensive income in the statement of profit or loss and other comprehensive income. On reclassification the £6,000 costs to sell would be recognised in profit or loss as an impairment loss resulting in a carrying value of the asset of £204,000 (£210,000 – £6,000).

(b) **Production machinery**

Audit procedures would be as follows:

- Discuss with management intentions to run down production and the timescales involved.
- Review minutes of management/board meetings to confirm management's intentions.
- If material, agree with the management the reclassification of the asset as part of plant and machinery.
- Consider whether an impairment adjustment is required as the asset will no longer be used for its current purpose.

Land

Audit procedures would be as follows:

- Review the process of estimating the fair value of the land on 1 October and the necessary advertising costs.
- Discuss with management why the land was not revalued on classification as held for sale.

Answers to Self-test questions

1 AZ

AZ statement of profit or loss and other comprehensive income for the year ended 31 March 20X3

	$'000
Revenue	124,900

CREDIT	Share capital (2,000 × $1)		2,000
CREDIT	Share premium (2,000 × $0.20)		400

2 Viscum

£11,000

IFRS 5.15 requires assets classified as held for sale to be measured at the time of classification at the lower of (1) the carrying value (£30,000) and (2) the fair value less costs to sell (£19,000).

IFRS 5.20 requires recognition of the resulting impairment loss (£30,000 – £19,000). The gain or loss on disposal is treated separately per IFRS 5.24.

3 Reavley

£19,500

IFRS 5.15 requires that a non-current asset held for sale should be stated at the lower of (1) the carrying amount (£19,500) and (2) the fair value less costs to sell (£24,550).

4 Smicek

£40,000

At the end of the current year, a non-current asset that has ceased to be classified as held for sale should be valued at the lower of:

(1) The carrying amount had it not been recognised as held for sale, ie, to charge a full year's depreciation of £100,000 for 20X7 and reduce the carrying amount from £900,000 at 31 December 20X6 to £800,000.

(2) The recoverable amount, which is the higher of the £790,000 fair value less costs to sell (£810,000 less £20,000) and value in use (the cash flows generated from using the asset) of £1,200,000.

Therefore the asset should be carried at £800,000 in the statement of financial position at 31 December 20X7.

At the end of the prior year, when the asset was classified as held for sale, the asset would have been carried at the lower of carrying amount (£900,000) and fair value less costs to sell of £840,000 (£860,000 less £20,000). Therefore the asset has fallen in value from £840,000 to £800,000 in the current year, giving a charge to profits of £40,000.

5 Ndombe

31 December 20X6: the assets should be shown in the statement of financial position at a value of £1,140,000.

31 December 20X7: the assets should be shown in the statement of financial position at a value of £1,040,000.

At the end of 20X6 the assets are classified as held for sale. The assets should be measured at the lower of carrying amount and fair value less costs to sell (IFRS 5.15). The carrying amount was £1,140,000 and the fair value less costs to sell was £1,180,000 so they were measured at £1,140,000. No depreciation is charged on these assets in 20X7 (IFRS 5.25).
At the end of 20X7, it is still possible to classify the 'other' assets as held for sale as the company is still committed to the sale (IFRS 5.29). These assets would be measured at fair value less costs to sell of £880,000, as this is lower than the carrying amount of £900,000.

However, the polishing machine should be valued at the lower of £160,000 carrying amount had classification as held for sale not occurred (£400,000 × 2/5) and the higher of fair value less costs to sell (£190,000) and value in use (£170,000) (IFRS 5.27). This gives a value of £160,000.

This gives a total value of £1,040,000 at 31 December 20X7.

6 Sapajou

An expense of £20,000 is shown in the profit or loss part of the statement of profit or loss and other comprehensive income for the year ended 31 December 20X6.

Income of £20,000 is shown in the profit or loss part of the statement of profit or loss and other comprehensive income for the year ended 31 December 20X7.

Under IFRS 5.15 an asset classified as held for sale is measured at the lower of carrying amount immediately before the reclassification of £900,000 (£1,200,000 – 2.5 × £120,000), and fair value less costs to sell of £880,000. The £20,000 impairment loss is charged to profits (IFRS 5.20).

In the following year, the increase in fair value less costs to sell is £115,000, but only £20,000 of this can be recognised in profit (IFRS 5.21) as this is the reversal of the previous impairment loss.

7 Sulafat

Disclosure is required of transactions with both Vurta and Piton. See IAS 24.3, which states that entities under both direct and common control are related parties.

8 Phlegra

Nil under IAS 24.11 (a) two entities are not related parties simply because they have a director in common, nor per IAS 24.11 (b) simply because the volume of transactions between them results in economic dependence.

So neither Nereidum nor Chub is a related party of Phlegra.

9 Mareotis

£300,000

Under IAS 24.9, Hayles is a related party of Mareotis. Bourne 'controls' Wrasse (by virtue of the power to appoint the majority of directors) and Wrasse 'controls' Hayles (by virtue of holding the majority of the equity). So Bourne 'controls' both Mareotis and Hayles, which are therefore related parties as a result of being under common control.

Being an aunt does not make Danielle a close member of Agnes's family so, although Galaxius is controlled by a relative of Agnes, the relationship is not close enough to make Galaxius a related party of Mareotis. So only transactions with Hayles have to be disclosed.

10 Marmoset

Nil

Interim reports should apply the normal recognition and measurement criteria, using appropriate estimates under IAS 34.41.

There is no legal or constructive obligation at the interim reporting date to pay the bonus, as no announcement had been made at this date. Under IAS 34 App B B6 no expense is required.

11 Aconcagua

Inventory values change

Six months ending 30 June 20X7	£20,000 profit decrease
Six months ending 31 December 20X7	£16,000 profit increase

Interim reports should apply the normal recognition and measurement criteria, using appropriate estimates under IAS 34.41. IAS 34 App B B25–B26 links these general principles to inventories by requiring them to be written down to net realisable value at the interim date; the write down is then reversed at the year end, if appropriate.

So the profit decrease in the six months to 30 June 20X7 is 2,000 × (£30 – £20) = £20,000, while the profit increase in the six months to 31 December 20X7 is 2,000 × (£28 – £20) = £16,000.

Chapter 10

Reporting revenue

Introduction

Learning outcomes

- Identify and explain current and emerging issues in corporate reporting
- Explain how different methods of recognising and measuring assets and liabilities can affect reported financial performance
- Explain and appraise accounting standards that relate to reporting performance: in respect of financial statements; revenue; operating segments; continuing and discontinued operations; EPS; interim reporting
- Calculate and disclose, from financial and other qualitative data, the amounts to be included in an entity's financial statements according to legal requirements, applicable financial reporting standards and accounting and reporting policies
- Determine for a particular scenario what comprises sufficient, appropriate audit evidence
- Design and determine audit procedures in a range of circumstances and scenarios, for example identifying an appropriate mix of tests of controls, analytical procedures and tests of details
- Demonstrate and explain, in the application of audit procedures, how relevant ISAs affect audit risk and the evaluation of audit evidence

Chapter study guidance

Use this schedule and your study timetable to plan the dates on which you will complete your study of this chapter.

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
1	**Context** Revenue is often the single largest item in the financial statements, and has in the past been open to manipulation. This led to the development of a recent standard IFRS 15, *Revenue from Contracts with Customers.* IFRS 15 recognises separate performance obligations will arise	**Approach** You have met this topic before, but now it is examinable at Level A. Read through this introductory section quickly. **Stop and think** Can you think of any recent scandals involving recognition of revenue?	This section deals with background knowledge only.	N/A

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
	for distinct goods or services. This could result in some revenue being attributed to goods or services that were previously considered incidental to the contract – for instance, to mobile phones that are provided free of charge with airtime contracts and to some post-delivery services, such as maintenance and installation.			
2	**IFRS 15, *Revenue from Contracts with Customers*** The five-stage model will be used in practice for recognising revenue and is useful for exam questions.	**Approach** Pay particular attention to the five-stage model for recognising revenue in section 2: (1) Identify the contract(s) with a customer. (2) Identify separate performance obligations. (3) Determine the transaction price. (4) Allocate transaction price to performance obligations. (5) Recognise revenue as or when each performance obligation is satisfied. **Stop and think** A performance obligation can be satisfied at a point in	IFRS 15 is a recent, topical standard, and could be tested in a number of ways. It was examined for the first time in July 2019, when it formed a large part of the content of Question 3 (audit and financial reporting). The five-stage model will help structure your answer in an exam, but you will get no marks for just listing them without applying them to a scenario.	**IQ1–4** Work through all the examples and questions on applying this model, especially: **IQ5: Caravan** This deals with all five stages of IFRS 15.

CHAPTER 10

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
		time, such as in retail sales, or over time, such as a construction contract taking place over weeks, months or even years. You will not have studied construction contracts before, so pay particular attention to section 2.10.		
3	**Applications of IFRS 15** Section 3 deals with specific applications of IFRS 15. The most important of these are sale or return, sale and repurchase and goods and services in the same contract.	**Approach** You will have dealt with these topics at Professional Level, so read through for revision and focus on doing the interactive questions. **Stop and think** In a principal/agent relationship, what is the agent's revenue?	Any of these topics could come up in an exam. Revenue is regularly examined and could take up most of the question.	Work through all the examples and questions on applying this model, especially: **IQ6: Sale or return** This is not as straightforward as you might think.
4	**Audit focus** This gives auditing guidance relating to each stage of IFRS 15 and for specific transactions.	**Approach** Study this section carefully and attempt the integrated interactive question. **Stop and think** Where performance obligations are satisfied over time, how would you determine whether contract costs had been overstated?	To avoid repetition of the five stages, it is best to deal with each stage first from the FR point of view, then in terms of auditing. Questions are very likely to test both.	**IQ11: Construction contracts** A must-do question on auditing revenue from contracts in which performance obligations are satisfied over time.

Once you have worked through this guidance you are ready to attempt the further question practice included at the end of this chapter.

1 Context

Section overview

- Income, as defined by the IFRS Foundation's *Conceptual Framework*, includes both revenues and gains. Revenue is income arising in the ordinary course of an entity's activities and it may be called different names, such as sales, fees, interest, dividends or royalties.
- IFRS 15, *Revenue from Contracts with Customers* establishes a single comprehensive framework for accounting for the majority of contracts that result in revenue.
- Revenue recognition is straightforward in most business transactions, but can be complicated in some situations.

1.1 Accrual accounting

Financial statements are prepared on the underlying assumption of the **accrual basis** of accounting, whereby effects of transactions are recognised **when they occur** and not when the cash associated with them is received or paid.

But this raises questions about **when** a transaction 'occurs':

- Is it when the buyer takes possession of the goods, in circumstances where the contract for sale contains clauses that seek to ensure that ownership does not pass to the customer until the seller has been paid in full?
- Is it when services are provided, in circumstances where the seller undertakes to come back to do additional work without charge if needed, e.g., remedial work carried out by a building contractor?
- When does the profit arise on a contract for the provision of services to a customer over time, such as under a maintenance contract of two years' duration? Only at the start, only in the middle, only at the end, or over the period of two years?

IFRS 15, *Revenue from Contracts with Customers* was brought in to address this.

Professional skills focus: Assimilating and using information

It is by no means always easy in practice to assimilate information about revenue, as the points above show. An exam question is likely to contain a detailed scenario with revenue apparently occurring at different times.

1.2 Significance of revenue

Revenue is often the largest single item in the financial statements. US studies have shown that over half of all financial statement frauds and requirements for restatements of previously published financial information involved revenue manipulation.

1.2.1 Significance for your exam

IFRS 15 has been tested in a number of ways. It was examined for the first time in July 2019, when it formed a large part of the content of Question 3 (audit and financial reporting). The question focused mainly on performance obligations satisfied (or not satisfied) over time, and was set in the context of financial reporting (comment on recognition policy), risk of misstatement and a potential ethical issue (breach of contract). Reference was also made to data analytics, which continues to be a focus of future questions on revenue.

In Question 2 of November 2019 the focus was on correct allocation of the transaction price to performance obligations for a loyalty points scheme (when the points are redeemed or expire) and an audio and music streaming service (based on standalone price). This was in the context of adjusting draft financial statements and re-calculating ratios.

Question 3 in November 2020 focused on the timing of revenue recognition in the context of club membership, ie, when the performance obligation is satisfied rather than when the membership fee is received or an event booked. The question also covered auditing aspects of revenue and analytical review procedures.

In July 2021, IFRS 15 was examined in Question 1, where the use of data analytics software was needed in order to identify anomalies in timing of revenue recognition. By using the software candidates would have been able to identify a significant transaction posted out of hours. This gave rise to an audit risk of revenue overstatement.

IFRS 15 has therefore been examined in all three questions in the Corporate Reporting exam.

2 IFRS 15, *Revenue from Contracts with Customers*

Section overview

- Revenue is income arising in the course of an entity's ordinary activities.
- Revenue should be recognised to depict the transfer of goods or services to a customer in an amount that reflects the consideration to which the entity expects to be entitled.
- Generally revenue is recognised when the entity has transferred to the buyer control of the asset.
- IFRS 15 sets out a five-stage process for this.

Tutorial Note

This material should be familiar to you from your studies at Professional Level. So we would advise skim-reading the explanations and going straight to the examples or questions, coming back to the detail if you get stuck.

2.1 Objective and scope

The objective of IFRS 15 is to establish the principles that should be applied to report on the nature, amount, timing and uncertainty of revenue and cash flows arising from a contract with a customer.

(IFRS 15.1)

IFRS 15 applies to all contracts with customers except:

- leases within the scope of IFRS 16, *Leases*
- insurance contracts within the scope of IFRS 4, *Insurance Contracts*
- non-monetary exchanges between entities in the same line of business

2.2 Revenue

Income is defined in the IASB's *Conceptual Framework* (para. 4.2) as "Increases in assets, or decreases in liabilities, that result in increases in equity, other than those relating to contributions from holders of equity claims." **Revenue is simply income arising in the course of an entity's ordinary activities** (IFRS 15: Appendix A) and it may be called different names such as:

- Sales
- Turnover
- Interest
- Dividends
- Royalties

2.3 Core principle

The core principle of IFRS 15, *Revenue from Contracts with Customers* is that an entity recognises revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services (IFRS 15. IN7).

The transfer of goods and services is evidenced by the transfer of **control**.

Revenue is recognised in accordance with this core principle by applying a five-step model.

2.4 Five-step model

IFRS 15 takes a five-step approach to recognising revenue:

Step 1 Identify the contract(s) with a customer.

Step 2 Identify separate performance obligations.

Step 3 Determine the transaction price.

Step 4 Allocate transaction price to performance obligations.

Step 5 Recognise revenue as or when each performance obligation is satisfied.

Revenue is therefore recognised when control over goods or services is transferred to the customer.

Professional skills focus: Structuring problems and solutions

IFRS 15 is a good example of an IFRS structuring a problem. The five-stage process provides the structure.

2.5 Identify the contract with the customer

The contract can be written, verbal or implied. For instance, in retail sales the contract is implied. The criteria to be met are as follows:

(a) All parties have approved the contract.

(b) The entity can identify each party's rights regarding the goods or services to be transferred.

(c) The payment terms can be identified.

(d) The contract has commercial substance.

(e) It is probable that the entity will collect the consideration to which it will be entitled in exchange for the goods or services.

(IFRS 15.9)

2.6 Identify the performance obligations in the contract

A performance obligation is a promise to transfer to the customer either:

(a) a **distinct** good or service (or bundle of goods or services); or

(b) a series of **distinct** goods or services.

(IFRS 15.22)

A good or service is **distinct** if it can be sold separately and has a distinct function. If this does not apply, it will form part of a distinct bundle.

The definition of **distinct** is therefore key when identifying separate performance obligations. **A good or service** (or a bundle of goods or services) is distinct if the customer can benefit from the good or service on its own or together with other readily available resources and the entity's promise is separately identifiable from other promises in the contract).

If goods or services are not distinct, the reporting company must combine them with other promised goods or services until a bundle of goods or services that is distinct can be identified.

Worked example: Performance obligations (1)

Colossal Construction plc has recently signed a contract to build a warehouse for SupaSave Ltd. Colossal Construction is responsible for designing the building, preparing the site, purchasing raw materials, construction, plumbing, wiring and finishing.

Requirement

Identify the performance obligation(s) in the contract.

Solution

In the context of this contract, Colossal Construction is contracted to provide a significant service of integrating the inputs in order to produce a single output; this being the warehouse. Therefore, the provision of each good or service is not separately identifiable.

The promises are not distinct and therefore there is only a single performance obligation, being the development of the property.

Worked example: Performance obligations (2)

MetaConnect Software Services plc (MetaConnect) supplies computer aided design packages to customers. It has recently signed a contract with EverTel Design Ltd to provide a licence to use a software package, installation service (which does not involve customising the software package) and technical support for four years. MetaConnect is not the only company that could install the software and provide technical support.

Requirement

Identify the performance obligation(s) in the contract.

Solution

Each good or service provided (the provision of the licence, the installation service and the technical support) is capable of being distinct because a customer could gain benefit from each either on its own or by obtaining the other goods/services from another supplier. The good or service could therefore benefit the customer either on its own or together with other resources that are readily available.

In the context of this contract, MetaConnect is not integrating the goods or services, none of the goods or services modifies another and the goods/services are not highly interrelated. Therefore each promise is separately identifiable. Therefore the promise to transfer the good or service to the customer is separately identifiable from other promises in the contract

In conclusion, there are three distinct performance obligations in the contract, being:

(1) Installation of the software

(2) Provision of the licence

(3) Provision of technical support

2.7 Determine the transaction price

This is the amount of consideration in a contract to which an entity expects to be entitled for transferring promised goods or services to a customer (IFRS 15.47).

This may include both fixed and variable elements but not amounts collected on behalf of third parties. Variable amounts could be discounts, refunds, price concessions, incentives, bonuses or other items.

Variable consideration is included in the transaction price based on either:

- its expected value (the sum of probability weighted amounts in a range of possible outcomes); or
- the single most likely amount (the single most likely amount in a range of possible consideration amounts).

The expected value approach is generally appropriate if the vendor has a large number of contracts with similar characteristics.

The single most likely outcome may be appropriate if a contract has only two possible outcomes (eg, an entity achieves a performance bonus or does not).

The chosen approach should be that which is expected to provide a better prediction of consideration.

Variable consideration is included in the transaction price only to the extent that it is highly probable that a significant amount will not be reversed when the uncertainty associated with the variable consideration is resolved. When assessing whether it is highly probable that a significant reversal will not occur once the uncertainty related to the variable consideration is subsequently resolved, an entity should consider both the likelihood and magnitude of the revenue reversal. Factors that may increase the likelihood or magnitude of reversal include **any** of the following:

(a) The amount of consideration is very susceptible to factors outside the entity's influence eg, weather conditions or market volatility.

(b) The uncertainty about consideration is not expected to be resolved for a long period of time.

(c) The entity's experience with similar types of contracts is limited or has limited predictive value.

(d) The entity has a practice of offering a wide range of price concessions or changing the payment terms and conditions of similar contracts in similar circumstances.

(e) The contract has a large number and broad range of possible consideration amounts.

Worked example: Variable consideration

On 1 July 20X8, Danmar Construction plc (Danmar) signs a contract to build an extension to a retail outlet. The total price agreed is £80 million. The contract terms require completion by 31 March 20X9. The price will decrease by £200,000 for every day after this date that the project remains incomplete. At the year end of 31 December 20X8, Danmar expects that there is an 80% chance of the project being completed on time, a 10% chance of it being completed a day late, a 7% chance of it being completed two days late and a 3% chance of it being completed three days late.

Requirement

What is the transaction price?

Solution

The consideration is variable due to the fact that Danmar will accept an amount that is less than the price stated in the contract if the project overruns (the price concession).

Here the calculation of transaction price is based on expected values.

	£
80% × £80,000,000	64,000,000
10% × £79,800,000	7,980,000
7% × £79,600,000	5,572,000
3% × £79,400,000	2,382,000
Transaction price	79,934,000

2.8 Allocate the transaction price to the performance obligations in the contract

The transaction price is allocated to each performance obligation on the basis of the stand-alone selling price of each distinct good or service in the contract. If the good or service does not have a stand-alone selling price, it will need to be estimated (IFRS 15.IN7).

This applies particularly where a bundle of goods is sold which the entity also supplies unbundled. An example of this is a mobile phone service contract which includes a free handset. In accordance with IFRS 15, the entity will have to allocate some of the revenue to the handset, based on its stand- alone selling price.

Worked example: Allocation of transaction price

The contract between MetaConnect and EverTel Design (see Worked example: Performance obligations 2) is priced at £6,000. The stand-alone selling prices of each element are as follows:

	£
Provision of a licence	5,000
Installation service	1,500
	£
Provision of technical support	3,000
	9,500

Requirement

Allocate the transaction price to the performance obligations in the contract.

Solution

Licence provision £5,000/£9,500 × £6,000 = £3,158 Installation service £1,500/£9,500 × £6,000 = £947 Technical support service £3,000/£9,500 × £6,000 = £1,895

Context example: Unbundling

A mobile phone company gives customers a free handset when they sign a two-year contract for provision of network services. The handset has a stand-alone price of £52 and the contract is for £20 per month.

Under IFRS 15, revenue must be allocated to the handset because delivery of the handset constitutes a performance obligation. This will be calculated as follows:

	£	%
Handset	52	10
Network services	480	90
Total value	532	100

As the transaction price is the total receipts of £480, this is the amount which must be allocated to the separate performance obligations.

Revenue will be recognised as follows:

	£
Year 1	
Handset (480 × 10%)	48
Contract (480 – 48)/2	216
	264
Year 2	
Contract as above	216

2.9 Recognise revenue when (or as) a performance obligation is satisfied

A performance obligation is satisfied when control of the good or service specified in the contract is transferred to the customer (IFRS 15.31).

A performance obligation can be satisfied **at a point in time**, such as in retail sales, or **over time**, such as a construction contract taking place over weeks, months or even years.

Where a performance obligation is satisfied **at a point in time**, that point will occur when **control is transferred**. At that point the customer is able to direct the use of the asset and obtain substantially all the remaining benefits from it (IFRS 15.33).

The following events can indicate that control has been transferred (IFRS 15.38):

- The entity has a present right to payment for the asset
- The customer has legal title to the asset
- The entity has transferred physical possession of the asset

- The significant risks and rewards of ownership have been transferred to the customer
- The customer has accepted the asset

A performance obligation satisfied **over time** will meet one of the following criteria:

- The customer simultaneously receives and consumes the benefits as the performance obligation is satisfied.
- The entity's performance creates or enhances an asset that the customer controls as the asset is created or enhanced.
- The entity's performance does not create an asset with an alternative use to the entity and the entity has an enforceable right to payment for performance completed to date.

(IFRS 15.35)

Where performance obligations are satisfied over time, the entity recognises revenue by measuring progress towards complete satisfaction of the performance obligation. Progress can be measured using output methods (measuring the value to the customer of goods or services transferred to date) or input methods (measuring the cost to the entity of goods or services transferred to date) (IFRS 15.B14).

In the early stages of a contract it may not be possible to reasonably measure the outcome of a performance obligation, but the entity is entitled to recover costs incurred. In this case, revenue can be measured to the extent of costs incurred.

A contract where performance obligations are recognised over time may give rise to asset or liability amounts at the end of the reporting period.

Contracts with customers will be presented in an entity's statement of financial position as a contract liability, a contract asset or a receivable, depending on the relationship between the entity's performance and the customer's payment.

(IFRS 15.105)

A **contract liability** is recognised and presented in the statement of financial position where a customer has paid an amount of consideration prior to the entity performing by transferring control of the related good or service to the customer.

(IFRS 15.106)

When the entity has performed but the customer has not yet paid the related consideration, this will give rise to either a **contract asset** or a **receivable**. A contract asset is recognised when the entity's right to consideration is conditional on something other than the passage of time, for instance future performance. A receivable is recognised when the entity's right to consideration is unconditional except for the passage of time.

(IFRS 15.107)

Where revenue has been invoiced a receivable is recognised. Where revenue has been earned but not invoiced, it is recognised as a contract asset.

Worked example: Performance obligation satisfied over time

Associated Solutions Ltd is building a bespoke software system for an insurance company. The contract started on 1 January 20X7 with an estimated completion date of 31 December 20X9. The contract price is £2 million. As at 31 December 20X7:

(1) costs incurred amounted to £800,000;

(2) half the work on the contract was completed;

(3) certificates of work completed have been issued by the insurance company, to the value of £1 million; and

(4) it is estimated with reasonable certainty that further costs to completion will be £800,000.

Requirement

What is the contract profit in 20X7, and what entries would be made for the contract at 31 December 20X7?

Solution

This is a contract in which the performance obligation is satisfied **over time**. The entity is carrying out the work for the benefit of the customer rather than creating an asset for its own use and in this case it has an enforceable right to payment for work completed to date. We can see this from the fact that certificates of work completed have been issued.

IFRS 15 states that the amount of payment that the entity is entitled to corresponds to the amount of performance completed to date (ie, goods and/or services transferred).

In this case, the contract is certified as 50% complete, measuring progress under the output method. At 31 December 20X7, the entity will recognise revenue of £1,000,000 and cost of sales of £800,000, leaving profit of £200,000. The **contract asset** will be the costs to date plus the profit – that is £1,000,000. We are not told that any of this amount has yet been invoiced, so none of this amount is classified as receivables.

Interactive question 1: Publishing revenue

A magazine publisher launched a new monthly magazine on 1 January 20X7. During January it received £48,000 in annual subscriptions in advance. It has despatched four issues by the year end 31 March 20X7.

Requirement

What revenue should be recognised for the year ended 31 March 20X7?

See **Answer** at the end of this chapter.

Interactive question 2: Advance sales

A DIY store is about to sell a new type of drill. Customer demand is high and the store has taken advance orders for the drill. The selling price of the drill will be £50 and so far 200 customers have paid an initial 10% deposit on the selling price of the drill. No drills are yet held in inventory.

Requirement

What amount should be recognised as revenue? See **Answer** at the end of this chapter.

Interactive question 3: Rendering of services

A £210,000 fixed-price contract is entered into for the provision of services. At the end of 20X7, the first accounting period, the contract is thought to be 33% complete and costs of £45,000 have been incurred in performing that 33% of the work.

Requirements

Calculate the revenue to be recognised in 20X7 on the alternative assumptions that:

(a) The costs to complete are reliably estimated at £90,000; and

(b) The costs to complete cannot be reliably estimated, and it is thought that £40,000 of the costs incurred are recoverable from the customer.

See **Answer** at the end of this chapter.

Interactive question 4: Service contract

An entity entered into a contract for the provision of services over a two year period. The total contract price was £150,000 and the entity initially expected to earn a profit of £20,000 on the contract. In the first year, costs of £60,000 were incurred and 50% of the work was completed. The contract did not progress as expected and management was not sure of the ultimate outcome but believed that the costs incurred to date would be recovered from the customer.

Requirement

What revenue should be recognised for the first year of the contract? See **Answer** at the end of this chapter.

2.10 Performance obligations satisfied over time: 'construction contracts'

IFRS 15 does not specifically use the term 'construction contracts', but refers to them as contracts in which performance obligations are satisfied over time. Such contracts often include contracts for large construction projects falling into more than one accounting period. As mentioned in section

2.9 above, the entity recognises revenue by measuring progress towards complete satisfaction of the performance obligation. Progress can be measured using output methods (measuring the value to the customer of goods or services transferred to date) or input methods (measuring the cost to the entity of goods or services transferred to date) (IFRS 15.B14).

Worked example: Contract to construct a conference centre

During the year ended 31 July 20X9, Frizco Construction plc (Frizco) began the construction of a leisure centre on behalf of a local authority. The agreed contract price was £70 million. However this will be reduced by £6 million if Frizco completes the centre a month or more behind schedule.

During the year ended 31 July 20X9, costs incurred amounted to £18.6 million, including £1,000,000 material that could not be used in the project as it was of the incorrect grade to meet regulations.

The total cost of the project (excluding the £1,000,000 in wasted material) is estimated to be £44 million. Work certified at the year-end was £24.5 million.

The construction is currently progressing in accordance with the agreed schedule.

Requirements

1 What amount of revenue is recognised in profit or loss in the year ended 31 July 20X9 if an output method is used to assess progress?

2 What amount of revenue is recognised in profit or loss in the year ended 31 July 20X9 if an input method is used to assess progress?

Solution

The transaction price is £70 million. £64 million is fixed consideration and £6 million is variable consideration. The transaction price is £70 million as the project is currently expected to be completed on time and therefore the single most likely outcome is the receipt of £70 million.

1 **Output method**

Using the output method the project is 35% complete:

Work certified ÷ Transaction price = 24,500 ÷ 70,000 = 35%

Therefore 35% × £70m = £24.5 million is recognised as revenue in the year.

2 **Input method**

Using the input method the project is 40% complete:

Costs incurred to date ÷ Total expected costs = (18,600 – 1,000) ÷ 44,000 = 40% Therefore 40% × £70m = £28 million is recognised as revenue in the year.
Note that the £1 million wasted material is not relevant to the assessment of progress, however, it must be recognised in profit or loss as a wastage expense.

Contract costs are considered in further detail in section 2.12.

2.11 Deferred consideration

In some sectors of the retail industry it is common practice to provide interest-free credit to customers in order to encourage sales of, for example, furniture and new cars.

IFRS 15 refers to this as a 'financing component' in the contract. When the contract contains a significant financing component, such as a period of interest-free credit exceeding one year, the amount of consideration should be adjusted for the time value of money (IFRS 15.60, .63).

Where an extended period of credit is offered, the revenue receivable has two separate elements:

- The value of the goods on the date of sale
- Financing income

In order to separate these two elements the future receipts are discounted to present value at an imputed interest rate, identified as either:

- the prevailing rate for lending to a customer with a credit rating similar to that of the customer; or
- the rate of interest which discounts the receivable back to the current cash selling price.

The effect on the timing of the revenue recognition is that:

- the fair value of the goods is recognised on delivery of the goods
- the finance element is recognised over the period that the financing is provided

Worked example: Deferred consideration 1

A car retailer sells its new cars by requiring a 20% deposit followed by no further payments until the full balance is due after two years. The price of the cars is calculated using a 10% per annum finance charge.

On 1 January 20X7 a car was sold to a customer for £20,000.

Requirement

How should the revenue be recognised in the year ended 31 December 20X7 and what should the carrying amount of the customer receivable be on that date?

Solution

Revenue to be recognized

	£
Sale of goods (£4,000 + £13,223 (W))	17,223
Financing income (£13,223 (W) × 10%)	1,322
Carrying amount of receivable (£13,223 (W) × 1.10)	14,545

WORKING

The deposit is £4,000 (£20,000 × 20%), so the amount receivable in two years is £16,000. This is discounted at 10% for two years to £13,223 (£16,000 × $1/1.10^2$).

Context example: Deferred consideration 2

Comfy Couches Ltd sells an item of furniture to a customer on 1 September 20X7 for £2,500 with a one-year interest-free credit period. The fair value of the consideration receivable is £2,294. (In other words, if the company tried to sell this debt, this is the amount it would expect to receive now.)

In this case the transaction would be split into two components:

(a) Interest revenue of £206 (2,500 – 2,294), which would be recognised over the period of credit

(b) Sales revenue of £2,294, which would be recognised on 1 September 20X7

2.12 Contract costs

IFRS 15 deals with the costs of obtaining a contract and the costs of fulfilling a contract.

2.12.1 Costs of obtaining a contract

The incremental costs of **obtaining** a contract (such as sales commission) are **recognised as an asset** if the entity expects to recover those costs.

Costs that would have been incurred regardless of whether the contract was obtained are recognised as an expense as incurred.

Costs incurred in **fulfilling** a contract, unless within the scope of another standard, (such as IAS 2, *Inventories*, IAS 16, *Property, Plant and Equipment* or IAS 38, *Intangible Assets*) are recognised as an asset if they meet the following criteria (IFRS 15.95):

(a) The costs relate directly to an identifiable contract (costs such as labour, materials, management costs)

(b) The costs generate or enhance resources of the entity that will be used in satisfying (or continuing to satisfy) performance obligations in the future

(c) The costs are expected to be recovered

Costs recognised as assets are amortised on a systematic basis consistent with the transfer to the customer of the goods or services to which the asset relates.

Worked example: Costs of obtaining a contract

Copyquick Ltd enters into contracts for five-year terms to service and repair a customer's photocopiers. The contracts may be subsequently renewed on a one-year rolling basis and the average customer term is seven years. Copyquick pays its sales staff a commission of £35,000 when a new customer signs an initial contract.

On 1 January 20X8, the Copyquick sales staff secured a new customer contract.

Requirement

How is the cost of commission of £35,000 accounted for?

Solution

The £35,000 is an incremental cost of obtaining a new contract, and Copyquick expects to recover the cost by charging the customer for servicing and repairing their photocopiers.

Copyquick should capitalise the £35,000 and amortise it over a period to reflect the transfer of services to the customer. Although the original contract is for five years, this is usually extended for a further two years and so the amortisation period is seven years.

Therefore the annual amortisation charge is £5,000 (£35,000/7 years).

Professional skills focus: Applying judgement

As we have seen, while IFRS 15 provides structure and guidance, it does not remove the need for judgement. The area of costs is one where judgement must be applied. An example of this is the question of whether to use an input method or an output method.

2.13 Presentation and disclosure

2.13.1 Presentation

Contracts with customers will be presented in an entity's statement of financial position as a contract liability, a contract asset, or a receivable depending on the relationship between the entity's performance and the customer's payment.

A contract liability is recognised and presented in the statement of financial position where a customer has paid an amount of consideration before the entity has transferred control of the related good or service to the customer.

When the entity has performed but the customer has not yet paid the related consideration, this will give rise to either a contract asset or a receivable. A contract asset is recognised when the entity's right to consideration is conditional on something other than the passage of time, for instance future performance. A receivable is recognised when the entity's right to consideration is unconditional except for the passage of time.

Where revenue has been invoiced, a receivable is recognised. Where revenue has been earned but not invoiced, it is recognised as a contract asset.

2.13.2 Disclosure

Disclosure of the following is required:

(a) Revenue from contracts with customers (separately from other sources of revenue) in categories that depict how the nature, timing, amount and uncertainty of revenue and cash flows are affected by economic factors (eg, by type of goods or geographical area). Sufficient information should be disclosed to enable users to understand the relationship between the disclosure of disaggregated revenue and revenue information that is disclosed for each reportable segment (where IFRS 8 is applied).

(b) Impairment losses recognised on receivables, or contract assets arising from contracts with customers (by category, as above).

(c) The opening and closing balances of receivables, contract assets and contract liabilities and explanation of significant changes in contract assets and liabilities, including both qualitative and quantitative information.

(d) Revenue recognised in the reporting period that was included in the contract liability balance at the start of the period and revenue recognised in the period from performance obligations satisfied in previous periods (eg, due to changes in transaction price).

(e) A description of performance obligations including the following:
   (1) When they are typically satisfied
   (2) Significant payment terms
   (3) The nature of goods or services that an entity has promised to transfer, highlighting obligations to arrange for another party to transfer goods or services
   (4) Obligations for returns, refunds or similar
   (5) Types of warranties and related obligations

(f) The transaction price allocated to performance obligations that are unsatisfied at the end of the reporting period, and an explanation of when related revenue is expected to be recognised. This information need not be disclosed if the performance obligation is part of a contract lasting 12 months or less, or the entity recognises revenue from the satisfaction of the performance obligation in the amount that it has a right to invoice (because the amount directly corresponds with the value to the customer of the entity's performance completed to date).

Worked example: Applying the IFRS 15 five-step model

On 1 January 20X4, Peterloo enters into a 12-month 'pay monthly' contract for a mobile phone. The contract is with Westerfield, and terms of the plan are as follows:

- Peterloo receives a free handset on 1 January 20X4.
- Peterloo pays a monthly fee of £200, which includes unlimited free minutes. Peterloo is billed on the last day of the month.

Customers may purchase the same handset from Westerfield for £500 without the payment plan. They may also enter into the payment plan without the handset, in which case the plan costs them £175 per month.

The company's year-end is 31 July 20X4.

Requirement

Show how Westerfield should recognise revenue from this plan in accordance with IFRS 15, *Revenue from Contracts with Customers.* Your answer should give journal entries:

(1) On 1 January 20X4

(2) On 31 January 20X4

Solution

IFRS 15 requires application of its five-step process:

(1) **Identify the contract with a customer.** A contract can be written, oral or implied by customary business practices.

(2) **Identify the separate performance obligations in the contract.** If a promised good or service is not distinct, it can be combined with others.

(3) **Determine the transaction price.** This is the amount to which the entity expects to be **'entitled'**. For variable consideration, the probability-weighted expected amount is used.

(4) **Allocate the transaction price to the separate performance obligations in the contract.** For multiple deliverables, the transaction price is allocated to each separate performance obligation in proportion to the **stand-alone selling price** at contract inception of each performance obligation.

(5) **Recognise revenue when (or as) the entity satisfies a performance obligation.** That is when the entity **transfers** a promised good or service to a customer. The good or service is only considered as transferred when the customer obtains **control** of it.

Application of the five-step process to Westerfield

(1) **Identify the contract with a customer.** This is clear. Westerfield has a 12-month contract with Peterloo.

(2) **Identify the separate performance obligations in the contract.** In this case there are two distinct performance obligations:

   (a) The obligation to deliver a handset

   (b) The obligation to provide network services for 12 months

   (The obligation to deliver a handset would not be a distinct performance obligation if the handset could not be sold separately, but it is in this case because the handsets are sold separately.)

(3) **Determine the transaction price.** This is straightforward: it is £2,400, that is 12 months × the monthly fee of £200.

(4) **Allocate the transaction price to the separate performance obligations in the contract.** The transaction price is allocated to each separate performance obligation in proportion to the **stand-alone selling price** at contract inception of each performance obligation, that is the stand-alone price of the handset (£500) and the stand-alone price of the network services (£175 × 12 =£2,100):

Performance obligation	Stand-alone selling price £	% of total	Revenue (= relative selling price = £2,400 × %) £
Handset	500.00	19.2	460.80
Network services	2,100.00	80.8	1,939.20
Total	2,600.00	100	2,400.00

(5) **Recognise revenue when (or as) the entity satisfies a performance obligation.** That is when the entity transfers a promised good or service to a customer. This applies to each of the performance obligations:

- When Westerfield gives a handset to Peterloo, it needs to recognise the revenue of £460.80.
- When Westerfield provides network services to Peterloo, it needs to recognise the total revenue of £1,939.20. It's practical to do it once per month as the billing happens.

Journal entries

(1) On 1 January 20X4

The entries in the books of Westerfield will be:

DEBIT	Receivable (unbilled revenue)	£460.80	
CREDIT	Revenue		£460.80

Being recognition of revenue from the sale of the handset

(2) On 31 January 20X4

The monthly payment from Peterloo is split between amounts owing for network services and amounts owing for the handset:

DEBIT	Bank/Receivable (Peterloo)	£200	
CREDIT	Revenue (1,939.20/12)		£161.60
CREDIT	Receivable (unbilled revenue) (460.80/12)		£38.40

Being recognition of revenue from monthly provision of network services and 'repayment' of handset.

CHAPTER 10

Interactive question 5: Caravan

Caravans Deluxe is a retailer of caravans, dormer vans and mobile homes, with a year end of 30 June. It is having trouble selling one model – the £30,000 Mini-Lux, and so is offering incentives for customers who buy this model before 31 May 20X7.

(1) Customers buying this model before 31 May 20X7 will receive a period of interest free credit, provided they pay a non-refundable deposit of £3,000, an instalment of £15,000 on 1 August 20X7 and the balance of £12,000 on 1 August 20X9.

(2) Equipment for the caravan, normally worth £1,500, is included free in the price of the caravan.

On 1 May 20X7, a customer agrees to buy a Mini-Lux caravan, paying the deposit of £3,000. Delivery is arranged for 1 August 20X7.

As the sale has now been made, the sales director of Caravans Deluxe wishes to recognise the full sale price of the caravan, £30,000, in the accounts for the year ended 30 June 20X7.

Requirement

Show how the IFRS 15 five-step plan is applied to this sale. Assume a 10% discount rate. Show the journal entries for this treatment.

See **Answer** at the end of this chapter.

3 Applications of IFRS 15

Section overview

- IFRS 15 includes Application Guidance, which explains how the provisions of the standard should be applied to a number of situations.
- These include:
  - Sales with a right of return
  - Extended warranties
  - Transactions involving an agent
  - Licensing
  - Royalties
  - Repurchase agreements
  - Consignment arrangements
  - Bill and hold arrangements
  - Non-refundable upfront fees

3.1 Sales with a right of return

Some contracts give the customer the right to return the product and receive a refund, a credit or a replacement.

The entity should recognise (IFRS 15.B21):

- revenue for the transferred products
- a refund liability
- an asset in respect of products to be returned

The asset is:

- measured at the former carrying amount of the products less any expected decreases in value and other costs to recover the products;
- presented separately from the refund liability; and
- remeasured to reflect changes in expectations about the products to be returned at each reporting date.

Interactive question 6: Sale or return

Bags Galore Ltd operates a number of high-end handbag outlets. On 28 January 20X9, it sells 50 identical bags to different customers for £850 each. The bags cost £400 each. The customers have 28 days in which they can return purchases in exchange for a full refund and, based on past experience, Bags Galore Ltd expects a returns level of 6%. Bags Galore Ltd's 'Fabulous February' sale starts on 1 February and the selling price of the bags will be reduced to 50% of the original price from that date.

Requirements

6.1 How should Bags Galore account for the sale of the bags?

6.2 How would the accounting treatment change if the selling price of the bags was to be reduced to 40% of the original price in the Fabulous February sale?

See **Answer** at the end of this chapter.

3.2 Warranties

It is necessary to distinguish between warranties which give the customer assurance that the product complies with agreed upon specifications, and warranties which provide the customer with a distinct service (such as free repairs over a specified period).

A warranty which the customer purchases separately will always be a service warranty.

A service warranty is accounted for as a separate performance obligation and a portion of the transaction price is allocated to it.

A warranty which does not promise a service is simply accounted for in accordance with IAS 37, *Provisions, Contingent Liabilities and Contingent Assets* (IFRS 15.B28–30).

When considering whether a warranty is standard or extended, IFRS 15 requires that the following factors are considered:

(a) Whether the provision of the warranty is a legal requirement; this would indicate that it is a standard warranty

(b) The length of the warranty period – the longer the period, the more likely it is to be an additional or extended warranty

(c) The nature of the tasks promised within the warranty and whether they relate to providing assurance that a product will function as intended

3.3 Principal versus agent

IFRS 15 specifically excludes amounts collected on behalf of third parties from the transaction price attached to a contract (IFRS 15.47).

Individually or in combination, the following criteria indicate that the entity is acting as an agent (IFRS 15.B37):

- Another party has the primary responsibility for providing the goods or services to the customer, or for fulfilling the order.
- The entity does not have the inventory risk before or after the customer order, during shipping or on return.
- The entity does not have discretion in establishing prices for the goods or services.
- The entity's consideration is in the form of commission.
- The entity is not exposed to credit risk on the amount due from the customer.

An entity is a principal if it controls the promised good or service before it is transferred to the customer. In this case, when the performance obligation is satisfied the entity recognises the revenue.

An entity is an agent if its performance obligation is to arrange for the provision of goods or services by another party. When this performance obligation is satisfied, it recognises revenue only for the fee or commission to which it is entitled (IFRS 15.B36).

Worked example: Agent or principal?

An entity runs a website which enables customers to buy goods from a range of suppliers. Prices are set by suppliers, and payments are processed through the entity's website. Customers pay in advance and goods are delivered directly from the supplier to the customer.

The entity receives a commission of 10% of the sales price and has no further obligation to the customer after arranging for the products to be shipped.

Requirement

Is the entity an agent or the principal?

Solution

The entity is acting as an agent based on the following points:

- Goods travel directly from the supplier to the customer, so the entity never has physical custody of them and does not bear the associated risk.
- The supplier, not the entity, has the obligation to the customer.
- The entity does not set prices or bear credit risk.
- The payment received by the entity is in the form of commission.

So the entity should only recognise the commission received from suppliers as revenue.

3.4 Goods and services provided in one contract

One marketing approach frequently used is to bundle together both goods and services into one transaction. For example, a car dealer may sell new cars with one year's free servicing and insurance.

In such cases:

- the components of the package which could be sold separately should be identified; and
- each should be measured and recognised as if sold separately.

IFRS 15 does not specifically state how each component should be measured but general principles require that each component should be:

- measured at its fair value; and
- recognised as revenue only when it meets the recognition criteria.

If the total of the fair values exceeds the overall price of the contract, an appropriate approach would be to apply the same discount percentage to each separate component.

Worked example: Goods and services

A car dealer sells a new car, together with 50 litres of fuel per month for a year and one year's servicing, for £27,000. The fair values of these components are: car £28,000, fuel £1,200 and servicing £800.

Requirement

How should the £27,000 be recognised as revenue?

Solution

The total fair value of the package is £30,000 (28,000 + 1,200 + 800) but is being sold for £27,000, a discount of £3,000 or 10%.

The discounted fair value of the car should be recognised as revenue upon delivery:

£28,000 × 90% = £25,200

The discounted fair value of the fuel should be recognised as revenue on a straight line basis over the next 12 months:

£1,200 × 90% = £1,080

The discounted fair value of the servicing should be recognised as revenue at the earlier of when the servicing is provided and the end of the year:

£800 × 90% = £720

Interactive question 7: Goods and services

An entity sells an item of equipment to a customer on 1 January 20X7 for £1.5 million. Due to the specialised nature of the equipment, the entity has agreed to provide free support services for the next two years, despite the cost to the entity of that support being estimated at £120,000 in total. The entity usually earns a gross margin of 20% on such support service contracts.

Requirement

How much revenue should the entity recognise for the year ended 30 April 20X7?

	£
Revenue:	

See **Answer** at the end of this chapter.

Interactive question 8: Servicing fees

On the last day of its current accounting period, Computer Ltd completes the handover of a new system to a client and raises an invoice for £800,000. This price includes after-sales support for the next two years, which is estimated to cost £35,000 each year. Computer Ltd normally earns a gross profit margin of 17.5% on such support activity.

Requirement

Calculate the revenue to be included in Computer Ltd's current year statement of profit or loss in respect of this sale.

		£
After-sales support Remainder		
Total selling price		
So the revenue from the sale in the current year is:		

See **Answer** at the end of this chapter.

3.5 Licenses

A license allows a customer to access intellectual property such as software, patents, trademarks, franchises, copyrights and media (eg, films).

The grant of a license may be accompanied by the promise to transfer other goods or services in the following circumstances:

(a) Where the promise to grant a licence is distinct, it forms a separate performance obligation from that for goods and services.

(b) Where the promise to grant a licence is a separate performance obligation, revenue is either recognised at a point in time or over time depending on the nature of the contract.

(c) Where the promise to grant a licence is not distinct from the promised goods and services, the goods, services and licence are combined as one single performance obligation (eg, software that requires ongoing upgrade services in order to function or a software hosting agreement on an internet site). This performance obligation may be satisfied at a point in time or over time and this should be determined in accordance with IFRS guidance (see section 2.9).

(d) Where the licence allows the customer access to the vendor's intellectual property as it exists at any given time in the licence period (ie, the vendor continues to support and update the intellectual property), this is a performance obligation satisfied over time.

(e) Where the licence allows the customer access to the vendor's intellectual property as it exists at the date the licence is granted, this is a performance obligation satisfied at a point in time.

Worked example: Licensing

A fast food company 'PizzaTheAction' grants a franchise licence to a customer, allowing the customer to use the PizzaTheAction brand and sell company products for a 10-year period. During the 10-year period, management at PizzaTheAction will perform customer analysis, continuously improve the product and advertise the brand, all of which will affect the franchise licence.

Requirement

Explain how the revenue arising from this transaction is recognised.

Solution

PizzaTheAction is providing access to its intellectual property as it exists throughout the licence period (ie, the customer will benefit from continuous improvements and marketing etc). Therefore the performance obligation is satisfied over time and PizzaTheAction recognises revenue over the licence period.

3.6 Royalties

A contract to license intellectual property may require as consideration a royalty that is measured by reference to sales or usage. In such cases, the seller recognises revenue when the later of the following events occurs:

- The subsequent sale or usage arises.
- The performance obligation to which some or all of the sales- or usage-based royalty has been allocated is satisfied (or partially satisfied).

3.7 Repurchase agreements

Under a repurchase agreement an entity sells an asset and has the option to repurchase it. This can come in one of three forms (IFRS 15.B64):

(a) An obligation to repurchase (a forward contract)

(b) A right to repurchase (a call option)

(c) An obligation to repurchase at the customer's request (a put option)

Under a **forward contract** or a **call option** the customer does not obtain control of the asset because that control is limited by the repurchase option. The contract is accounted for as a lease if the repurchase price is below the original selling price, or a financing arrangement if the repurchase price is equal to or above the original selling price (IFRS 15.B66).

Under a **put option**, if the customer does not have sufficient economic incentive to exercise the right to request repurchase, the agreement should be treated as if it were a sale with a right of return. If the customer **does** have sufficient economic incentive, for instance if the repurchase price is above the original selling price and above market value, the contract is treated as a financing arrangement (IFRS 15.B73).

Worked example: Repurchase agreement

An entity sold an investment property to a financial institution for £4 million when the fair value of the property was £5 million. Further investigation uncovered an agreement whereby the entity could repurchase the property after one year for £4.32 million.

Requirement

How should this transaction be accounted for?

Solution

The entity has a right to repurchase the property – a call option. The repurchase price is above the original selling price, so this is, in effect, a financing arrangement.

The sale of the property at 20% below fair value is sufficient to cast doubt on whether a real sale has been made. Also, the repurchase price is below fair value at the date of sale and represents a return to the financial institution of 8% ((£4.32m – £4m) as a percentage of £4 million) on the amount paid out.

The substance of the arrangement appears to be that the financial institution has granted the entity a one-year loan secured on the property, charging interest at 8%.

The transaction should be accounted for by:

- continuing to recognise the property as an asset;
- crediting the £4 million received to a liability account;
- recognising £0.32 million as a finance cost in profit or loss and crediting it to the liability account; and
- derecognising the liability when the £4.32 million cash is paid out.

Interactive question 9: Sale and repurchase

Builder Ltd specialises in building high quality executive flats in city centres. On 1 March 20X6 it sells a plot of building land to Finance plc, an unconnected company, for £1.5 million. Builder Ltd retains rights of access and supervision over the plot, the right to build on this land until 28 February 20X9 and the right to buy the plot back again on that date for £1.9 million. On 1 March 20X6 the plot is valued at £2.5 million.

Requirement

Explain how this sale transaction would be dealt with in Builder Ltd's financial statements for the year ended 28 February 20X7.

See **Answer** at the end of this chapter.

3.8 Consignment arrangements

In a consignment arrangement, a dealer does not obtain control of an asset. Such arrangements are common in the motor industry. Often a car manufacturer will enter into an arrangement with a car dealer such that the dealer takes and displays vehicles with a view to selling them to a customer. In such situations, the manufacturer cannot recognise any revenue because the dealer does not obtain control of the cars at the point of delivery.

The following are indicators that an arrangement is a consignment arrangement:

- The product is controlled by the seller (manufacturer) until a specified event occurs (eg, the product is sold onwards or a specified period of time expires).
- The seller (manufacturer) can require the return of the product or transfer it to another party.
- The customer (dealer) does not have an unconditional obligation to pay for the product.

3.9 Bill and hold arrangements

Under these arrangements, an entity bills the customer for the product but delivery is delayed with the agreement of the customer, perhaps because the customer is short of space. In this case, the entity must determine the point in time at which it has satisfied its performance obligation by transferring control of the product to the customer. It may be that the customer is still able to exercise control without having physical possession of the product.(IFRS 15 .B79)

Control may pass at the point of delivery or when the product is shipped or at an earlier date ie, the customer may obtain control even though the seller has physical possession of the product.

All the following IFRS 15 criteria must have been met in a bill and hold arrangement, in order for control to be said to have passed:

(a) There must be a substantive reason for the bill and hold arrangement, for example, the customer has requested it.

(b) The product must be identified as belonging to the customer.

(c) The product must be ready for physical transfer to the customer.

(d) The seller must not be able to use the product or transfer it to another customer.

If these criteria are met, enabling revenue to be recognised on a bill and hold basis, the seller should consider whether to allocate a proportion of the transaction price to the provision of a storage service.

Interactive question 10: Bill and hold

Walbrooke Engineering plc enters into a contract with Southfield Beverages Ltd on 1 January 20X8 for the sale of a bottling machine and spare parts. It takes two years to manufacture these and on 31 December 20X9 the customer pays for both the machine and the spare parts, but only takes physical possession of the machine. The customer inspects and accepts the spare parts, but requests that Walbrooke Engineering continues to store them at its warehouse.

Requirement

Explain when Walbrooke Engineering should recognise revenue in respect of this transaction.

See **Answer** at the end of this chapter.

3.10 Options for additional goods and services

An option in a sales contract may grant the customer the right to acquire additional goods or services for free or at a discount. In some cases this may take the form of 'loyalty points'. For example, airlines often give passengers loyalty points when they buy a flight. When enough loyalty points are acquired, they can be redeemed for a free flight.

The option to acquire additional goods or services forms a separate performance obligation if the option can only be obtained by entering into the initial sales contract.

In this case, part of the transaction price is allocated to the option to acquire additional goods or services, and part is allocated to the goods or services that are the subject of the sales contract.

Revenue is recognised in respect of the option to acquire additional goods or services at the earlier of:

- the date on which the additional goods or services are provided;
- the date on which the option to acquire the additional goods or services expires.

The allocation of transaction price to the option is based on the stand-alone selling price of the additional goods or services, taking account of the discount and adjusted for the likelihood that the option will be exercised.

If the option granted to the customer does not offer a discount, it is treated as a marketing offer and no contract exists until the customer exercises the option to purchase.

Worked example: Customer loyalty scheme

GymGo Ltd, a 'pay as you go' gym operates a customer loyalty scheme whereby if a customer pays for nine visits and has a loyalty card stamped, the tenth visit is provided free of charge.

During 20X7, customers visit the gym a total of 94,995 times, paying £10 per visit, so earning the right to a maximum of 10,555 (94,995/9) free visits, each of which has an average stand-alone price of £10. The gym expects 7,400 of the free visits to be claimed and by 31 December 20X7, 4,350 have been claimed.

Requirement

Explain how revenue is recognised by GymGo Ltd.

Solution

The promise to provide a free tenth visit is a performance obligation, and total revenue of £949,950 (94,995 × £10) is allocated between visits to the gym by customers and the loyalty scheme.

Revenue is allocated to the provision of 'stamps' based on the expected take up rate and the stand- alone selling price basis ie, based on a total stand-alone selling price of £74,000 (7,400 × £10):

		£
Gym visits	£949,950 × (949,950/(949,950 + 74,000))	881,298
Loyalty stamps	£949,950 × (74,000/(949,950 + 74,000))	68,652
		949,950

At 31 December 20X7, 4,350 of the expected 7,400 free visits have been claimed, therefore of the £68,652 transaction price allocated to loyalty stamps:

- £40,356 (4,350/7,400 × £68,652) is recognised as revenue; and
- £28,296 is recognised as a contract liability for the unredeemed loyalty stamps.

Therefore total revenue recognised in 20X7 is £921,654 (881,298 + 40,356).

3.11 Non-refundable upfront fees

A non-refundable upfront fee is often charged at the beginning of a contract, such as joining fees in health club membership contracts.

In many cases upfront fees do not relate to the transfer of any promised good or service, but are simply advance payments for **future** goods or services. In this case revenue is recognised when the future goods or services are provided.

If the fee relates to a good or service the entity should evaluate whether or not it amounts to a separate performance obligation. This depends on whether it results in the transfer of an asset to the customer. The fee may relate to costs incurred in setting up a contract, but these setup activities may not result in the transfer of services to the customer.

4 Audit focus

Section overview

This section looks at audit procedures relevant when considering the appropriateness of the accounting treatment adopted for construction contracts.

4.1 Audit procedures for testing IFRS 15

Stage of IFRS 15	Suggested audit procedures
Step 1 Identify the contract(s) with a customer.	• Obtain copies of **contracts** between entities and customers • Inspect contracts to confirm they are **legally binding** and **effective** for the year of audit • For **implied contracts** (such as retail contracts) clarify the likely contractual terms to establish rights and responsibilities in each case
Step 2 Identify separate performance obligations.	• Confirm the **goods** or **services** to be transferred, either individually or as part of a series, by reference to the contracts in place • Confirm whether any of the goods or service are **not distinct** by reference to the contracts in place and if separate bundles
Step 3 Determine the transaction price.	• Identify the amount of **consideration** by reference to the contract • Where appropriate, confirm the split between **variable** and **fixed** elements and re-calculate any variable amounts by reference to the contract terms • Test the hypothesis that variable consideration is **highly probable** by reviewing the reasonableness of the underlying assumptions used in the entity's calculations
Step 4 Allocate transaction price to performance obligations.	• Confirm **stand-alone** prices to individual elements of the contract as performance obligations are settled • In the case of **estimated stand-alone prices**, test the assumptions underpinning the calculations used by the entity for reasonableness
Step 5 Recognise revenue as or when each performance obligation is satisfied.	• For performance obligations satisfied **at a point in time** (such as retail sales) confirm the occurrence of the event required (such as the sale itself) by reference to supporting documentation (For performance obligations satisfied **over time** refer to section 4.2 below.)
Other tests	• For **deferred consideration**, confirm the proportion split between the value of the goods on the date of sale and the financing income by reference to the contract and testing the reasonableness of the entity's calculations for recognising revenue (such as interest rates for estimating fair value)
Returns	• Review contract/terms of sale and confirm that this is allowed • For a sample of goods inwards, determine whether any relate to returns and ensure no revenue has been recognised for such goods • Review returns activities in the next reporting period to ensure revenue has not been overstated in relation to returns
Warranties	• For service warranties, review sales activity to identify evidence of related performance obligations and identify revenue allocated to such warranties
Revenue collected on behalf of third parties	• Establish existence of any third parties for whom revenue would be collected (ideally during the process of understanding the entity at the planning stage) • For a sample of revenue items, confirm the revenue is not due to be passed on to any third parties identified

Stage of IFRS 15	Suggested audit procedures
Bundled services, licences, royalties and repurchase agreements	• Clearly complex, these will require a review of contracts/terms of sale to establish their likelihood and conditions and the audit team briefed to include these in audit tests as appropriate
Consignment arrangements	• Consider the existence of any **indicators** of consignment arrangements, such as: - Confirming who **controls** the product and what (if any) **conditions** need to have occurred for control to be passed on - Clarifying who can require the **return** of a product or **transfer** it to a third party
Bill and hold arrangements	• Consider the **existence** of such arrangements and if present, review the conditions required by IFRS 15 have been met: - Confirm that the customer **owns** the products stored by the seller by reference to the contract terms, and obtain confirmation from the customer that they are happy for the seller to **hold** them - Inspect the agreement between the seller and customer to confirm the products can be **accessed at any time** and **not transferred** to another customer
Non-refundable upfront fees	• For a sample of revenues recognised during the reporting period, determine whether any related to upfront fees • Confirm any upfront fees recognised that relate to performance obligations have now been satisfied (for example, in a health club, that services have been provided)

Professional skills focus: Structuring problems and solutions

Just as the financial accountant must apply the five-stage structure of IFRS 15 in determining when and in what amount to recognise revenue, the auditor must also apply this structured approach to selecting audit procedures at each of the five stages.

Exam focus note

It is possible that you could be examined on IFRS 15 and that you will need to know the auditing implications of this complex standard: here are two illustrations since it became an examinable standard that show just how complex the accounting for revenue can actually be for the auditor.

For example a requirement to account for a customer reward scheme which included specific performance obligations in relation to the redemption of the points earned by customers under the scheme. What if auditing issues are tested for this? You might have been required to consider procedures such as obtaining details about the scheme to confirm the criteria in place and challenging the client on any of the information supplied (such as confirming how many of the points earned had been redeemed and recalculating the client's estimates of points not yet redeemed that would need to be recognised as a contract liability).

For example, for another incentive scheme, this time for a listed caterer whose customers can pay to join a club which offers discounts for future events booked within a set period of time. The scenario presented different revenue streams, each with their own performance obligations, which required candidates to discuss audit risks related to cut-off and other recognition issues (which in turn were likely to indicate questionable management integrity and manipulation).

4.2 Audit procedures for contracts in which performance obligations are satisfied over time ('construction contracts')

Remember, under IFRS 15, the entity recognises revenue in such cases by measuring **progress** towards complete satisfaction of the performance obligation. Progress can be measured using **output methods** (measuring the value to the customer of goods or services transferred to date) or **input methods** (measuring the cost to the entity of goods or services transferred to date)(IFRS 15.B14).

The following audit procedures will be relevant:

- Confirm **contract price** to contract agreed between client and customer
- Determine any amounts of **conditional revenue**/**costs** including the associated conditions
- Confirm the **progress** to date of the work completed, including any potential delays or problems
- Confirm **costs incurred to date** (**inputs**) by reference to management accounts, invoices, budgets and other relevant documentation
- Identify any **expenditure not supporting fulfilment of the contract** by inspecting board minutes, management accounts or other documentation (such as legal correspondence)
- Confirm **total costs estimated for contract** to ensure no planned overspends have been identified (again, budgets, board minutes or management accounts can be inspected)
- Confirm the **amounts of contract work certified as complete** (**outputs**) at the year end by reference to relevant documentation (such as surveyors' reports or client estimates)

Interactive question 11: Construction contracts

Construction Co has entered into a fixed price contract to construct an office block. Construction commenced on 1 March 20X6 and is expected to take 36 months. You are auditing the financial statements for the year ended 31 December 20X6.

The contract price is made up as follows:

	£'000
Contract price	600
Incentive payment if completed on time	40
	640

Total contract costs were originally estimated to be £470,000. At the end of 20X6 this estimate has increased to £570,000 due to extra costs incurred to rectify a number of construction faults.

At the end of 20X6 the contract was assessed as being 30% complete. The draft financial statements show that revenue of £192,000 has been recognised in respect of this contract.

Requirements

For the year ended 31 December 20X6:

(a) Identify the audit issues you would need to consider

(b) List the audit procedures you would perform

See **Answer** at the end of this chapter.

Context example: Carillion

In July 2017, UK construction firm Carillion collapsed leaving over £1 billion in debts and a number of unfulfilled contracts, as well as a significant unfunded pension scheme. A UK parliamentary committee interviewed the company's directors, internal auditors Deloitte, and external auditors KPMG and asked why this could not have been foreseen in March 2017, only four months earlier, when the 2016 financial statements were signed off, despite a number of so-called 'red flags' which had been identified by investors. Carillion went into liquidation in January 2018.

These 'red flags' included poor corporate governance, uncertainty over complex accounting practices for goodwill and revenue (including the cash-flows on individual contracts) and inadequate site visits as part of managing high-profile construction contracts clients.

The imminent need to adopt IFRS 15 from 2018 onwards is considered to be one of the key triggers for these events. In its interim financial statements for the six months to 30 June 2017, the company estimated that the adoption of IFRS 15 would reduce reserves by up to £150 million, an amount that could have seen operating profits for 2017 almost entirely eliminated. Of course, revenue recognition wasn't the only issue facing Carillion: insufficient cash-flow from an excess of loss-making contracts had made the company vulnerable and this could be seen by the frequency with which their shares were being shorted by investors keen to capitalise on an already doomed share price.

Overall, the fundamental need to communicate position and performance (and viability for that matter) in a true and fair manner must never be forgotten by companies, regulators, investors and auditors and the Carillion case has framed the discussion for how auditing, reporting and governance should evolve.

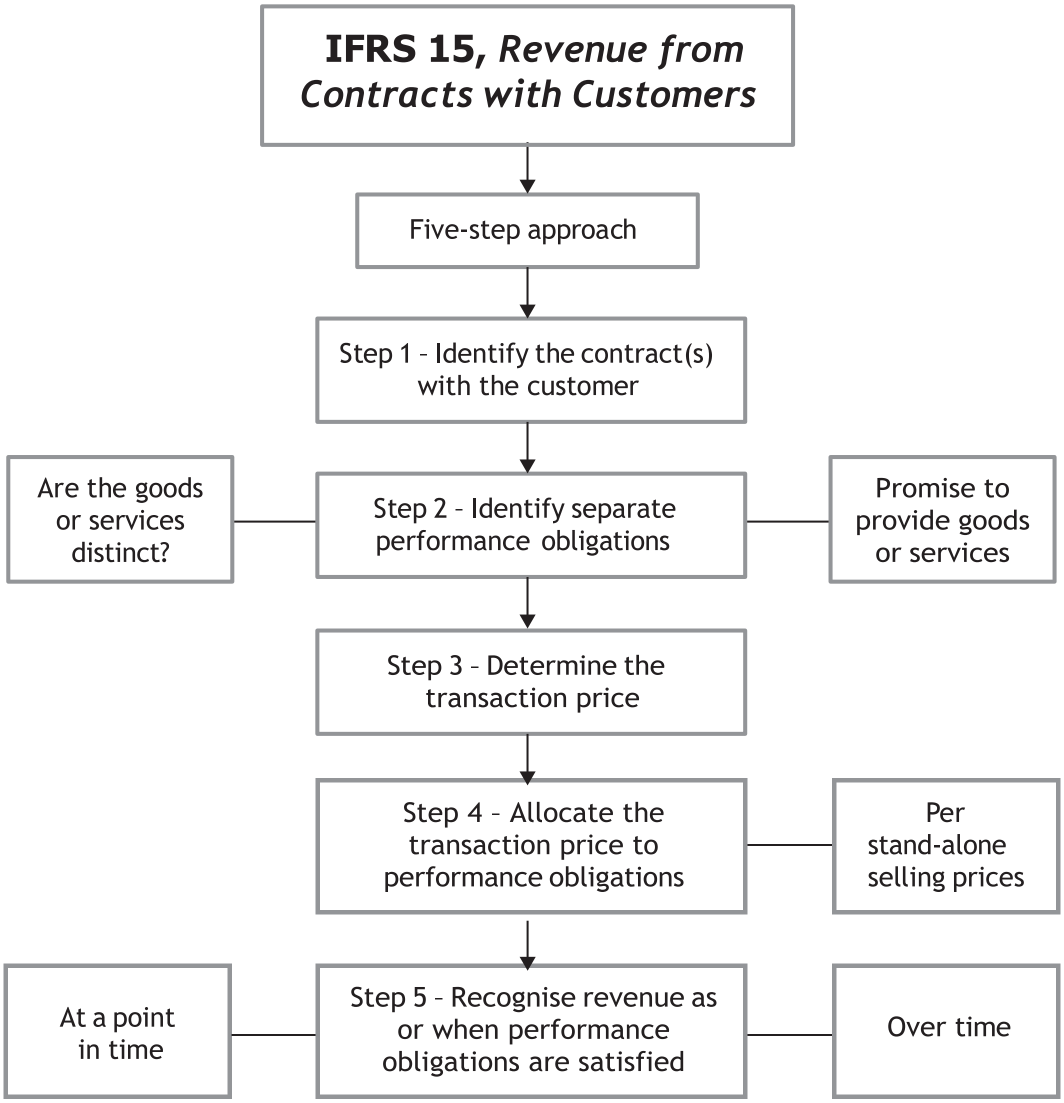
Carillion plc (29 September 2017) Financial results for the six months ended 30 June 2017 Strategic and operational review update [Online]. Available from: https://www.rns-pdf.londonstockexchange.com/rns/2047S_1-2017-9-29.pdf

[All accessed 23 June 2021])

Professional skills focus: Concluding, recommending and communicating

The worked example above (Carillion) illustrates a situation where the professional skills of concluding, recommending and communicating were not applied. Red flags over revenue were identified, but the wrong conclusion drawn.

Summary



IFRS 15, *Revenue from Contracts with Customers*
Five-step approach
Step 1 - Identify the contract(s) with the customer
Are the goods or services distinct?
Step 2 - Identify separate performance obligations
Promise to provide goods or services
Step 3 - Determine the transaction price
Step 4 - Allocate the transaction price to performance obligations
Per stand-alone selling prices
At a point in time
Step 5 - Recognise revenue as or when performance obligations are satisfied
Over time

Further question practice

1 Knowledge diagnostic

Before you move on to question practice, confirm you are able to answer the following questions having studied this chapter. If not, you are advised to revisit the relevant learning from the topic indicated.

	Confirm your learning
1.	Can you list and apply the IFRS 15 five-step model for recognising revenue? (Topic 2)
2.	What does 'distinct' mean in the context of performance obligations? (Topic 2)
3.	Can you deal with performance obligations satisfied over time? (Topic 2)
4.	What is the IFRS 15 treatment for sales with a right of return? (Topic 2)
5.	How would each of IFRS 15's five steps be audited? (Topic 5)

2 Question practice

Aim to complete all self-test questions at the end of this chapter. The following self-test questions are particularly helpful to further topic understanding and guide skills application before you proceed to the next chapter.

Question	Learning benefit from attempting this question
Southwell	A sale and repurchase question with a financing element, this is a short question to get you started.
Taplop	A comprehensive question on variable consideration, this is an exam- standard test of this topic (though not exam-style as it is much shorter).
Clavering	Part (a) deals with the issue of whether control has transferred, which it must in order to satisfy a performance obligation. There is scope for different interpretations. Part (b) deals with identifying performance obligations and allocating the transaction price.

Once you have completed these self-test questions, it is beneficial to attempt the following questions from the Question Bank for this module. These questions have been selected to introduce exam style scenarios to help you improve knowledge application and professional skills development before you start the next chapter.

Question	Learning benefit from attempting this question
Wayte	This requires you to separate out performance obligations to determine the appropriate timing of revenue recognition.
Solvit	This tests the five-step process in detail and also the audit aspects.
Roada	A comprehensive, detailed question on IFRS 15, focusing mainly on performance obligations satisfied over time, but with a number of different revenue streams.
Panther Metals	This question requires use of the data analytics software to identify revenue issues.

Refer back to the learning in this chapter for any questions which you did not answer correctly or where the suggested solution has not provided sufficient explanation to answer all your queries.

Once you have attempted these questions, you can continue your studies by moving onto the next chapter.

Technical reference

1 IFRS 15, Revenue from Contracts with Customers

Revenue is income arising in the course of an entity's ordinary activities. – **IFRS 15 Appendix A**

Five-step approach is used: – **IFRS 15 (IN7)**

- Identifying the contract – **IFRS 15 (9)**
- Identifying the performance obligations – **IFRS 15 (22)**
  - Satisfaction of performance obligations – **IFRS 15 (31)**
  - Performance obligations satisfied over time – **IFRS 15 (35)**
  - Performance obligations satisfied at a point in time – **IFRS 15 (38)**
- Determining the transaction price – **IFRS 15 (47)**
- Allocating the transaction price to the performance obligations – **IFRS 15 (73)**
- Recognising revenue as/when obligations are satisfied – **IFRS 15 (31)**

Incremental costs of a contract are recognised. – **IFRS 15 (91–94)**

Costs incurred to fulfil a contract are recognised as an asset if and only if all of certain criteria are met: – **IFRS 15 (95)**

- The costs relate directly to a contract (or a specific anticipated contract);
- The costs generate or enhance resources of the entity that will be used in satisfying performance obligations in the future; and
- The costs are expected to be recovered.

Costs include direct labour, direct materials, and the allocation of overheads that relate directly to the contract. – **IFRS 15 (97)**

The asset recognised in respect of the costs to obtain or fulfil a contract is amortised on a systematic basis that is consistent with the pattern of transfer of the goods or services to which the asset relates. – **IFRS 15 (99)**

IFRS 15 gives further guidance on: – **IFRS 15 (App B)**

- Performance obligations satisfied over time
- Methods for measuring progress towards complete satisfaction of a performance obligation
- Sale with a right of return
- Warranties
- Principal versus agent considerations
- Customer options for additional goods or services
- Customers' unexercised rights
- Non-refundable upfront fees
- Licensing
- Repurchase agreements
- Consignment arrangements
- Bill-and-hold arrangements
- Customer acceptance
- Disclosures of disaggregation of revenue

Self-test questions

Answer the following questions.

1 Webber

Webber sells two types of product, the Sleigh and the Sled. Webber sells the sleigh as an agent of Caplin receiving commission of 15% on selling price. Webber sells the sled as principal at a gross margin of 30%.

The following information relates to the year ended 30 September 20X8.

	Sleighs	**Sleds**
	£	**£**
Total sales	200,000	75,000
Gross profit	60,000	22,500

Requirement

According to IFRS 15, *Revenue from Contracts with Customers* what revenue should Webber recognise in total for Sleighs and Sleds for the year ended 30 September 20X8?

2 Alexander

On 1 January 20X0, Alexander Ltd supplied goods to David Ltd for an agreed sum of £600,000. This amount becomes payable on 31 December 20X2. David Ltd could have bought the goods for cash of £450,000 on 1 January 20X0. The imputed rate of interest to discount the receivable to the cash sales price is 10%.

Requirement

In accordance with IFRS 15, *Revenue from Contracts with Customers* what amounts for revenue and interest income should Alexander Ltd record in profit or loss relating to this transaction for the year ended 31 December 20X0?

3 Southwell

Southwell Ltd, a manufacturing company, sold a property with a carrying amount of £4.5 million for
£5 million to Financier Ltd on 1 January 20X4. Southwell Ltd retains the right to occupy the property and has an option to repurchase the property after two years for £6 million. Property prices are expected to rise and the current market value is £8 million. The annual rate for 20% over two years is 9.5%.

Requirement

In accordance with IFRS, 15 *Revenue from Contracts with Customers* what should be recognised in the financial statements relating to this transaction for the year ended 31 December 20X4?

4 White Goods

White Goods Ltd sells an electrical appliance for £2,400 on 1 October 20X7 making a mark up on cost of 20%. The customer is given a one-year interest-free credit period. White Goods Ltd has a cost of capital of 9%.

Requirement

In accordance with IFRS 15, *Revenue from Contracts with Customers*, what amount should the company recognise as revenue from the sale of the appliance in profit or loss for the year ended 31 December 20X7?

5 Tree

You are the accountant of Tree, a listed limited liability company that prepares consolidated financial statements. Your Managing Director, who is not an accountant, has recently attended a seminar at which key financial reporting issues were discussed. She remembers being told the following.

- Financial statements of an entity should reflect the substance of its transactions.
- Revenue from the contracts with customers should only be recognised when certain conditions have been satisfied. Transfer of legal title to the goods is not necessarily sufficient for an entity to recognise revenue from their 'sale'.

The year end of Tree is 31 August. In the year to 31 August 20X1, the company entered into the following transactions.

Transaction 1

On 1 March 20X1, Tree sold a property to a bank for £5 million. The market value of the property at the date of the sale was £10 million. Tree continues to occupy the property rent-free. Tree has the option to buy the property back from the bank at the end of every month from 31 March 20X1 until 28 February 20X6. Tree has not yet exercised this option. The repurchase price will be £5 million plus
£50,000 for every complete month that has elapsed from the date of sale to the date of repurchase. The bank cannot require Tree to repurchase the property and the facility lapses after 28 February 20X6. The directors of Tree expect property prices to rise at around 5% each year for the foreseeable future.

Transaction 2

On 1 September 20X0, Tree sold one of its branches to Vehicle for £8 million. The net assets of the branch in the financial statements of Tree immediately before the sale were £7 million. Vehicle is a subsidiary of a bank and was specifically incorporated to carry out the purchase – it has no other business operations. Vehicle received the £8 million to finance this project from its parent in the form of a loan.

Tree continues to control the operations of the branch and receives an annual operating fee from Vehicle. The annual fee is the operating profit of the branch for the 12 months to the previous 31 August less the interest payable on the loan taken out by Vehicle for the 12 months to the previous 31 August. If this amount is negative, then Tree must pay the negative amount to Vehicle.

Any payments to or by Tree must be made by 30 September following the end of the relevant period. In the year to 31 August 20X1, the branch made an operating profit of £2,000,000. Interest payable by Vehicle on the loan for this period was £800,000.

Requirements

5.1 Explain the conditions that need to be satisfied before revenue can be recognised. You should support your answer with reference to IFRS 15.

5.2 Explain how the transactions described above will be dealt with in the consolidated financial statements (statement of financial position and statement of profit or loss and other comprehensive income) of Tree for the year ended 31 August 20X1 in accordance with IFRS 15.

6 Taplop

Taplop supplies laptop computers to large businesses. On 1 July 20X5, Taplop entered into a contract with TrillCo, under which TrillCo was to purchase laptops at £500 per unit. The contract states that if TrillCo purchases more than 500 laptops in a year, the price per unit is reduced retrospectively to £450 per unit. Taplop's year end is 30 June.

- As at 30 September 20X5, TrillCo had bought 70 laptops from Taplop. Taplop therefore estimated that TrillCo's purchases would not exceed 500 in the year to 30 June 20X6, and would therefore not be entitled to the volume discount.
- During the quarter ended 31 December 20X5, TrillCo expanded rapidly as a result of a substantial acquisition, and purchased an additional 250 laptops from Taplop. Taplop then estimated that TrillCo's purchases would exceed the threshold for the volume discount in the year to 30 June 20X6.

Requirements

Calculate the revenue Taplop would recognise in:

(a) The quarter ended 30 September 20X5

(b) The quarter ended 31 December 20X5

Your answer should apply the principles of IFRS 15, *Revenue from Contracts with Customers*.

7 Clavering

Clavering Leisure Co owns and operates a number of hotels. The company is preparing its financial statements for the year ended 31 May 20X3, and has come across the following issues.

(1) One of the hotels owned by Clavering Leisure is a complex which includes a theme park and a casino as well as a hotel. The theme park, casino and hotel were sold in the year ended 31 May 20X3 to Manningtree Co, a public limited company, for £200 million but the sale agreement stated that Clavering Leisure would continue to operate and manage the three businesses for their remaining useful life of 15 years. The residual interest in the business reverts back to Clavering Leisure after the 15-year period. Clavering Leisure would receive 75% of the net profit of the businesses as operator fees, and Manningtree would receive the remaining 25%. Clavering Leisure has guaranteed to Manningtree that the net minimum profit paid to Manningtree would not be less than £15 million per year.

(2) Clavering Leisure has recently started issuing vouchers to customers when they stay in its hotels. The vouchers entitle the customers to a £30 discount on a subsequent room booking within three months of their stay. Historical experience has shown that only one in five vouchers are redeemed by the customer. At the company's year end of 31 May 20X3, it is estimated that there are vouchers worth £20 million which are eligible for discount. The income from room sales for the year is £300 million and Clavering Leisure is unsure how to report the income from room sales in the financial statements.

Requirement

Advise Clavering Leisure on how the above accounting issues should be dealt with in its financial statements in accordance with IFRS 15, *Revenue from Contracts with Customers*.

8 Rockwye

Rockwye is a manufacturer of luxury watches which it sells to customers via a number of independent retailers. Rockwye recognises revenue and derecognises inventory when it supplies each retailer with deliveries of watches for display. Watches are then displayed by retailers at a price set by the manufacturer – once a watch is sold to a customer, the retailer passes the revenue back to Rockwye. Any unsold watches are returned to Rockwye after a period of 11 months.

Requirement

Comment on the accounting treatment in operation at Rockwye and recommend suitable audit procedures that you should undertake.

Now go back to the Introduction and ensure that you have achieved the Learning outcomes listed for this chapter.

Answers to Interactive questions

Answer to Interactive question 1

Magazine revenue: £16,000 **Explanation**

Revenue for the magazines should be recognised in the periods in which they are despatched, assuming the items are of similar value in each period. Despatch of the magazine constitutes satisfaction of the performance obligation. Thus the revenue to be recognised in the year ended 31 March 20X7 is £48,000 × 4/12 = £16,000.

Answer to Interactive question 2

Revenue: £nil

Explanation

Revenue should be recognised when the drills are delivered to the customer. This is the point at which the performance obligation is satisfied. Until then no revenue should be recognised and the deposits should be carried forward as deferred income.

Answer to Interactive question 3

(a) **Costs to complete are £90,000**

This is a contract with performance obligations satisfied over time and 33% of the performance has been completed to date.

Revenue can be recognised on the output basis by the percentage of completion method, so 33% of £210,000 = £69,300.

Note: The project is profitable overall (total revenue £210,000, total costs £135,000), so no provision for a contract loss need be made.

(b) **Costs to complete cannot be estimated reliably**

As the outcome of the overall contract cannot be estimated reliably, revenue is recognised to the extent of the costs incurred which are recoverable ie, £40,000. The current period therefore recognises the contract loss to date of £5,000.

Answer to Interactive question 4 Contract revenue: £60,000 **Explanation**

If the outcome of a services transaction cannot be estimated reliably, revenue should only be recognised to the extent that expenses incurred are recoverable from the customer.

Answer to Interactive question 5

The Sales Director wishes to recognise the sale as early as possible. However, following IFRS 15, *Revenue from Contracts with Customers*, revenue from the sale should only be recognised when the performance obligations in the contract have been satisfied.

Performance obligations in the contract

The contract contains a promise to deliver the caravan and a promise to deliver additional goods free of charge. These are distinct promises and therefore the contract contains two performance obligations.

Transaction price

The transaction price is made up of three elements.

A significant financing component must be considered where consideration is received more than 12 months before or after the date on which revenue is recognised (being the delivery date, 1 August

20X7). Therefore the payment on 1 August 20X9 must be discounted to present value at 1 August 20X7.

	£
Deposit	3,000
Payment on 1.8.X7 (the delivery date)	15,000
Payment on 1.8.X9 (£12,000/1.1^2)	9,917
	27,917

Allocation to performance obligations

The transaction price is allocated based on standalone selling prices:

Caravan	30,000/31,500 × £27,917	=	£26,588
Free equipment	1,500/31,500 × £27,917	=	£1,329

Recognition of revenue

The two performance obligations are satisfied simultaneously on 1 August 20X7, and therefore all revenue is recognised on this date.

Journal entries are as follows:

1 May 20X7

The receipt of cash in the form of the £3,000 deposit is recognised on receipt as a contract liability (deferred income) in the statement of financial position by:

DEBIT	Bank	£3,000	
CREDIT	Contract liability (deferred income)		£3,000

1 August 20X7

Revenue is recognised together with payment of the first £15,000. The contract liability is transferred to be revenue:

DEBIT	Bank	£15,000	
DEBIT	Contract liability	£3,000	
DEBIT	Receivable	£9,917	
CREDIT	Revenue		£27,917

Note: This question is rather fiddly, so do not worry too much if you didn't get all of it right. Read through our solution carefully, going back to first principles where required.

Answer to Interactive question 6

6.1 **Account for sale**

- Bags Galore Ltd expects 3 bags (6% × 50) to be returned.
- Therefore on 28 January 20X9 revenue is recognised in relation to 47 bags, giving a total of £39,950 (47 × £850).
- A refund liability of £2,550 (3 × £850) is recognised.
- The cost of 47 bags of £18,800 (47 × £400) is transferred to cost of sales. The remaining 3 bags are recognised as an asset (the right to recover the bags) at cost of £1,200 (3 × £400). The 'right to recover' asset is measured at the original cost of the bags that are expected to be returned because, even in the 'Fabulous February' sale, they are capable of being sold for £425 (50% × £850) ie, more than cost.

The required accounting entries are:

DEBIT	Bank (50 × £850)	£42,500	
CREDIT	Revenue		£39,950
CREDIT	Refund liability		£2,550

To recognise the sale of bags and expectation that 6% will be returned.

DEBIT	Asset (right to recover inventory)	£1,200	
DEBIT	Cost of sales (47 × £400)	£18,800	
CREDIT	Asset (inventory)		£20,000

To recognise the transfer of items of inventory that are not expected to be returned to become cost of sales and that are expected to be returned to become assets (the right to recover the 3 bags).

6.2 If the selling price of the bags were reduced to £340 (40% × £850):

- The revenue and refund liability would be recorded as before.
- The retained asset would be measured at £1,020 (3 × £340), so resulting in a write down of the carrying amount of inventory in profit or loss.

Answer to Interactive question 7

	£
Revenue:	
- Sale of goods (W)	1,350,000
- Sale of services (W)	25,000
	1,375,000

WORKING

	£
After-sale support (120,000/ (100% – 20%))	150,000
Remainder = sale of goods (bal fig)	1,350,000
Total revenue	1,500,000

Revenue for sale of services recognised in the four months to 30 April 20X7 should be £150,000/2 years × 4/12 = £25,000

Answer to Interactive question 8

	£
After-sales support (2 × (35,000/82.5%))	84,848
Remainder	715,152
Total selling price	800,000
So the revenue from the sale in the current year is:	715,152

Answer to Interactive question 9

Sale transaction

- As there is an option to repurchase, this is a call option with a repurchase price above the original selling price, so it is treated as a financing arrangement.
- Through the rights of access and supervision, together with the right to build on the land, Builder Ltd has retained the risks and rewards of ownership over the building plot, so should continue to show it as an asset in its statement of financial position.
- The fact that the consideration for the sale on 1 March 20X6 is so far below the valuation is further evidence that the transaction is in substance a three-year loan, with the £400,000 difference between the selling and repurchase prices being interest on the loan.
- The right to repurchase in the future for much less than the current valuation (making the exercise of the repurchase right almost a certainty) is further evidence that this is not a real sale.
- So Builder Ltd will show the building plot in its 28 February 20X7 statement of financial position as a current asset (as it will be realised in the normal course of its operating cycle) at its original acquisition cost (not given in the Interactive question).
- In the same statement of financial position it will show the £1.5 million received on 1 March 20X6 as a liability, together with any unpaid part of the £400,000 interest which is attributable to the first year of the loan.
- The appropriate part of the total interest will be charged to profit or loss for the year ended 28 February 20X7.

Answer to Interactive question 10

The contract contains three performance obligations – transfer of the machine, transfer of the spare parts and the custodial services. The transaction price is allocated to the three performance obligations and revenue is recognised when (or as) control passes to the customer.

The machine and the spare parts are both performance obligations satisfied at a point in time, this being 31 December 20X9. In the case of the spare parts, the customer has paid for them, the customer has legal title to them and the customer has control of them as they can remove them from storage at any time.

The custodial services are a performance obligation satisfied over time, so revenue will be recognised over the period during which the spare parts are stored.

Answer to Interactive question 11

(a) **Audit issues**

- Whether revenue recognised to date includes a proportion of the incentive payment. This would only be appropriate if it is probable that this income will be received.
- Total costs to complete have been increased during the year due to rectification costs. There is a risk that there may be other rectification costs which have yet to be identified.
- Whether the accounting treatment of the revenue recognised is in accordance with IFRS 15. The current figure of £192,000 appears to be based on 30% of the expected total revenue (640 × 30%) but it is unclear where this 30% has come from. If revenue is being measured on costs incurred to date (input basis) the additional £100,000 of contract costs may not be allowable as part of this calculation. Similarly, if certified as complete (output basis) on a pro- rated time basis, the contract is only 10 months old – this would give a percentage of 10/36 = 27.8% which could lead to overstated revenue.

(b) **Audit procedures**

- Agree the contract price and incentive payment to the sales contract.
- Discuss with management the basis on which they have recognised the incentive payment and review their performance on other similar contracts to determine the likelihood of the contract being completed on time.
- Establish the basis on which the percentage completion of 30% has been determined. If a surveyor has been used to make this estimate assess the extent to which this evidence can be relied on.
- Discuss with management the nature of the rectification costs and assess the likelihood of other similar additional costs being incurred. Obtain a schedule of these and agree to supporting documentation.
- Review management calculations regarding costs to complete and seek corroboration for any assumptions made.
- Discuss with management the revenue recognition policy adopted. If material to the financial statements the figures should be revised in accordance with IFRS 15.

Answers to Self-test questions

1 Webber

Revenue

	£
Revenue recognised as agent (£200,000 × 15%)	30,000
Revenue recognised as principal	75,000
Total revenue	105,000

2 Alexander

At the time of supply, revenue is recognised for the cash sale price of £450,000. Interest will then be accrued until payment is made. For the year ended 31 December 20X0 the interest charge is £450,000 × 10% = £45,000.

3 Southwell

As there is an option to repurchase, this is a call option with a repurchase price above the original selling price, so it is treated as a financing arrangement.

Initial loan:	DEBIT	Cash	£5m
	CREDIT	Loan	£5m
Interest:	DEBIT	Interest (Profit or loss) (5m × 9.5%)	£0.475m
	CREDIT	Loan	£0.475m

Total loan liability is £5.475 million.

4 White Goods

The amount receivable discounted to present value = £2,400 × 1/1.09 = £2,202

This is recognised as income on 1 October 20X7. The difference between this and the sale proceeds (2,400 – 2,202 = 198) is treated as interest and will be recognised over the 12-month interest-free credit period.

5 Tree

5.1 IFRS 15, *Revenue from Contracts with Customers* states the following (IFRS 15.35):

Revenue is recognised when (or as) a performance obligation is satisfied. The entity satisfies a performance obligation by transferring **control** of a promised good or service to the customer. A performance obligation can be satisfied **at a point in time**, such as when goods are delivered to the customer, or **over time**. An obligation satisfied **over time** will meet one of the following criteria:

- The customer simultaneously receives and consumes the benefits as the performance takes place.
- The entity's performance creates or enhances an asset that the customer controls as the asset is created or enhanced.
- The entity's performance does not create an asset with an alternative use to the entity and the entity has an enforceable right to payment for performance completed to date.

The amount of revenue recognised is the amount allocated to that performance obligation. An entity must be able to reasonably measure the outcome of a performance obligation before the related revenue can be recognised. In some circumstances, such as in the early stages of a contract, it may not be possible to reasonably measure the outcome of a performance obligation, but the entity expects to recover the costs incurred. In these circumstances, revenue is recognised only to the extent of costs incurred.

5.2 **Transaction 1**

Tree has the option to repurchase the property but cannot be required to do so. This is a call option in which the repurchase price is equal to or above the original selling price, so it should be accounted for as a financing arrangement.

Tree has not transferred control of the property to the bank as it still has the right to exercise this option, so no performance obligation has been satisfied that could justify the recognition of revenue.

The transaction is essentially a **loan secured on the property**, rather than an outright sale. The £50,000 payable for each month that the bank holds the property is **interest** on the loan.

The property **remains in the consolidated statement of financial position** at its cost or market value (depending on the accounting policy adopted by Tree). The **loan** of £5 million and **accrued interest** of £300,000 (6 × 50,000) are reported under **non-current liabilities**. Interest of £300,000 is recognised in consolidated profit or loss.

Transaction 2

The key issue is whether Tree **has transferred control** of the branch.

Tree **continues to control the operations** of the branch and the amount that it receives from Vehicle is the operating profit of the branch less the interest payable on the loan. Tree also suffers the effect of any operating losses made by the branch. Therefore, the **position is essentially the same as before** the 'sale' and Tree has not satisfied any performance obligation in return for the consideration of £8 million.

Although Vehicle is not a subsidiary of Tree as defined by IFRS 10, *Consolidated Financial Statements,* it is a special purpose entity (**quasi-subsidiary**). It gives rise to benefits for Tree that are in substance no different from those that would arise if it were a subsidiary. Its assets, liabilities, income and expenses **must be included** in the consolidated financial statements.

The assets and liabilities of Vehicle are included in the consolidated statement of financial position at £7 million (their original value to the group). The loan of £8 million is recognised as a non-current liability. The profit on disposal of £1 million and the operating fee of £1,200,000 are cancelled as intra-group transactions. The operating profit of £2 million is included in consolidated profit or loss, as is the loan interest of £800,000.

6 Taplop

(a) Applying the requirements of IFRS 15 to TrillCo's purchasing pattern at 30 September 20X5, Taplop should conclude that it was highly probable that a significant reversal in the cumulative amount of revenue recognised (£500 per laptop) would not occur when the uncertainty was resolved, that is when the total amount of purchases was known. Consequently, Taplop should recognise revenue of 70 × £500 = £35,000 for the first quarter ended 30 September 20X5.

(b) In the quarter ended 31 December 20X5, TrillCo's purchasing pattern changed such that it would be legitimate for Taplop to conclude that TrillCo's purchases would exceed the threshold for the volume discount in the year to 30 June 20X6, and therefore that it was appropriate to reduce the price to £450 per laptop. Taplop should therefore recognise revenue of £109,000 for the quarter ended 31 December 20X5. The amount is calculated as from £112,500 (250 laptops × £450) less the change in transaction price of £3,500 (70 laptops × £50 price reduction) for the reduction of the price of the laptops sold in the quarter ended 30 September 20X5.

7 Clavering

Sale of hotel complex

The issue here is one of **revenue recognition**, and the accounting treatment is governed by IFRS 15, *Revenue from Contracts with Customers*. Step (5) of the standard's revenue recognition process requires that **revenue is recognised when (or as) a performance obligation is satisfied**. The entity satisfies a performance obligation by transferring **control** of a promised good or service to the customer. A performance obligation can be satisfied **at a point in time**, such as when goods are delivered to the customer, or **over time**. In the case of the hotel transfer, the issue is that of a performance obligation **satisfied at a point in time**. One of the indicators of control is that significant risks and rewards of ownership have been transferred to the customer.

It can be argued in some cases where property is sold that the seller, by continuing to be involved, has **not satisfied the performance obligation by transferring control**, partly because the seller has not transferred the risks and rewards of ownership. In such cases, the **sale is not genuine**, but is often in substance a **financing arrangement**. IFRS 15 requires that the substance of a transaction is determined by looking at the transaction as a whole. If two or more transactions are linked, they should be treated as one transaction to better reflect the commercial substance.

Clavering Leisure continues to operate and manage the hotel complex, receiving the bulk (75%) of the profits, and the residual interest reverts back to Clavering Leisure; effectively, Clavering Leisure **retains control** by retaining the risks and rewards of ownership. Manningtree does not bear substantial risk: its minimum annual income is guaranteed at £15 million. **The sale should not be recognised**. In substance it is a **financing transaction.** The **proceeds** should be treated as a **loan**, and the payment of **profits** as **interest**.

Discount vouchers

The treatment of the vouchers is governed by IFRS 15, *Revenue from Contracts with Customers*. The principles of the standard require the following:

- The voucher should be accounted for as a **separate component** of the sale.
- The promise to provide the discount is a **performance obligation.**
- The entity must estimate the **stand-alone selling price** of the discount voucher in accordance with paragraph B42 of IFRS 15. That estimate must reflect the discount that the customer would obtain when exercising the option, adjusted for both of the following:
  - Any discount that the customer could receive without exercising the option
  - The likelihood that the option will be exercised.

The vouchers are issued as part of the sale of the room and redeemable against future bookings. The substance of the transaction is that **the customer is purchasing both a room and a voucher**.

Vouchers worth £20 million are eligible for discount as at 31 May 20X3. However, based on past experience, it is likely that only one in five vouchers will be redeemed, that is vouchers worth £4 million. Room sales are £300 million, **so effectively, the company has made sales worth £(300m + 4m) = £304 million in exchange for £300 million**. The **stand-alone price would give a total of £300 million for the rooms and £4 million for the vouchers**.

To **allocate the transaction price**, following step (4) of IFRS 15's five-step process for revenue recognition, the proceeds need to be split proportionally **pro rata the stand-alone prices**, that is the discount of £4 million needs to be allocated between the room sales and the vouchers, as follows:

Room sales: 300/304 × £300m = £296.1m Vouchers (balance) = £3.9m

The £3.9 million attributable to the vouchers is only recognised when the performance obligations are fulfilled, that is when the vouchers are redeemed.

8 Rockwye

Matters to consider

The accounting treatment adopted by Rockwye does not appear to comply with IFRS 15 as it appears to be a consignment arrangement in place with retailers. This means that Rockwye cannot recognise any revenue or derecognise inventory when the watches are delivered to retailers because control has not passed from Rockwye to the retailer due to control being retained (the right to fix the price and receive the watches back after 11 months).

Revenue should only be recognised when the retailer makes a sale to a customer. This means that revenue in Rockwye's financial statements is likely to be overstated. In addition, if watches are returned unsold, there may also be a risk that inventory is overstated if any of the watches have suffered any impairment.

Audit procedures

- The auditor should obtain copies of the contracts in place between Rockwye and individual retailers to confirm the supplier arrangements in place and which party retains controls of the watches.
- The auditor should establish the proportion of watches that are returned unsold to determine if there are any indicators of impairment in the inventory held.
- The auditor should re-calculate revenue for a sample of months using the consignment approach and compare to actual revenue recorded to establish if there is any material misstatement.

Chapter 11

Earnings per share

Introduction

Learning outcomes

- Explain and appraise accounting standards that relate to reporting performance: in respect of presentation of financial statements; revenue; operating segments continuing and discontinued operations; EPS; interim reporting
- Determine for a particular scenario what comprises sufficient, appropriate audit evidence
- Design and determine audit procedures in a range of circumstances and scenarios, for example identifying an appropriate mix of tests of controls, analytical procedures and tests of details
- Demonstrate and explain, in the application of audit procedures, how relevant ISAs affect audit risk and the evaluation of audit evidence

Chapter study guidance

Use this schedule and your study timetable to plan the dates on which you will complete your study of this chapter.

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
1	**EPS: overview of material covered in earlier studies** IAS 33, *Earnings per Share* seeks to provide guidance to ensure a consistent basis is followed so that a meaningful comparison can be made over time.	**Approach** This section will be revision from your earlier studies, so should not take long to work through. Do not overlook the brief subsection on auditing EPS. **Stop and think** Why is an adjustment needed for preference shares?	You may be asked for a simple EPS calculation, or more likely re-calculation once a series of adjustments have been made to the SPLOCI. Otherwise you are more likely to get complications that were not tested at Professional Level.	**IQ1: Adjustment for preference shares** This is a straightforward question, revising material from your earlier studies.
2	**Basic EPS: weighted average number of shares** This could be used in practice to compare companies for investment purposes.	**Approach** While you have done the weighted average calculations at Professional Level, you may not have come across all the factors that determine when shares are included in the weighted average.	These topics could come up as part of a financial analysis question.	N/A

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
		Stop and think What is the impact of bonus issues, rights issues and share consolidations on EPS?		
3	**Basic EPS: profits attributable to ordinary equity holders** This section focuses on the adjustments to earnings arising as a result of preference shares.	**Approach** Focus on the redeemable versus irredeemable distinction and examples rather than the increasing rate preference shares, which is less likely to come up. **Stop and think** Why does it matter whether the preference shares are redeemable or not?	This area has not yet been examined under the current syllabus.	**IQ2: Redeemable preference shares** This a short, straightforward question to reinforce the main point in this section.
4	**Diluted earnings per share** In addition to basic EPS, IAS 33 requires a diluted figure which takes into account the existence of convertible instruments already issued that could increase the number of shares.	**Approach** This section revises material from your earlier studies before moving on to more difficult topics. **Stop and think** What does 'antidilutive' mean?	Diluted earnings per share is often tested, together with basic EPS, in a question requiring adjustments to financial statements.	N/A
5	**Diluted EPS: convertible instruments** Convertible instruments are one of the most common reasons for dilution.	**Approach** Although this topic won't be entirely new, you may not have considered the indicators that a convertible instrument is antidilutive. **Stop and think** What is the impact of	This is a regular topic for examination and may arise in the context of financial instruments.	**IQ3: Test of dilution** This is a comprehensive question to enable a firm grasp of the dilutive/ antidilutive distinction,

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
		convertibles on EPS?		
6	**Diluted EPS: options** Options are another reason for dilution. Options are dilutive when they are 'in the money'.	**Approach** The key method to take away is: Calculate the number of shares issued at market price. • Find the number of shares issued at nil consideration (the dilutive shares). • Add the dilutive shares to the number of shares under basic EPS. **Stop and think** What is the impact of options on EPS?	Next to convertibles, options are the most common way that the complications of IAS 33 will be tested.	**IQ4: Diluted earnings per share** This is a crucial question as options are new to Advanced Level.
7	**Diluted EPS: contingently issuable shares** These arise in a business combination, where consideration takes the form of shares which will only be issued if certain targets are met in the future. They are also issued to senior staff as a reward for meeting certain targets.	**Approach** Key points to remember: • Do not include the shares in basic EPS unless and until issued. • Include in DEPS only if the conditions have been met. • Include from the beginning of the period or the date of the agreement if later. **Stop and think** What is the impact of contingently issuable shares on EPS?	These are usually tested in the context of performance-based options.	N/A

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
8	**Retrospective adjustments, presentation and disclosure** Additional EPS figures are often reported by entities based on what they consider to be sustainable earnings. These are intended to provide a more realistic measure of future performance.	**Approach** Note how IAS 33 interacts with IAS 8 in requiring adjustments adjusted for the effects of errors and those resulting from changes in accounting policies accounted for retrospectively. **Stop and think** Why are additional EPS measures often disclosed?	This topic is most likely to be tested by requiring DEPS for prior periods to be adjusted.	N/A

Once you have worked through this guidance you are ready to attempt the further question practice included at the end of this chapter.

1 EPS: overview of material covered in earlier studies

Section overview

This section reviews the material on basic and diluted earnings per share covered at Professional Level.

1.1 Scope

IAS 33, *Earnings per Share* applies to entities whose ordinary shares are publicly traded or are in the process of being issued in public markets.

1.2 Basic earnings per share (EPS)

- Basic earnings per share (EPS) is calculated as:

  (Profit/(loss) attributable to ordinary equity holders of the parent) ÷ (Weighted average number of ordinary shares outstanding during the period)
- **Profit attributable to the ordinary equity holders** is based on profit after tax after the deduction of preference dividends and other financing costs in relation to preference shares classified as equity under IAS 32. Whether an adjustment is needed depends on the type of preference share:

Redeemable preference shares	No adjustment is required as these shares are classified as liabilities and the finance charge relating to them will already have been charged to profit or loss as part of finance charges.
Irredeemable preference shares	These shares are classified as equity and the dividend relating to them is disclosed in the statement of changes in equity. This dividend must be deducted from profit for the year to arrive at profit attributable to the ordinary shareholders.

- The **weighted average number of shares** should be adjusted for changes in the number of shares without a corresponding change in resources, for example a bonus issue, by assuming that the new number of shares had always been in issue.

  Shares should generally be included in the weighted average number of shares from the date the consideration for their issue is receivable.
- An entity is required to calculate and present a basic EPS amount based on the profit or loss for the period attributable to the ordinary equity holders of the parent entity. If results from 'continuing operations' and 'discontinued operations' are reported separately, EPS on these results should also be separately reported.

1.3 Diluted earnings per share

- A diluted EPS figure should also be reported by an entity. A dilution is a reduction in the EPS figure (or increase in a loss per share) that will result from the issue of more equity shares on the conversion of convertible instruments already issued.
- For the purpose of calculating diluted earnings per share, an entity shall adjust profit or loss attributable to ordinary equity holders of the parent entity, and the weighted average number of shares outstanding for the effects of all dilutive potential ordinary shares.

1.4 Presentation

- Basic and diluted EPS figures (and from continuing operations if reported separately) should be presented on the face of the statement of comprehensive income with equal prominence.
- Where changes in ordinary shares occur during the accounting period, an amendment is necessary to the number of shares used in the EPS calculations. In some situations, the EPS in prior periods will also have to be adjusted.
- Treasury shares are accounted for as a deduction from shareholders' funds. Since such shares are no longer available in the market, they are excluded from the weighted average number of ordinary shares for the purpose of calculating EPS.

Interactive question 1: Adjustment for preference shares

A company has issued £100,000 4% redeemable non-cumulative preference shares. Should the dividend be subtracted from the reported profit after tax figure for the calculation of EPS?

See **Answer** at the end of this chapter.

1.4.1 Auditing issues

Clearly, the main auditing issues with EPS can be summarised as follows:

- Ensuring that the stated EPS figures comply with IAS 33 (for example, obtaining a breakdown of the amounts and tracing each of them back to their source)
- Ensuring that both basic and diluted EPS figures are presented (so obtaining a copy of the draft financial statements to vouch this)
- Addressing any other disclosure issues as required (for example, treasury shares) by reference to the draft financial statements

2 Basic EPS: weighted average number of shares

Section overview

This section deals with certain adjustments to the number of shares used for the calculation of basic earnings per share.

IAS 33 requires that a time-weighted average number of shares should be used in the denominator of the earnings per share calculation. The basic idea of how to calculate such a weighted average has been covered at Professional Level. In this section we deal with issues relating to the treatment of share repurchases, partly paid shares, bonus and rights issues and the impact of consolidation.

2.1 Calculation of the weighted average number of shares

The use of the weighted average number of ordinary shares outstanding during the period reflects the possibility that the amount of shareholders' capital varied during the period.

The weighted average number of ordinary shares outstanding during the period is the number of ordinary shares outstanding at the beginning of the period, adjusted by the number of ordinary shares bought back or issued during the period multiplied by a time-weighting factor.

2.2 Time weights determination

Shares are usually included in the weighted average number of shares from the date consideration is receivable (which is generally the date of their issue), for example:

- Ordinary shares issued in exchange for cash are included when cash is receivable.
- Ordinary shares issued on the voluntary reinvestment of dividends on ordinary or preference shares are included when dividends are reinvested.
- Ordinary shares issued as a result of the conversion of a debt instrument to ordinary shares are included from the date that interest ceases to accrue.
- Ordinary shares issued in place of interest or principal on other financial instruments are included from the date that interest ceases to accrue.
- Ordinary shares issued in exchange for the settlement of a liability of the entity are included from the settlement date.
- Ordinary shares issued as consideration for the acquisition of an asset other than cash are included as of the date on which the acquisition is recognised.
- Ordinary shares issued for the rendering of services to the entity are included as the services are rendered.
- Ordinary shares issued as part of the cost of a business combination are included in the weighted average number of shares from the acquisition date. This is because the acquirer incorporates into its results the acquiree's profits and losses from that date.
- Ordinary shares that will be issued upon the conversion of a mandatorily convertible instrument are included in the calculation of basic earnings per share from the date the contract is entered into.
- Contingently issuable shares are included in the calculation of basic earnings per share only from the date when all necessary conditions for their issue are satisfied. Shares that are issuable solely after the passage of time are not contingently issuable shares, because the passage of time is a certainty.
- Outstanding ordinary shares that are contingently returnable (ie, subject to recall) are excluded from the calculation of basic earnings per share until the date the shares are no longer subject to recall.

Worked example: Weighted average number of ordinary shares

The following information is provided for an entity.

		Shares issued	Treasury shares	Shares outstanding
1 Jan 20X1	Balance at beginning of year	2,000	300	1,700
31 May 20X1	Issue of new shares for cash	800	–	2,500
1 Dec 20X1	Purchase of treasury shares for cash	–	250	2,250
31 Dec 20X1	Balance at year end	2,800	550	2,250

Requirement

Calculate the weighted average number of shares in issue during the year.

Solution

The calculation can be performed on a cumulative basis:

			Weighted average
1 Jan X1 – 30 May X1	1,700	× 5/12	708
Share issue	800		
31 May X1 – 30 Nov X1	2,500	× 6/12	1,250
Share purchase	(250)		
1 Dec X1 – 31 Dec X1	2,250	× 1/12	188
			2,146

or alternatively each issue or recall treated separately:

			Weighted average
1 Jan X1 – 31 Dec X1	1,700	12/12	1,700
31 May X1 – 31 Dec X1	800	7/12	467
1 Dec X1 – 31 Dec X1	(250)	1/12	(21)
			2,146

2.3 Partly paid shares

Where ordinary shares are issued but not fully paid, they are treated in the calculation of basic earnings per share as a fraction of an ordinary share to the extent that they were entitled to participate in dividends during the period relative to a fully paid ordinary share.

To the extent that partly paid shares are not entitled to participate in dividends during the period they are treated as the equivalent of warrants or options in the calculation of diluted earnings per share. The unpaid balance is assumed to represent proceeds used to purchase ordinary shares. The number of shares included in diluted earnings per share is the difference between the number of shares subscribed and the number of shares assumed to be purchased.

Worked example: Partly paid shares

At 1 January 20X5 an entity had 900 ordinary shares in issue. It issued 600 new shares at 1 September 20X5, at a subscription price of £4 per share. At the date of issue each shareholder paid
£2. The balance of £2 per share will be paid during 20X6. Each part-paid share will be entitled to dividends in proportion to the percentage of the issue price paid up on the share. The entity has a year end of 31 December.

Requirement

Calculate the weighted average number of shares for the year ended 31 December 20X5.

Solution

The new shares issued should be included in the calculation of the weighted average number of shares in proportion to the percentage of the issue price received from the shareholding during the period.

	Shares issued	Fraction of period	Weighted average shares
1 January 20X5 – 31 August 20X5	900	8/12	600
Issue of new shares for cash, part paid (2/4 × 600)	300		
1 September 20X5 – 31 December 20X5	1,200	4/12	400
Weighted average number of shares			1,000

2.4 The impact of bonus issues and share consolidations on the number of shares

The weighted average number of ordinary shares outstanding during the period must be adjusted for events that have changed the number of ordinary shares outstanding without a corresponding change in resources. These include the following:

- Bonus issues (capitalisation issues)
- Share consolidation

2.4.1 Bonus issue

In a bonus or capitalisation issue, or a share split, ordinary shares are issued to existing shareholders for no additional consideration. Therefore, the number of ordinary shares outstanding is increased without a corresponding increase in resources.

The number of ordinary shares outstanding **before** the event is adjusted for the proportionate change in the number of ordinary shares outstanding as if the event had occurred at the beginning of the earliest period presented. For example, on a 2 for 1 bonus issue, the number of ordinary shares outstanding before the issue is multiplied by three to obtain the new total number of ordinary shares, or by two to obtain the number of additional ordinary shares.

Bonus issue after the reporting date

Where a bonus issue takes place after the reporting date but before the financial statements are authorised for issue, the number of shares in the EPS calculation is adjusted for the current and prior periods as though the bonus issue took place during the current year.

Worked example: Bonus issue

The following information is given for an entity.

Profit attributable to ordinary equity holders for y/e 30 September 20X6	£300
Profit attributable to ordinary equity holders for y/e 30 September 20X7	£900
Ordinary shares outstanding until 30 September 20X7	200

Bonus issue 1 October 20X7 – two ordinary shares for each ordinary share outstanding at 30 September 20X7

Requirement

Calculate the basic earnings per share for 20X6 and 20X7.

Solution

The bonus issue arose in the period after the reporting date. It should be treated as if the bonus issue arose during 20X7, and EPS calculated accordingly:

Additional shares issued 200 × 2 = 400 Basic EPS 20X7

£900 ÷ (200 + 400) = £1.50

Basic EPS 20X6

£300 ÷ (200 + 400) = £0.50

2.4.2 Share consolidation

A consolidation of ordinary shares generally reduces the number of ordinary shares outstanding without a corresponding reduction in resources.

Sometimes, however, shares are repurchased at fair value, and in this instance, there is a corresponding reduction in resources. An example is a share consolidation combined with a special dividend. In this case, the weighted average number of ordinary shares outstanding for the period is adjusted for the reduction in the number of ordinary shares from the date the special dividend is recognised.

Worked example: Share consolidation

At the start of its financial year ended 31 December 20X5, an entity had 10 million ordinary shares in issue. On 30 April 20X5 it issued three million shares in consideration for the acquisition of a majority holding in another entity. On 31 August 20X5 it went through a share reconstruction by consolidating the shares in issue, on the basis of one new share for two old shares.

Requirement

Calculate the weighted number of shares in issue for the year to 31 December 20X5.

Solution

The three million new shares issued at the time of the acquisition should be weighted from the date of issue, but the consolidation should be related back to the start of the financial year (and to the start of any previous years presented as comparative figures).

The calculation of the weighted number of shares in issue is as follows:

Number			**Weighting**
At 1 January 20X5			10,000,000
Effect of consolidation is to halve the number of shares (since one new share was issued for every two old			
Adjusted number			
shares held)	(5,000,000)		
	5,000,000	12/12	5,000,000
30 April 20X5 issue	3,000,000		
Effect of consolidation is to halve the number of shares	(1,500,000)		
	1,500,000	8/12	1,000,000
Weighted average shares in issue			6,000,000

CHAPTER 11

Worked example: Special dividend and share consolidation

A company has issued 20,000 shares with a nominal value of 20p each. At the beginning of 20X7 it considers whether to launch a share repurchase of 2,000 shares at the current market price of £2 per share, or pay a special dividend of 20p per share to be followed by a share consolidation of 9 new shares for 10 old shares. The profit after tax for 20X6 and 20X7 is expected to be £4,000 for each year. Interest rates stand at 5% and the company tax rate is 20%.

Requirement

Calculate the basic EPS for the two alternatives.

Solution Basic EPS

(1) **Share repurchase at fair value**

	20X7	**20X6**
	£	**£**
Profit for the year	4,000	4,000
Loss of interest as cash		
paid out £4,000 × 0.05 × 0.80*	(160)	
Earnings	3,840	4,000
Number of shares outstanding	18,000	20,000
Earnings per share	21.33p	20.00p

(2) **Special dividend followed by share consolidation**

	20X7	**20X6**
	£	**£**
Profit for the year	4,000	4,000
Loss of interest on cash paid out as dividend		
£4,000 × 0.05 × 0.80*	(160)	
Earnings	3,840	4,000

The effect of share consolidation is to leave the total nominal value of outstanding shares the same, but to reduce the number of shares from 20,000 to 18,000, and raising the market price of a share from £2 to £2.22.

	20X7	**20X6**
Number of shares	18,000	20,000
Earnings per share	21.33p	20.00p

No adjustment to prior year's EPS is made for the share consolidation.

* 0.80 = (1 – tax rate)

2.5 Rights issue

A rights issue is an issue of shares for cash to the existing ordinary equity holders in proportion to their current shareholdings, at a discount to the current market price.

Because the issue price is below the market price, a rights issue is in effect a combination of **an issue at fair value and a bonus issue.**

In order to calculate the weighted average number of shares when there has been a rights issue, an adjustment factor is required:

Adjustment factor = Pre-rights issue price of shares ÷ Theoretical ex-rights price (TERP)

The TERP is the theoretical price at which the shares would trade after the rights issue and takes into account the diluting effect of the bonus element in the rights issue. It is calculated as:

TERP = (Total market value of original shares pre-rights issue + Proceeds of rights issue) ÷ Number of shares post rights issue

The adjustment factor is used to increase the number of shares in issue **before** the rights issue for the bonus element.

Where the rights are to be publicly traded separately from the shares before the exercise date, fair value for the purposes of this calculation is established at the close of the last day on which the shares are traded together with the rights.

Worked example: Rights issue

The following information is provided for an entity which is making a rights issue.

	20X4	**20X5**	**20X6**
Profit attributable to ordinary equity holders of the parent entity	£1,100	£1,500	£1,800

Shares outstanding before rights issue: 500 shares

Rights issue: One new share for each five outstanding shares (100 new shares total) Exercise

price: £5.00

Date of rights issue: 1 January 20X5

Last date to exercise rights: 1 March 20X5

Market price of one ordinary share immediately before exercise on 1 March 20X5: £11.00

Reporting date 31 December

Requirement

Calculate the theoretical ex-rights value per share and the basic EPS for each of the years 20X4, 20X5 and 20X6.

Solution

Calculation of theoretical ex-rights value per share

	No.	**Price**	**Total**
Pre-rights issue holding	5	£11	£55
Rights share	1	£5	£5
	6		£60

Therefore TERP = £60/6 = £10

(The TERP may also be calculated on the basis of all shares in issue ie, £6,000/600 shares.)

Calculation of adjustment factor

Adjustment factor = Fair value share before exercise of rights ÷ Theoretical ex-rights value per share

CHAPTER 11

Calculation of basic earnings per share 20X4

20X4 basic EPS as originally reported: £1,100 ÷ 500 shares =	£2.20
20X4 basic EPS restated for rights issue in 20X5 accounts: £1,000 ÷ (500 shares) × (adjustment factor) = £2.00	

Alternatively the restated EPS may be calculated by applying the reciprocal of the adjustment factor to the basic EPS as originally reported:

£2.20 × 10/11 = £2.00

20X5

Weighted average number of shares:

1 January – 28 February	500 × 11/10	× 2/12	92	
Rights issue	100			
1 March – 31 December	600	× 10/12	500	592

Basic EPS including effects of rights issue: £1,500 ÷ 592 shares = £2.53

20X6

Basic EPS: £1,800 ÷ 600 shares = £3.00

Worked example: Cash and rights issue

An entity had 14 million ordinary shares in issue on 1 January 20X4 and 20X5. In its financial year ended 31 December 20X5 it issued further shares, as follows:

- On 1 April 20X5, 4 million shares in consideration for the majority holding in another entity.
- On 1 July 20X5 a rights issue of 1 for 6 at £15 when the market price of the existing shares was £20. There were 18 million shares in issue at this date, another 3 million shares were therefore issued.

A profit of £17 million attributable to the ordinary equity holders was reported for 20X5 and £14 million for 20X4.

Requirement

Calculate the earnings per share for 20X5 and restate the comparative for 20X4.

Solution

As the shares issued on the acquisition were issued at full fair value, a time apportionment adjustment over the period they are in issue is required.

The rights issue shares require a time apportionment adjustment and an adjustment for the bonus element in the rights. The latter adjustment should be applied to the shares issued on 1 April as well as to those issued earlier.

To adjust for the bonus element the theoretical ex-rights fair value per share is required:

Computation of theoretical ex-rights price (TERP):

	No.	Price	Total
Pre-rights issue holding	6	£20	£120
Rights share	1	£15	£15
	7		£135

Therefore TERP = £135/7 = £19.29

The adjustment factor is therefore £20/£19.29

20X4 and earlier EPS figures would be adjusted by dividing the corresponding earnings figure by 1.037.

The weighted number of shares in issue in 20X5 is calculated as:

	Number	Weighting	Adjusted number
1 January to 31 March	14,000,000 × 20/19.29	3/12	3,628,823
Issue 1 April	4,000,000		
1 April to 30 June	18,000,000 × 20/19.29	3/12	4,665,630
Rights issue 1 July	3,000,000		
1 July to 31 December	21,000,000	6/12	10,500,000
Weighted average shares in issue			18,794,453

20X5 EPS:

£17m/18,794,453 shares = £0.90

20X4 restatement – original EPS: £14m ÷ 14m shares = £1.00

£1.00 × 19.29/20.00 = £0.96

3 Basic EPS: profits attributable to ordinary equity holders

Section overview

In this section we discuss the adjustments that are required to earnings as a result of preference shares, in order to calculate profits attributable to ordinary shareholders (equity holders).

As we have seen in earlier studies, for the purpose of calculating basic earnings per share, we must calculate the amounts attributable to ordinary equity holders of the parent entity in respect of profit or loss.

This is done in two steps:

- First the profit or loss which includes all items of income and expense that are recognised in a period, including tax expense, dividends on preference shares classified as liabilities or non-controlling interest is calculated according to IAS 1, *Presentation of Financial Statements*.

- In the second step the calculated profit or loss is adjusted for the after-tax amounts of preference dividends, differences arising on the settlement of preference shares, and other similar effects of preference shares classified as **equity** under IAS 32, *Financial Instruments: Presentation*.

3.1 Adjusting earnings for the impact of preference shares

Where an entity has preference shares in issue depending on their terms these will be classified under IAS 32 as either:

- **financial liabilities**; or
- **equity.**

3.1.1 Preference shares classified as equity

Any dividends and other appropriations (for example, amortised premium or discount) is debited directly to equity, in the statement of changes in equity. Therefore an adjustment is required to deduct these amounts from the profit for the period in order to derive the profit attributable to ordinary shareholders (equity holders).

3.1.2 Preference shares classified as liabilities

Any dividends or other appropriations are treated as finance costs in arriving at profit for the period and no adjustment is required.

In both the above cases the treatment is the same, as in both cases the amounts are deducted from profit attributable to ordinary shareholders. In the latter case the deduction will already have been made in arriving at reported profit and loss, however in the former case an adjustment to reported profits is required.

3.1.3 Cumulative preference shares

Where preference shares are **cumulative**, the dividends for the period need to be taken into account irrespective of whether these have been declared or not.

3.1.4 Non-cumulative preference shares

For non-cumulative preference dividends only the amount of dividend declared for the period should be deducted in arriving at profit or loss attributed to ordinary equity holders.

Interactive question 2: Redeemable preference shares

Turaco is a company listed on a recognised stock exchange. Given below is an extract from its statement of comprehensive income for the year ended 31 December 20X6.

	£
Profit before tax	500,000
Tax	150,000
Profit after tax	350,000

The company paid an ordinary dividend of £20,000 and a dividend on its redeemable preference shares of £70,000.

The company had £100,000 of £0.50 ordinary shares in issue throughout the year and authorised share capital of 1,000,000 ordinary shares.

Requirement

What is the basic earnings per share figure for the year according to IAS 33, *Earnings per Share*?

See **Answer** at the end of this chapter.

3.1.5 Other adjustments in respect of preference shares Increasing rate preference shares

These are preference shares that provide for a low initial dividend to compensate an entity for selling the preference shares at a discount, or an above-market dividend in later periods to compensate investors for purchasing preference shares at a premium.

Under IAS 32, *Financial Instruments: Presentation* and IFRS 9, *Financial Instruments* any original issue discount or premium on increasing rate preference shares is amortised using the effective interest method and treated as a preference dividend for the purposes of calculating earnings per share.

In addition, there may be other elements amortised such as transaction costs.

All these elements should be deducted in arriving at the earnings attributed to ordinary equity holders.

Worked example: Increasing rate preference shares

Dennison Co issued non-convertible, non-redeemable class A cumulative preference shares of £100 par value on 1 January 20X1. The class A preference shares are entitled to a cumulative annual dividend of £7 per share starting in 20X4.

At the time of issue, the market rate dividend yield on the class A preference shares was 7% a year. Thus, Dennison Co could have expected to receive proceeds of approximately £100 per class A preference share if the dividend rate of £7 per share had been in effect at the date of issue.

There was, however, to be no dividend paid for the first three years after issue. In consideration of these dividend payment terms, the class A preference shares were issued at £81.63 per share ie, at a discount of £18.37 per share. The issue price can be calculated by taking the present value of £100, discounted at 7% over a three-year period.

Requirement

Calculate the imputed dividends attributable to preference shares that need to be deducted from earnings to determine the profit or loss attributable to ordinary equity holders.

Solution

Because the shares are classified as equity, the original issue discount is amortised to retained earnings using the effective interest method and treated as a preference dividend for earnings per share purposes. To calculate basic earnings per share, the following imputed dividend per class A preference share is deducted to determine the profit or loss attributable to ordinary equity holders of the parent entity.

Year	Carrying amount of class A preference shares 1 Jan £	Imputed dividend £	Carrying amount of class A preference shares 31 Dec £	Dividend paid £
20X1	81.63	5.71	87.34	–
20X2	87.34	6.12	93.46	–
20X3	93.46	6.54	100.00	–
Thereafter	100.00	7.00	107.00	(7.00)

CHAPTER 11

Convertible preference shares

An entity may achieve early conversion of convertible preference shares by improving the original conversion terms or paying additional consideration.

- Where this is the case, then the excess amount transferred as a result of the improvement of conversion terms is treated as a return to the preference shareholders and so should be deducted in arriving at earnings attributable to ordinary equity holders.

Deduction	=	Fair value of ordinary shares issued/consideration paid	–	Fair value of ordinary shares issuable under original terms

Worked example: Cumulative convertible preference shares

An entity issued £100,000 2% cumulative convertible preference shares in 20X4 and the shares were due to be converted in the current year, 20X6.

The convertible shares were converted at the beginning of 20X6 and no dividend was accrued in respect of the year, although the previous year's dividend was paid immediately before conversion. The terms of conversion were also amended and the revised terms entitled the preference shareholders to a total additional 100 ordinary shares on conversion with a fair value of £300.

Requirement

If the profit attributable to ordinary equity holders for the year is £150,000 what adjustments need to be made for the purpose of calculating EPS in 20X6?

Solution

The excess of the fair value of additional ordinary shares issued on conversion of the convertible preference shares over fair values of the ordinary shares to which they would have been entitled under the original conversion terms is deducted from profit as it is an additional return to the convertible preference shareholders.

	£
Profits attributable to the ordinary equity holders	150,000
Fair value of additional ordinary shares issued on conversion of convertible preference shares	(300)
	149,700

There is no adjustment in respect of the preference shares as no dividend accrual was made in respect of the year. The payment of the previous year's cumulative dividend is ignored for EPS purposes as it will have been adjusted for in the prior year.

Repurchase of preference shares

- Where the fair value of consideration paid to preference shareholders exceeds the carrying value of the preference shares repurchased, the excess is a return to the preference shareholders and must be deducted in calculating profits attributable to ordinary equity holders.
- Where the carrying value of preference shares repurchased exceeds the fair value of consideration paid, the excess is added in calculating profit attributable to ordinary equity holders.

In respect of preference shares that are classified as liabilities, the above adjustments, where these are relevant, would have already been made in arriving at the profit or loss for the period.

Worked example: Repurchase of preference shares

An entity has issued £100,000 8% non-redeemable non-cumulative preference shares. Half way through the year, the entity repurchased half of the preference shares at a discount of £1,000. No dividends were paid on these shares in respect of the amounts repurchased or outstanding at the end of the year.

Requirement

If the profit attributable to ordinary equity holders for the year is £150,000, what adjustments should be made for the purpose of calculating EPS?

Solution Adjustments

	£
Profit for the year attributed to ordinary equity holders	150,000
Plus discount on repurchasing of preference shares	1,000
	151,000

The discount on repurchase of the preference shares has been credited to equity and it must therefore be adjusted against profit.

Had there been a premium payable on repurchase, the loss on repurchase would have been subtracted from profit.

No accrual for the dividend on the 8% preference shares is required as these are non-cumulative. Had a dividend been paid for the year it would have been deducted from profit for the purpose of calculating basic EPS as the shares are treated as equity and the dividend would have been charged to equity in the financial statements.

3.2 Participating securities and two-class ordinary shares

The equity of some entities includes:

- instruments that participate in dividends with ordinary shares according to a predetermined formula (for example, 2 for 1) with an upper limit on the extent of participation (for example, up to, but not beyond, a specified amount per share); or
- a class of ordinary shares with a different dividend rate from that of another class of ordinary shares.

Profit or loss for the period is allocated to the different classes of shares and participating equity instruments in accordance with their dividend rights or other rights to participate in undistributed earnings.

To calculate basic earnings per share:

- Profit or loss attributable to ordinary equity holders of the parent entity is adjusted as previously discussed.
- The remaining profit or loss is allocated to ordinary shares and participating equity instruments to the extent that each instrument shares in earnings as if all of the profit or loss for the period had been distributed. The total profit or loss allocated to each class of equity instrument is determined by adding together the amount allocated for dividends and the amount allocated for a participation feature.

- The total amount of profit or loss allocated to each class of equity instrument is divided by the number of outstanding instruments to which the earnings are allocated to determine the earnings per share for the instrument.

Worked example: Participating equity instruments

The following information is provided for an entity.

Profit attributable to equity holders of the parent entity	£100,000
Ordinary shares outstanding	10,000
Non-convertible preference shares	6,000
Non-cumulative annual dividend on preference shares	
(before any dividend is paid on ordinary shares)	£5.50 per share

After ordinary shares have been paid at a dividend of £2.10 per share, the preference shares participate in any additional dividends on a 20:80 ratio with ordinary shares.

Dividends on preference shares paid – £33,000 (£5.50 per share × 6,000 shares)

Dividends on ordinary shares paid – £21,000 (£2.10 per share × 10,000 shares)

Requirement

Calculate the earnings attributable to ordinary shares.

Solution

Basic earnings per share is calculated as follows

	£	£
Profit attributable to equity holders of the parent entity 100,000 Less dividends paid:		
Preference		33,000
Ordinary		21,000
		(54,000)
Undistributed earnings		46,000

Allocation of undistributed earnings

Let A be the allocation of undistributed earnings per ordinary share and B the allocation per preference share. That is:

(A × 10,000) + (B × 6,000) = £46,000

As B's entitlement is one quarter that of A's, we can eliminate B from the equation as follows:

(A × 10,000) + (1/4 × A × 6,000) = £46,000

10,000A + 1,500A = £46,000

11,500A = £46,000 A = £46,000/11,500 A = £4.00

Therefore B = £1.00

Basic per share amounts Basic per share amounts

	Per preference share	Per ordinary share
Distributed earnings	£5.50	£2.10
Undistributed earnings	£1.00	£4.00
Totals	£6.50	£6.10

Professional skills focus: Assimilating and using information

As we have seen, although the basic EPS calculation is straightforward, a great deal of information needs to be assimilated and understood, both regarding earnings (adjustments for preference shares) and weighted average number of shares (changes in share capital). The two interact.

4 Diluted earnings per share

Section overview

This section deals with the adjustments required to earnings in order to take into account the dilutive impact of potential ordinary shares.

The objective of diluted earnings per share is consistent with that of basic earnings per share; that is, to provide a measure of the interest of each ordinary share in the performance of an entity taking into account **dilutive** potential ordinary shares outstanding during the period.

4.1 Potential ordinary shares

Potential ordinary shares are financial instruments or other contracts that may entitle their holders to ordinary shares. Potential ordinary shares are as follows:

- Various financial liabilities or equity instruments, including preference shares that are convertible into ordinary shares
- Options
- Warrants
- Shares that would be issued on satisfaction of certain conditions that result from contractual arrangements, such as the purchase of a business or other assets

The conversion of potential ordinary shares will lead in the future to an increase in the weighted average number of ordinary shares outstanding by the weighted average number of additional ordinary shares that would have been outstanding assuming the conversion of all dilutive potential ordinary shares.

Conversion may also lead to consequential changes in income or expenses. For example, the reduction of interest expense related to convertible debt and the resulting increase in profit or reduction in loss may lead to an increase in the expense related to a non-discretionary employee profit-sharing plan.

For the purpose of calculating diluted earnings per share, profit or loss attributable to ordinary equity holders of the parent entity is adjusted for any such consequential changes in income or expense.

4.2 Dilutive and antidilutive potential ordinary shares

Potential ordinary shares are **dilutive** when their conversion to ordinary shares would decrease earnings per share or increase loss per share from continuing operations.

Potential ordinary shares are **antidilutive** when their conversion to ordinary shares would increase earnings per share or decrease loss per share from continuing operations. **Antidilution** is therefore the situation where the 'diluted' EPS is greater than the basic EPS (or where there is a lower loss per share). IAS 33 defines antidilution as follows.

Definition

Antidilution: An increase in earnings per share or a reduction in loss per share resulting from the assumption that convertible instruments are converted, that options or warrants are exercised, or that ordinary shares are issued upon the satisfaction of specified conditions.

In computing diluted EPS only potential ordinary shares that are dilutive are considered in the calculations. The calculation ignores the effects of potential ordinary shares that would have an antidilutive effect on earnings per share.

Determining whether potential ordinary shares are dilutive or antidilutive

In determining whether potential ordinary shares are dilutive or antidilutive, **each issue or series of potential ordinary shares is considered separately rather than in aggregate.**

A separate EPS calculation is performed for each potential share issue.

(a) Those individual EPS which exceed the entity's basic EPS are disregarded as they are antidilutive.

(b) Those individual EPS which are less than the entity's basic EPS are dilutive and are ranked from most to least dilutive. Options and warrants are generally included first because they do not affect the numerator of the calculation. These dilutive factors are added one by one into the DEPS calculation in order to identify the maximum dilution.

The calculation showing each issue or series of potential ordinary shares being considered separately is shown in the worked example Convertible loan stock 2.

4.3 Computation of diluted earnings

For the purpose of calculating diluted earnings per share, the profit or loss attributable to ordinary equity holders of the parent entity should be adjusted for the after-tax effect of:

- any dividends or other items related to dilutive potential ordinary shares deducted in arriving at profit or loss attributable to ordinary equity holders;
- any interest recognised in the period related to dilutive potential ordinary shares; and
- any other changes in income or expense that would result from the conversion of the dilutive potential ordinary shares.

After the potential ordinary shares are converted into ordinary shares, the dividends, interest and any other expenses associated with the potential ordinary shares will no longer arise. Instead, the new ordinary shares are entitled to participate in profit or loss attributable to ordinary equity holders of the parent entity. The expenses associated with potential ordinary shares include transaction costs and discounts accounted for in accordance with the effective interest method.

4.4 Calculation of the number of shares

In the calculation of diluted earnings per share, the number of ordinary shares in the denominator is the weighted average number of ordinary shares calculated for the basic earnings per share plus the weighted average number of ordinary shares that would be issued on the conversion of all the dilutive potential ordinary shares into ordinary shares. That is:

Number of shares in diluted earnings per share	=	Number of shares in basic earnings per share	+	Dilutive potential ordinary shares

- Dilutive potential ordinary shares shall be deemed to have been converted into ordinary shares at the **beginning of the period** or, if later, the **date of the issue** of the potential ordinary shares (ie, where the convertible instruments or options are issued during the current period).
- Potential ordinary shares are weighted for the period they are outstanding.
- Potential ordinary shares that are cancelled or allowed to lapse during the period are included in the calculation of diluted earnings per share only for the portion of the period during which they are outstanding.
- Potential ordinary shares that are converted into ordinary shares during the period are included in the calculation of diluted earnings per share from the beginning of the period to the date of conversion. From the date of conversion, the resulting ordinary shares are included in both basic and diluted earnings per share.
- The number of ordinary shares that would be issued on conversion of dilutive potential ordinary shares is determined from the terms of the potential ordinary shares. When more than one basis of conversion exists, the calculation assumes the **most advantageous** conversion rate or exercise price from the standpoint of the holder of the potential ordinary shares.

5 Diluted earnings per share: convertible instruments

Section overview

This section deals with the impact of convertible instruments on the diluted earnings per share.

5.1 Convertible instruments

Convertible instruments, such as convertible loan stock or convertible preference shares impact both the profit or loss attributed to ordinary equity holders, and the number of ordinary shares, on conversion.

Where this has a dilutive effect, the instrument should be taken into account when calculating diluted earnings per share (DEPS).

Indicators that convertible instruments are antidilutive

Convertible preference shares are antidilutive whenever the amount of the dividend on such shares declared in, or accumulated for, the current period per ordinary share obtainable on conversion exceeds basic earnings per share.

Similarly, convertible debt is antidilutive whenever its interest (net of tax and other changes in income or expense) per ordinary share obtainable on conversion exceeds basic earnings per share.

Worked example: Convertible loan stock 1

On 1 January 20X5 entity A had in issue:

- 24 million ordinary shares of £1 nominal value each; and
- £8 million of 8% convertible loan stock. These were issued on 1 January 20X5 and are convertible at any time from 1 January 20X8. The conversion terms are one ordinary share for each £2 nominal of loan stock.

The split accounting required for compound financial instruments per IAS 32 resulted in a liability element for the loan stock of £7 million and an effective interest rate of 10%.

After charging income tax at 20%, the entity reported profit attributable to the ordinary equity holders of £15 million for its year ended 31 December 20X5.

Requirement

Calculate the basic and diluted earnings per share for 20X5.

Solution Basic EPS
£15m/24m shares = £0.63

Diluted EPS

To calculate the diluted earnings per share we need to consider the impact on both earnings and number of shares.

Impact on earnings:	On conversion, after tax earnings attributed to ordinary shareholders should be increased by the reduction in the interest charge payable to loan holders. Taking tax into account, the interest saved will be: £7m × 0.1 × (1 – 0.2) = £0.56m Therefore diluted earnings = £15m + £0.56m = £15.56m
Impact on number of shares:	On conversion the number of ordinary shares will increase by £8m/2 = 4 million shares, raising the number of ordinary shares after conversion to 28 million ordinary shares.

Therefore DEPS = £15.56m/28 million shares = £0.56

Professional skills focus: Structuring problems and solutions

The approach to calculating diluted EPS requires skills at structuring the problem. First basic EPS needs to be calculated. Then the profit or loss attributable to ordinary equity holders of the parent entity needs to be adjusted for dividends, interest or relating to the dilutive potential of any other changes in income or expense that would result from the conversion of the dilutive potential ordinary shares. Then the basic EPS denominator needs to be adjusted for the weighted average number of ordinary shares that would be issued on the conversion of all the dilutive potential ordinary shares into ordinary shares.

Interactive question 3: Test of dilution

The issued share capital of Entity A at 31 December 20X5 was 2,000,000 ordinary shares of £1 each. On 1 January 20X6, Entity A issued £1,500,000 of 7% convertible loan stock for cash at par. (Ignore the requirement to split the value of a compound financial instrument.) Each £100 nominal of the loan stock may be converted into 140 ordinary shares at any time after 1 January 20X9.

The profit before interest and taxation for the year ended 31 December 20X6 amounted to £1,050,000 and arose exclusively from continuing operations. The rate of tax is 30%.

Requirement

Test whether the potential shares are dilutive.

See **Answer** at the end of this chapter.

Worked example: Convertible loan stock 2

On 1 January 20X5 Entity A had in issue:

(1) 20 million ordinary shares;

(2) £11 million of 6.5% convertible loan stock, convertible at any time from 1 January 20X7. The conversion terms are one ordinary share for each £2 nominal of loan stock, the 1 January carrying amount of the liability component is £10 million and the effective interest rate is 9%;

(3) £9 million of 6.75% convertible loan stock, convertible at any time from 1 January 20X8. The conversion terms are one ordinary share for each £2 nominal of loan stock, the 1 January carrying amount of the liability component is £8 million and the effective interest rate is 8%; and

(4) £12.6 million of 9% convertible loan stock, convertible at any time from 1 January 20X9. The conversion terms are one ordinary share for each £6 nominal of loan stock, the 1 January carrying amount of the liability component is £12 million and the effective interest rate is 12%.

The entity reported profit attributable to the ordinary equity holders of £4 million for its year ended 31 December 20X5.

Requirement

Ignoring taxes, calculate the diluted earnings per share.

Solution

The incremental earnings per share for each type of potential ordinary shares is shown below.

	Increase in earnings (interest saved) £	Increase in number of shares	Earnings per additional share £
£11 million of 6.5% convertible loan stock			
£10m × 9% convertible loan stock	900,000		
1 ordinary share for £2 nominal of loan stock		5,500,000	0.16
£9 million of 6.75% convertible loan stock			
£8m × 8% convertible loan stock	640,000		
1 ordinary share for £2 nominal of loan stock		4,500,000	0.14
£12.6 million of 9% convertible loan stock			
£12m × 12% convertible loan stock	1,440,000		
1 ordinary share for £6 nominal of loan stock		2,100,000	0.69

The earnings per share can be calculated adjusting both the earnings and the number of shares for each type of potential shares, and the results are shown below. Each issue of potential ordinary shares is added to the calculation at a time, taking the most dilutive factor first.

	Earnings	Number of shares	Earnings per share
	£		£
Shares already in issue	4,000,000	20,000,000	0.20
Including 6.75% convertible loan stock	4,640,000	24,500,000	0.189
Including 6.5% convertible loan stock	5,540,000	30,000,000	0.185
Including 9% convertible loan stock	6,980,000	32,100,000	0.217

The diluted earnings per share will be £0.185. The 9% convertible loan stock is antidilutive since it increases earnings per share, and it will not be taken into account in calculating diluted earnings per share.

Professional skills focus: Assimilating and using information

The above example is a good illustration of the skill of assimilating information (the position at the start, the effect on both earnings and number of shares of each type of potential shares), as well as the skill of using this information by presenting each effect in a logical layout in order to arrive at the resulting diluted earnings per share figure.

5.2 Testing for dilution

In some cases some convertible preference shares are redeemed or converted in a period, and others remain outstanding.

Where this occurs, any excess consideration paid on redemption or conversion is attributed to those shares which have been redeemed or converted.

Outstanding convertible preference shares are therefore tested for dilution as normal and without regard to this excess.

6 Diluted EPS and options

Section overview

This section deals with the impact of options on diluted earnings per share.

Definition

Options and warrants: Financial instruments that give the holder the right to purchase ordinary shares.

6.1 Options, warrants and their equivalents

Options and warrants are dilutive when they would result in the issue of ordinary shares for less than the average market price of ordinary shares during the period (ie, when they are 'in the money').

To calculate diluted EPS where there are options or warrants, the potential ordinary shares at less than average market price are treated as consisting of two elements:

- A contract to issue some shares at **average market price**. These shares are assumed to be fairly priced and to be neither dilutive nor antidilutive. They are ignored in the calculation of diluted EPS.
- A contract to issue the remaining ordinary shares for **no consideration.** These shares are dilutive and are added to the number of ordinary shares outstanding in the calculation of diluted EPS.

Average market price of ordinary shares

- Theoretically every market transaction for an entity's ordinary shares could be included in the determination of the average market price. It is however adequate to use a simple average of weekly or monthly prices.
- Generally, closing market prices are adequate for calculating the average market price. When prices fluctuate widely, however, an average of the high and low prices usually produces a more representative price.
- The method used to calculate the average market price must be used consistently unless it is no longer representative because of changed conditions. For example, an entity that uses closing market prices to calculate the average market price for several years of relatively stable prices might change to an average of high and low prices if prices start fluctuating greatly and the closing market prices no longer produce a representative average price.

Interactive question 4: Diluted earnings per share

At 31 December 20X6, the issued share capital of Entity A consisted of 3,000,000 ordinary shares of 20p each. Entity A has granted options that give holders the right to subscribe for ordinary shares between 20X8 and 20X9 at 50p each. Options outstanding at 31 December 20X7 were 600,000.
There were no grants, exercises or lapses of options during the year. The profit after tax attributable to ordinary equity holders for the year ended 31 December 20X7 amounted to £900,000 arising from continuing operations. The average market price of one ordinary share during year 20X7 was
£1.50.

Requirement

Calculate the diluted earnings per share for 20X7.

See **Answer** at the end of this chapter.

6.2 Employee share options

The most common type of option that leads to earnings dilution is an employee share option granted by a company to its employees.

Employee share options give the right to the holder to acquire shares in the company at a price that is fixed when the options are issued.

Employee share options can normally be exercised after a certain time eg, once the employee has completed a period of service and within a certain period eg, over a period of five years after they become exercisable.

Employee share options that can be exercised are **vested** options, whereas options that cannot yet be exercised are **unvested** options.

Worked example: Vested options

The profit attributable to the ordinary equity holders of an entity for the year ended 31 December 20X5 was £30 million and the weighted average number of its ordinary shares in issue was 60 million. Its basic earnings per share was £0.50.

In addition, there was a weighted average of five million shares under options which had vested (ie, were able to be exercised). The exercise price for the options was £21 and the average market price per share over the year was £30.

Requirement

Calculate the diluted EPS.

Solution

The amount to be received on exercise is £21 × 5m = £105m

The number of shares issued at average market price is: £105m / £30 = 3.5m

The number of 'free' shares is: 5 million issued – 3.5 million issued at average market price = 1.5 million

Diluted earnings per share:

£30m/(60m + 1.5m) = £0.49

Where shares are **unvested**, the amount still to be recognised in profit or loss before the vesting date must be taken into account when calculating the number of 'free' shares.

Worked example: Unvested options

Assume the same information as in above example, except that:

- the options have not yet vested; and
- the amount to be recognised in relation to these options in the entity's profit or loss over future accounting periods up to date of vesting, as calculated according to IFRS 2, is £15 million.

Requirement

Calculate the diluted EPS.

Solution

The amount to be recognised in profit or loss is reduced to a per share amount: £15m/5m =

£3 This is added to the exercise price: £21 + £3 = £24

The amount to be received on exercise: £24 × 5m = £120m

The number of shares issued at average market price: £120m/£30 = 4m The number of 'free'

shares: 5m – 4m = 1m

Diluted earnings per share: £30m/(60m + 1m) = £0.49

7 Diluted EPS: contingently issuable shares

Section overview

This section deals with the impact of contingently issuable shares on the number of ordinary shares used in the calculation of diluted earnings per share.

7.1 Contingently issuable shares

The consideration for acquisitions of other entities may partly be in the form of shares which will only be issued if certain targets are met in the future. The additional consideration is contingent consideration and the additional shares are described as contingently issuable.

Contingently issuable shares may also arise where senior staff members are issued shares as a performance reward.

- Until the shares are issued (if indeed they ever are), they should not be taken into account when calculating basic EPS.
- They should be taken into account when calculating diluted EPS **if and only if** the conditions leading to their issue have been satisfied. For these purposes the end of the accounting period is treated as the end of the contingency period.
- Contingently issuable shares are included from the beginning of the period (or from the date of the contingent share agreement, if later).

Worked example: Contingently issuable shares

The profit attributable to the ordinary equity holders of an entity for the year ended 31 December 20X5 was £20 million and the weighted average number of its ordinary shares in issue was 16 million. Basic earnings per share was therefore £1.25.

Under an agreement relating to a business combination, two million additional shares were to be issued if the share price on 30 June 20X6 was £8 or above. On 31 December 20X5 the share price was £9. Assuming the end of the reporting period was the end of the contingency period, the condition would have been met.

Requirement

Determine the diluted EPS.

Solution

As the two million additional shares do not result in additional resources for the entity, they are brought into the diluted earnings per share calculation from the start of the 20X5 reporting period. The diluted earnings per share is therefore:

Diluted earnings per share = £20m/(16m + 2m) = £1.11

7.2 Conditions for issue

Contingently issuable shares are included within the calculation of diluted EPS where:

- the shares have not yet been issued
- the relevant performance criteria have been met

Future earnings

Achieving or maintaining a specified level of earnings for a particular period may be the condition for contingent issue.

In this case, if the effect is dilutive, the calculation of diluted EPS is based on the number of ordinary shares that would be issued if the amount of earnings at the end of the reporting period were the amount of earnings at the end of the contingency period.

Market price of shares

The number of ordinary shares contingently issuable may depend on the future market price of the ordinary shares.

In this case, if the effect is dilutive, the calculation of diluted EPS is based on the number of ordinary shares that would be issued if the market price at the end of the reporting period were the market price at the end of the contingency period.

If the condition is based on an average of market prices over a period of time that extends beyond the end of the reporting period, the average for the period of time that has lapsed is used.

Future earnings and market price of shares

The number of ordinary shares contingently issuable may depend on future earnings and future prices of the ordinary shares.

In such cases, the number of ordinary shares included in the diluted EPS calculation is based on both conditions (ie, earnings to date and the current market price at the end of the reporting period).

Contingently issuable ordinary shares are not included in the diluted earnings per share calculation unless both conditions are met

Other conditions

In other cases, the number of ordinary shares contingently issuable may depend on a condition other than earnings or market price (for example, the opening of a specific number of retail stores).

In this case, the contingently issuable ordinary shares are included in the calculation of diluted earnings per share according to the status at the end of the reporting period

Cumulative targets

Note that where performance criteria involve a cumulative target, no dilution is accounted for until the cumulative target has been met. For example, where the issue of shares is dependent upon average profits of £300,000 over four years, the cumulative target is £1,200,000. No dilution is accounted for until this cumulative target is met.

Worked example: Cumulative targets

A manufacturer has in issue 3,000,000 ordinary shares at 1 January 20X7. It agreed to issue 500,000 shares to its staff if factory output averages 100,000 units per annum over the period from 1 January 20X7 to 31 December 20X9. The shares are to be issued on 1 January 20Y0.

Results for the three periods are:

	Units produced	Profits
20X7	120,000	£780,000
20X8	99,000	£655,000
20X9	105,000	£745,000

Requirement

What are basic and diluted EPS in each of the years 20X7–20X9?

Solution

The cumulative target of 3 years × 100,000 units is not met in 20X7 and 20X8, therefore no dilution is accounted for.

In 20X9, the cumulative target is met as is the average target, therefore a diluted EPS is disclosed:

		Basic EPS		Diluted EPS
20X7	£780,000 ÷ 3,000,000 shares	£0.26		Not relevant
20X8	£655,000 ÷ 3,000,000 shares	£0.22		Not relevant
20X9	£745,000 ÷ 3,000,000 shares	£0.25	£745,000 ÷ 3,500,000 Shares	£0.21

7.3 Issue of contingently issuable shares

Where contingently issuable shares are issued at the end of a contingency period, they must be included within the calculation of basic EPS. Any outstanding contingently issuable shares are included in diluted EPS as discussed above.

Worked example: Contingently issuable shares

The profit attributable to the ordinary equity holders of an entity for the year ended 31 December 20X5 was £200 million and the number of its ordinary shares in issue at 1 January 20X5 was 80 million.

Under an agreement relating to a business combination, 12 million additional shares were to be issued each time the entity's products were ranked in the top three places in a consumer satisfaction survey conducted by a well-known magazine. A maximum of 36 million shares was issuable under this agreement and the products appeared in the top three places in surveys dated 28 February and 30 September 20X5.

There were no other issues of ordinary shares.

Requirement

Determine the basic and diluted EPS.

Solution

Basic earnings per share

The 24 million additional shares are weighted by the period they have been in issue:

	Issued	Weighting	Adjusted number
1 January 20X5 – 28 February	80,000,000	2/12	13,333,333
Issued 28 February	12,000,000		
1 March – 30 Sept	92,000,000	7/12	53,666,667
Issued 30 September	12,000,000		
30 September – 31 December	104,000,000	3/12	26,000,000
Weighted average shares in issue			93,000,000

CHAPTER 11

Basic earnings per share = £200m/93m = £2.15

Diluted earnings per share

As the 24 million additional shares do not result in any additional resources for the entity, the diluted calculation assumes all the new shares were issued at the start of the year (see section 2.4).

Diluted earnings per share = £200m/(80m + 12m + 12m) = £1.92

8 Retrospective adjustments, presentation and disclosure

Section overview

This section deals with retrospective adjustments to EPS and the provisions of IAS 33 concerning presentation and disclosure.

8.1 Retrospective adjustment

Bonus issues, share splits and share consolidations

If the number of ordinary or potential ordinary shares outstanding increases as a result of a capitalisation, bonus issue or share split, or decreases as a result of a share consolidation, the calculation of basic and diluted earnings per share for all periods presented must be adjusted retrospectively.

If these changes occur after the year end but before the financial statements are authorised for issue, EPS calculations for all periods presented must be based on the new number of shares.

The fact that EPS calculations reflect such changes must be disclosed.

Prior period adjustments and errors

Basic and diluted earnings per share of all periods presented must be adjusted for the effects of errors (IAS 8) and adjustments resulting from changes in accounting policies accounted for retrospectively.

DEPS

An entity does not restate diluted earnings per share of any prior period presented for changes in the assumptions used in earnings per share calculations or for the conversion of potential ordinary shares into ordinary shares.

8.2 Presentation

- Please note the following key points regarding presentation.
- Basic and diluted EPS for the year (and from continuing operations if reported separately) must be presented on the face of the statement of profit or loss and other comprehensive income with equal prominence for all periods presented.
- Where a separate statement of profit or loss is presented, basic and diluted EPS should be presented on the face of this statement.
- Earnings per share is presented for every period for which a statement of comprehensive income is presented.

- If diluted earnings per share is reported for at least one period, it shall be reported for all periods presented, even if it equals basic earnings per share.
- If basic and diluted earnings per share are equal, dual presentation can be accomplished in one line on the statement of comprehensive income.
- An entity that reports a discontinued operation shall disclose the basic and diluted amounts per share for the discontinued operation either on the face of the statement of comprehensive income or in the notes.
- An entity shall present basic and diluted earnings per share, even if the amounts are negative (ie, a loss per share).

8.3 Disclosure

An entity shall disclose the following:

- The amounts used as the numerators in calculating basic and diluted earnings per share, and a reconciliation of those amounts to profit or loss attributable to the parent entity for the period. The reconciliation shall include the individual effect of each class of instruments that affects earnings per share.
- The weighted average number of ordinary shares used as the denominator in calculating basic and diluted earnings per share, and a reconciliation of these denominators to each other. The reconciliation shall include the individual effect of each class of instruments that affects earnings per share.
- Instruments (including contingently issuable shares) that could potentially dilute basic earnings per share in the future, but were not included in the calculation of diluted earnings per share because they are antidilutive for the period(s) presented.
- A description of ordinary share transactions or potential ordinary share transactions, other than retrospective adjustments, that occur after the reporting date and that would have changed significantly the number of ordinary shares or potential ordinary shares outstanding at the end of the period if those transactions had occurred before the end of the reporting period.

Examples of transactions referred to in the paragraph above include the following:

- An issue of shares for cash
- An issue of shares when the proceeds are used to repay debt or preference shares outstanding at the reporting date
- The redemption of ordinary shares outstanding
- The conversion or exercise of potential ordinary shares outstanding at the reporting date into ordinary shares
- An issue of options, warrants, or convertible instruments
- The achievement of conditions that would result in the issue of contingently issuable shares

Earnings per share amounts are not adjusted for such transactions occurring after the reporting date because such transactions do not affect the amount of capital used to produce profit or loss for the period.

Financial instruments and other contracts generating potential ordinary shares may incorporate terms and conditions that affect the measurement of basic and diluted earnings per share. These terms and conditions may determine whether any potential ordinary shares are dilutive and, if so, the effect on the weighted average number of shares outstanding and any consequential adjustments to profit or loss attributable to ordinary equity holders. The disclosure of the terms and conditions of such financial instruments and other contracts is encouraged, if not otherwise required (refer also to IFRS 7, *Financial Instruments: Disclosures*).

8.4 Additional EPS

If an entity discloses, in addition to basic and diluted earnings per share, amounts per share using a reported component of profit other than one required by IAS 33, such amounts shall be calculated using the weighted average number of ordinary shares determined in accordance with this Standard.

Basic and diluted amounts per share relating to such a component shall be disclosed with equal prominence and presented in the notes.

An entity shall indicate the basis on which the numerator(s) is (are) determined, including whether amounts per share are before tax or after tax.

If a component of profit is used that is not reported as a line item in the statement of profit or loss and other comprehensive income, a reconciliation shall be provided between the component used and a line item that is reported in the statement of profit or loss and other comprehensive income.

Professional skills focus: Applying judgement

Judgement is needed as to whether the additional EPS potentially undermines the EPS as calculated in accordance with IAS 33. Although it is required by the standard to have equal prominence, the preparer of the financial statements needs to weigh up whether it is really necessary.

Context example: Allied Irish Bank plc

In addition to the required EPS under IAS 33, Allied Irish Bank plc reports an adjusted EPS measure excluding hedge volatility, profit on disposal of property and business and construction contract income. A comment to the disclosure states that the adjusted measure is presented to help better understand underlying business performance.

Allied Irish Bank plc 31 December 2006

Extract from Notes to the accounts:

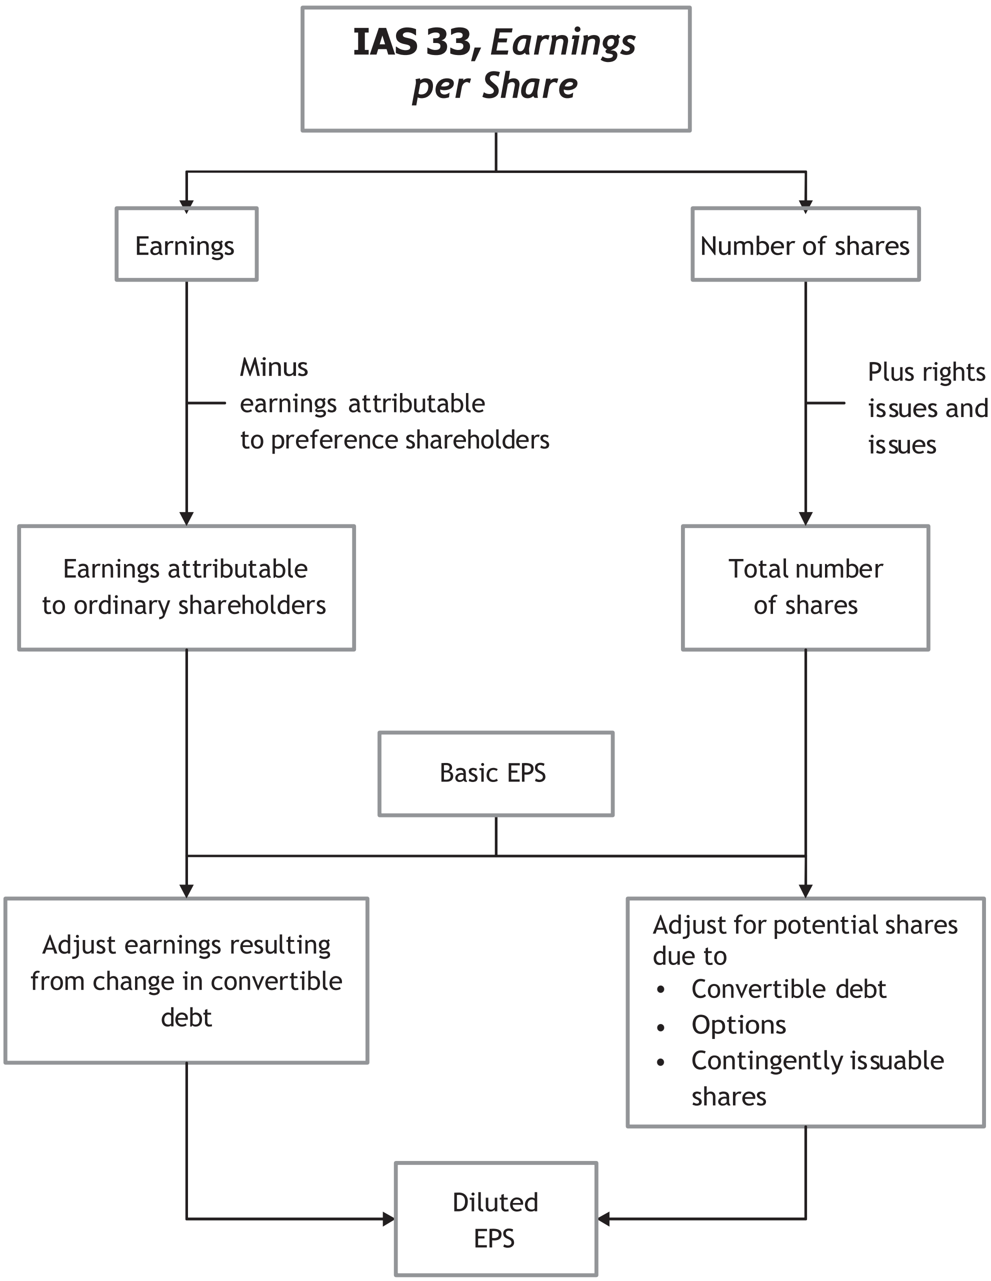
	Profit attributable		Earnings per share	
	2006	**2005**	**2006**	**2005**
19 Adjusted earnings per share	**€m**	**€m**	**€m**	**€m**
(a) Basic earnings per share				
As reported (Note 18(a))	2,147	1,305	246.8	151.0
Adjustments:				
Construction contract income	(82)	(38)	(9.4)	(4.4)
Hedge volatility	4	(6)	0.5	(0.7)
Profit on disposal of property	(290)	-	(33.4)	-
Profit on disposal of business	(189)		(21.7)	
	1,590	1,261	182.8	145.9

Although not required under IFRS® Standards, adjusted earnings per share is presented to help understand the underlying performance of the Group. The adjustments in 2006 and 2005 are items that management believe do not reflect the underlying business performance. The adjustment in respect of profit on sale of property relates only to the profit on sale of properties that are subject to sale and leaseback arrangements. The adjustments listed above are shown net of taxation.

Professional skills focus: Concluding, recommending and communicating

While earnings per share is a useful tool, users should be wary of relying solely on this figure. In particular, the context of the size of the entity, and the nature of its businesses should be taken into account.

Summary



IAS 33, *Earnings per Share*
Earnings
Number of shares

Diluted
EPS

1 Knowledge diagnostic

Before you move on to question practice, confirm you are able to answer the following questions having studied this chapter. If not, you are advised to revisit the relevant learning from the topic indicated.

	Confirm your learning
1.	Can you calculate the weighted average number of shares for basic and diluted EPS? (Topic 2)
2.	Why is the distinction between redeemable and irredeemable preference shares significant? (Topic 3)
3.	What is meant by antidilutive? (Topic 4)
4.	Can you calculate EPS in the context of convertible shares and options? (Topic 7)
5.	Can you calculate EPS in the context of contingently issuable shares? (Topic 7)

2 Question practice

Aim to complete all self-test questions at the end of this chapter. The following self-test questions are particularly helpful to further topic understanding and guide skills application before you proceed to the next chapter.

Question	Learning benefit from attempting this question
Puffbird	A straightforward EPS question with a bonus issue and adjustment of the prior year figure, this is a good one to start on.
Whiting	An intermediate question, with a discontinued operation and convertible loan stock.
Citric	This is about as complicated as EPS gets, covering warrants and convertible bonds and test of dilution.

Refer back to the learning in this chapter for any questions which you did not answer correctly or where the suggested solution has not provided sufficient explanation to answer all your queries. Once you have attempted the self-test questions, you can continue your studies by moving onto the next chapter.

In later chapters, we will recommend questions from the Question Bank for you to attempt. Earnings per share calculations often come at the end of scenario questions requiring adjustments to financial statements for financial reporting issues covered in later chapters.

1 Earnings

Amounts attributable to ordinary equity holders in respect of profit or loss for the period (and from continuing operations where reported separately) adjusted for the after tax amounts of preference dividends. – **IAS 33.12**

2 Shares

For the calculation of basic EPS the number of ordinary shares should be the weighted average number of shares outstanding during the period adjusted where appropriate for events, other than the conversion of shares, that have changed the number of ordinary shares outstanding without a corresponding change in resources. – **IAS 33.26**

3 Diluted earnings per share

For the purposes of calculating diluted earnings per share an entity shall adjust profit or loss attributable to ordinary equity holders and the weighted number of shares outstanding for the effects of dilutive potential ordinary shares. – **IAS 33.30, IAS 33.31**

4 Dilutive potential ordinary shares

Potential ordinary shares shall be treated as dilutive when, and only when, their conversion to ordinary shares could decrease earnings per share or increase loss per share from continuing operations. – **IAS 33.41**

5 Options, warrants and their equivalents – IAS 33.45

6 Convertible instruments – IAS 33.49

7 Contingently issuable shares – IAS 33.52

8 Retrospective adjustments

Basic and diluted EPS should be adjusted retrospectively for all capitalisations, bonus issues or share splits or reverse share splits that affect the number of shares in issue without affecting resources. – **IAS 33.64**

9 Presentation – IAS 33.66

10 Disclosure – IAS 33.70

Self-test questions

Answer the following questions.

1 Puffbird

Puffbird is a company listed on a recognised stock exchange. Its financial statements for the year ended 31 December 20X6 showed earnings per share of £0.95.

On 1 July 20X7 Puffbird made a 3 for 1 bonus issue.

Requirement

According to IAS 33, *Earnings per Share*, what figure for the 20X6 earnings per share will be shown as comparative information in the financial statements for the year ended 31 December 20X7?

2 Urtica

The Urtica Company is listed on a recognised stock exchange.

During the year ended 31 December 20X6, the company had 5 million ordinary shares of £1 and 500,000 6% irredeemable preference shares of £1 in issue.

Profit before tax for the year was £300,000 and the tax charge was £75,000

Requirement

According to IAS 33, *Earnings per Share*, what is Urtica's basic earnings per share for the year?

3 Issky

The following extracts relate to the Issky Company for the year ended 31 December 20X7.

Statement of comprehensive income

	£'000
Profit after tax	5,400

Statement of financial position

Ordinary shares of £1	8,400

In addition, the company had in issue throughout the year 1,800,000 share options granted to directors at an exercise price of £15. These were fully vested (ie, conditions required before these could be exercised were fulfilled and the options were exercisable) but had not yet been exercised. The market price for Issky's shares was £24 at 1 January 20X7, £30 at 31 December 20X7, and the average for 20X7 was £27.

Requirement

What is the diluted earnings per share for 20X7 according to IAS 33, *Earnings per Share*?

4 Whiting

The Whiting Company has the following financial statement extracts in the year ended 31 December 20X7.

Statement of comprehensive income

	£
Profit after tax	
Continuing operations	1,600,000
Discontinued operations	(400,000)
Total attributable to ordinary equity holders	1,200,000

Statement of financial position

Ordinary shares of £9,600,000 in £1 shares

On 1 January 20X7, Whiting issued £1.2 million of 7% redeemable convertible bonds, interest being payable annually in arrears on 31 December. The split accounting required of compound financial instruments resulted in the following classification.

	£
Equity component	100,000
Liability component	1,100,000
	1,200,000

The effective interest rate on the liability component is 10%. The bonds are convertible on specified dates in the future at the rate of one ordinary share for every £2 bond.

The tax regime under which Whiting operates gives relief for the whole of the charge based on the effective interest rate and applies a tax rate of 20%.

Requirement

Based upon the profit from continuing operations attributable to ordinary equity holders, what amount, if any, for diluted earnings per share should be presented by Whiting in its financial statements for the year ended 31 December 20X7 according to IAS 33, *Earnings per Share*?

5 Garfish

The Garfish Company had profits after tax of £3.0 million in the year ended 31 December 20X7.

On 1 January 20X7, Garfish had 2.4 million ordinary shares in issue. On 1 April 20X7 Garfish made a 1 for 2 rights issue at a price of £1.40 when the market price of Garfish's shares was £2.00.

Requirement

What is Garfish's basic earnings per share figure for the year ended 31 December 20X7, according to IAS 33, *Earnings per Share*?

6 Sakho

The Sakho Company has 850,000 ordinary shares in issue on 1 January 20X7 and had the following share transactions in the year ended 31 December 20X7.

(1) A 1 for 5 bonus issue on 1 May 20X7

(2) A 2 for 5 rights issue on 1 September 20X7 at £0.45 when the market price was £1.50

Requirement

Indicate whether the following statements are true or false according to IAS 33, *Earnings per Share*.

(1) The basic earnings per share for the year ended 31 December 20X6 has to be adjusted by a fraction of 5/6.

(2) For the calculation of 20X7 basic earnings per share, the number of shares in issue before the rights issue has to be adjusted by a rights fraction of 1.50/1.20.

7 Sardine

The Sardine Company operates in Moldania, a jurisdiction in which shares may be issued at a discount. It has profit after tax and before preference dividends of £200,000 in the year ended 31 December 20X7.

On 1 January 20X7 Sardine has in issue 500,000 ordinary shares, and on 1 January 20X7 issues £300,000 of £100 non-convertible, non-redeemable preference shares. Cash dividends of 8% per annum will only start to be paid on the preference shares from 1 January 20X9, so the shares are issued at a discount. The effective interest rate of the discount is 8%.

Requirement

According to IAS 33, *Earnings per Share*, what is the basic earnings per share for Sardine in the year ended 31 December 20X7?

8 Citric

The following information relates to The Citric Company for the year ended 31 December 20X7.

Statement of comprehensive income

Profit after tax – £100,000

Statement of financial position

Ordinary shares of £1 – 1,000,000

There are warrants outstanding in respect of 1.7 million new shares in Citric at a subscription price of

£18.00. Citric's share price was £22.00 on 1 January 20X7, £24.00 on 30 June 20X7, £30.00 on 31 December 20X7 and averaged £25.00 over the year.

On 1 January 20X7 Citric issued £2 million of 6% redeemable convertible bonds, interest being payable annually in arrears on 31 December. The split accounting required of compound financial instruments resulted in a liability component of £1.75 million and effective interest rate of 7%. The bonds are convertible on specified dates many years into the future at the rate of two ordinary shares for every £5 bonds.

The tax regime under which Citric operates gives relief for the whole of the effective interest rate charge on the bonds and applies a tax rate of 25%.

Requirement

Determine the following amounts in respect of Citric's diluted earnings per share for the year ending 31 December 20X7 according to IAS 33, *Earnings Per Share*:

(1) The number of shares to be treated as issued for no consideration (ie, 'free' shares) on the subscription of the warrants

(2) The earnings per incremental share on conversion of the bonds, expressed in pence (to one decimal place)

(3) The diluted earnings per share, expressed in pence (to one decimal place)

Now go back to the Introduction and ensure that you have achieved the Learning outcomes listed for this chapter.

Answers to Interactive questions

Answer to Interactive question 1

No, the 4% preference shares are classed as liabilities under IAS 32. The dividend has been charged to profits as part of the finance cost and no adjustment is necessary.

Answer to Interactive question 2

£1.75

Being the total earnings £350,000 divided by the number of shares in issue (200,000).

The redeemable preference share dividend is included as a finance cost and deducted in arriving at profit before tax.

Answer to Interactive question 3

Basic EPS
Trading results

	20X6
	£
Profit before interest and tax	1,050,000
Interest on 7% convertible loan stock	(105,000)
Profit before tax	945,000
Taxation	(283,500)
Profit after tax	661,500
Number of shares outstanding	2,000,000
Basic EPS (£661,500/2,000,000 shares)	£0.33

Testing for dilutive impact

Increase in earnings = interest saved (£1,500,000 × 7% × (1 – 30%)) – £73,500 Increase in number of shares (£1,500,000/£100 × 140) – 2,100,000

EPS (£73,500/2,100,000) = 3.5p

This is less than basic EPS and therefore the convertible loan stock is dilutive.

Answer to Interactive question 4

Diluted EPS

Trading results

CHAPTER 11

	20X7
	£
Profit after tax	900,000.00
Number of shares outstanding	3,000,000.00
Basic EPS	0.30
Number of shares under option	
Issued at full market price (600,000 × 50p)/£1.50	200,000.00

	20X7
	£
Issued at nil consideration 600,000 – 200,000	400,000.00
Total number of shares under option	600,000.00
Number of equity shares for basic EPS	3,000,000.00
Number of dilutive shares under option	400,000.00
Adjusted number of shares	3,400,000.00
Diluted EPS (£900,000/3,400,000)	0.26

Answers to Self-test questions

1 Puffbird

23.75 pence

Last year's EPS figure is adjusted by the reciprocal of the bonus fraction:

Bonus fraction = Number of shares post issue ÷ Number of shares pre issue = 4 ÷ 1 Therefore

revised EPS = 95p × ¼ = 23.75p

2 Urtica

3.9 pence

IAS 33 12–13 define earnings for basic EPS as after tax and after dividends on irredeemable preference shares.

	£
Profit before tax	300,000
Tax	(75,000)
Profit after tax	225,000
Preference dividend (£500,000 × 6%)	(30,000)
Profit attributable to ordinary equity holders	195,000

Therefore BEPS = £195,000/5,000,000 shares = 3.9p

3 Issky

58.7 pence

Number of shares under option	
Issued at average market price (£15 × 1,800,000)/£27	1,000,000
Issued at nil consideration (1,800,000 – 1,000,000)	800,000
Number of equity shares for basic EPS	8,400,000
Number of dilutive shares under option	800,000
Adjusted number of shares	9,200,000

Diluted EPS (£5,400,000/9,200,000 shares) = 58.7p

According to IAS 33.46, the proceeds of the options should be calculated using the average market price during the year. The difference between the number of ordinary shares issued and the number that would have been issued at the average market price are the 'free' shares that create the dilutive effect.

4 Whiting

16.6 pence

Basic EPS	Based on continuing operations £1,600,000 ÷ 9,600,000	16.7 p
Incremental EPS	Increment to profits after conversion of bonds: £1,100,000 × 10% × (1 – 20%) = £88,000 Increase to number of shares: £1,200,000/£2 = 600,000 Therefore: £88,000 ÷ 600,000	14.7 p
Diluted EPS	Based on continuing operations £(1,600,000 + 88,000) ÷ (9,600,000 + 600,000 shares)	16.6 p

The shares issuable on conversion of the bonds are potentially dilutive, but IAS 33.41 only requires them to be taken into account if they dilute the basic EPS figure based on continuing operations.

5 Garfish

89.1 pence

Weighted average number of shares:

TERP	2	Shares @ £2.00 =	£4.00	
	1	Shares @ £1.40 =	£1.40	
	3		£5.40	Therefore £5.40/3 = £1.80

Adjustment factor: Market value of share ÷ TERP = £2.00 ÷ £1.80

1 Jan X7 – 31 March X7	2,400,000 × (2.00 ÷ 1.80) × 3/12	666,667
Rights issue	1,200,000	
1 April X7 – 31 Dec X7	3,600,000 × 9/12	2,700,000
		3,366,667

Basic EPS:

£3,000,000 ÷ 3,366,667 shares = 89.1p

6 Sakho

Statements

(1) False

(2) True

Bonus fraction = Number of shares post issue ÷ Number of shares pre issue = 6 ÷ 5 Rights adjustment factor = MV of share ÷ TERP = 1.50 ÷ 1.20

TERP	5	Shares @ £1.50 =	£7.50	
	2	Shares @ £0.45 =	£0.90	
	7		£8.40	Therefore £8.40/7 = £1.20

The basic EPS for the prior year is multiplied by the inverse of the rights factor and the bonus factor, so 1.20/1.50 × 5/6 = 2/3.

7 Sardine

35.9 pence

Issue price of preference shares = £300,000/1.08^2 = £257,202

Profit attributable to ordinary equity holders = £200,000 – (8% × £257,202) = £179,424

Basic EPS = £179,424 ÷ 500,000 shares = 35.9p

As no dividend is payable on the preference shares in 20X7, the discount on issue is amortised using the effective interest method and treated as preference dividend when calculating earnings for EPS purposes (IAS 33.15).

The £300,000 preference shares must be discounted at 8% for the two years between issue and the date when dividends commence. A dividend is then calculated at 8% per annum compound on that value.

8 Citric

Diluted EPS

(1) 476,000

(2) 11.5 pence

(3) 6.78 pence

Explanation

(1) Shares issued at average market price (1,700,000 × £18)/£25 = 1,224,000 Shares issued at nil consideration (1,700,000 – 1,224,000) = 476,000

(2) Incremental profits (£1,750,000 × 7% × (1 – 25%)) = £91,875 Increase in number of shares (£2,000,000/£5 × 2) = 800,000 Therefore incremental EPS (£91,875/800,000 shares) = 11.5p (3)

	Profits	Number of shares	EPS
Basic EPS	£100,000	1,000,000	10p
Add in options	£100,000	1,446,000	6.78p

The warrants (treated as issued for nil consideration) are more dilutive than the bonds, so are dealt with first under IAS 33.44. As the 11.5 pence earnings per incremental share on conversion of the bonds is antidilutive, under IAS 33.36 the conversion is left out of the calculation of diluted EPS.

Chapter 12

Reporting of assets

Introduction

Learning outcomes

- Explain how different methods of recognising and measuring assets and liabilities can affect reported financial position and explain the role of data analytics in financial asset and liability valuation
- Explain and appraise accounting standards that relate to assets and non-financial liabilities for example: property, plant and equipment; intangible assets, held-for-sale assets; inventories; investment properties; provisions and contingencies
- Determine for a particular scenario what comprises sufficient, appropriate audit evidence
- Design and determine audit procedures in a range of circumstances and scenarios, for example identifying an appropriate mix of tests of controls, analytical procedures and tests of details
- Demonstrate and explain, in the application of audit procedures, how relevant ISAs affect audit risk and the evaluation of audit evidence

Chapter study guidance

Use this schedule and your study timetable to plan the dates on which you will complete your study of this chapter.

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
1	**Review of material from earlier studies** Section 1 gives a brief revision of standards covered in great detail in terms of content and application at Professional Level. They address the reporting of assets, impairment, liabilities, provisions and contingencies and events after the reporting period. These are likely to be examined in an integrated way with other areas at Advanced Level.	**Approach** Read the summary of knowledge brought forward and try the relevant questions. If you have any difficulty, go back to your earlier study material and revise it. Use the questions in the electronic Self-test bank for further revision. **Stop and think** What is the definition of an asset in the 2018 *Conceptual*	Just because these standards are tested at earlier levels does not mean that questions that include them will be easy. These are likely to be examined in an integrated way with other areas at Advanced Level. For example, a question on property may range from owner-occupied (IAS 16) to investment property (IAS 40) to leasehold property	**IQ2: Impairment loss** You should aim to do all the interactive questions because you will struggle to tackle a complex scenario question without a knowledge of the basics. This question is the one to focus on.

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
	Inventories can often be the most significant current asset in an entity's statement of financial position. In addition, whether an asset is capitalised or not, the value attributed to it and how it is depreciated or not has a significant impact on the financial statements.	*Framework*?	(IFRS 16, covered in Chapter 14).	
2	**IAS 40, *Investment Property*** Entities may invest in property (IAS 40) for the potentially attractive returns that are available from capital gains and rental income. Measuring such investment properties as a series of out-of-date historic costs is not an appropriate reflection of volatility caused by changes in property values.	**Approach** This is a new standard at Advanced Level, so work through carefully. Make sure you can distinguish investment property from owner-occupied property, that you know when to recognise investment property and how to measure it, and can deal with a change of use. **Stop and think** An investment property held under the fair value model is developed for future sale. How should it be accounted for?	Investment property comes up quite regularly as part of a longer scenario question and in the context of audit and fair value (IFRS 13). With IFRS 16, *Leases* being a topical standard, expect to see examined the interaction between this and IAS 40.	**IQ11: Replacement property** Although short, this is a useful question because it tests how IAS 40 interacts with other standards.
3	**IAS 41, *Agriculture*** Working in the context of the agricultural sector or of extractive industries you will need to make judgements on the	**Approach** This standard is set at level A, so this section should be studied carefully, even though the topic has not yet been examined. Do	This topic has yet to be examined.	**IQ13: Costs to sell** This is a quick, test-your-knowledge question.

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
	valuation of biological assets/the appropriate capitalisation of expenditure. Since the use of a historic cost model was not seen as wholly appropriate for accounting for agricultural activity IAS 41, *Agriculture* is based on a fair value model.	both interactive questions. **Stop and think** What are bearer biological assets?		
4	**IFRS 6, *Exploration for and Evaluation of Mineral Resources*** Entities such as those in the oil and gas industry follow a wide range of practices for the accounting of exploration and evaluation expenditure (IFRS 6).	**Approach** This is examinable at level D, so is not a key topic. Read through quickly. The key point is that the recognition criteria for impairment are different from IAS 36 but, once impairment is recognised, the measurement criteria are the same as for IAS 36. **Stop and think** How should these assets be measured on initial recognition?	This topic has yet to be examined.	N/A
5	**IFRS 4, *Insurance Contracts*** IFRS 4 provides **interim guidance** on accounting for insurance contracts. It will be replaced in 2023 by IFRS 17.	**Approach** This is examinable at level D, so should not be prioritised at the expense of key standards, such as IAS 40. **Stop and think** Focus more on other standards!	This topic has yet to be examined.	N/A

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
6	**Audit focus points** This section focuses on the audit of investment properties, as the other key topics were covered at Professional Level.	**Approach** Read and learn the table in Section 6.2, which gives an approach to auditing classification, valuation and disclosure. **Stop and think** Why might investment property be more risky than owner-occupied property?	You are very likely to get investment property as part of an integrated financial reporting and auditing question.	**IQ14: Investment property and fair value** A typical scenario as part of Question 3, covering both audit issues and audit procedures in relation to IAS 40 and IFRS 13.

Once you have worked through this guidance you are ready to attempt the further question practice included at the end of this chapter.

1 Review of material from earlier studies

Section overview

You should already be familiar with the standards relating to current and non-current assets from earlier studies. If not, go back to your earlier study material.

- IAS 2, *Inventories*
- IAS 16, *Property, Plant and Equipment*
- IAS 38, *Intangible Assets*
- IAS 36, *Impairment of Assets*

Read the summary of knowledge brought forward and try the relevant questions. If you have any difficulty, go back to your earlier study material and revise it.

Assets have been defined in many different ways and for many purposes. The definition of an asset is important because it directly affects the **treatment** of such items. A good definition will prevent abuse or error in the accounting treatment: otherwise some assets might be treated as expenses, and some expenses might be treated as assets.

In the current accounting climate, where complex transactions are carried out daily a definition that covers ownership and value is not sufficient, leaving key questions unanswered.

- What determines ownership?
- What determines value?

The definition of an asset in the IASB's *Conceptual Framework for Financial Reporting* from earlier studies is given below.

Definition

Asset: A present economic resource controlled by the entity as a result of past events. An economic resource is a right that has the potential to produce economic benefits. (*Conceptual Framework, para. 4.2*)

This definition ties in closely with the definitions produced by **other standard-setters**, particularly the FASB (USA) and the ASB (UK).

A general consensus seems to exist in the standard setting bodies as to the definition of an asset which encompasses **three important characteristics**.

- Future economic benefit
- Control
- The transaction to acquire control has already taken place

1.1 Property, plant and equipment

The following concepts will be familiar to you from your earlier studies.

- **Cost** is the amount of cash or cash equivalents paid or the fair value of the other consideration given to acquire an asset at the time of its acquisition or construction.
- **Residual value** is the estimated amount that an entity would currently obtain from disposal of the asset, after deducting the estimated costs of disposal, if the asset were already of the age and in the condition expected at the end of its useful life.

- **Fair value** is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. (Note that this definition changed when IFRS 13, *Fair Value Measurement* came into force in January 2013.
- **Carrying amount** is the amount at which an asset is recognised after deducting any accumulated depreciation and accumulated impairment losses.

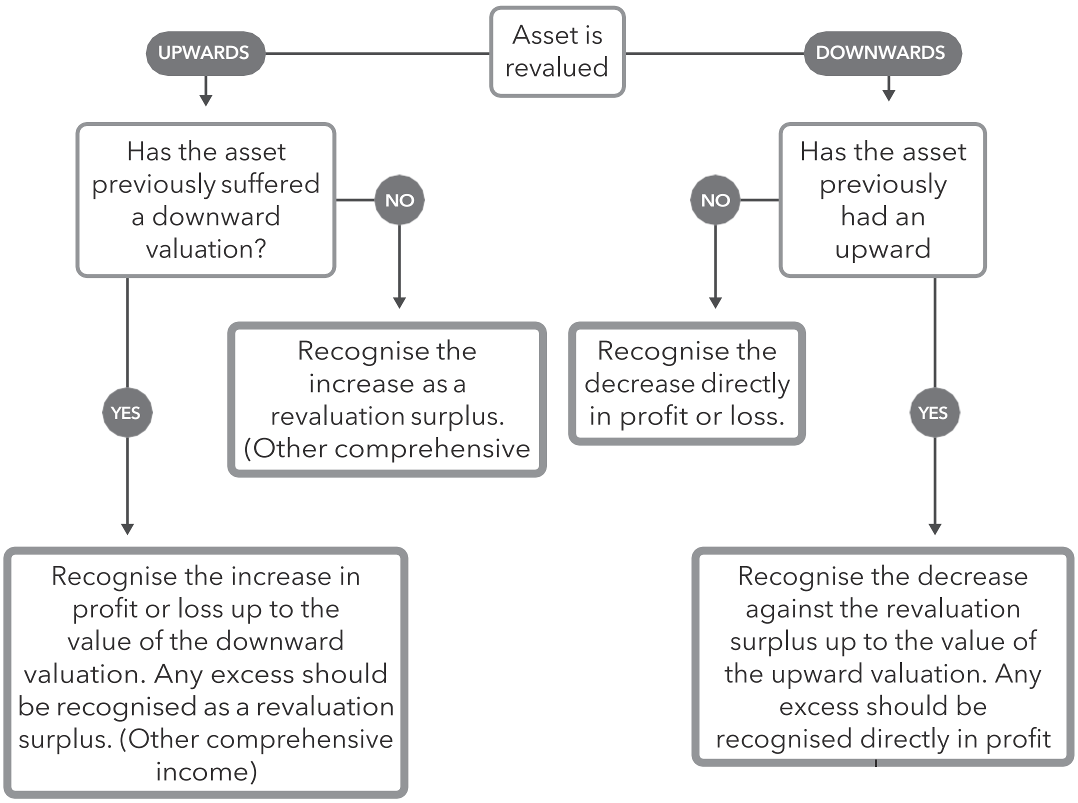
Accounting treatment

- As with all assets, **recognition** depends on two criteria:
  - It is probable that **future economic benefits** associated with the item will flow to the entity.
  - The cost of the item can be **measured reliably.**
- These recognition criteria apply to **subsequent expenditure** as well as costs incurred initially (ie, there are no longer separate criteria for recognising subsequent expenditure).
- Once recognised as an asset, items should **initially be measured at cost**.
- Cost is the **purchase price**, less trade discount/rebate plus:
  - **directly attributable costs** of bringing the asset to working condition for intended use; and
  - **initial estimate** of the **unavoidable cost of dismantling and removing the item** and **restoring the site** on which it is located.

IAS 16, *Property, Plant and Equipment* also does the following:

- Provides additional guidance on directly attributable costs, including the cost of an item of property, plant and equipment
- States that income and related expenses of operations that are incidental to the construction or development of an item of property, plant and equipment should be recognised in profit or loss for the period
- Specifies that exchanges of items of property, plant and equipment, regardless of whether the assets are similar, are measured at **fair value**, unless the exchange transaction lacks commercial substance or the fair value of neither of the assets exchanged can be measured reliably. If the acquired item is not measured at fair value, its cost is measured at the carrying amount of the asset given up
- Permits a **choice of measurement models subsequent to initial recognition**
  - **Cost model**: carrying asset at cost less depreciation and any accumulated impairment losses
  - **Revaluation model**: carrying asset at revalued amount, ie, fair value less subsequent accumulated depreciation and any accumulated impairment losses. (IAS 16 makes clear that the revaluation model is available only if the fair value of the item can be measured reliably.)

Figure 12.1: Revaluations



Professional skills focus: Structuring problems and solutions

The above flowchart is an example of how to structure a problem, in this case PPE revaluations. It should form part of your revision.

Interactive question 1: Revaluations

Binkie Co has an item of land carried in its books at £13,000. Two years ago a slump in land values led the company to reduce the carrying amount from £15,000. This was recorded as an expense. There has been a surge in land prices in the current year, however, and the land is now worth £20,000.

In the example given above assume that the original cost was £15,000, revalued upwards to £20,000 two years ago. The value has now fallen to £13,000.

Crinkle Co bought an asset for £10,000 at the beginning of 20X6. It had a useful life of five years. On 1 January 20X8 the asset was revalued to £12,000. The expected useful life has remained unchanged (ie, three years remain).

Requirements

1.1 Account for the revaluation in the current year

1.2 Account for the decrease in value

1.3 Account for the revaluation and state the treatment for depreciation from 20X8 onwards.

See **Answer** at the end of this chapter.

1.2 Inventories

Valuation	Allowable costs
Lower of: • Cost • Net realisable value Each item/group/category considered separately	Include: • Cost of purchase Exclude: • Cost of storage • Cost of selling
Determining cost • First in, first out (FIFO) • Weighted average cost	**Net realisable value** • Estimated cost of completion • Estimated costs necessary to make the sale (eg, marketing, selling and distribution)

1.3 IAS 38, *Intangible Assets*

- An **intangible asset** is an **identifiable non-monetary asset without physical substance**, such as a licence, patent or trademark.
- An intangible asset is **identifiable** if it is **separable** (ie, it can be sold, transferred, exchanged, licensed or rented to another party on its own rather than as part of a business) or it arises from **contractual or other legal rights**.
- An intangible asset should be recognised if it is probable that future economic benefits **attributable to the asset** will flow to the entity and the **cost** of the asset can be **measured reliably**.
- At recognition the intangible should be recognised at cost (purchase price plus directly attributable costs). After initial recognition an entity can **choose** between the **cost model** and the **revaluation model**. The revaluation model can only be adopted if an **active market** (as defined) exists for that type of asset.
- An intangible asset (other than goodwill recognised in the acquiree's financial statements) **acquired as part of a business combination** should initially be recognised **at fair value**.
- Internally generated goodwill should **not** be recognised.
- Expenditure incurred in the **research phase** of an internally generated intangible asset should be **expensed as incurred**.
- Expenditure incurred in the **development phase** of an internally generated intangible asset **mustbe capitalised** provided **certain tightly defined criteria are met**.
  - Expenditure incurred before the criteria being met may not be capitalised retrospectively.
- An intangible asset with a **finite useful life** should be **amortised** over its expected useful life, **commencing** when the asset is **available for use** in the manner intended by management.
- Residual values should be assumed to be nil, except in the rare circumstances when an active market exists or there is a commitment by a third party to purchase the asset at the end of its useful life.
- An intangible asset with an **indefinite life** should **not be amortised**, but should be reviewed for **impairment** on an **annual basis**.
  - There must also be an annual review of whether the indefinite life assessment is still appropriate.
- On disposal of an intangible asset the gain or loss is recognised in profit or loss.

1.4 IAS 36, *Impairment of Assets*

1.4.1 Key points

Recoverable amount	An asset's recoverable amount is the higher of **value in use** (net cash flows) and **fair value less costs of disposal**. Impairment losses occur where the **carrying amount** of an asset is **above its recoverable amount**.
Impairment indicators	An entity must do an impairment test when there are **impairment indicators**. These can be **internal** or **external**.
Cash-generating units	Where cash flows cannot be measured separately, the recoverable amount is calculated by reference to the **CGU**.
Recognition of impairment losses	Impairment losses are charged **first to other comprehensive income** (re any revaluation surplus relating to the asset) and then to profit or loss. In the case of a CGU, the credit is allocated **first against any goodwill** and then pro-rata over the other assets of the CGU.
After the impairment review	After the impairment review, depreciation/amortisation is allocated over the asset's **revised remaining useful life**.

Interactive question 2: Impairment loss

An entity has a single manufacturing plant which has a carrying value of £749,000. A new government elected in the country passes legislation significantly restricting exports of the product produced by the plant. As a result, and for the foreseeable future, the entity's production will be cut by 40%. Cash flow forecasts have been prepared derived from the most recent financial budgets/forecasts for the next five years approved by management (excluding the effects of general price inflation).

Year	1	2	3	4	5
	£'000	**£'000**	**£'000**	**£'000**	**£'000**
Future cash flows	230	211	157	104	233 (including disposal proceeds)

If the plant was sold now it would realise £550,000, net of selling costs.

The entity estimates the pre-tax discount rate specific to the plant to be 15%, after taking into account the effects of general price inflation.

Requirement

Calculate the recoverable amount of the plant and any impairment loss.

Note: PV factors at 15% are as follows.

Year	**PV factor @15%**
1	0.86957
2	0.75614
3	0.65752
4	0.57175
5	0.49718

See **Answer** at the end of this chapter.

Professional skills focus: Applying judgement

Judgement must be applied in considering whether an item is a cash-generating unit. Both in the exam, and in real life, it may not be obvious.

Interactive question 3: Cash-generating units

Discuss whether the following items would be cash-generating units in their own right, or part of a larger cash-generating unit.

(1) A pizza oven in a pizza restaurant

(2) A branch of a pizza restaurant in Warsaw

(3) A monorail that takes fee paying visitors to a theme park from its car park

(4) A monorail that transports fee paying commuters from a suburban part of town to the centre of town

(5) The internal large telephone network of a country's railway system, although its use is currently not permitted to anybody other than railway workers

See **Answer** at the end of this chapter.

1.4.2 Treatment of the non-controlling interest element of goodwill

The revision to IFRS 3 allows two methods of initially valuing the non-controlling (minority) interest in an entity:

- As a share of the net assets of the entity at the acquisition date; or
- at fair value.

The non-controlling interest is then taken into account in the goodwill calculation per the revised standard:

Purchase consideration	X
Non-controlling interest	<u>X</u>
	X
Total fair value of net assets of acquiree	<u>(X)</u>
Goodwill	<u>X</u>

This means that the resulting goodwill will represent:

- only the parent's share of total goodwill when valuing the non-controlling interest using the proportion of net assets method; and
- full goodwill (ie, the parent's share plus the non-controlling interest share) when using the fair value method.

Where the share of net assets method is used to value the non-controlling interest, the carrying amount of a CGU therefore comprises:

- the parent and non-controlling share of the identifiable net assets of the unit; and
- only the parent's share of the goodwill.

Part of the calculation of the recoverable amount of the CGU relates to the unrecognised share in the goodwill.

For the purpose of calculating the impairment loss, the carrying amount of the CGU is therefore notionally adjusted to include the non-controlling share in the goodwill by grossing it up.

The consequent impairment loss calculated is only recognised to the extent of the parent's share. Where the fair value method is used to value the non-controlling interest, no adjustment is required.

Interactive question 4: Allocation of impairment loss

Peter acquired 60% of Stewart on 1 January 20X1 for £450 million recognising net assets of £600 million, a non-controlling interest (valued as a proportion of total net assets) of £240 million and goodwill of £90 million. Stewart consists of a single cash-generating unit.

Due to adverse publicity, the recoverable amount of Stewart had fallen by 31 December 20X1. The depreciated value of the net assets at that date was £550 million (excluding goodwill). No impairment losses have yet been recognised relating to the goodwill.

Requirement

Show the allocation of the impairment losses:

(1) if the recoverable amount was £510 million at 31 December 20X1

(2) if the recoverable amount was £570 million at 31 December 20X1

See **Answer** at the end of this chapter.

1.4.3 Reversal of past impairments

A reversal for a CGU is allocated to the assets of the CGU, except for goodwill, pro rata with the carrying amounts of those assets.

However, the carrying amount of an asset is not increased above the lower of:

- its recoverable amount (if determinable); and
- its depreciated carrying amount had no impairment loss originally been recognised.

Any amounts left unallocated are allocated to the other assets (except goodwill) pro rata.

The reversal is recognised in profit or loss, except where reversing a loss recognised on assets carried at revalued amounts, which are treated in accordance with the applicable IFRS® Standard.

For example, an impairment loss reversal on property, plant and equipment first reverses the loss recorded in profit or loss and any remainder is credited to the revaluation surplus (IAS 16).

Goodwill

Once recognised, impairment losses on goodwill are **not reversed**.

1.4.4 Impairment and IFRS 5

IFRS 5 is covered in detail in Chapter 9. Regarding impairment, note the following:

- Immediately before initial classification as held for sale, the asset (or disposal group) is **measured in accordance with the applicable IFRS** (eg, property, plant and equipment held under the IAS 16 revaluation model is revalued).
- On classification of the non-current asset (or disposal group) as held for sale, it is **written down to fair value less costs to sell** (if less than carrying amount).
- Any impairment loss arising under IFRS 5 is **charged to profit or loss** (and the credit

allocated to assets of a disposal group using the IAS 36 rules, ie, first to goodwill then to other assets pro rata based on carrying value).

- Non-current assets/disposal groups classified as held for sale are ***not* depreciated/amortised.**
- Any subsequent changes in fair value less costs to sell are **recognised as a further impairment** loss (or reversal of an impairment loss).
- However, gains recognised **cannot exceed cumulative impairment losses** to date (whether under IAS 36 or IFRS 5).

2 IAS 40, *Investment Property*

Section overview

- An investment property is land or buildings or both that is held by an entity to earn rentals and/or for its capital appreciation potential.
- Following initial measurement, investment property may be measured using the cost model or the fair value model.

One of the distinguishing characteristics of **investment property** is that it generates cash flows largely independent of the other assets held by an entity.

Owner-occupied property is not investment property and is accounted for under IAS 16, *Property, Plant and Equipment*.

2.1 Recognition

Investment property should be recognised as an asset when **two conditions** are met.

- It is **probable** that the **future economic benefits** that are associated with the investment property will **flow to the entity**.
- The **cost** of the investment property can be **measured reliably**.

2.2 Initial measurement and further aspects of recognition

An investment property should initially be measured at its cost, including transaction costs.

Further aspects of recognition	
Transaction costs	Expenses that are directly attributable to the investment property, for example professional fees and property transfer taxes. Cost does not include activities that, while related to the investment property, are not directly attributable to it. For example, start-up costs, abnormal amounts of wasted resources in constructing the property, relocation costs, losses incurred before full occupancy and the normal servicing of the property are not directly attributable.
Self-constructed investment properties	Property being self-constructed or under development for future use as an investment property qualifies itself as an investment property.

Leases	An investment property held by a lessee as a right-of-use asset must be recognised in accordance with IFRS 16, *Leases* (see Chapter 14).
Entity occupies part of property and leases out balance	If the two portions can be sold separately or leased separately, each is accounted for as appropriate. If not, entire property is an investment property only if **insignificant** portion is owner occupied.
Entity supplies services to the lessee of the property	An investment property only if the services are insignificant to the arrangement as a whole.
Property leased to and occupied by parent, subsidiary or other group company	An investment property in entity's own accounts but owner occupied from group perspective.

Interactive question 5: Identification of investment property

(1) An entity has a factory that has been shut down due to chemical contamination, worker unrest and strike. The entity plans to sell this factory.

(2) An entity has purchased a building that it intends to lease out under an operating lease.

(3) An entity has acquired a large-scale office building, with the intention of enjoying its capital appreciation. Rather than holding it empty, the entity has decided to try to recover its running costs by renting the space out for periods which run from one week to one year. To make the building attractive to potential customers, the entity has fitted the space out as small office units, complete with full-scale telecommunications facilities, and offers reception, cleaning, a loud speaker system and secretarial services. The expenditure incurred in fitting out the offices has been a substantial proportion of the value of the building.

(4) An entity acquired a site on 30 April 20X4 with the intention of building office blocks to let. After receiving planning permission, construction started on 1 September 20X4 and was completed at a cost of £10 million on 30 March 20X5 at which point the building was ready for occupation.

The building remained vacant for several months and the entity incurred significant operating losses during this period.

The first leases were signed in July 20X5 and the building was not fully let until 1 September 20X6.

Requirement

Do the buildings referred to in (1)–(4) above meet the definition of investment property?

See **Answer** at the end of this chapter.

2.3 Measurement subsequent to initial recognition

Following initial measurement, investment properties are held **either**:

- at cost less accumulated depreciation (the **cost model**); or
- measured at fair value (the **fair value model**).

2.3.1 Cost model

Where the cost model is adopted, the property should be accounted for in accordance with IAS 16, *Property, Plant and Equipment*.

2.3.2 Fair value model

- After initial recognition, an entity that chooses the **fair value model** should measure all of its investment property at fair value, except in the extremely rare cases where this cannot be measured reliably. In such cases it should apply the IAS 16 cost model.
- A gain or loss arising from a change in the fair value of an investment property should be recognised in net profit or loss for the period in which it arises.
- The fair value of investment property should reflect market conditions at the reporting date.
- A change in use of an investment property may lead to a change in classification.

Whatever policy the entity chooses should be applied to **all of its investment property**.

Interactive question 6: Estimating fair value

An entity with a 31 December year end owns the freehold of an office block standing on a city centre site on which there are four other similar buildings, none of which are owned by the entity. All the office buildings were constructed at the same time as the entity's building and the floors in all five buildings are let out on standard 25-year leases.

Requirements

Which of the following values could be used by the entity as a basis for estimating the fair value of its office building at 31 December 20X5, according to IAS 40?

6.1 The first of the other office buildings changed hands early in 20X5 for £5 million as a result of an auction which was widely publicised in the professional property press.

6.2 The second of the other office buildings changed hands late in 20X5 for £6 million as a result of a sale to an entity, 55% of whose shares were owned by the seller.

6.3 The third of the other office buildings changed hands late in 20X5 for £4.5 million as a result of sale to a financial institution to which the seller owed £3.5 million. It is understood that the seller had breached its banking covenants and had to raise cash by the end of 20X5.

6.4 The fourth of the other office buildings changed hands late in 20X5 for £5.5 million as a result of a sale to an overseas institution which was seeking to establish its first foothold in the country's property market. The offer of the office building was widely publicised in the professional property press although it is understood that local institutions were only prepared to offer in the region of £4.9 million.

See **Answer** at the end of this chapter.

2.4 Derecognition

When an investment property is derecognised, a gain or loss on disposal should be recognised in profit or loss. The gain or loss should normally be determined as the difference between the net disposal proceeds and the carrying amount of the asset.

Interactive question 7: Disposal of investment property

An entity purchased an investment property on 1 January 20X3, for a cost of £5.5 million. The property has a useful life of 50 years, with no residual value and at 31 December 20X5 had a fair value of £6.2 million. On 1 January 20X6 the property was sold for net proceeds of £6 million.

Requirement

Calculate the profit or loss on disposal under both the cost and fair value model.

See **Answer** at the end of this chapter.

2.5 Transfers following a change in use

A change in use may lead to recognition or de-recognition of an investment property. The following is a summary of such instances.

Evidence of change in use	Accounting treatment
Commencement of owner occupation	• Owner-occupied property recognised under IAS 16. • If fair value model was used, treat fair value as deemed cost.
Commencement of development with a view to sale	• Reclassify as inventory under IAS 2. • If fair value model was used, treat fair value as deemed cost.
Development with view to continue letting	• Continue to hold as an investment property.
End of owner occupation with view to let to third parties	• Transfer to investment properties under IAS 40. • If fair value model to be used, revalue at date of change and recognise difference as revaluation under IAS 16.
Property held as inventory now let to a third party	• Transfer to investment properties under IAS 40. • If fair value model to be used, revalue at date of change and recognise difference in profit or loss.
Commencement of lease to another party	• Transfer from property, plant and equipment to investment property under IAS 40.

Professional skills focus: Assimilating and using information

When considering a change of use, it is important to understand all the required evidence about its current use and its future use, including the model that is to be used. The current use affects the future accounting treatment.

Professional skills focus: Concluding, recommending and communicating

It is possible that you may, in an exam, come to the wrong conclusion about change of use, but you will gain credit for any valid arguments that led you to your conclusion, and which are clearly communicated.

Interactive question 8: Change of use

An entity with a 31 December year end purchased an office building, with a useful life of 50 years, for £5.5 million on 1 January 20X1. The amount attributable to the land was negligible. The entity used the building as its head office for five years until 31 December 20X5 when the entity moved its head office to larger premises. The building was reclassified as an investment property and leased out under a five-year lease.

Owing to a change in circumstances the entity took possession of the building five years later on 31 December 20Y0, to use it as its head office once more. At that date the remaining useful life of the building was confirmed as 40 years.

The fair value of the head office was as follows.

- At 31 December 20X5 £6 million
- At 31 December 20Y0 £7.5 million

Requirements

How should the changes of use be reflected in the financial statements on the assumption that:

(a) the entity uses the cost model for investment properties?

(b) the entity uses the fair value model for investment properties?

See **Answer** at the end of this chapter.

2.6 Summary of disclosure requirements

An entity shall disclose the following:

- Whether it has followed the fair value model or cost model
- Whether property interests held as leases are included in investment property
- Criteria for classification as investment property
- Assumptions in determining fair value
- Use of independent professional valuer (encouraged but not required)
- Rental income and expenses
- Any restrictions or obligations

2.6.1 Fair value model – additional disclosures

An entity that adopts this must also disclose a **reconciliation** of the carrying amount of the investment property at the beginning and end of the period.

2.6.2 Cost model – additional disclosures

These relate mainly to the depreciation method, rates and useful lives used as well as a reconciliation of the carrying amount at the beginning and end of the period. In addition, an entity which adopts the cost model **must disclose the fair value** of the investment property.

Interactive question 9: Installation of new equipment 1

An entity owns the freehold of an office building which was acquired on 31 December 20X0 for £17 million, £2 million of which was attributable to the land. The freehold is an investment property measured under the cost model with the building's useful life estimated at 30 years. The building was fully equipped with an air-conditioning system. No separate value was placed on the air conditioning unit as this was not something that was required by accounting standards at the time of acquisition.

On 31 December 20X5 the entity replaced the air-conditioning system for £1.2 million, which has an estimated useful life of 10 years. As no more reliable information was available, it used this cost as an indication of the cost of the old system.

Requirement

How should the replacement of the air-conditioning be accounted for?

See **Answer** at the end of this chapter.

Interactive question 10: Installation of new equipment 2

An entity with a 31 December year end owns an office building which is recognised as an investment property. The lift system is an integral part of the office building. The entity uses the fair value model for measurement of investment properties.

The lift system was purchased on 1 January 20X0 for £400,000 and is being depreciated at 12.5% per annum on cost. Its carrying amount has been accepted as a reasonable value at which to include it within the fair value of the office building as a whole.

Early in December 20X5 a professional valuer determined the fair value of the office building, including the lift system, to be £3 million. The lift system failed on 28 December 20X5 and was immediately replaced on 31 December 20X5 with a new system costing £600,000.

Requirement

How should the lift system be recognised?

See **Answer** at the end of this chapter.

Interactive question 11: Replacement property

An entity with a 31 December year end owns an investment property which it measures using the fair value model. At 31 December 20X4, the property's carrying amount is £4 million. On 30 June 20X5, an explosion close to the property causes major damage to the property. In July 20X5, the entity makes a number of insurance claims as a result, one of which is for the rebuilding cost, estimated at £3.7 million.

Although the property is repairable, the entity decides to sell it in its present state and buy a replacement property. This decision is made on 30 September 20X5, on which date the damaged property meets the criteria for classification as held for sale. Its fair value on that date is £350,000 and the costs to sell are £35,000. The fair value does not change between 30 September 20X5 and 31 December 20X5. The sale is completed in the middle of 20X6 for £375,000, with selling costs of £40,000.

On 1 March 20X6, the entity acquires a replacement property for £3.8 million.

The entity's insurers contest the claim relating to the building on the basis of an exclusion clause. The entity disagrees with the insurers' interpretation and in February 20X6 initiates legal proceedings.
Negotiations are protracted and it is not until the end of 20X7 that the insurers agree to settle for £3.9 million.

Requirement

How should the entity recognise these transactions? See **Answer** at the end of this chapter.

3 IAS 41, *Agriculture*

Section overview

IAS 41 sets out the accounting treatment, including presentation and disclosure requirements, for agricultural activity.

3.1 Definitions

Definitions

Agricultural activity: Defined as the management of the biological transformation of biological assets for sale, into agricultural produce, or into additional biological assets.

Agricultural activities include, for example, raising livestock, forestry and cultivating orchards and plantations.

In its simplest form a biological transformation is the process of growing something such as a crop, although it also incorporates the production of agricultural produce such as wool and milk.

Biological transformation: Comprises the processes of growth, degeneration, production and procreation that cause qualitative or quantitative changes in a biological asset.

Biological asset: A living plant or animal.

Agricultural produce: The harvested produce of an entity's biological assets.

IAS 41 considers the classification of biological assets and how their characteristics, and hence value, change over time. The standard applies to agricultural produce up to the point of harvest, after which IAS 2, *Inventories* is applicable. A distinction is made between the two because IAS 41 applies to biological assets throughout their lives but to agricultural produce only at the point of harvest.

IAS 41 includes a table of examples which clearly sets out three distinct stages involved in the production of biological assets. For example, we can identify dairy cattle as the biological asset, milk as the agricultural produce and cheese as the product that is processed after the point of harvest.

Calves and cows are biological assets as they are living animals whereas beef and milk are agricultural produce.

Agricultural activities may be quite diverse, but all such activities have similar characteristics as described below.

Common characteristics of agricultural activities

- **Capacity to change** – living animals and plants are capable of changing. For example, a sapling grows into a fruit tree which will bear fruit and a sheep can give birth to a lamb;
- **Management of change** – the biological transformation relies on some form of management input, ensuring, for example, the right nutrient levels for plants, providing the right amount of light or assisting fertilisation; and
- **Measurement of change** – the changes as a result of the biological transformation are measured and monitored. Measurement is in relation to both quality and quantity.

Context example: Common characteristics of agricultural activities

An entity is involved in the production and sale of raw materials for food products, in the sale of fish reared at its own 'fish farms' and in the sale of fish caught in the Northern seas by ocean-going trawlers. An analysis of the processes involved is as follows.

Food products raw materials

The entity owns farmland on which it grows annual crops of corn for sale to food manufacturers. The growing process is aided by the careful application of a range of nutrients, while additives are administered to the underlying land immediately after harvesting has ended. This is an agricultural activity; the corn growing each year is the biological transformation; growth is encouraged by management's activities and the change is monitored, to identify the time at which harvest should commence.

Fish farming

The entity leases a number of privately-owned lakes into which it puts underwater tanks for the rearing of fish. This is an agricultural activity, because the fish are grown to the size suitable for sale and their feed must be provided for them since the amount available naturally in the tanks will be insufficient.

Ocean fishing

The entity owns a number of trawlers. The trawlers go to sea in search of suitable fish. This is not an agricultural activity. Although there is biological transformation on the part of the fish, there is no management intervention in the process; neither is there any routine measurement of the amount of any change which has taken place. The trawlers harvest what the seas yield naturally.

3.1.1 Bearer biological assets

An amendment was issued to IAS 41 in 2014 regarding plant-based bearer biological assets, which would include trees grown in plantations, such as grape vines, rubber trees and oil palms.

These plants are used solely to grow crops over several periods and are not in themselves consumed. When no longer productive they are usually scrapped.

It was decided that fair value was not an appropriate measurement for these assets as, once they reach maturity, the only economic benefit they produce comes from the agricultural produce they create. In this respect, they are similar to assets in a manufacturing activity.

Consequently, these assets have been removed from the scope of IAS 41 and should be accounted for under IAS 16, *Property, Plant and Equipment*. They are measured at accumulated cost until maturity and are then subject to depreciation and impairment charges. The IAS 16 revaluation model could also be applied. Agricultural produce from these plants continues to be recognised under IAS 41.

Interactive question 12: Classification

Into which category would the following items be classified according to IAS 41, *Agriculture*?

12.1 Wool

12.2 Sugar

See **Answer** at the end of this chapter.

3.2 Recognition and measurement

3.2.1 Recognition criteria

A biological asset or agricultural produce should only be recognised when:

- the entity controls the asset as a result of past events, for example the acquisition of dairy cattle. The past event is the purchase, and control is obtained as the entity is now the legal owner;
- it is probable that future economic benefits will flow to the entity, for example because the dairy cattle will produce milk which can be sold or processed into cheese and sold; and
- fair value, or cost, of the asset can be measured reliably.

3.2.2 Measurement of biological assets

A biological asset should initially be measured at its **fair value less estimated costs to sell**, such as duty and commission to brokers or dealers.

Costs to sell

Costs to sell do not include any costs that are necessary to get the asset to a market, for example transport. These should, however, be deducted in determining fair value.

Fair value

Fair value is 'the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date'.

Where an active market exists for a biological asset the quoted price in the market is the appropriate fair value.

Where an active market does not exist, then fair value may be derived by using:

- the most recent transaction in the market, assuming that similar economic conditions exist at the time of the transaction and at the reporting date;
- market prices for similar assets with appropriate adjustments to reflect differences; and
- sector-based benchmarks, for example the value of meat per kilogram.

IAS 41 includes the presumption that it will be possible to fair value a biological asset. But if fair value cannot be measured reliably at the time of initial recognition then the biological asset should be recognised at cost less accumulated depreciation and impairment cost (i.e., the decrease in the recoverable amount of an asset). Fair value should then be used as soon as a reliable measurement can be made.

At subsequent reporting dates a biological asset should continue to be measured at its fair value. Once a biological asset has been measured at fair value it is not possible to revert to cost.

3.2.3 Measurement of agricultural produce

Agricultural produce should be measured at its fair value, less estimated costs to sell at the point of harvest. Subsequent measurement is by reference to IAS 2. It will always be possible to fair value the agricultural produce since, by its very nature, there must be a market for it.

Interactive question 13: Costs to sell

Which of the following expenses would be classified as costs to sell when valuing biological assets and agricultural produce?

A Commission to brokers

B Transfer taxes and duties

C Transport costs

D Advertising costs

See **Answer** at the end of this chapter.

Worked example: Fair value

An entity rears animals to be sold in a local market. The market is 50 km away, and transport to market costs £1 per animal. At the measurement date the open market value is £60. The auctioneers charge a sales commission of 2% of market value and there is a government levy, based on market value, of 1% on purchases and 3% on sales.

Requirement

How should the fair value less cost to sell be calculated?

Solution

The fair value less costs to sell is calculated as:

	£
Market value	60.00
Transport to market costs	(1.00)
Fair value	59.00
Costs to sell	
Auctioneers' commission – 2% of £60	(1.20)
	£
Government levy – 3% of £60	(1.80)
Fair value less costs to sell	56.00

3.2.4 Grouping assets

Grouping biological assets, or agricultural produce, according to significant attributes, such as age or quality, may help to establish fair value. Such groupings should be consistent with attribute groupings that are used in the market as a basis for pricing, for example, by wine vintage.

Some biological assets are physically attached to land, for example tree plantations, and it is necessary to value the land and biological assets together as one asset, even though agricultural land is not within the scope of IAS 41. To obtain the fair value of the biological assets, the fair value of the land element should be deducted from the combined fair value.

Land is dealt with under IAS 16 or IAS 40.

3.3 Gains and losses

Gains or losses arising on the initial recognition at fair value of a biological asset and agricultural produce should be reported directly in profit or loss for the period to which they relate, for example a gain may arise on the birth of a calf. Subsequent changes in the fair value will also be reported directly in profit or loss.

Gains or losses on the initial recognition of agricultural produce should also be included in profit or loss in the period in which they arise. Such gains or losses may arise as a result of harvesting, because the harvested crop may be worth more than the unharvested crop. In this case a gain would arise.

Worked example: Changes in fair value

A herd of five four-year old animals was held on 1 January 20X3. On 1 July 20X3, a 4.5-year old animal was purchased. The fair values less estimated costs to sell were as follows.

4. year-old animal at 1 January 20X3	£200
4.5-year-old animal at 1 July 20X3	£212
5. year-old animal at 31 December 20X3	£230

Requirement

Show the reconciliation of the changes in fair value.

Solution

The movement in the fair value less estimated costs to sell of the herd can be reconciled as follows.

	£
At 1 January 20X3 (5 × £200)	1,000
Purchased	212
Change in fair value (the balancing figure)	168
At 31 December 20X3 (6 × £230)	1,380

The entity is encouraged to disclose separately the amount of the change in fair value less estimated costs to sell arising from physical changes and price changes.

If it is not possible to measure biological assets reliably and they are instead recognised at their cost less depreciation and impairment an explanation should be provided of why it was not possible to establish fair value. A full reconciliation of movements in the net cost should be presented with an explanation of the depreciation rate and method used.

4 IFRS 6, *Exploration for and Evaluation of Mineral Resources*

Section overview

IFRS 6, *Exploration for and Evaluation of Mineral Resources* has been effective since 2006 and essentially deals with two matters.

- Allows entities to use existing accounting policies for exploration and evaluation assets.
- Requires entities to assess exploration and evaluation assets for impairment. The recognition criteria for impairment are different from IAS 36 but, once impairment is recognised, the measurement criteria are the same as for IAS 36.

4.1 Scope

The standard deals with the accounting of expenditures on the exploration for and evaluation of mineral resources (that is, minerals such as gold, copper, etc, oil, natural gas and similar resources), except:

- expenditures incurred before the acquisition of legal rights to explore; and
- expenditures incurred following the assessment of technical and commercial feasibility.

IAS 8, *Accounting Policies, Changes in Accounting Estimates and Errors* still applies to such industries in helping them determine appropriate accounting policies. Thus, accounting policies must present information that is relevant to the economic decision needs of users. Entities may change their policies under IFRS 6 as long as the new information comes closer to meeting the IAS 8 criterion.

4.2 Measurement at recognition

At recognition, exploration and evaluation assets must be measured at cost.

Entities must determine which expenditures to recognise and **apply their policy consistently**. Such expenditure may include acquisition of rights to explore, exploratory drilling, sampling, studies and activities relating to commercial evaluation.

Expenditure related to the **development of mineral resources** is outside the scope of IFRS 6. This comes under IAS 38.

4.3 Measurement after recognition

Entities must apply either the **cost model** or the **revaluation model** in IAS 16.

4.4 Changes in accounting policies

These may be made if the change makes the financial statements more relevant to users. IAS 8 criteria need to be applied.

4.5 Classification and reclassification

Exploration and evaluation assets are classified as **tangible or intangible according to the nature** of the assets acquired. The classification must be applied consistently. They should no longer be classified as such when the technical feasibility and commercial viability of extracting a mineral resource are demonstrable.

4.6 Impairment

The difficulty with respect to exploratory activities is that future economic benefits are generally very uncertain and hence forecasting future cash flows, for example, is difficult. IFRS 6 modifies IAS 36 to state that impairment tests are required:

- When the technical and commercial viability of extraction is demonstrable, at which point IFRS 6 is no longer relevant to the asset.
- When other facts indicate that the carrying amount exceeds recoverable amounts, such as:
  - exploration rights have expired;
  - substantive expenditure on further exploration for and evaluation of mineral resources in the specific area is neither budgeted nor planned;
  - there has been no success in finding commercially viable mineral resources and the entity has decided to discontinue exploratory activities within a specific area; and
  - estimates suggest that the carrying amounts of assets are unlikely to be recovered in full following successful development of the mineral resource.

In such circumstances, impairment is undertaken in accordance with IAS 36.

4.7 Presentation and disclosure

Exploration and evaluation assets are recorded as tangible or intangible assets, as appropriate. Once benefits are demonstrable, assets dealt with under IFRS 6 are superseded by other appropriate standards and are reclassified accordingly.

Disclosure relates to the following:

- A description of the accounting policies applied
- The amounts relating to assets, liabilities, income and expense, and operating and investing cash flows arising from exploration for and evaluation of mineral resources

5 IFRS 4, *Insurance Contracts*

Section overview

IFRS 4 represents interim guidance, as the first phase of a bigger project on insurance contracts. The objective of IFRS 4 is to make limited improvements to accounting practices for insurance contracts and to require an issuer of insurance contracts to disclose information that identifies and explains amounts arising from such contracts.

5.1 Background

IFRS 4 specifies the financial reporting for insurance contracts by any entity that issues such contracts, or holds reinsurance contracts. It does not apply to other assets and liabilities held by insurers.

In the past there was a wide range of accounting practices used for insurance contracts and the practices adopted often differ from those used in other sectors. As a result the IASB embarked on a substantial project to address the issues surrounding the accounting for insurance contracts. Rather than issuing one standard that covered all areas, the IASB decided to tackle the project in two phases.

Interim guidance has been issued in phase one of the project in the form of IFRS 4; it is a stepping stone to the second phase of the project. IFRS 4 largely focuses on improving the disclosure requirements in relation to insurance contracts; however, it also includes a number of limited improvements to existing accounting requirements.

Although IFRS 4 sets out a number of accounting principles as essentially best practice, it does not require an entity to use these if it currently adopts different accounting practices. An insurance entity is however prohibited from changing its current accounting policies to a number of specifically identified practices.

5.2 What is an insurance contract?

Definition

Insurance contract: A contract between two parties, where one party, the insurer, agrees to compensate the other party, the policyholder, if it is adversely affected by an uncertain future event.

An uncertain future event exists where at least one of the following is uncertain at the inception of an insurance contract:

- the occurrence of an insured event;
- the timing of the event; or
- the level of compensation that will be paid by the insurer if the event occurs (IFRS 4 Appendix B).

Some insurance contracts may offer **payments-in-kind** rather than **compensation** payable to the policyholder directly. For example, an insurance repair contract may pay for a washing machine to be repaired if it breaks down; the contract will not necessarily pay monetary compensation.

In identifying an insurance contract it is important to make the distinction between **financial risk** and **insurance risk**. A contract that exposes the issuer to financial risk without significant insurance risk does not meet the definition of an insurance contract.

Financial risk is where there is a possible change in a financial or non-financial variable, for example a specified interest rate, commodity prices, an entity's credit rating or foreign exchange rates.

Definition

Insurance risk: A risk that is not a financial risk. The risk in an insurance contract is whether an event will occur (rather than arising from a change in something), for example a theft, damage against property, or product or professional liability.

Examples of insurance contracts

Appendix B to IFRS 4, which forms an integral part of the standard, includes an extensive list of examples of insurance contracts including:

- life insurance and prepaid funeral plans. It is the timing of the event that is uncertain here, for example certain life cover plans only pay out if death occurs within a specified period of time;
- disability and medical cover;
- credit insurance, covering the policyholder for non-recoverable receivables; and
- travel cover to provide against any loss suffered while travelling.

Examples of an insurer taking on insurance risk are as follows:

- An insurance contract issued to a policyholder against the escalation of claims from faulty motorcycles. The fault was discovered a year ago and the extent of total claims is yet to be established. This is an insurance contract since the insured event is the discovery of the ultimate cost of the claims.
- A gas boiler repair service available from a supplier who, for the payment of a fixed fee, will fix the malfunctioning boiler. This is an insurance contract as it is a payment-in-kind contract, with the uncertain event being whether the boiler will break down and the policyholder will be adversely affected.

Examples which are not insurance contracts

It is important to distinguish between **insurance contracts** and **other contracts** that are not covered by IFRS 4 but which might look like insurance contracts. To provide clarification IFRS 4 specifically identifies a number of areas where its provisions do not apply, for example:

- the provision of product warranties given directly by the manufacturer, dealer or retailer;
- employers' assets and liabilities in relation to employee benefit plans and obligations under a defined benefit plan;
- a contractual right, or obligation, that is contingent on the right to use a non-financial item, for example some licences;

- a lease that contains a residual value guaranteed by the lessee, ie, a specified value for the asset at the end of the lease is guaranteed by the lessee;
- financial guarantees within the scope of IFRS 9, *Financial Instruments;*
- contingent consideration that has arisen as a result of a business combination; and
- insurance contracts that the entity holds as policyholder.

5.3 Recognition and measurement

IFRS 4 exempts an insurer temporarily (during phase one of the IASB's insurance project) from the need to consider the IASB *Framework* in selecting accounting policies for insurance contracts where there is no specific accounting requirement set out in another international Standard (IFRS 4.13, through its reference to IAS 8, *Accounting Policies*, *Changes in Accounting Estimates and Errors)*.

However, IFRS 4 expressly:

- requires a test for the adequacy of recognised insurance liabilities – referred to as the **liability adequacy test**;
- prohibits provisions for possible claims under contracts that are not in existence at the reporting date (referred to as catastrophe or equalisation provisions);
- requires an impairment test for reinsurance assets. An impairment is only recognised where after the commencement of a reinsurance contract, an event has occurred that will lead to amounts due under the contract not being recovered in full, and a reliable estimate of the shortfall can be assessed; and
- requires an insurer to continue to recognise insurance liabilities in its financial statements until they are discharged, cancelled or expire, and to present such liabilities without offsetting them against related reinsurance assets.

Liability adequacy test

An insurer recognises its insurance liabilities at each reporting date based on the current estimate of future contractual cash flows, and related items such as handling costs, arising under the insurance contracts.

This provision should be reassessed at each reporting date and any identified shortfall should be recognised immediately as part of profit or loss for the period. This is the so called **liability adequacy test**.

The assessment should be based on current estimates for future cash flows under the insurance contracts issued. If the recognised insurance liability is assessed as being adequate, then IFRS 4 does not require any further action by the insurer. However, if the liability is found to be inadequate, then the entire shortfall should be recognised in profit or loss.

The liability adequacy test considers all contractual cash flows under current insurance contracts, and related costs, such as claims handling costs. Where there are embedded options or guarantees within a contract, any cash flows arising should also be included in the assessment. Where an entity has deferred acquisition costs and related intangible assets, such as those arising from an insurance based business combination these should be deducted from the insurance liabilities.

If the accounting policies of an insurer do not demand that a liability adequacy test should be carried out, as described above, then an assessment is still required of the potential net liability (ie, the relevant insurance liabilities less any related deferred acquisition costs). In these circumstances the insurer is required to recognise at least the amount that would be required to be recognised as a provision under the application of IAS 37, *Provisions, Contingent Liabilities and Contingent Assets*.

That is, if the carrying amount of the IAS 37 calculated provision is greater than that recognised, then the insurer should increase the liabilities as appropriate.

Context example: Liability adequacy test

An insurance entity writes one-year policies for one of its classes of general insurance business and is carrying the following amounts for that class in its draft statement of financial position at 31 December 20X5.

	£m
Liabilities	
Provision for claims – discounted value of likely claims for insured losses occurring up to 31 December 20X5	75
Liability for unearned premiums – proportion of premiums for policies already written which relates to cover in 20X6	30
Assets	
Deferred acquisition costs – proportion of commission and other business acquisition costs for policies already written which relate to the unearned premiums	10

The effect of reinsurance is immaterial.

The entity's procedure for calculating the provision for claims is as follows.

(a) To use past experience to make a range of estimates of amounts ultimately payable to insured persons in respect of claims for losses occurring by the reporting date and of the timing of the payments

(b) To select the most likely amount and timing as its central estimate

(c) To discount the amount by reference to a risk-free rate

(d) To use past experience to increase the discounted amount by a risk margin to reflect the inherent uncertainty in this discounted estimate

(e) To increase the adjusted amount by an estimate, based on past experience and discounted, of the internal costs (such as employee benefits and accommodation costs) which will be incurred in handling the loss claims over the period up to their settlement

The cost of the provision is recognised in profit or loss. As this procedure meets the requirements of IFRS 4 no further action is necessary.

The entity also estimates on a similar basis the discounted total amount, including claims handling costs, which will be payable in respect of insured losses arising after the reporting date over the period of cover which generates the unearned premiums. The estimated amount is £25 million.

As all the policies extend for one year, in 20X6 the whole of the £30 million unearned premiums will become earned. But in 20X6 the deferred acquisition costs of £10 million will be charged against those premiums. Against this net income of £20 million, the estimated cost of claims is £25 million. Hence, there is a premium deficiency of £5 million in 20X6, which should be recognised in profit or loss in 20X5.

5.4 Disclosures

IFRS 4 sets out an overriding requirement that the information to be disclosed in the financial statements of an insurer "helps users understand the amounts in the insurer's financial statements that arise from insurance contracts" (IFRS 4: para 4.36).

This information should include the accounting policies adopted and the identification of recognised assets, liabilities, income and expense arising from insurance contracts.

More generally, the risk management objectives and policies of an entity should be disclosed, since this will explain how an insurer deals with the uncertainty it is exposed to.

An entity is not generally required to comply with the disclosure requirements in IFRS 4 for comparative information that relates to annual periods beginning before 1 January 2005. However, comparative disclosure is required in relation to accounting policies adopted and the identification of recognised assets, liabilities, income and expense arising from insurance contracts.

5.5 Current developments: IFRS 17

5.5.1 Background

IFRS 4 was criticised for allowing a large number of different accounting policies, resulting in a lack of comparability, even within insurance groups. To address this the IASB has developed a new standard, IFRS 17, *Insurance Contracts*.

Adoption of IFRS 17 is mandatory for reporting periods beginning on or after 1 January 2023. Early adoption is permitted. In addition insurance companies are permitted to delay initial adoption of IFRS 9 (see Chapter 16) until IFRS 17 is applied.

> **Tutorial note**
>
> IFRS 4 is still the examinable standard, so an overview of the main features of IFRS 17 is required, bearing in mind that companies may early adopt.

IFRS 17 was published in 2017 and introduces a comprehensive financial reporting framework for insurance contracts which aims to achieve greater comparability and consistency in financial reporting by insurers.

5.5.2 Scope

The scope of IFRS 17 is similar to IFRS 4 and encompasses insurance contracts issued, reinsurance contracts both issued and held and investment contracts with discretionary participation features if issued by insurers.

5.5.3 Simplified measurement model

A simplified measurement model referred to as the premium allocation approach can be used for short term insurance contracts and is similar to the use of an unearned premium reserve under IFRS 4.

5.5.4 General measurement model

The general measurement method is more complex and will be applied to long-term insurance contracts. It uses a building block approach to establish the value of insurance contracts on initial recognition.

This general method discounts future cash flows related to the contract and adjusts for non-financial risk to arrive at the value of fulfilment cash flows. To these is added an equal and opposite amount representing the unearned profit over the contract life, referred to as contractual service margin.

Insurance contracts are remeasured at each subsequent year end and a proportion of contractual service margin is released to profit or loss as part of the insurance service result.

Contracts for which the value of fulfilment cash flows is negative (liability) are referred to as onerous contracts. This amount is not mirrored in the creation of a contractual service margin, but rather is recognised immediately in profit or loss.

In practice the measurement models of IFRS 17 will generally be applied to groups of contracts with similar characteristics aggregated together rather than on an individual contract basis.

5.5.5 Reinsurance contracts

The measurement of reinsurance contracts follows the same measurement principles and mirrors that of the primary insurance contract(s) to which it is related.

5.5.6 Implementation challenges

The implementation of such a significant change to the financial reporting of insurance contract is likely to represent a significant systems challenge to insurers and auditors will need to perform additional work in relation to these systems and the related internal controls. Implementing IFRS 17 is likely to be a complex, lengthy process, with the following implications:

(a) Changes to profit recognition patterns

(b) Increased volatility of profit and equity

(c) Increased options and requirement for judgement

Set against this, it can be argued that the changes will bring greater transparency through disclosure.

6 Audit focus points

Section overview

The audit of investment properties should focus on:

- whether the property has been correctly classified;
- whether the valuation is materially correct (either under the cost model or the FV model); and
- whether the disclosure complies with IAS 40/IFRS 13.

Other areas will have been tested at the Professional Level in Audit and Assurance but may still require some key questions to be answered by auditors in the Corporate Reporting exam.

6.1 General approach to auditing assets

You should be familiar with the auditing of tangible and intangible assets from the Certificate Level Assurance exam. If you do not feel confident in this area, we would recommend that you revise it.

Your earlier studies should give you a good understanding of the audit techniques, and the sources of audit evidence, that an auditor can use in a range of different scenarios. Your knowledge of the financial reporting standards will inform your specific approach in the exam. For example:

- testing for tangible non-current assets should consider both over- and under-statement, as well as valuation and impairment
- intangible assets can vary significantly, but in most cases, the auditor is on the lookout for creative accounting and instances where expenditure might not be recognised when it should be, leading to overstated assets and understated expenses

- inventory is usually going to be a material balance, so auditors must concentrate on the two key issues of quantity (using the inventory count) and valuation (lower of cost and net realisable value)

6.2 Auditing investment properties

Definition

Investment property: Property (land or a building – or part of a building – or both) held (by the owner or by the entity as a right-of-use asset) to earn rentals or for capital appreciation or both, rather than for:

- use in the production or supply of goods or services or for administrative purposes; or
- sale in the ordinary course of business.

The following would be non-investment properties:

- Property held for sale in the ordinary course of business
- Property being constructed or developed on behalf of third parties
- Owner-occupied property

Investment property is initially measured at its **cost** (including transaction costs and directly attributable expenditure). After recognition it is measured at **either depreciated cost or fair value**.

Audit evidence

Issue	Evidence
Classification as an investment property	Confirm that all investment properties are classified in accordance with the IAS 40 definition. This will include: • a building owned by the entity and leased out under one or more operating leases; and • a building that is vacant but is held to be leased under one or more operating leases.
	Verify rental agreements, ensuring that the occupier is not a connected company and that the rent has been negotiated at arm's length If the building has recently been built, check the architect's certificates to ensure that cost/fair value is reasonable
Valuation	If cost model adopted, check compliance with IAS 16. If fair value model adopted: • Check that fair value has been measured in accordance with IFRS 13 • Where current prices in an active market are not available confirm that alternative valuation basis is reasonable and in accordance with IFRS 13, and document the relevant audit evidence • Agree valuation to valuer's certificate • Recalculate gain or loss on change in fair value and agree to amount in statement of profit or loss and other comprehensive income • If fair value cannot be measured reliably confirm use of cost model • Consider the use of an auditor's expert to review the appropriateness of the underlying market assumptions and valuation methodology used

Issue	Evidence
Disclosure	Confirm compliance with IAS 40/IFRS 13, for example: • Disclosure of policy adopted • If fair value model adopted disclosure of a reconciliation of carrying amounts of investment property at the beginning and end of the period • Disclosure of the inputs used to measure fair value based on the fair value hierarchy (Level 1, Level 2 or Level 3) • Where Level 2 or Level 3 inputs are used, a description of the valuation techniques and inputs used (interest rates, net reversionary yield, stabilised net rental value, costs to complete and developer's profit) • For fair value measurements using significant unobservable inputs (Level 3), the effect of the measurements on profit or loss and other comprehensive income for the period

Note: IAS 40 states that fair value should be measured in accordance with IFRS 13.

Interactive question 14: Investment property and fair value

Propertyco, an investment property company, has a portfolio of properties, including the following:

Property A	This is used as the company head office.
Property B	This is held as a right-of-use asset and is currently rented out to a non-group company under an operating lease.
Property C	This was acquired in the year at a cost of £3 million including legal fees. It is currently vacant but a tenant is being actively sought.
Property D	This has been owned by Propertyco for a number of years and is currently rented out to a non-group company.

Propertyco uses the fair value model in accordance with IAS 40. Currently all the above properties are recorded in the financial statements at fair value.

Requirements

Based on the information above:

(a) Identify the audit issues which the auditor would need to consider

(b) List the audit procedures you would perform regarding fair values

See **Answer** at the end of this chapter.

Context example: Big Yellow Group plc

Deloitte, the statutory auditor of the Big Yellow Group plc – the self-storage solutions business listed on the FTSE 250 – noted in the auditor's report in the group's financial statements for the year ended 31 March 2015 that investment properties constituted an area of particular audit risk. The nature of the risk and the auditor's responses to the risk were described in the following except from the auditor's report. The full annual report can be found at the following URL: http://html.investis.com/B/Big-yellow-plc/reports/ar2015/pdfs/Big_Yellow_AR2015.pdf

Risk

At 31 March 2015, the Group held wholly owned investment properties and investment properties under construction valued at £1,022.8 million.

Investment properties are held at fair value on the balance sheet. The net valuation gain, relating to Group held properties was £64.5 million, which was recognised through the Consolidated Income Statement during the year. The fair values at 31 March 2015 are calculated using actual and forecast inputs, such as occupancy, capitalisation rates, an assessment of cost to complete for investment properties under construction and net rent per square foot by property. In addition, the valuers apply professional judgement concerning market conditions and factors impacting individual properties.

The valuation process is inherently judgemental, which is why we consider this to be a risk of material misstatement. In particular, changes in assumptions such as the capitalisation rates, forecast rent per square foot, forecast occupancy levels and, in the case of investment property under construction, cost to complete can lead to significant movements in the value of the property, as can changes in the underlying market conditions.

How the scope of our audit responded to the risk

(a) We assessed the design and implementation of controls around the property valuations by considering the level of management oversight and review of the valuations prepared by the external valuation specialists engaged by management, who have been named in note 14;

(b) We tested the integrity of the information provided by management to the valuers by agreeing key inputs such as actual occupancy and net rent per square foot to underlying records and source evidence;

(c) We modelled eight years of valuations and key valuation inputs to the investment property portfolio, to understand the historical trends of key inputs and compared these against the key forecast assumptions included in the property valuation;

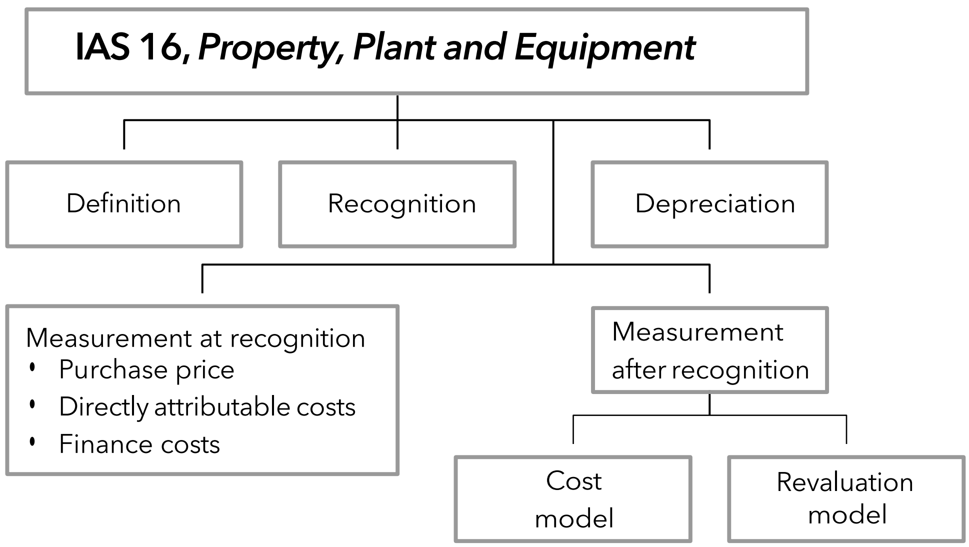
(d) We met with the valuers. We assessed their independence, the scope of the work they were requested to perform by management, and the valuation methodology applied. For each property we identified as having significant or unusual valuation movements (compared to market data or previous periods), we challenged the valuers on the key assumptions applied. Our challenge was informed by input from our internal valuation specialists, utilising their knowledge and expertise in the market at a macro level and the relevant geographies to challenge the key judgemental inputs noted adjacent. We also researched comparable transactions and understood trends in analogous industries. We understood the rationale for outlying valuations or movements and obtained corroborative evidence. We also assessed the valuations for a sample of other properties; and

(e) We visited a sample of properties to assess the condition of the buildings.

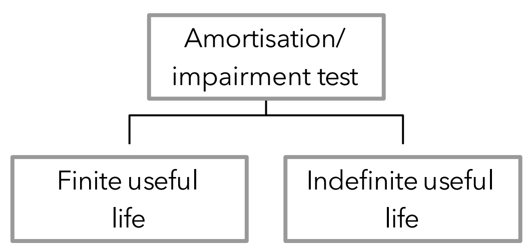
Professional skills focus: Concluding, recommending and communicating

Investment property can be risky and subject to judgement on the part of valuers. Effective communication on the part of the auditors is therefore particularly important. The above case study shows the auditors acting with professional scepticism while maintaining sufficient trust to elicit the necessary information.

Summary

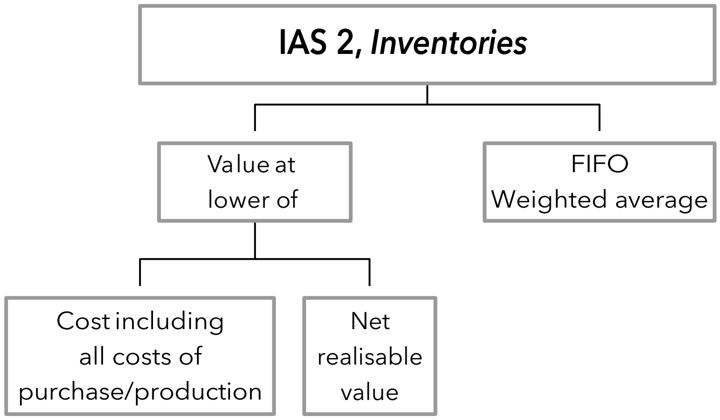


IAS 16, *Property, Plant and Equipment*
Definition
Recognition
Depreciation
Measurement at recognition
• Purchase price
• Directly attributable costs
• Finance costs
Measurement after recognition
Cost model
Revaluation model

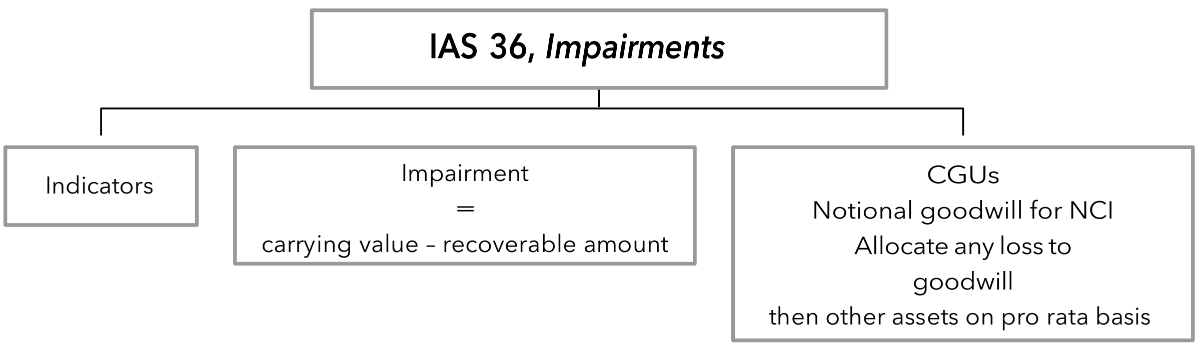


Amortisation/ impairment test
Finite useful life
Indefinite useful life

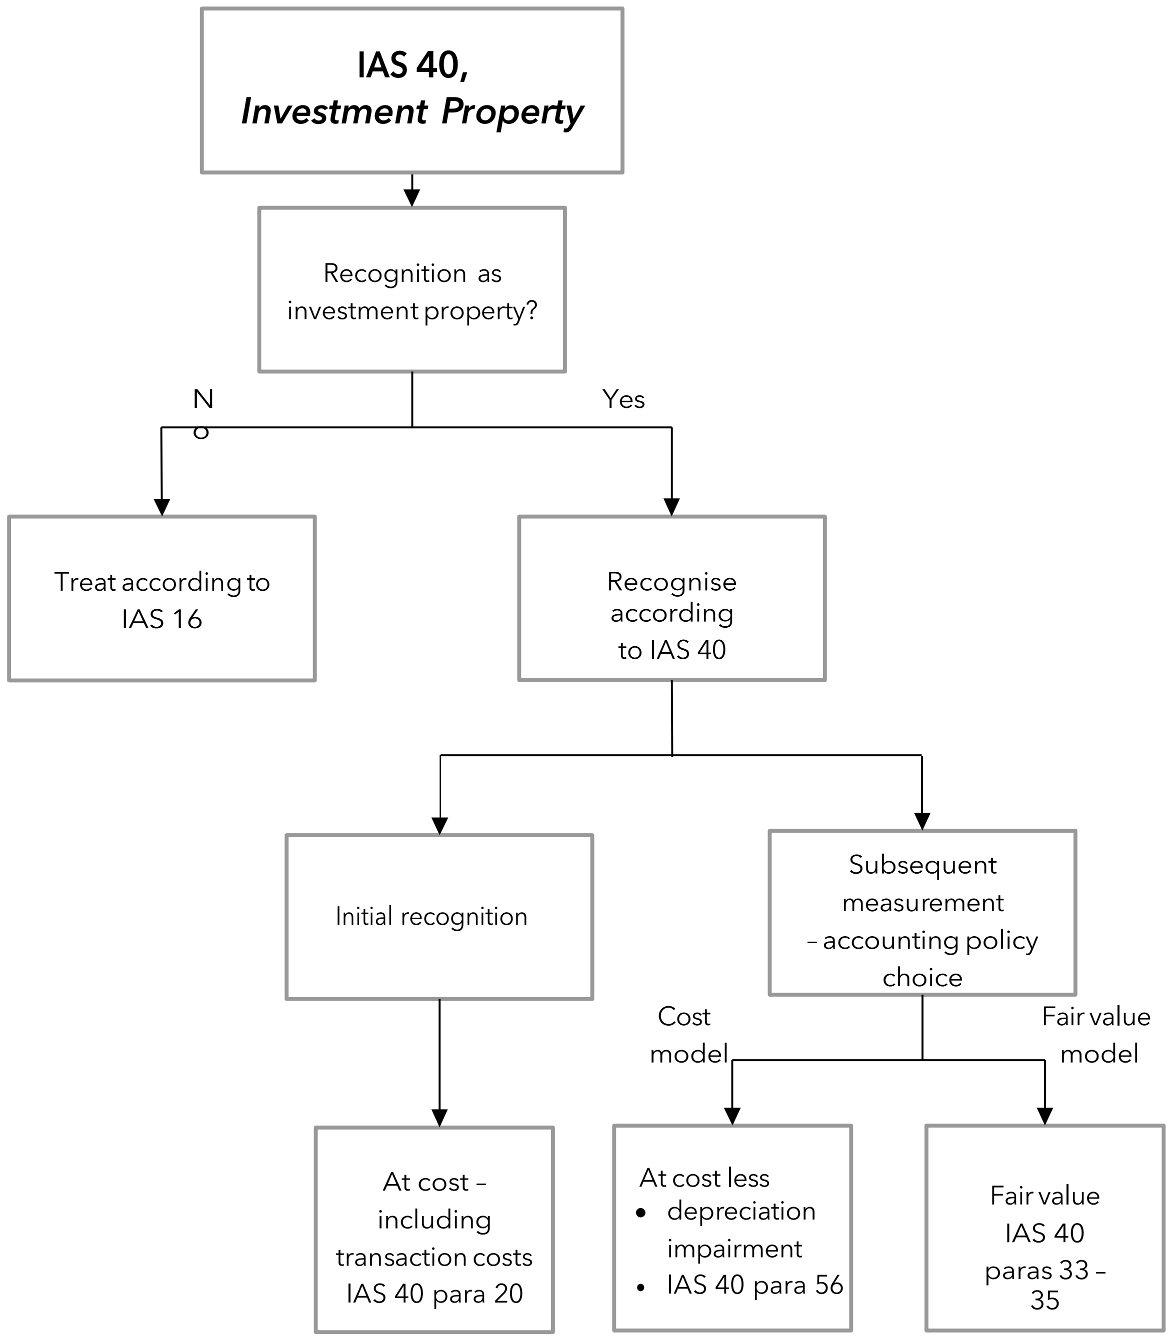
Separate acquisition
Acquired in business combination
Acquisition by way of a government grant
Exchanges of assets
Internally generated goodwill
Internally generated intangibles



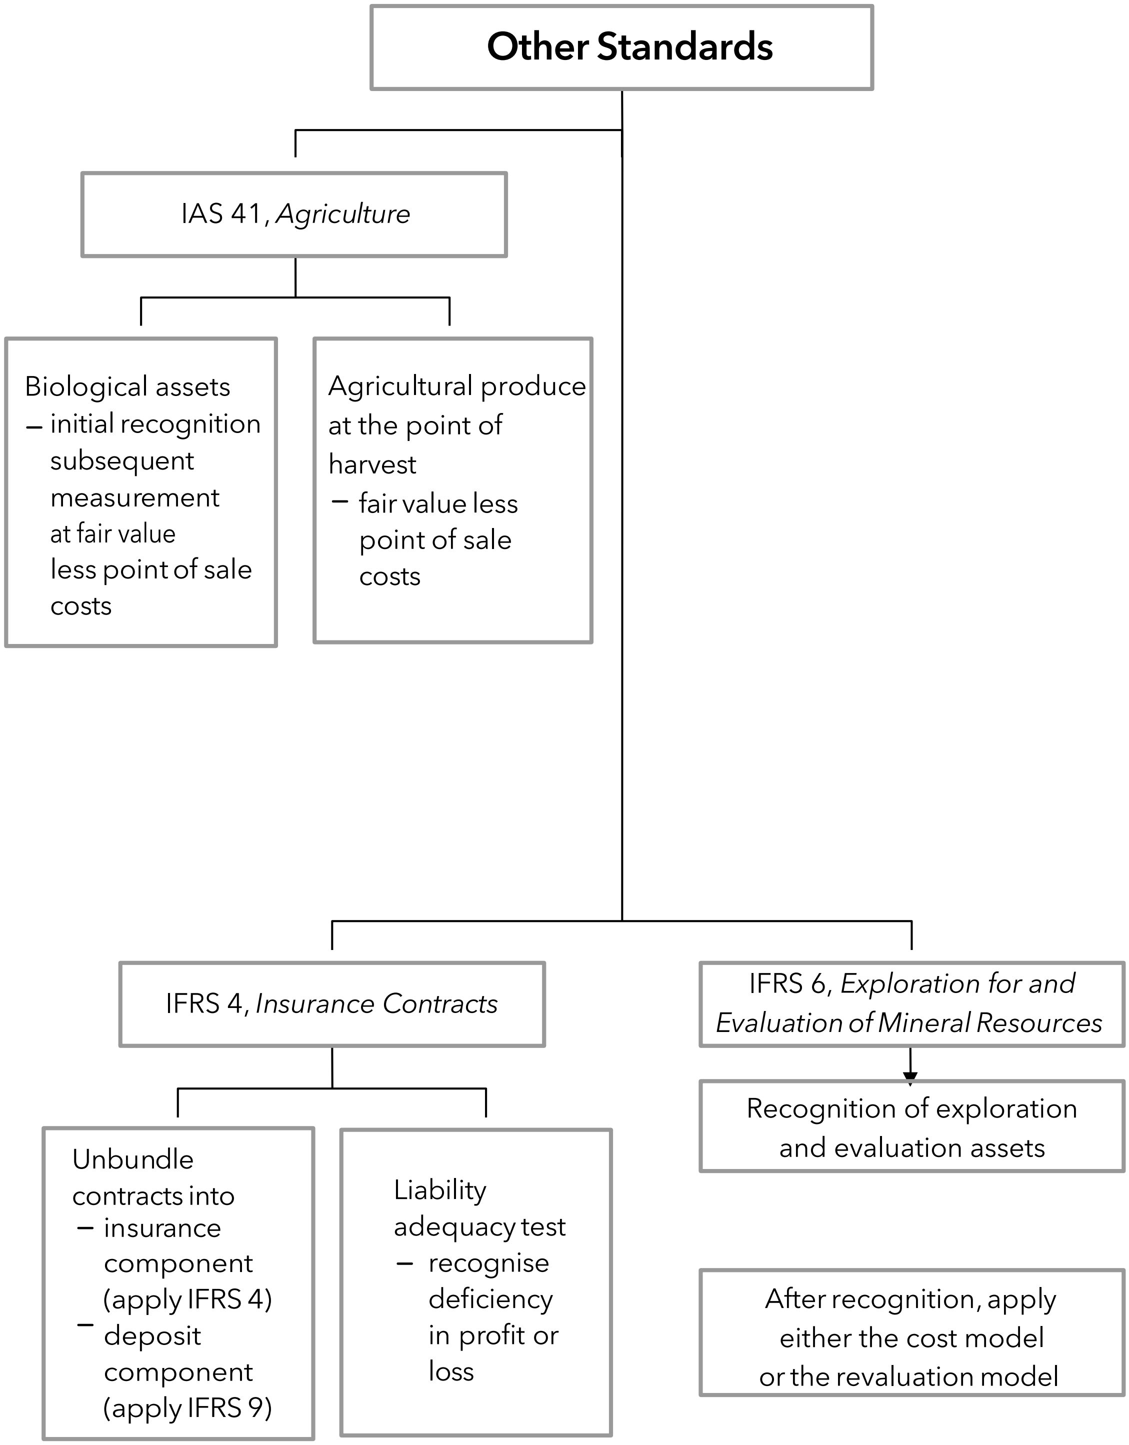
IAS 2, *Inventories*
Value at lower of
FIFO
Weighted average
Cost including all costs of purchase/production
Net realisable value



IAS 36, *Impairments*
Indicators
Impairment
=
carrying value – recoverable amount
CGUs
Notional goodwill for NCI
Allocate any loss to goodwill
then other assets on pro rata basis



IAS 40,
Investment Property
Recognition as investment property?
No
Yes
Treat according to IAS 16
Recognise according to IAS 40
Initial recognition
Subsequent measurement – accounting policy choice
Cost model
Fair value model
At cost – including transaction costs IAS 40 para 20
At cost less
• depreciation impairment
• IAS 40 para 56
Fair value IAS 40 paras 33 – 35



Other Standards
IAS 41, *Agriculture*
Biological assets
– initial recognition subsequent measurement at fair value less point of sale costs
Agricultural produce at the point of harvest
– fair value less point of sale costs
IFRS 4, *Insurance Contracts*
Unbundle contracts into
– insurance component (apply IFRS 4)
– deposit component (apply IFRS 9)
Liability adequacy test
– recognise deficiency in profit or loss
IFRS 6, *Exploration for and Evaluation of Mineral Resources*
Recognition of exploration and evaluation assets
After recognition, apply either the cost model or the revaluation model

Further question practice

1 Knowledge diagnostic

Before you move on to question practice, confirm you are able to answer the following questions having studied this chapter. If not, you are advised to revisit the relevant learning from the topic indicated.

	Confirm your learning
1.	Can you list the key points in IAS 36, *Impairment of Assets*? (Topic 1)
2.	How should change in use be dealt with under IAS 40? (Topic 2)
3.	How should biological assets be measured under IAS 41? (Topic 3)
4.	How should exploration and evaluation assets be measured under IFRS 5? (Topic 4)
5.	What should be the auditor's main focus when auditing investment properties? (Topic 6)

2 Question practice

Aim to complete all self-test questions at the end of this chapter. The following self-test questions are particularly helpful to further topic understanding and guide skills application before you proceed to the next chapter.

Question	Learning benefit from attempting this question
Ruapehu	You should have no trouble with this quick revision of inventory from your earlier studies.
Oruatua	This is on PPE, and is rather more complex than you will have met in your earlier studies.
Acetone	This tests impairment of goodwill, including 'notional' goodwill, which you may have found tricky in your Professional Level studies.
Ramshead	Investment property is new at Advanced Level, so you need a substantial question to get you started. This one tests the interaction of IAS 40 with IFRS 5, which you covered in an earlier chapter.

Refer back to the learning in this chapter for any questions which you did not answer correctly or where the suggested solution has not provided sufficient explanation to answer all your queries. Once you have attempted the self-test questions, you can continue your studies by moving onto the next chapter. In later chapters, we will recommend questions from the Question Bank for you to attempt.

Technical reference

1 **IAS 16, *Property, Plant and Equipment***

- Recognition – **IAS 16.7**
- Initial costs – **IAS 16.11**
- Subsequent costs – **IAS 16.12**
- Measurement at recognition – **IAS 16.15**
- Measurement after recognition – **IAS 16.29**
- Derecognition – **IAS 16.67-72**
- Disclosure – **IAS 16.73-79**

2 **IAS 38, *Intangible Assets***

- Scope – **IAS 38.2**
- Definition – **IAS 38.8**
- Intangible assets – **IAS 38.9-10**
- Identifiability – **IAS 38.11-12**
- Control – **IAS 38.13**
- Future economic benefits – **IAS 38.17**
- Recognition and measurement – **IAS 38.18-67**
- Recognition of an expense – **IAS 38.68**
- Measurement after recognition – **IAS 38.72**
- Cost model – **IAS 38.74**
- Revaluation model – **IAS 38.75-87**
- Useful life – **IAS 38.88-96**
- Intangible assets with finite useful lives – **IAS 38.97-106**
- Intangible assets with indefinite useful lives – **IAS 38.107-110**
- Recoverability of the carrying amount - impairment losses – **IAS 38.111**
- Retirements and disposals – **IAS 38.112**
- Disclosure – **IAS 38.118**

3 **IAS 2, *Inventories***

- Measurement and disclosure but not recognition – **IAS 2.1**
- Measured at lower of cost and net realisable value – **IAS 2.9**
- Cost = expenditure incurred, in bringing the items to their present location and condition, so the cost of purchase and the cost of conversion – **IAS 2.10**
  - Fixed costs included by reference to normal levels of activity – **IAS 2.13**
- Cost formula: FIFO or Weighted average – **IAS 2.25**
- NRV includes costs to complete and selling costs – **IAS 2.6**
- Disclosures include accounting policies, carrying amounts and amounts recognised as an expense – **IAS 2.36-38**

4 IAS 36, *Impairment of Assets*

(1) **Indications**

- At each reporting date assess whether indication of impairment: – **IAS 36.9**
  - If so, estimate recoverable amount (RA)
  - RA is higher of fair value less costs to sell and value in use (present value of future cash flows in use and on disposal) – **IAS 36.6**
  - Review both external and internal information for evidence of impairment – **IAS 36.12**
- Impairment loss where carrying amount exceeds RA – **IAS 36.59**

(2) **Fair value less costs to sell**

- The way in which fair value is determined depends on whether there is a binding sale agreement and/or an active market – **IAS 36.25-27**
- Examples of disposal costs – **IAS 36.28**

(3) **Value in use**

- Calculation involves the estimation of future cash flows as follows: – **IAS 36.39**
  - Cash flows from continuing use
  - Cash flows necessarily incurred to generate cash inflows from continuing use
  - Net cash flows receivable/payable on disposal
- These should reflect the current condition of the asset – **IAS 36.44**
- The discount rate should reflect:
  - The time value of money – **IAS 36.55**
  - Risks specific to the asset for which the future cash flow estimates have not been adjusted

(4) **Cash-generating units**

- Estimate recoverable amount of CGU if not possible to assess for an individual asset – **IAS 36.66**
- Identification of an asset's CGU involves judgement – **IAS 36.68**
- Goodwill should be allocated to each of the acquirer's CGUs that are expected to benefit – **IAS 36.80**
- Goodwill that cannot be allocated to a CGU on a non-arbitrary basis is allocated to the group of CGUs to which it relates – **IAS 36.81**
- Annual impairment review required for any CGU which includes goodwill – **IAS 36.90**
- Corporate assets should be allocated on a reasonable and consistent basis – **IAS 36.102**

(5) **Impairment losses**

- If the asset is held under the cost model the impairment should be recognised in profit or loss – **IAS 36.60**
- If the asset has been revalued the impairment loss is treated as a revaluation decrease – **IAS 36.60**
- An impairment loss for a CGU should be allocated: – **IAS 36.104**
  - To goodwill then
  - To all other assets on a pro rata basis
- When a CGU is a non-wholly owned subsidiary and non-controlling interest is measured at acquisition date at share of net assets, notionally gross up goodwill for that part attributable to the non-controlling interest – **IAS 36 (Appendix C)**

(6) **Reversals**

- An impairment loss recognised for goodwill should not be reversed – **IAS 36.124**

(7) **Disclosures**

- All impairments – **IAS 36.126**
- For a material impairment on an individual asset – **IAS 36.130**
- For a material impairment on a CGU – **IAS 36.130**

5 IAS 40, *Investment Property*

- Definition of investment property – **IAS 40.5**
- Definition of fair value – **IFRS 13.9**
- Property held as a right-of-use asset may be investment property – **IAS 40.6**
- Fair value model – **IAS 40.33-35, IAS 40.38**
- Cost model – **IAS 40.56**

6 IAS 41, *Agriculture*

- Scope – **IAS 41.1**
- Agricultural activities – **IAS 41.5, 8**
  - Biological assets
  - Agricultural produce at the point of harvest
  - Government grants
- Recognition and measurement – **IAS 41.10, 12-13**
- Gains and losses – **IAS 41.26, 28**
- Government grants – **IAS 41.34-35**
- Disclosure – **IAS 41.40, 41, 46-50, 54-57**

7 IFRS 6, *Exploration for and Evaluation of Mineral Resources*

- Scope – **IFRS 6.3-5**
- Measurement at recognition – **IFRS 6.8-11**
- Measurement after recognition – **IFRS 6.12**
- Changes in accounting policies – **IFRS 6.13**
- Impairment – **IFRS 6.18**

8 IFRS 4, *Insurance Contracts*

- Objective – **IFRS 4.1**
- Scope – **IFRS 4.2-6**
- Embedded derivatives – **IFRS 4.7-9**
- Liability adequacy test – **IFRS 4.15**

Self-test questions

Answer the following questions

1 **IAS 40**

Which of the following properties fall under the definition of investment property and therefore within the scope of IAS 40, *Investment Property*?

A Property occupied by an employee paying market rent

B A building owned by an entity and leased out under an operating lease

C Property being constructed on behalf of third parties

D Land held for long-term capital appreciation

2 **Ruapehu**

The Ruapehu Company manufactures a single type of concrete mixing machine, which it sells to building companies. Ruapehu is currently considering the value of its inventories at 31 December 20X7. The following data are relevant at this date:

	Cost per item £
Variable production costs	200,000
Fixed production costs	40,000
	240,000

There are 85 mixing machines held in inventory.

The company has a contract to sell 15 concrete mixing machines at £225,000 each to a major local building company in January 20X8. The normal selling price is £260,000 per machine. Selling costs are minimal.

Requirement

What is the value of Ruapehu's inventory at 31 December 20X7, according to IAS 2, *Inventories*?

3 **Utah**

The Utah Company manufactures motors for domestic refrigerators. A major customer is The Bushbaby Company, which is a major international electrical company making refrigerators as one of its products.

Utah is currently preparing its financial statements for the year to 31 December 20X7 and it expects to authorise them for issue on 3 March 20X8.

Utah holds significant inventories of motors (which are unique to the Bushbaby contract) as Bushbaby requires them to be supplied on a just-in-time basis and has variable production schedules.

On 3 January 20X8, Bushbaby announced that it was fundamentally changing the design of its refrigerators and that, while this had been planned for some time, it had not been possible to warn Utah for reasons of commercial confidentiality. As a consequence, it would cease to use Utah's motors from 30 April 20X8 and would reduce production before that date. Details for Utah are as follows:

Number of motors held in inventory at 31 December	4,000 motors
Expected sales in the four months to 30 April 20X8	1,600 motors
Net selling price per motor sold to Bushbaby	£50
Net selling price per motor unsold at 30 April 20X8	£10
Cost per motor	£25

Requirement

At what value should the inventories of motors be stated by Utah in its statement of financial position at 31 December 20X7 according to IAS 2, *Inventories*, and IAS 10, *Events after the Reporting Period*?

4 Niobium

The Niobium Company operates in the petrol refining industry. A fire at a competitor using similar plant has revealed a safety problem and the Government has introduced new regulations requiring the installation of new safety equipment in the industry. The refinery had a carrying amount of £30 million before the installation of the safety equipment. The new safety equipment cost £5 million and was fully operational at 31 December 20X7, but it does not generate any future economic benefits. The refinery would, however, be closed down without such equipment being installed.

At 31 December 20X7 the net selling price of the refinery was estimated at £33 million. In determining its value in use, the directors have determined that the refinery would generate annual cash flows of £3.2 million from next year in perpetuity, to be discounted at 10% per annum.

Requirement

According to IAS 16, *Property, Plant and Equipment*, what is the carrying amount of the refinery in Niobium's statement of financial position at 31 December 20X7?

5 Oruatua

The Oruatua Company acquired a piece of machinery for £800,000 on 1 January 20X6. It identified that the asset had three major components as follows:

Component	Useful life	Cost (£'000)
Pump	5 years	110
Filter	4 years	240
Engines	15 years	450

Under the terms of the 15-year licence agreement for the use of the machinery, the engines (but not the other components) were to be dismantled at the end of the licence period. The machinery contained three engines, and dismantling costs for all three engines were initially estimated at a total cost of £480,000 (ie, £160,000 per engine) payable in 15 years' time. Oruatua's discount rate appropriate to the risk specific to this liability is 7% per annum.

One of the three engines developed a fault on 1 January 20X7 and had to be sold for scrap for £40,000. A replacement engine was purchased at a cost of £168,000 on 1 January 20X7, for use until the end of the licence period, when dismantling costs on this engine estimated at £150,000 would be payable.

At a rate of 7% per annum the present value of £1 payable in 15 years' time is 0.3624 and of £1 payable in 14 years' time is 0.3878.

Requirements

Calculate the following figures for inclusion in Oruatua's financial statements for the year ended 31 December 20X7 according to IAS 16, *Property, Plant and Equipment*, and IAS 37, *Provisions, Contingent Liabilities and Contingent Assets*.

(a) The carrying amount of the machinery at 31 December 20X6;

(b) The profit/loss on the disposal of the faulty engine;

(c) The carrying amount of the machinery at 31 December 20X7.

6 Antimony

The Antimony Company acquired its head office on 1 January 20W8 at a cost of £5.0 million (excluding land). Antimony's policy is to depreciate property on a straight-line basis over 50 years with a zero residual value.

On 31 December 20X2 (after five years of ownership) Antimony revalued the non-land element of its head office to £8.0 million. Antimony does not transfer annual amounts out of revaluation reserves as assets are used: this is in accordance with the permitted treatment in IAS 16, *Property, Plant and Equipment*.

In January 20X8, localised flooding occurred and the recoverable amount of the non-land element of the head office property fell to £2.9 million.

Requirement

What impairment charge should be recognised in the profit or loss of Antimony arising from the impairment review in January 20X8 according to IAS 36, *Impairment of Assets*?

7 Sundew

The Sundew Company is a vertically integrated manufacturer of chainsaws. It has two divisions. Division X manufactures engines, all of which are identical. Division Y assembles complete chainsaws and sells them to third party dealers.

Division X, a cash-generating unit, sells to Division Y at cost price but sells to other chainsaw manufacturers at cost plus 50%. Details of Division X's budgeted revenues for the year ending 31 December 20X7 are as follows:

	Engines	Price per engine
Sales to Division Y	2,500	£1,000
Third party sales	1,500	£1,500

Requirement

What are the 20X7 cash inflows which should be used in determining the value in use of Division X according to IAS 36, *Impairment of Assets*?

8 Cowbird

The Cowbird Company operates in the television industry. It acquired a licence to operate in a particular region for 20 years at a cost of £10 million on 31 December 20X3. Cowbird's policy was to amortise the fee paid for the licence on a straight-line basis.

By 31 December 20X5 it had become apparent that Cowbird had overpaid for the licence and, measuring recoverable amount by reference to value in use, it recognised an impairment charge of
£4.05 million, leaving a carrying amount of £4.95 million.

At 31 December 20X7 the market place had improved, such that the conditions giving rise to the original impairment no longer existed. The recoverable amount of the licence by reference to value in use was now £11 million.

Requirement

What should be the carrying amount of the licence in the statement of financial position of Cowbird at 31 December 20X7, according to IAS 36, *Impairment of Assets*?

9 Acetone

The Acetone Company is testing for impairment two subsidiaries which have been identified as separate cash-generating units.

Some years ago, Acetone acquired 80% of The Dushanbe Company for £600,000 when the fair value of Dushanbe's identifiable assets was £400,000. As Dushanbe's policy is to distribute all profits by way of dividend, the fair value of its identifiable net assets remained at £400,000 on 31 December 20X7. The impairment review indicated Dushanbe's recoverable amount at 31 December 20X7 to be
£520,000.

Some years ago Acetone acquired 85% of The Maclulich Company for £800,000 when the fair value of Maclulich's identifiable net assets was £700,000. Goodwill of £205,000 (£800,000 – (£700,000 × 85%)) was recognised. As Maclulich's policy is to distribute all profits by way of dividend, the fair value of its identifiable net assets remained at £700,000 on 31 December 20X7. The impairment review indicated Maclulich's recoverable amount at 31 December 20X7 to be £660,000.

It is Acetone group policy to value the non-controlling interest using the proportion of net assets method.

Requirements

Determine the following amounts in respect of Acetone's consolidated financial statements at 31 December 20X7 according to IAS 36, *Impairment of Assets*.

(a) The carrying amount of Dushanbe's assets to be compared with its recoverable amount for impairment testing purposes.

(b) The carrying amount of goodwill in respect of Dushanbe after the recognition of any impairment loss.

(c) The carrying amount of the non-controlling interest in Maclulich after recognition of any impairment loss.

10 Titanium

On 1 January 20X7 The Titanium Company acquired the copyright to four similar magazines, each with a remaining legal copyright period for 10 years. At the end of the legal copyright period, other publishing companies will be allowed to tender for the copyright renewal rights.

At 31 December 20X7 the following information was available in respect of the assets:

Publication name	Copyright cost at 1 January 20X7	Remaining period over which publication is expected to generate cash flows at 1 January 20X7	Value in active market at 31 December 20X7
Dominoes	£900,000	6 years	£700,000
Billiards	£1,200,000	16 years	£1,150,000
Skittles	£1,700,000	8 years	Unknown
Darts	£1,400,000	Indefinite	£2,100,000

Titanium uses the revaluation model as its accounting policy in relation to intangible assets.

Requirement

What is the total charge to profit or loss for the year ended 31 December 20X7 in respect of these intangible assets per IAS 38, *Intangible Assets*?

11 Lewis

The following issues have arisen in relation to business combinations undertaken by the Lewis Company.

(1) Lewis acquired the trademark of a type of wine when it acquired 80% of the ordinary share capital of The Calcium Company on 1 April 20X7. This wine is produced from a vineyard that is exclusively used by Calcium.

(2) When Lewis bought a football club on 1 May 20X7, it acquired the registrations of a group of football players.

(3) Lewis acquired a 75% share in the Stilt Company during 20X7. At the acquisition date Stilt was researching a new pharmaceutical product which is expected to produce future economic benefits.

The cost of these assets can be measured reliably.

Requirement

Indicate which of the above items should or should not be recognised as assets separable from goodwill in Lewis's statement of financial position at 31 December 20X7, according to IAS 38, *Intangible Assets*.

12 Diversified group

The following issues have arisen within a diversified group of businesses.

(1) The Thrasher Company has signed a three-year contract with a team of experts to write questions for a computer based examination on International Financial Reporting Standards. The contract states that the experts cannot work on similar projects for rival entities. Thrasher incurred costs of £5,000 in training the experts to use the software, and believes that the product developed by the team will be a market leader.

(2) The Curium Company has a loyalty card scheme for customers. Every customer purchase is recorded in such a way that Curium is able to create a profile of spending amounts and habits of customers, and uses this to target them with special offers and discounts to encourage repeat business. The database has cost £60,000 to create and Curium has been approached by another company wishing to buy the contents of the database.

Requirement

Which of the above items should be classified as intangible assets per IAS 38, *Intangible Assets*?

13 Cadmium

The Cadmium Company produces a globally recognised dog food that is a market leader. The trademark was established over 50 years ago and is renewable every eight years. The last renewal was effective from 1 January 20X2 and cost £65,000. Cadmium intends to continue to renew the trademark in future years.

Cadmium uses the revaluation model where allowed for measuring intangible assets, in accordance with IAS 38, *Intangible Assets*. A valuation of £50 million was made by an independent valuation expert on 31 December 20X7, who charged £650,000 for the valuation report.

Requirement

What is the carrying amount of the trademark in Cadmium's statement of financial position at 31 December 20X7 per IAS 38, *Intangible Assets*?

14 Piperazine

The Piperazine Company's financial reporting year ends on 31 December. It has adopted the revaluation model for intangible assets and revalues them on a regular three-year cycle. For intangibles with a finite life Piperazine transfers the relevant amount from revaluation reserve to retained earnings each year.

During 20X4 Piperazine incurred £70,000 on the process of preparing an application for licences for 15 taxis to operate in a holiday resort where, in order to prevent excessive traffic pollution, the licensing authority only allowed a small number of taxis to operate. The outcome of its application was uncertain up to 30 November 20X4 when the local authority accepted its application. In December 20X4 Piperazine incurred a total cost of £9,000 in registering its licences. The licences were for a period of nine years from 1 January 20X5. The licences are freely transferable and an active market in them exists. The fair value of the licences at 31 December 20X4 was £9,450 per taxi and Piperazine carried them at fair value in its statement of financial position at 31 December 20X4.

At 31 December 20X7, Piperazine undertook its regular revaluation. On that date the licensing authority announced that it would triple the number of licences offered to taxi operators and there were transactions in the active market for licences with six years to run at £4,500.

Requirements

Determine the following amounts in respect of the revaluation reserve in respect of these taxi licences in Piperazine's financial statements according to IAS 38, *Intangible Assets*.

14.1 The balance at 31 December 20X4

14.2 The balance at 31 December 20X7 before the regular revaluation

14.3 The balance at 31 December 20X7 after the regular revaluation

15 Boron

The Boron Company is an investment property company. On 31 December 20X6, it purchased a retirement home as an investment at a cost of £600,000. Legal costs associated with the acquisition of this property were a further £50,000.

At 31 December 20X7 Boron adopted the fair value model. The fair value of the retirement home at this date was £700,000 and costs to sell were estimated at £40,000.

Requirement

What amount should appear in the statement of profit or loss and other comprehensive income of Boron in the year ending 31 December 20X7 in respect of the retirement home under IAS 40, *Investment Property*?

16 Laburnum

The Laburnum Company is an investment property company. One of its properties is a warehouse which has the specialist use of storing tropical plants at high temperatures. As a result, the central heating system is an important and integral part of the warehouse building. Laburnum uses the fair value model for investment properties.

The central heating system was purchased on 1 January 20X2 for £80,000. It is being depreciated at 10% per annum on cost and it has been agreed by the valuer that the carrying amount of the central heating system is a reasonable value at which to include it in the fair value of the entire warehouse.

In December 20X7, the valuer initially determined the fair value of the warehouse, including the central heating system, to be £1,250,000. Unfortunately, the central heating system completely failed on 25 December 20X7 and was immediately scrapped and replaced with a new heating system costing £140,000 on 31 December 20X7.

Requirement

According to IAS 40, *Investment Property*, at what value should the warehouse, including the heating system, be recognised in the financial statements of Laburnum in the year ending 31 December 20X7?

17 Ramshead

On 1 January 20X6, The Ramshead Company acquired an investment property for which it paid £3.1 million and incurred £100,000 agency and legal costs. The property's useful life was estimated at 20 years, with no residual value; its fair value at 31 December 20X6 was estimated at £3.45 million and agency and legal costs to dispose of the property at that date were estimated at £167,500.

On 1 July 20X7, Ramshead decided to dispose of the property. The criteria for being classified as held for sale were met on that date, when the property's fair value was £3.5 million. Agency and legal costs to dispose of the property were estimated at £160,000.

On 1 October 20X7, the property was sold for a gross price of £3.7 million, with agency and legal costs of £165,000 being incurred.

Requirements

Calculate the following amounts in respect of Ramshead's financial statements for the year ended 31 December 20X7 in accordance with IAS 40, *Investment Property* and IFRS 5, *Non-current Assets Held for Sale and Discontinued Operations*.

17.1 The gain or loss arising in 20X6 from the change in carrying amount if the fair value model is used to account for the property

17.2 The gain or loss on disposal arising in 20X7 if the cost model is used

17.3 The increase or decrease, compared with the cost model, in the gain or loss on disposal arising in 20X7 if the fair value model is used

18 Arapawanui

The Arapawanui Company keeps a flock of sheep on its land, selling the milk outputs to make cheese. The day after its production, the milk is collected on behalf of the purchasers and revenue from its sale is recognised.

On 30 June 20X7 300 animals were born, all of which survived and were still owned by Arapawanui at 31 December 20X7. 10,000 litres of milk were produced in the year to 31 December 20X7.

The following market data is available in respect of the sheep.

Type of animal	At 30 June 20X7 Fair value per animal	At 31 December 20X7 Fair value per animal
	£	£
Newborn	22	23
6 months old	25	26

The animal fair values are based on transactions prices in the local markets. Auctioneers' commission is 1.5% of the transaction price and the government sales levy is 0.5% of that price.

The production cost, including overheads, of the milk was £0.08 per litre and the fair values were £0.13 per litre throughout 20X7 and £0.14 per litre throughout 20X8. Costs to sell were estimated at 4%.

Requirement

What gain should be recognised in respect of the newborn sheep and the milk in Arapawanui's financial statements for the year to 31 December 20X7, according to IAS 41, *Agriculture*?

19 Tepev

The Tepev Company bought a flock of 400 sheep on 1 December 20X7. The cost of each sheep was
£80, which represented fair value at that date. Auctioneers' fees on sale are 5% of fair value, and the cost of transporting each sheep to market is £4.00. An agricultural levy of £2.00 is payable on each sheep sold.

At 31 December 20X7 all of the sheep are still held and fair value has increased to £90 per sheep. No other costs have changed. Tepev has a contract to sell the sheep on 31 March 20X8 for £100 each.

Requirement

What is the carrying amount of the flock in the statement of financial position at 31 December 20X7, according to IAS 41, *Agriculture*?

20 Saving

The Saving Company bought a flock of 500 sheep on 1 December 20X7. The cost of each sheep was
£95, which represented fair value at that date. Auctioneers' fees on sale are 5% of fair value, and the cost of transporting each sheep to market is £3.00. An agricultural levy of £2.00 is payable on each sheep sold.

At 31 December 20X7 all of the sheep are still held and fair value has increased to £107 per sheep. No other costs have changed. Saving has a contract to sell the sheep on 31 March 20X8 for £119 each.

Requirement

What is the gain arising in relation to the flock between the date of initial recognition as an asset and 31 December 20X7, according to IAS 41, *Agriculture*?

21 Monkey

The Monkey Company has the following information in relation to a cattle herd in the year ended 31 December 20X7.

	£'000
Cost of herd acquired on 1 January 20X7 (which equates to fair value)	1,800
Auctioneers' sales fees	2% of sale price
Loan obtained at 8% to finance acquisition of herd	1,500
Fair value of herd at 31 December 20X7	2,500
Transport cost to market	35
Government transfer fee on sales – no fee on purchases	50

Requirement

What is the loss arising on initial recognition of the herd as biological assets and the gain arising on its subsequent remeasurement under IAS 41, *Agriculture*, in the year ended 31 December 20X7?

22 Blackbuck

The Blackbuck Company has in issue unit-linked contracts which pay benefits measured by reference to the fair value of the pool of investments supporting the contracts. The terms of the contracts include the following.

(1) On surrender by the holder or on maturity, the benefits shall be the full fair value of the relevant proportion of the investment.

(2) In the event of the holder's death before surrender or maturity, the benefits shall be 120% of the full value of the relevant proportion of the investments.

Blackbuck's accounting policies do not otherwise require it to recognise all the obligations under any deposit component within these contracts.

Blackbuck's financial controller is unclear whether these contracts should be accounted for under IFRS 4, *Insurance Contracts*, or under IFRS 9, *Financial Instruments*.

Requirement

Explain how these contracts should be accounted for.

23 Traore

The Traore Company is organised into a number of divisions operating in different sectors. The accounting policies applied in two of its divisions before the introduction of IFRS 4, *Insurance Contracts* are as follows.

Accounting policy (1)	In its car breakdown division, Traore offers unlimited amounts of roadside assistance in exchange for an annual subscription. Although it has always accepted that this activity is in the nature of offering insurance against breakdown, it accounts for these subscriptions by using the stage of completion method under IAS 18, *Revenue,* and making relevant provisions for fulfilment costs under IAS 37, *Provisions, Contingent Liabilities and Contingent Assets*.
Accounting policy (2)	In its property structures insurance division, Traore makes a detailed estimate for the cost of each outstanding claim but adopts the practice of adding another 20% to the total on a 'just in case' basis.

Requirement

Which of these accounting policies is Traore permitted to continue to use under IFRS 4, *Insurance Contracts*?

24 Evaluation and exploration

Give examples of circumstances that would trigger a need to test an evaluation and exploration asset for impairment.

Now go back to the Introduction and ensure that you have achieved the Learning outcomes listed for this chapter.

Answers to Interactive questions

Answer to Interactive question 1

1.1 The double entry is:

DEBIT	Asset value (statement of financial position)		£7,000
CREDIT	Profit or loss		£2,000
CREDIT	Revaluation surplus (other comprehensive income)		£5,000

The case is similar for a **decrease in value** on revaluation. Any decrease should be recognised as an expense, except where it offsets a previous increase taken as a revaluation surplus in other comprehensive income. Any decrease greater than the previous upwards increase in value must be recorded as an expense in profit or loss.

1.2 The double entry is:

DEBIT	Revaluation surplus (other comprehensive income)	£5,000	
DEBIT	Profit or loss	£2,000	
CREDIT	Asset value (statement of financial position)		£7,000

There is a further complication when a **revalued asset is being depreciated**. An upward revaluation means that the depreciation charge will increase. Normally, a revaluation surplus is only realised when the asset is sold, but when it is being depreciated, part of that surplus is being realised as the asset is used. The amount of the surplus realised is the difference between depreciation charged on the revalued amount and the (lower) depreciation which would have been charged on the asset's original cost. **This amount can be transferred to retained (ie, realised) earnings but not through profit or loss**.

1.3 On 1 January 20X8 the carrying value of the asset is £10,000 – (2 × £10,000 ÷ 5) = £6,000. For the revaluation:

DEBIT	Asset value (statement of financial position)	£6,000	
CREDIT	Revaluation surplus (other comprehensive income)		£6,000

The depreciation for the next three years will be £12,000 ÷ 3 = £4,000 compared to depreciation on cost of £10,000 ÷ 5 = £2,000. Each year the extra £2,000 is treated as realised and transferred to retained earnings:

DEBIT	Revaluation surplus	£2,000	
CREDIT	Retained earnings		£2,000

This is a movement within reserves, not an item in profit or loss.

Answer to Interactive question 2

The fair value less costs to sell of the plant is below its carrying value so it may be impaired. It is now necessary to find the value in use in order to determine whether an impairment has occurred and to quantify any impairment loss.

Year	Future cash flows	PV factor at 15%	Discounted future cash flows
	£'000		£'000
1	230	0.86957	200
2	211	0.75614	160

Year	Future cash flows	PV factor at 15%	Discounted future cash flows
	£'000		£'000
3	157	0.65752	103
4	104	0.57175	59
5	233	0.49718	116
			638

To calculate the impairment loss, compare the carrying value of £749,000 with the higher of value in use (£638,000) and fair value less costs to sell (£550,000). The impairment loss is therefore £749,000 – £638,000 = £111,000.

Answer to Interactive question 3

The key issue is whether the cash-generating unit produces cash flows which are independent of other assets or not.

The CGUs which appear to have cash flows independent of the other assets (and can therefore be subject to reliable assessment of their recoverable value) are:

(2) a branch of a pizza restaurant in Warsaw; and

(4) a commuter monorail.

Options (1) and (3) are not generators of independent cash flows and are therefore too small to be CGUs in their own right. In the case of (3) the CGU is the theme park as one entity.

Additionally (5) is a CGU in its own right as there is an external active market for its services, even though these are not openly available (IAS 36.71).

Answer to Interactive question 4

In both scenarios:

	(1)	(2)
	£m	£m
Recognised goodwill	90	90
Notional goodwill (£90m × 40/60)	60	60
Carrying amount of net assets	550	550
	700	700
Recoverable amount	510	570
Impairment loss	190	130
Allocation of impairment loss:		
	£m	£m
Recognised goodwill	90	90
Notional goodwill	60	40
Other assets pro rata	40	
	190	130

Carrying value after impairment:

	£m	£m
Goodwill (90 – (150 × 60%))/(90 – (130 × 60%))	–	12
Other net assets (550 – 40)	510	550
	510	562

Answer to Interactive question 5

For each scenario:

(1) The factory is not an investment property. It should be classified as property held for sale and accounted for under IFRS 5.

(2) The building would qualify as an investment property under IAS 40, as the entity intends to earn rentals from it under an operating lease.

(3) The provisions offered over and above the office space itself fall within what IAS 40 describes as 'ancillary services'. Considering the nature and extent of these services, it would be unlikely that they could be described as 'insignificant' in relation to the arrangements as a whole. The building is, in essence, being used for the provision of serviced offices and therefore does not meet the definition of an investment property.

Although the entity's main objective in acquiring the building is its potential capital appreciation, the building should be recognised and measured in accordance with IAS 16 rather than IAS 40.

(4) The property should be recognised as an investment property on 30 March 20X5 when the offices were ready to be occupied. Costs incurred, and consequently operating losses, after this date should be expensed even though the entity did not start to receive rentals until later in 20X5. Losses incurred during this 'empty' period are part of the entity's normal business operations and do not form part of the cost of the investment property.

Answer to Interactive question 6

6.1 The £5 million value could be used as a basis of fair value, because the price was agreed between market participants.

6.2 The £6 million value could not be used as a basis of fair value, because the sale transaction cannot be presumed to be between market participants in an orderly transaction.

6.3 The £4.5 million value could not be used as a basis of fair value, because the sale transaction would appear to have been made by a forced, not willing, seller, and therefore not an orderly transaction.

6.4 The £5.5 million value could not be used as a basis of fair value, because the sale transaction would appear to have been made to a buyer who was not knowledgeable of local market conditions, and therefore not a market participant in an orderly transaction.

Answer to Interactive question 7

Profit or loss on disposal

The cost model	**£m**
Net proceeds	6.00
Carrying amount £5,500,000 × 47/50	(5.17)
Profit on sale	0.83

The fair value model	**£m**
Net proceeds	6.0
Fair value	(6.2)
Loss on sale	(0.2)

Answer to Interactive question 8

(a) The changes of use will be reflected in the financial statements based on whether the entity uses the cost model or the fair value model for investment properties as follows.

The cost model for investment properties

At 31 December 20X5, the building has a carrying amount of:

£5.5m × 45/50 years = £4.95 million in accordance with IAS 16.

On 1 January 20X6 the property will be recognised as an investment property at its IAS 16 carrying amount of £4.95 million and will continue to be depreciated over its remaining 45-year life.

At 31 December 20Y0, the building has a carrying amount of:

£4.95m × 40/45 years = £4.4 million in accordance with IAS 40.

On 1 January 20Y1 the property will be recognised as property, plant and equipment at its IAS 40 carrying amount of £4.4 million and will continue to be depreciated over its remaining 40- year life.

(b) **The fair value model for investment properties**

At 31 December 20X5, the building has a carrying amount of £4.95 million in accordance with IAS 16 (as set out above).

On 1 January 20X6, the property will be recognised as an investment property. However, the property should be revalued to fair value at 31 December 20X5, and any change in value should be recognised in accordance with IAS 16.

The property will therefore be recognised at a carrying amount of £6 million and the difference of £1.05 million should be recognised as a revaluation surplus (other comprehensive income).

During the period between 1 January 20X6 and 31 December 20Y0 the building is measured at fair value with any gain or loss recognised directly in profit or loss. At the end of 20Y0 the cumulative gain is £1.5 million.

At 31 December 20Y0, the building has a carrying amount of £7.5 million being its fair value and this is the amount that should be recognised as its carrying amount under IAS 16. The carrying amount will be depreciated over the building's remaining 40-year useful life.

Answer to Interactive question 9

£1 million is derecognised being the depreciated cost of the replaced system: £1.2 million × (25/30 years)

£1.2 million is capitalised as the cost of the new system and will be depreciated over its estimated useful life of 10 years.

Answer to Interactive question 10

The carrying amount of the failed system should be derecognised:

Carrying amount is £100,000 (£400,000 less six years' depreciation at 12.5%) The replacement system should be recognised:

Total carrying amount of the office building is £3,500,000 (£3m – £100,000 + £600,000)

Answer to Interactive question 11

The entity recognises these transactions and events as follows.

20X5

The property continues to be measured under the fair value model on classification as held for sale on 30 September. An impairment of £3.65 million is recognised (£4 million less £350,000).

At 31 December the property is presented as held for sale within current assets at £350,000.

20X6

The replacement property is recognised at a cost of £3.8 million and a loss on disposal is recognised of £15,000 being (proceeds of £375,000 less selling costs of £40,000 less carrying amount of property of £350,000).

20X7

The insurance proceeds of £3.9 million are recognised in profit or loss.

Note: The requirement to measure an asset 'held for sale' at the lower of carrying amount and fair value less costs to sell does not apply to investment properties measured at fair value (IFRS 5.5). IAS 40.37 states that costs to sell should not be deducted from fair value.

Answer to Interactive question 12

12.1 Wool: Agricultural produce

12.2 Sugar: Products that are the result of processing after harvest

Answer to Interactive question 13

The correct answers are:

A Commission to brokers

B Transfer taxes and duties

Commissions to brokers and transfer taxes and duties are recognised costs to sell in the standard.

Answer to Interactive question 14

(a) **Audit issues**

(1) **Classification as an investment property**

Property A: As this property is owner occupied it does not fall within the definition of an investment property in accordance with IAS 40 (IAS 40(9)).

Property B: While this property is not legally owned it is held as a right-of-use asset under IFRS 16 and therefore can be treated as an investment property (IAS 40(5)).

Property C: Although this property is currently vacant, on the basis that it is being held for investment purposes it can be classified as an investment property (IAS 40(8d)).

Property D: This is an investment property as it is legally owned by Propertyco and is let out to a non-group company (IAS 40(5)).

(2) **Valuation**

Property A: Should be valued in accordance with IAS 16 ie, cost less accumulated depreciation unless the revaluation model is to be adopted.

Property B: Would have been recognised in accordance with IFRS 16 at the inception of the lease at the present value of the future lease payments, plus payments made at or before commencement less lease incentives. After initial recognition it would be valued at fair value in accordance with company policy in respect of investment properties.

Property C: Should initially be recognised at cost including transaction costs. In this case the asset should initially be recognised at £3 million. As the fair value model is adopted by Propertyco the value will then be revised to fair value.

Property D: Should be recognised at fair value in accordance with IAS 40 and the accounting policy adopted by Propertyco. Changes in fair value should be recognised in profit or loss for the period.

(b) **Audit procedures**

- Evaluate the control environment and the process by which Propertyco establishes fair values.
- Determine the basis on which fair values have been calculated. (In accordance with IAS 40/IFRS 13 this should be the price that would be received to sell an asset in an orderly transaction between market participants at the measurement date.) Current prices per square metre in an active market for similar property in the same location and condition are likely to provide the best evidence or observable market rents. (IAS 40.40 states that the fair value must reflect rental income from current leases and other assumptions that participants would use when pricing investment property under current market conditions).
- Where external valuers have been used assess the extent to which they can be relied on in accordance with the principles of using the work of a management's expert in ISA 500, *Audit Evidence*.
- If fair values have been based on discounted cash flows ie, discounted future rental incomes compare predicted cash flows to current rental agreements and assess whether this is the most appropriate basis for estimating fair value in accordance with IFRS 13. Review the basis on which the interest rate applied has been selected and any other assumptions built into this calculation eg, consider management's history of carrying out its intentions.
- Review any documentation to support assumptions.
- Agree level of disclosure is in accordance with IAS 40/IFRS 13.

Answers to Self-test questions

1 IAS 40

The correct answers are:

A building owned by an entity and leased out under an operating lease D

Land held for long-term capital appreciation

IAS 40.8 and 9 give examples of types of investment property.

2 Ruapehu

£20,175,000

IAS 2.31 requires that NRV should take into account the purpose for which inventory is held. The NRV for the contract is therefore determined separately from the general sales, thus:

	£
Contract: NRV is lower than cost thus use NRV, so (£225,000 × 15) =	3,375,000
General: Use cost as this is less than NRV, so (£240,000 × (85 – 15)) =	16,800,000
	20,175,000

3 Utah

£64,000

IAS 2.30 requires the NRV of inventories to be calculated on the basis of all relevant information, including events after the reporting period. This is supported by the example in IAS 10.9(b).

Thus:

	£
£25 × 1,600 expected to be sold to Bushbaby:	40,000
£10 × 2,400 remainder	24,000
Total	64,000

4 Niobium

£33 million

IAS 16.11 requires the capitalisation of essential safety equipment even if there are no future economic benefits flowing directly from its operation.

It does however subject the total value of all the related assets to an impairment test. In this case the recoverable amount is £33 million, as the net selling price £33 million is greater than the value in use £32 million (ie, £3.2m/0.1). As this is less than the total carrying amount of £35 million (£30m + 5m), the assets are written down to £33 million.

5 Oruatua

(a) £850,355

The initial cost of the asset must include the dismantling cost at its present value, where the time value of the money is material (IAS 16.16(c) and IAS 37.45). The present value of these costs at 1 January 20X6 is £173,952 (£480,000 × 0.3624), making the total cost of the engines £623,952. Each part of the asset that has a cost which is significant in relation to the total asset cost should be depreciated separately (IAS 16.43). Therefore, at the end of 20X6 the carrying amount of the asset is £850,355 (£110,000 × 4/5) + (£240,000 × 3/4) + (£623,952 × 14/15).

(b) £(154,118)

The loss on disposal is (per IAS 16.71) the difference between the carrying amount of an individual engine at 1 January 20X7 of £194,118 (£623,952/3 × 14/15)) and the scrap sale proceeds of £40,000, to give a loss of £154,118.

(c) £756,521

The replacement engine is capitalised at cost of £226,170 (£168,000 + £150,000 × 0.3878), and then depreciated over the remaining length of the licence of 14 years. The carrying amount of the asset at 31 December 20X7 is therefore £756,521 (£110,000 × 3/5) + (£240,000 × 2/4) + (£623,952 × 2/3 × 13/15) + (£226,170 × 13/14).

6 Antimony

£0.7 million

IAS 36.60 and 61 (also IAS 16.40) require that an impairment that reverses a previous revaluation should be recognised through the revaluation reserve to the extent of that reserve. Any remaining amount is recognised through profit or loss. Thus:

- The carrying amount at 31 December 20X2 is 45/50 × £5.0m = £4.5 million.
- The revaluation reserve created is £3.5 million (ie, £8.0m – £4.5m).
- The carrying amount at 31 December 20X7 is 40/45 × £8.0m = £7.1 million.
- The recoverable amount at 31 December 20X7 is £2.9 million.
- The total impairment charge is £4.2 million (ie, £7.1m – £2.9m).
- Of this, £3.5 million is a reversal of the revaluation reserve, so only £0.7 million is recognised through profit or loss.

7 Sundew

£6,000,000

IAS 36.70 requires that in determining value in use where internal transfers are made, then a best estimate should be made of prices that would be paid in an orderly transaction between market participants at the measurement date.

Thus revenues are 4,000 × £1,500 = £6,000,000

8 Cowbird

£8.0 million

IAS 36.110 requires consideration of whether an impairment loss recognised in previous years has reversed or decreased.

IAS 36.117 and 118 restrict the recognition of any such reversal to the value of the carrying amount at the current reporting date had the original impairment not taken place. Thus:

Carrying amount under original conditions = £10m × 16/20 years = £8.0m.

9 Acetone

(a) £750,000

Book value of Dushanbe's net assets	400,000
Goodwill recognised on acquisition	
£600,000 – (80% × £400,000)	280,000
Notional goodwill (£280,000 × 20/80)	70,000
	750,000

(b) £96,000

The impairment loss is the total £750,000 less the recoverable amount of £520,000 = £230,000. Under IAS 36.104 this is firstly allocated against the £350,000 goodwill. (As the impairment loss is less than the goodwill, none is allocated against identifiable net assets.)

As only the goodwill relating to Acetone is recognised, only its 80% share of the impairment loss is recognised:

	£
Carrying value of goodwill	280,000
Impairment (80% × 230,000)	(184,000)
Revised carrying amount of goodwill	96,000

(c) £99,000

	£
Carrying amount of Maclulich's net assets	700,000
Recognised goodwill	205,000
Notional goodwill (15/85 × £205,000)	36,176
	941,176
Recoverable amount	(660,000)
Impairment loss	281,176
Allocated to:	
Recognised and notional goodwill	241,176
Other net assets	40,000

Therefore the non-controlling interest is (£700,000 – £40,000) × 15% = £99,000.

10 Titanium

£672,500

IAS 38.94 deals with the identification of the useful life of an intangible asset arising from legal rights.

The **Dominoes** publication has a useful life of six years, and so should be amortised over this period. At the year end the carrying amount of £750,000, (900,000 × 5/6), exceeds the active market value, so an impairment of £50,000 is required. This gives a total charge of £200,000 (£150,000 amortisation plus £50,000 impairment charge)

The **Billiards** publication is initially amortised over the period of 10 years to the end of the copyright arrangement, as there is no certainty that the company can publish the magazine after this date. This gives a charge of £120,000.

The **Skittles** publication is amortised over the period it is expected to generate cash flows of eight years, giving a charge of £212,500.

The **Darts** publication has an indefinite period over which it is expected to generate cash flows. Under normal circumstances it would be automatically subject to an annual impairment review. However, because the copyright arrangement does have a finite period, amortisation should take place over 10 years, and so a charge of £140,000 is required.

The total charge is £672,500.

11 Lewis

For each statement:

(1) Recognised

The vineyard trademark is not separable because it could only be sold with the vineyard itself. But under IAS 38.36, the combination of the vineyard and the trademark should be recognised.

(2) Recognised

The footballers' registrations represent a legal right which meets the identifiability criterion in IAS 38.12.

(3) Recognised

The research project should be treated as a separate asset, as on a business combination it meets the definition of an asset and is identifiable (IAS 38.34).

12 Diversified group

For each item:

(1) Not an intangible

The training costs would not satisfy the definition of an intangible asset. This is because Thrasher has insufficient control over the expected future benefits of the team of experts (IAS 38.15).

(2) An intangible

The database would be classified as an intangible asset because the willingness of another party to buy the contents provides evidence of a potential exchange transaction for the relationship with customers and that the asset is separable (IAS 38.16).

13 Cadmium

£16,250

The revaluation model cannot be used for this trademark, because for a unique item there cannot be the active market required by IAS 38.75. (A professional valuation does not rank as a value by reference to an active market.) IAS 38.81 requires the cost model to be applied to such an item, even if it is in a class for which the revaluation model is used.

The cost of renewal should be treated as part of the cost of an intangible, under IAS 38.28(b), but the valuation expenses should be charged directly to profit or loss, as administration overheads (IAS 38.29(c)).

The trademark is therefore carried at the cost of renewal, depreciated for six of the eight years' life since last renewal, so £65,000 × 2/8 = £16,250.

14 Piperazine

14.1 £132,750

Under IAS 38.21 the £70,000 spent in 20X4 in applying for the licences must be recognised in profit or loss, because the generation of future economic benefits is not yet probable. The £9,000 incurred in December 20X4 in registering the licences is treated as the cost of the licences because the economic benefits are then probable. The carrying amount of the licences under the revaluation model at 31 December 20X4 is £141,750 (£9,450 × 15), so the balance on the revaluation reserve is the £132,750 uplift (IAS 38.75 & 85).

14.2 £88,500

After three years the accumulated amortisation based on the revalued amount is £47,250 (£141,750 × 3/9), whereas the accumulated amortisation based on the cost would have been £3,000 (£9,000 × 3/9). So £44,250 will have been transferred from the revaluation reserve to retained earnings (IAS 38.87). The remaining balance before the regular revaluation is £88,500 (£132,750 – £44,250).

14.3 £61,500

The carrying amount of the licences immediately before the revaluation is £94,500 (£141,750 – £47,250). The revalued carrying amount is £67,500 (£4,500 × 15). The deficit of £27,000 is recognised in the revaluation reserve, reducing the balance to £61,500 (IAS 38.86).

15 Boron

£50,000

Under the fair value model IAS 40.33 requires investment properties to be measured at fair value, while IAS 40.37 requires fair value to be determined excluding transaction costs that may be incurred on sale or other disposal. IAS 40.35 requires changes in fair value to be recognised in profit or loss.

IAS 40.20 requires transaction costs, such as legal costs, to be included in the initial measurement. So the change in fair value is £700,000 – (£600,000 + £50,000) = £50,000.

16 Laburnum

£1,358,000

IAS 40.19 and 68 require derecognition of the carrying amount of the failed system & inclusion of the replacement.

Thus £1,250,000 – (£80,000 × 4/10) + £140,000 = £1,358,000

17 Ramshead

17.1 £250,000 gain

Transaction costs should be included in the initial measurement of investment properties (IAS 40.20). Under the fair value model an investment property is subsequently carried at fair value without any deduction for costs to sell (IAS 40.33 & 5). The gain recognised in profit or loss is £250,000 (£3.45m – (£3.1m + £0.1m)).

17.2 £575,000 gain

Any asset classified as held for sale is measured in accordance with applicable IFRS immediately before classification. So if the cost model is used, the carrying amount before initial classification is cost less depreciation to the date of classification, so £2.96 million (£3.2m less 18 months' depreciation at 5% per annum). On initial classification, the property is measured at the lower of this carrying amount and the £3.34 million (£3.5m – £160,000) fair value less costs to sell (IFRS 5.15) so £2.96 million. There is no subsequent depreciation (IFRS 5.25), so the carrying amount will be the same at the date of disposal. The profit on disposal is net disposal proceeds less the carrying amount (IAS 40.69), so net sales proceeds of £3.535 million (£3.7m – £165,000) less £2.960 million gives a profit on disposal of £575,000.

17.3 £540,000 decrease

If the fair value model is used, then the carrying amount immediately before initial classification will be the £3.5 million fair value. The requirement to measure an asset 'held for sale' at the lower of carrying amount at fair value less costs to sell does not apply to investment properties measured at fair value (IFRS 5.5) and so the property continues to be measured at fair value. IAS 40.37 states that costs to sell should not be deducted from fair value, so the property continues to be measured at £3.5 million. Profit on disposal will be net sales proceeds of £3.535m less £3.5m = £35,000. This is a reduction of £540,000 on the cost model gain. If the fair value model is used, then the carrying amount immediately before initial classification will be the £3.5 million fair value. The requirement to measure an asset 'held for sale' at the lower of carrying amount at fair value less costs to sell does not apply to investment properties measured at fair value (IFRS 5.5) and so the property continues to be measured at fair value.

IAS 40.37 states that costs to sell should not be deducted from fair value, so the property continues to be measured at £3.5 million. Profit on disposal will be net sales proceeds of £3.535m less £3.5m = £35,000. This is a reduction of £540,000 on the cost model gain.

18 Arapawanui

The newborn sheep are biological assets and should be measured at fair value less costs to sell, both on initial recognition and at each reporting date (IAS 41.12). The gains on initial recognition and from a change in this value should be recognised in profit or loss (IAS 41.26). As the animals are six months old at the year end, the total gain in the year (being the initial gain based on a newborn fair value of £22 plus the year-end change in value by £4 to £26) is £7,644 (300 × £26 × (100% – 1.5% – 0.5%)).

The milk is agricultural produce and should be recognised initially under IAS 41 at fair value less costs to sell (IAS 41.13). (At this point it is taken into inventories and dealt with under IAS 2.) The gain on initial recognition should be recognised in profit or loss (IAS 41.28). The gain is £1,248 (10,000 litres × £0.13 × (100% – 4)).

Total gain is £8,892.

19 Tepev

£33,400

Biological assets should be measured at fair value less costs to sell (IAS 41.12). Costs to sell include sales commission and regulatory levies but exclude transport to market (IAS 41.14). Transport costs are in fact deducted from market value in order to reach fair value. In this question fair value of £90 is provided; it is assumed that this is calculated as a market value of £94 less the quoted transport costs of £4. Contracts to sell agricultural assets at a future date should be ignored (IAS 41.16).

The statement of financial position carrying amount per sheep is:

	£
Fair value	90.00
Costs to sell (£90 × 5%) + £2.00	(6.50)
Value per sheep	83.50

For the flock of 400 sheep, the amount is £33,400.

20 Saving

£5,700

Biological assets should be measured at fair value less costs to sell, both on initial recognition and at each reporting date (IAS 41.12). Costs to sell include sale commission and regulatory levies but exclude transport to market (IAS 41.14). Transport costs are in fact deducted from market value in order to reach fair value. Contracts to sell agricultural assets at a future date should be ignored (IAS 41.16).

	£
FV at reporting date (£107 – commission (£107 × 5%) – levy £2.00)	99.65
Initial FV per sheep (£95 – commission (£95 × 5%) – levy £2.00)	(88.25)
Gain per sheep	11.40

There is, therefore, a gain on the flock of 500 sheep of £5,700.

21 Monkey

£86,000 loss on initial recognition

£686,000 gain on subsequent measurement

	£'000
Cost of herd	1,800
Recognised at FV – costs to sell (£1.8m – fees (£1.8m × 2%) – gvnmt fee £50,000)	(1,714)
Initial loss on recognition	86

On acquisition of the herd, the cattle are initially recognised as biological assets at fair value less costs to sell (IAS 41.27), which in this case is less than cost by the costs to sell which are immediately deducted (IAS 41.27). Acceptable costs to sell include auctioneers' fees and government transfer fees (IAS 41.14) but exclude transport to market costs (IAS 41.14). The interest on the loan taken out to finance the acquisition is not a cost to sell (IAS 41.22).

The value is then restated to fair value less costs to sell at each reporting date (IAS 41.12)

	£'000
Fair value at 31 December 20X7	2,500
Costs to sell: auctioneers fees (£2.5m × 2%)	(50)
Government fees	(50)
Carrying value	2,400
Less initial recognition value	(1,714)
Gain	686

22 Blackbuck

The extra payable on death before surrender/maturity should be accounted for under IFRS 4 and the remainder under IAS 39.

Given the entity's accounting policies in relation to the recognition of obligations under the deposit components, IFRS 4.10 requires the insurance component and the deposit component to be unbundled; IFRS 4.12 requires the insurance component to be accounted for under IFRS 4 and the deposit component under IAS 39.

23 Traore

The entity is permitted to continue with both policies.

IFRS 4.13 disapplies the provisions of IAS 8, *Accounting Policies, Changes in Accounting Estimates and Errors*, in relation to selection of accounting policies where there is no IFRS. Entities are therefore only required to change existing policies in the circumstances listed in IFRS 4.14. Accounting policy (1) is not caught by this paragraph, so its continued use is permitted.

The application of Accounting policy (2) involves the use of excessive prudence. The continued use of excessive prudence is permitted by IFRS 4.26.

24 Evaluation and exploration

Circumstances that would trigger a need to test an evaluation and exploration asset for impairment:

- The expiration or anticipated expiration in the near future of the period for which the entity has the right to explore the relevant area, unless the right is expected to be renewed.
- The lack of available planned or budgeted expenditure for further exploration and evaluation of the specific area.
- A decision to discontinue evaluation activities in the exploration and specific area when commercially viable resources have not been identified.

Chapter 13

Reporting of non-financial liabilities

Introduction

Learning outcomes

- Identify and explain current and emerging issues in corporate reporting
- Explain how different methods of recognising and measuring assets and liabilities can affect reported financial position, and explain the role of data analytics in financial asset and liability valuation
- Explain and appraise accounting standards that relate to assets and non-financial liabilities for example: property, plant and equipment; intangible assets, held-for-sale assets; inventories; investment properties; provisions and contingencies
- Justify and conclude for a particular scenario what comprises sufficient, appropriate audit evidence
- Design and determine audit procedures in a range of circumstances and scenarios, for example identifying an appropriate mix of tests of controls, analytical procedures and tests of details
- Demonstrate and explain, in the application of audit procedures, how relevant ISAs affect audit risk and the evaluation of audit evidence

Chapter study guidance

Use this schedule and your study timetable to plan the dates on which you will complete your study of this chapter.

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
1	**IAS 10, *Events After the Reporting Period*** Regardless of how quickly the financial statements are published after the end of the year, subsequent events and transactions can be so significant that they need to be considered for either disclosure or adjustment or (in extreme situations) for their effect on the underlying principle of going concern. IAS 10, *Events After the Reporting Period*	**Approach** This section should be mainly revision from your earlier studies. Make sure you do all the questions and look back to your earlier studies if you are still unsure. **Stop and think** What type of events could be classified as adjusting or non-adjusting respectively? What type of events could affect the underlying principle of going concern?	Although this standard was tested at Level A at Professional Level, questions at Advanced Level will be more complex and there will be more interaction between standards. Ethical issues may arise, for example if a sale of an asset is treated incorrectly as an adjusting event, rather than non-adjusting, causing revenue and profit to be recognised too early.	**IQ2: Significant events** This short, straightforward question will test whether you have remembered this topic from your earlier studies.

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
	deals with the treatment of these issues. You will need to identify the appropriate cut-off date which will depend on the process of authorisation and the reporting entity's jurisdiction.			
2	**IAS 37, *Provisions, Contingent Liabilities and Contingent Assets*** You will be required to identify circumstances in which provisions will be required and when contingent liabilities or contingent assets should be disclosed.	**Approach** The key point is that provisions need to be recognised on the basis of obligations rather than management intentions. **Stop and think** A provision may be required in relation to cyber security breaches.	IAS 37 appears regularly in exam questions within a scenario that tests other standards, for example IAS 19 and IFRS 15. Possible ethical issues may arise, such as the directors wishing to make a lower provision than is required.	**IQ6: Restructuring** This tests IAS 37 in conjunction with IAS 36. **IQ7: Obligation to dismantle** Tests onerous contracts and discounting.
3	**Audit focus** This section focuses on provisions and contingencies, and also covers ISA 501, *Audit Evidence – Specific Considerations for Selected Items* which provides guidance on procedures regarding litigation and claims.	**Approach** The audit focus section will help you with the integrated questions on this area. **Stop and think** Why would the auditors need to communicate with the company's lawyers?	Integrated questions have generally focused on contraventions of IAS 10 and what the auditors should do in such cases.	**IQ8: Contingencies** This is an integrated question with an FR part on disclosures and an audit part on procedures to be carried out to determine whether a company will have to pay damages and if so, how much.

Once you have worked through this guidance you are ready to attempt the further question practice included at the end of this chapter.

1 IAS 10, *Events After the Reporting Period*

Section overview

- Events after the reporting period are split into adjusting and non-adjusting events. Those events that may affect the going concern assumption underlying the preparation of the financial statements must be considered further.
- The following is a summary of the material covered in earlier studies.

1.1 Overview of earlier studies

Events after the reporting period are split into **adjusting** and **non-adjusting events**.

1.1.1 Adjusting events after the reporting period

Adjusting events are events that provide evidence of conditions that existed at the reporting date, and the financial statements should be adjusted to reflect them. Examples include the following:

- Settlement of a court case that confirms that the entity had an obligation at the reporting date
- Evidence that an asset was impaired at the reporting date eg:
  - Bankruptcy of a customer
  - Selling prices achieved for inventory
- Determination of profit-sharing or bonus payments relating to the year
- Finalisation of prices for assets sold or purchased before year end
- The discovery of fraud or errors (where material) that show that the financial statements are misstated
- An adjustment to the disclosed earnings per share (EPS) for transactions such as bonus issues, share splits or share consolidations where the number of shares altered without an increase in resources. The additional shares are thus treated as having been in issue for the whole period

1.1.2 Non-adjusting events after the reporting period

Non-adjusting events are events that are indicative of conditions that arose after the reporting date. Disclosure should be made in the financial statements where the outcome of a non-adjusting event would influence the economic decisions made by users of the financial statements. Examples are as follows:

- A major business combination after the reporting date (IFRS 3 or the disposing of a major subsidiary)
- Announcement of plan to discontinue an operation
- Major purchases and disposals of assets
- Classification of assets as held for sale
- Expropriation of assets by government
- Destruction of assets, for example by fire or flood
- Announcing or commencing the implementation of a major restructuring
- Major ordinary share transactions (unless these involve transactions such as capitalisation and bonus issues where there is a change in the number of shares without an inflow or

outflow of resources, see adjusting events above. Such transactions require EPS to be restated as if the new number of shares was in issue for the whole year)

- Decline in the market value of investments including investment properties after the reporting date. These should reflect the fair value at the reporting date and should not be affected by hindsight

1.1.3 Going concern basis

Financial statements are prepared on the '**going concern**' basis. Where an entity goes into liquidation after the reporting date, it is no longer considered to be a going concern and the financial statements should not be prepared on this basis.

Where the going concern basis is clearly not appropriate, a basis other than the going concern basis should be adopted, for example the 'break-up basis'. The break-up basis measures the assets at their recoverable amount in a non-trading environment, and a provision is recognised for future costs that will be incurred to 'break-up' the business.

Where the financial statements are not prepared on a going concern basis, this should be fully disclosed, along with the actual basis of preparation used.

Management is required to make an explicit assessment of the entity's ability to continue as a going concern by considering a number of financial, operating and other indicators. Indicative of inability to continue as a going concern would be major restructuring of debt, adverse key financial ratios, substantial sale of non-current assets not intended to be replaced, loss of key staff or major markets.

1.1.4 The period of review

The cut-off date for the consideration of events after the reporting period is the date on which the financial statements are authorised for issue. Events that occur after the reporting date but before the financial statements are authorised for issue need to be considered, regardless of what financial information has been made publicly available during this period.

Normally the financial statements are authorised by the directors before being issued to the shareholders for approval; the authorisation date is the date these are authorised for issue to the shareholders, and not the date they are approved by the shareholders.

Where a supervisory board is made up wholly of non-executive directors, the financial statements will first be authorised by the executive directors for issue to that supervisory board for its approval. The relevant cut-off date for the review of events that have occurred after the reporting date is the date on which the financial statements are authorised for issue to the supervisory board.

The date on which the financial statements were authorised for issue should be disclosed, since events occurring after that date will not be reflected in the financial statements.

1.1.5 Treatment of errors

Errors identified before the authorisation date will be adjusted in the current financial statements. Those identified after the financial statements have been published should be dealt with in a subsequent period under IAS 8, *Accounting Policies, Changes in Accounting Estimates and Errors*. IAS 8 requires an error relating to a prior period to be treated as an adjustment to the comparative information presented in the subsequent financial statements.

If a significant event occurs after the authorisation of the financial statements but before the annual report is published, the entity is not required to apply the requirements of IAS 10. However, if the event was so material that it affects the entity's business and operations in the future, the entity may wish to discuss the event in the narrative section at the front of the Annual Review but outside the financial statements themselves.

1.1.6 Equity dividends

These should only be recognised as a liability where they have been declared before the reporting date, as this is the date on which the entity has an obligation. Where equity dividends are declared after the reporting date, this fact should be disclosed but no liability recognised at the reporting date.

1.1.7 Further points to note

Information on customers and suppliers

- Information after the reporting date on either a customer or supplier may not only affect amounts that have been recorded in the financial statements but also impact on the future trading of the entity.
- This should be assessed and disclosure made if the liquidation of a major customer or supplier is likely to influence the economic decisions of users of the financial statements.
- Significant customer and supplier relationships are fundamental where an entity relies on one major supplier. An example of a significant supplier/customer relationship is Intel Corporation and Dell Inc, where until recently Dell computers have used only Intel microprocessors. Dell relies almost totally on the ongoing supplier/customer relationship with Intel, and the success of Intel is vitally important to the future trade of Dell itself.

1.1.8 Contingent liabilities

Evidence may come to light regarding a contingent liability or provision that an entity was unaware of at the reporting date. The distinction between a contingent liability and a provision is discussed in IAS 37, *Provisions, Contingent Liabilities and Contingent Assets*. An example of an unknown provision is where, because of a major fault with goods which were purchased before the reporting date, an electrical retail chain has had the goods returned after the reporting date. The fault may raise safety issues and the retailer may have to recall all such items sold within a period of time in order to repair the fault. In such circumstances, a provision should be recognised for the repair of all items that have been sold before the reporting date. The entity may not have been aware of the problem at the reporting date but, as it existed at that date, a provision should be recognised in light of the new information.

Interactive question 1: Various events

The Roach Company is completing the preparation of its draft financial statements for the year ended 31 May 20X6.

On 24 July 20X6, an equity dividend of £200,000 was declared and a contractual profit share payment of £35,000 was made, both based on the profits for the year to 31 May 20X6.

On 20 June 20X6, a customer went into liquidation having owed the company £31,000 for the past six months. No provision had been made against this debt.

On 17 July 20X6, a manufacturing plant was destroyed by fire resulting in a financial loss of £200,000.

Requirement

According to IAS 10, *Events After the Reporting Period*, which amounts should be recognised in Roach's financial statements for the year to 31 May 20X6 to reflect adjusting events after the reporting period?

See **Answer** at the end of this chapter.

Interactive question 2: Significant events

An entity's draft financial statements for the year ended 31 December 20X3 were completed on 30 May 20X4, approved by the finance director on 7 June 20X4, authorised for issue on 20 June 20X4 and approved by the shareholders on 5 July 20X4.

The following events occurred after the reporting date (assume all amounts are significant to the entity):

Requirements

How should the entity treat these events in its financial statements?

(a) Notification on 18 February 20X4 that a customer owing £100,000 as at 31 December 20X3 has gone into liquidation. The financial statements already include a specific provision of £20,000 for this customer and the entity does not make general provisions.

(b) A rights issue on 6 April 20X4 to raise £1,500,000 for an acquisition.

(c) Confirmation on 28 May 20X4 from the entity's insurer that they will pay £500,000 for inventories that were destroyed in a fire on 24 December 20X3. The entity had claimed £650,000 and included this as a receivable in the financial statements.

See **Answer** at the end of this chapter.

Interactive question 3: Dividends proposed and declared

The recent financial calendar of an entity with a 31 December year end has included the following:

	Authorised by directors for issue	Approved in annual general meeting
Financial statements for 20X2	28 February 20X3	3 May 20X3
Financial statements for 20X3	28 February 20X4	4 May 20X4

Dividends on ordinary shares	Proposed by directors	Declared by directors	Approved in annual general meeting
20X2 final	28 Feb 20X3	no	yes
20X3 interim	31 Aug 20X3	yes	no
20X3 final	28 Feb 20X4	no	yes

Requirement

How will the dividends be dealt with in the entity's financial statements?

See **Answer** at the end of this chapter.

Professional skills focus: Concluding, recommending and communicating

While IAS 10 was covered at earlier levels, the focus at Advanced Level will be on more complex scenarios, where conclusions will need to be drawn.

2 IAS 37, Provisions, Contingent Liabilities and Contingent Assets

Section overview

The following is a summary of the material covered in earlier studies.

2.1 Overview of earlier studies

Definition

Provision: A liability where there is uncertainty over its timing or the amount at which it will be settled.

2.1.1 Recognition

- A provision should be recognised when:
  - an entity has a present obligation (legal or constructive) as a result of a past event;
  - it is probable that there will be an outflow of resources in the form of cash or other assets; and
  - a reliable estimate can be made of the amount.
- A provision should not be recognised in respect of future operating losses since there is no present obligation arising from a past event.

2.1.2 Onerous contracts

- If future benefits under a contract are expected to be less than the unavoidable costs under it, the contract is described as onerous. The excess unavoidable costs should be provided for at the time a contract becomes onerous.
- A lease agreement that becomes onerous is only within the scope of IAS 37, and therefore results in the creation of a provision, if simplified accounting is applied, so that no lease liability has been recognised. This is only the case where a lease is short-term or for an asset with a low value.

Definition

Unavoidable costs: Unavoidable costs of meeting an obligation are the lower of:

- the cost of fulfilling the contract; and
- any penalties from failure to fulfil the contract

2.1.3 2020 Amendment

In May 2020, the IASB issued an amendment to IAS 37, *Onerous Contracts – Cost of Fulfilling a Contract*. This clarifies that the cost of fulfilling the contract includes the costs that relate directly to the contract. These costs include the incremental costs of fulfilling the contract (eg, labour and materials) as well as an allocation of other direct costs (eg an allocation of depreciation of a machine used in fulfilling the contract) (IAS 37: para. 68A).

This amendment is effective for annual reporting periods beginning on or after January 1, 2022. It is therefore not yet examinable in full, but you should be aware of it as a current issue.

2.1.4 Restructuring costs

- A constructive obligation, requiring a provision, only arises in respect of restructuring costs where the following criteria are met:
  - A detailed formal plan has been made, identifying the areas of the business and number of employees affected with an estimate of likely costs and timescales
  - An announcement has been made to those who will be affected by the restructuring

2.1.5 Contingent liability

- A contingent liability arises where a past event may lead to an entity having a liability in the future but the financial impact of the event will only be confirmed by the outcome of some future event not wholly within the entity's control.
- A contingent liability should be disclosed in the financial statements unless the possible outflow of resources is thought to be remote.

2.1.6 Contingent asset

- A contingent asset is a potential asset that arises from past events but whose existence can only be confirmed by the outcome of future events not wholly within an entity's control.
- A contingent asset should be disclosed in the financial statements only when the expected inflow of economic benefits is probable.

2.1.7 Reimbursement

- An entity may be entitled to reimbursement from a third party for all or part of the expenditure required to settle a provision. In these circumstances, an entity generally retains the contractual obligation to settle the expenditure. A provision and reimbursement are therefore recognised separately in the statement of financial position. A reimbursement should be recognised only when it is virtually certain that an amount will be received.

2.1.8 Recognition and disclosure

- A full reconciliation of movements in provisions should be presented in the financial statements. Detailed narrative explanations should also be provided in relation to provisions, contingent liabilities and contingent assets. The narrative should include an estimate of the financial amount in relation to contingent liabilities and assets as well as indications of uncertainties.
- The required disclosures have already been covered at Professional Level. In particular, in relation to discounting, any increase in the value of the discounted amount arising from the passage of time or the effect of any change in the discount rate need to be disclosed.

2.1.9 Disclosure let out

- IAS 37 permits reporting entities to avoid disclosure requirements relating to provisions, contingent liabilities and contingent assets if they would be expected to be **seriously prejudicial** to the position of the entity in dispute with other parties. However, this should only be employed in **extremely rare** cases. Details of the general nature of the provision/contingency must still be provided, together with an explanation of why it has not been disclosed.

2.1.10 Discounting to present value

- Where the time value of money is material, the amount of provision should be the present value of the expenditures required to settle the obligation. The main types of provision where the impact of discounting may be significant are those relating to decommissioning and other environmental restoration liabilities. For most other provisions, no discounting will be required, as the cash flows are not sufficiently far into the future.

- The discount rate to be used should reflect current market assessments of the time value of money and the risks specific to the liability (ie, it would be a risk-adjusted rate). In practice it may be more appropriate to use a risk-free rate and adjust the cash flows for risk. For further guidance on the risk-free rate you may refer to your Strategic Business Management Workbook. Whichever method is adopted, it is important not to double count risk.

2.1.11 Unwinding the discount

- Where discounting is used, the carrying amount of the provision increases each period to reflect the passage of time and this is recognised as a finance cost in profit or loss.

Professional skills focus: Assimilating and using information

As the above overview from earlier studies shows, deciding whether a provision should be made and if so, how much, may require complex information to be assimilated. In particular, when considering the discount rate, the risks specific to the liability must be taken into account.

Interactive question 4: Constructive obligation

On 25 September 20X7, further to a decision made earlier in the year by the board of directors, Industrial plc publicly announced a decision to reduce the level of harmful emissions from its manufacturing plants.

The directors had reached their decision to proceed with the project after appraising the investment using discounted cash flow techniques and an annual discount rate of 8%.

The directors estimated that the future cash payments required to meet their stated objective would be as follows:

- £20 million on 30 September 20X8
- £25 million on 30 September 20X9
- £30 million on 30 September 20Y0

No contracts were entered into until after the start of the new accounting year on 1 October 20X7; however, the entity has a reputation of fulfilling its financial commitments after it has publicly announced them. Industrial included a provision for the expected costs of its proposal in its financial statements for the year ended 30 September 20X7. The actual expenditure in September 20X8 was
£20 million as expected.

The average remaining useful lives of the factories on 30 September 20X7 (the reporting date) was 30 years and depreciation is computed on a straight-line basis and charged to cost of sales.

Requirements

4.1 Compute the appropriate provision in the statements of financial position in respect of the proposed expenditure at 30 September 20X7 **and** 30 September 20X8, and explain why the directors decided to recognise the provision.

4.2 Compute the two components of the charge to profit in respect of the proposal for the year ended 30 September 20X8. You should explain how each component arises and identify where in the statement of profit or loss and other comprehensive income each component is reported.

See **Answer** at the end of this chapter.

Professional skills focus: Structuring problems and solutions

The interactive question you have just done is an example of structuring problems, both on your part and the part of the directors in the scenario. First, an investment appraisal is carried out by the directors, then the provision is announced, then calculated by you.

Interactive question 5: Unwinding the discount

A company has a present obligation at 31 December 20X0, which it expects to settle in four years' time for £200,000. It calculates that the present value of the obligation is £136,603, discounted at 10%.

The unwinding of the discount in 20X1, 20X2, 20X3 and 20X4 is shown in the table below.

Provision

	Cr balance b/f 1 Jan	Cr unwinding discount @ 10% 31 Dec	Cr balance c/f 31 Dec
	£	£	£
20X1	136,603	13,660	150,263
20X2	150,263	15,026	165,289
20X3	165,289	16,529	181,818
20X4	181,818	18,182	200,000

Requirement

What are the accounting entries for the above for 20X1?

See **Answer** at the end of this chapter.

Professional skills focus: Applying judgement

In the case of provisions, it is likely that the discount rate will be given to you. However, in other cases and in practice, choosing an appropriate discount rate is an area where judgement may need to be exercised. Selecting an appropriate discount rate is important as different discount rates can have a significant effect on the calculation.

Interactive question 6: Restructuring

How should these matters be recognised in the statement of profit or loss and other comprehensive income?

Requirements

6.1 An entity has a 31 December year end. The directors approved a major restructuring programme on 1 December 20X5 and announced the details on the entity's intranet and to the media on 2 December 20X5. The programme involves two stages.

Stage 1

Closure of three production lines during 20X6, the redundancy of 3,000 employees on 31 March 20X6, and the transfer during 20X6 of 500 employees to continuing parts of the business. All associated costs would be settled during 20X6.

Stage 2

Probable closure of four more production lines during 20X7, with probable redundancies of 3,500 employees during 20X7. Other staff will be transferred to continuing businesses. All associated costs would be settled during 20X7. Assume that the details of Stage 2 were formally confirmed on 1 November 20X6.

6.2 The entity had some years ago signed a 'take or pay' contract with a supplier, in order to ensure the reliable supply each year of 100,000 tonnes of critical raw materials to each of the seven production lines affected by the restructuring programme. Under the contract, the entity must pay for the 700,000 tonnes each year, even if it decides not to take delivery. This contract falls due for renewal on 1 January 20X8.

See **Answer** at the end of this chapter.

Interactive question 7: Obligation to dismantle

A company is awarded a contract to build and operate a nuclear power station on 1 January 20X1. The power station comes into operation on 31 December 20X3 and the operating licence is for 30 years from that date.

The construction cost of the power station was £450 million. Part of the agreement for the contract was that, in addition to building and operating the power station, the company is obliged to dismantle it at the end of its 30-year life and make the site safe for alternative use. At 31 December 20X3, the estimated cost of the obligation was £50 million.

An appropriate discount rate reflecting market assessments of the time value of money and risks specific to the power station is 8%.

Requirement

Explain the treatment of the cost of the power station and obligation to dismantle it as at 31 December 20X3 and for the year ended 31 December 20X4.

Work to the nearest £0.1 million.

See **Answer** at the end of this chapter.

3 Audit focus

Section overview

Auditors will carry out specific procedures on provisions and contingencies.

3.1 Auditing provisions and contingencies

Much of the audit work here is focused on ensuring that the recognition and treatment of these items is in accordance with IAS 37, which we looked at in section 2 of this chapter.

The audit procedures that should be carried out on provisions and contingent assets and liabilities are as follows.

- **Obtain details** of all **provisions** which have been included in the **accounts** and all **contingencies** that have been disclosed.
- **Obtain** a **detailed analysis** of all **provisions** showing opening balances, movements and closing balances.
- **Determine** for each material provision **whether** the **company** has a **present obligation** as a result of past events by:
  - **reviewing** of **correspondence** relating to the item; and
  - **discussing** with the **directors**. Have they created a valid expectation in other parties that they will discharge the obligation?
- **Determine** for each material provision **whether** it is **probable** that a **transfer of economic benefits** will be required to settle the obligation by:
  - **confirming** whether any **payments** have been **made** after the end of the reporting period in respect of the item;
  - **reviewing correspondences** with solicitors, banks, customers, insurance company and suppliers both pre and post year end for evidence of the existence of any liabilities;
  - **sending** a **letter** to the **solicitor** to obtain their views (where relevant);
  - **discussing** the **position** of similar **past provisions** with the directors. Were these provisions eventually settled?; and
  - **considering** the **likelihood** of **reimbursement**.
- **Recalculate** all **provisions** made.
- **Compare** the **amount provided** with any post year end payments and with any amount paid in the past for similar items.
- In the event that it is not possible to estimate the amount of the **provision**, confirm that this **contingent liability** is **disclosed** in the accounts.
- **Consider** the **nature** of the **client's business**. Would you expect to see any other provisions, for example warranties?
- **Consider** whether disclosures of **provisions, contingent liabilities and contingent assets** are correct and sufficient.

3.2 Procedures regarding litigation and claims

3.2.1 Introduction

- ISA 501, *Audit Evidence – Specific Considerations for Selected Items* provides guidance on procedures regarding litigation and claims.

A summary of the procedures regarding litigation and claims is provided below.

3.2.2 Litigation and claims

Litigation and claims involving the entity may have a material effect on the financial statements, and so will require adjustment to or disclosure in those financial statements.

The auditor shall **design and perform procedures** in order to identify any litigation and claims involving the entity which may give rise to a risk of material misstatement. (ISA 501.9)

Such procedures would include the following:

- Make appropriate **inquiries of management and those charged with governance** including obtaining **representations**.
- **Review board minutes** and **correspondence** with the entity's lawyers.

- Examine **legal expense account**.
- Use **any information** obtained regarding the entity's business including information obtained from discussions with any in-house legal department.

When litigation or claims have been identified or when the auditor believes they may exist, the auditor must seek **direct communication with the entity's lawyers**. (ISA 501.10)

This will help to obtain **sufficient, appropriate audit evidence** as to whether potential material litigation and claims are known and management's estimates of the financial implications, including costs, are reliable.

Form of the letter of inquiry

The letter, which should be prepared by management and sent by the auditor, should request the lawyer to **communicate directly** with the auditor.

If it is thought unlikely that the lawyer will respond to a general inquiry, the letter should specify the following.

- A list of litigation and claims
- Management's assessment of the outcome of the litigation or claim and its estimate of the financial implications, including costs involved
- A request that the lawyer confirm the reasonableness of management's assessments and provide the auditor with further information if the list is considered by the lawyer to be incomplete or incorrect

The auditors must consider these matters **up to the date of their report** and so a further, updating letter may be necessary.

A meeting between the auditors and the lawyer may be required, for example where a complex matter arises, or where there is a disagreement between management and the lawyer. Such meetings should take place only with the permission of management, and preferably with a management representative present.

If management refuses to give the auditor permission to communicate with the entity's lawyers or if the lawyer refuses to respond as required and the auditor can find no alternative sufficient evidence, this would mean that the auditor is unable to obtain sufficient, appropriate evidence and should ordinarily lead to a qualified opinion or a disclaimer of opinion. (ISA 501.11)

Interactive question 8: Contingencies

In February 20X7 the directors of Newthorpe Engineering suspended the managing director. At a disciplinary hearing held by the company on 17 March 20X7 the managing director was dismissed for gross misconduct, and it was decided the managing director's salary should stop from that date and no redundancy or compensation payments should be made.

The managing director has claimed unfair dismissal and is taking legal action against the company to obtain compensation for loss of his employment. The managing director says he has a service contract with the company which would entitle him to two years' salary at the date of dismissal.

The financial statements for the year ended 30 April 20X7 record the resignation of the director. However, they do not mention his dismissal and no provision for any damages has been included in the financial statements.

Requirements

8.1 State how contingent liabilities should be disclosed in financial statements according to IAS 37, *Provisions, Contingent Liabilities and Contingent Assets*.

8.2 Describe the audit procedures you will carry out to determine whether the company will have to pay damages to the director for unfair dismissal, and the amount of damages and costs which should be included in the financial statements.

Note: Assume the amounts you are auditing are material.

See **Answer** at the end of this chapter.

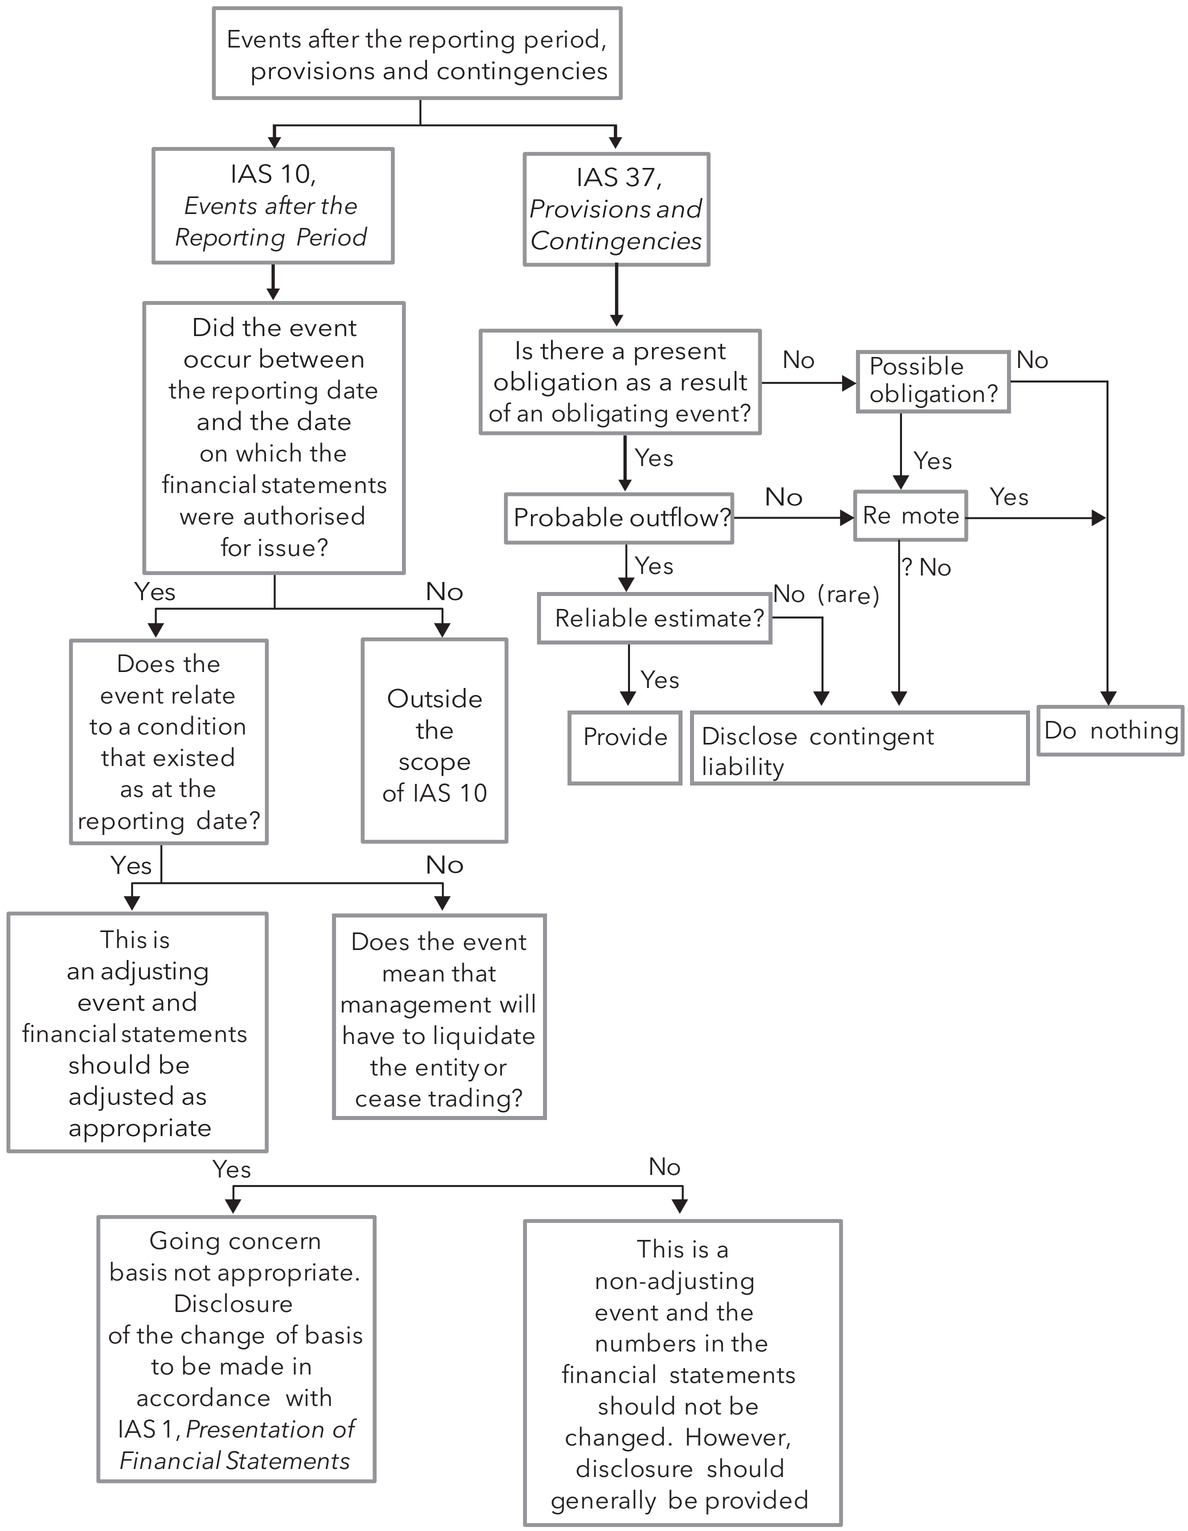
Professional skills focus: Applying judgement

Provisions are an area where judgement is required, for example in assessing the likelihood of success of a legal claim. In an exam, you are generally told whether a claim is likely to be successful, but in practice it could be difficult to determine.

3.3 Procedures regarding events after the reporting period

ISA 560, *Subsequent Events* sets out the audit requirements in relation to events occurring after the reporting period. Please refer to earlier chapters for a more detailed discussion.

Summary



Events after the reporting period, provisions and contingencies
IAS 10, *Events after the Reporting Period*
IAS 37, *Provisions and Contingencies*
Did the event occur between the reporting date and the date on which the financial statements were authorised for issue?
Yes
No
Does the event relate to a condition that existed as at the reporting date?
Outside the scope of IAS 10
Yes
No
This is an adjusting event and financial statements should be adjusted as appropriate
Does the event mean that management will have to liquidate the entity or cease trading?
Yes
No
Going concern basis not appropriate. Disclosure of the change of basis to be made in accordance with IAS 1, *Presentation of Financial Statements*
This is a non-adjusting event and the numbers in the financial statements should not be changed. However, disclosure should generally be provided
Is there a present obligation as a result of an obligating event?
No
Possible obligation?
No
Yes
Yes
Probable outflow?
No
Re mote
Yes
Yes
? No
Reliable estimate?
No (rare)
Yes
Provide
Disclose contingent liability
Do nothing

1 Knowledge diagnostic

Before you move on to question practice, confirm you are able to answer the following questions having studied this chapter. If not, you are advised to revisit the relevant learning from the topic indicated.

	Confirm your learning
1.	What is an adjusting event (IAS 10)? Give examples (Topic 1)
2.	What are IAS 10's requirements in relation to dividends? (Topic 1)
3.	When should a provision be recognised? (Topic 2)
4.	When, if at all, should a contingent liability be recognised? (Topic 2)
5.	When, if at all, should a contingent asset be recognised? (Topic 2)

2 Question practice

Aim to complete all self-test questions at the end of this chapter. The following self-test questions are particularly helpful to further topic understanding and guide skills application before you proceed to the next chapter.

Question	Learning benefit from attempting this question
Saimaa	This question revises knowledge of IAS 10, but requires application to an outcome that is uncertain.
Quokka	This question is good practice because it tests the interaction of two standards: IAS 10 and IAS 2.
Wilcox	In this question your brought forward knowledge of IAS 37, including discounting, is tested.

Once you have completed these self-test questions, it is beneficial to attempt the following questions from the Question Bank for this module. These questions have been selected to introduce exam style scenarios to help you improve knowledge application and professional skills development before you start the next chapter.

Question	Learning benefit from attempting this question
Upstart Records (Exhibit 3)	This tests IAS 37 in the context of a restructuring plan in considerably more depth and complexity than at earlier levels.
Newpenny (Exhibit 1 (1))	You will need to determine whether a provision is required for additional payment if a set volume of purchases is not met.

Refer back to the learning in this chapter for any questions which you did not answer correctly or where the suggested solution has not provided sufficient explanation to answer all your queries. Once you have attempted these questions, you can continue your studies by moving onto the next chapter.

Technical reference

1 IAS 10, *Events After the Reporting Period*

- Authorisation
  - Process of authorisation of financial statements – **IAS 10.4**
  - Authorisation date is the date on which financial statements are authorised for issue to shareholders – **IAS 10.5, 10.6**
  - The relevant cut-off date for consideration of events after the reporting period is the authorisation date – **IAS 10.7**
- Adjusting events
  - Amounts recognised in financial statements should be adjusted to reflect adjusting events after the reporting date – **IAS 10.8, 10.9**
  - Examples of adjusting events include
    - Outcome of court case that confirms obligation at reporting date
    - Receipt of information on recoverability or value of assets
    - Finalisation of profit sharing or bonus payments
    - Discovery of fraud or errors
- Non-adjusting events
  - An entity should not adjust amounts recognised in financial statements for non-adjusting events after the reporting period (an example is the subsequent decline of market value of investments) – **IAS 10.10**
  - Non-adjusting events may need to be disclosed – **IAS 10.10**
  - Dividends proposed or declared on equity instruments after the reporting date cannot be recognised as a liability at the reporting date – **IAS 10.12**
  - Dividends proposed or declared after the reporting date should be disclosed – **IAS 10.13**
- Going concern basis
  - Financial statements are not to be prepared on going concern basis if management intends to liquidate entity or cease trading – **IAS 10.14**
  - If going concern assumption no longer appropriate, disclosures required in accordance with IAS 1 – **IAS 10.16**
- Disclosure
  - Date of authorisation to be disclosed – **IAS 10.17**
  - Disclosures relating to information after the reporting date to be updated in the light of new information – **IAS 10.19**
  - For material non-adjusting events after the reporting period an entity shall disclose: – **IAS 10.21**
    - Nature of event
    - Estimate of financial effect

2 IAS 37, Provisions, Contingent Liabilities and Contingent Assets

- Scope – **IAS 37.1**
- Definitions – **IAS 37.10**

- Recognition of provisions – **IAS 37.14–15**
- Contingent liabilities – **IAS 37.27**
- Contingent assets – **IAS 37.31**
- Measurement best estimate – **IAS 37.36**
- Risks and uncertainties – **IAS 37.42**
- Present value – **IAS 37.45-47**
- Future events – **IAS 37.48**
- Onerous contracts – **IAS 37.66**
- Restructuring – **IAS 37.70–72, IAS 37.78–80**

3 ISA 501

- Audit procedures in respect of litigation and claims – **ISA 501.9–12**

Self-test questions

Answer the following questions.

1 ABC International

ABC International Inc is a company that deals extensively with overseas entities and its financial statements include a substantial number of foreign currency transactions. The entity also holds a portfolio of investment properties.

Requirements

Discuss the treatment of the following events after the reporting date.

(a) Between the reporting date of 31 December 20X6 and the authorisation date of 20 March 20X7, there were significant fluctuations in foreign exchange rates that were outside those normally expected.

(b) The entity obtained independent valuations of its investment properties at the reporting date based on current prices for similar properties. On 15 March 20X7, market conditions which included an unexpected rise in interest rates and the expectation of further rises resulted in a fall in the market value of the investment properties.

(c) A competitor introduced an improved product on 1 February 20X7 that caused a significant price reduction in the entity's own products.

2 Saimaa

The Saimaa Company operates in the banking industry. It is attempting to sell one of its major administrative office buildings and relocate its employees.

Saimaa has found a potential buyer, The Nipigon Company, which operates a chain of retail stores. Nipigon would like to convert the building into a new retail store but would require planning permission for this change of use. Nipigon may, however, still consider purchasing the building and using it for its own administrative offices if planning permission is declined. It is estimated that there is approximately a 50% probability of planning permission being granted.

A contract for sale of the building is to be drawn up in November 20X7 and two alternatives are available:

Contract 1: This sale contract would be made conditional on planning permission being granted. Thus the contract would be void if planning permission is not granted but it would otherwise be binding.

Contract 2: This contract would be unconditional and binding, except that the price would vary according to whether or not planning permission is granted.

The financial statements of Saimaa for the year to 31 December 20X7 are authorised for issue on 28 March 20X8. A decision on planning permission will be made in February 20X8.

Requirement

With respect to the financial statements of Saimaa for the year to 31 December 20X7, and according to IAS 10, *Events After the Reporting Period*, indicate whether the granting of planning permission on each of the contracts is an adjusting event.

3 Quokka

The Quokka Company manufactures balers for agricultural use. The selling price per baler, net of selling expenses, at 31 December 20X7 is £38,000. Due to increasing competition, however, Quokka decides to reduce the selling price by £5,000 on 3 January 20X8.

On 4 January 20X8 a health and safety report was delivered to Quokka by the government, showing that some of its balers were toppling over on moderate gradients. £9,000 per baler would need to be incurred by Quokka to correct the fault. No further sales could be made without the correction.

Quokka had been unaware of any problem or health and safety investigation until the report was delivered.

The financial statements of Quokka for the year to 31 December 20X7 are to be authorised for issue on 23 March 20X8.

The cost of manufacture for each baler was £36,000 and there were 80 balers in inventory at 31 December 20X7.

Requirement

After adjustment (if any) for the above events, what should be the carrying amount of the inventory in the financial statements of Quokka at 31 December 20X7, in accordance with IAS 10, *Events After the Reporting Period* and IAS 2, *Inventories*?

4 Labeatis

The financial statements of the Labeatis Company for the year to 31 December 20X7 were approved and issued with the authority of the board of directors on 6 March 20X8. However, the financial statements were not presented to the shareholders' meeting until 27 March 20X8.

The following events took place:

Event 1: On 18 February 20X8 the Government announced a retrospective increase in the tax rate applicable to Labeatis's year ending 31 December 20X7.

Event 2: On 19 March 20X8 a fraud was discovered which had had a material effect on the financial statements of Labeatis for the year ending 31 December 20X7.

Requirement

State which event (if any) is an adjusting event according to IAS 10, *Events After the Reporting Period*.

5 Scioto

The Scioto Company's financial statements for the year ended 30 April 20X7 were approved by its finance director on 7 July 20X7 and a public announcement of its profits for the year was made on 10 July 20X7.

The board of directors authorised the financial statements for issue on 15 July 20X7 and they were approved by the shareholders on 20 July 20X7.

Requirement

Under IAS 10, *Events After the Reporting Period*, after which date should consideration no longer be given as to whether the financial statements to 30 April 20X7 need to reflect adjusting and non- adjusting events?

6 Fushia

The Fushia Company sells electrical goods covered by a one-year warranty for any defects.

Of sales of £60 million for the year, the company estimates that 3% will have major defects, 6% will have minor defects and 91% will have no defects.

The cost of repairs would be £5 million if all the products sold had major defects and £3 million if all had minor defects.

Requirement

What amount should Fushia provide as a warranty provision?

7 Wilcox

The Wilcox Company has been lead mining in Valovia for many years. To clean the lead, Wilcox uses toxic chemicals which are then deposited back into the mines. Historically there has not been any legislation requiring environmental damage to be cleaned up. The company has a policy of only observing its environmental responsibilities when legally obliged.

In December 20X7, the Government of Valovia introduced legislation on a retrospective basis, forcing mining companies to rectify environmental damage that they have caused.

Wilcox estimates that the damage already caused will cost £27 million to rectify, but the work would not be paid for until December 20X9. It also estimates that damage caused by its operations each year for the remaining four years of the mines' lifespan will be £3 million, payable at the end of the relevant year.

17% is the pre-tax rate that reflects the time value of money and the risk specific to these liabilities.

Requirement

To the nearest £1 million, what provision should be shown in the statement of financial position of Wilcox at 31 December 20X7 under IAS 37, *Provisions, Contingent Liabilities and Contingent Assets*?

8 Noble

The Noble Company operates a fleet of commercial aircraft. On 1 April 20X7, a new law was introduced requiring all operators to use aircraft fitted with fuel-efficient engines only.

At 31 December 20X7 Noble had not fitted any fuel-efficient engines and the total cost of fitting them throughout the fleet was estimated at £4.2 million.

Under the terms of the legislation, the company is liable for a fine of £1 million for non-compliance with legislation for any calendar year, or part of a year, in which the law has been broken. The Government rigorously prosecutes all violations of the new law.

The effect of the time value of money is immaterial.

Requirement

State the provision required in Noble's financial statements for the year ended 31 December 20X7 under IAS 37, *Provisions, Contingent Liabilities and Contingent Assets*.

Now go back to the Introduction and ensure that you have achieved the Learning outcomes listed for this chapter.

Answers to Interactive questions

Answer to Interactive question 1

The £35,000 profit share payment and the £31,000 bad debt expense are adjusting events and should be recognised in the financial statements.

See IAS 10.9, 10.12 and 10.22.

Answer to Interactive question 2

(a) This is an adjusting event, as it provides more up to date information about a provision that was recognised at the reporting date. The £100,000 receivable should be written off.

(b) This is a disclosable non-adjusting event. The rights issue occurred after the reporting date, but is considered to be of significant importance and should be disclosed in the financial statements.

(c) This is an adjusting event since it is in relation to an asset that was recognised at the reporting date. The receivable should be reduced to £500,000.

Answer to Interactive question 3

These dividends will be dealt with in the entity's financial statements for 20X2, 20X3 and 20X4 as follows:

Financial statements for:	20X2	20X3	20X4
20X2 final dividend	Disclosed in the notes	Charged to statement of changes in equity	–
20X3 interim dividend	–	Charged to statement of changes in equity	–
20X3 final dividend	–	Disclosed in the notes	Charged to statement of changes in equity

Answer to Interactive question 4

4.1 Provision at 30 September 20X7

Expenditure on:		**£'000**
30 September 20X8	20,000 × 0.926	18,520
30 September 20X9	25,000 × 0.857	21,425
30 September 20Y0	30,000 × 0.794	23,820
		63,765

Provision at 30 September 20X8

Expenditure on:		**£'000**
30 September 20X9	25,000 × 0.926	23,150
30 September 20Y0	30,000 ×0.857	25,710
		48,860

A provision should be recognised where:

(1) there is a present obligation as a result of a past event;

(2) there is a probable outflow of economic benefits; and

(3) the amount can be measured reliably.

(2) and (3) are clearly met, as Industrial will incur expenditure and the detailed estimates of the amounts have been prepared.

By announcing the plan to reduce emissions publicly, Industrial has created a constructive obligation to carry out the project. Therefore, although there is no legal obligation, Industrial should record a provision for the estimated (and discounted) costs of the project.

4.2 The charge to profit or loss for the year ended 30 September 20X8 consists of:

(1) Depreciation (£63,765,000 ÷ 30) = £2,125,500 This is reported in cost of sales.

The provision of £63,765,000 also represents an **asset**, as it gives rise to future economic benefits (it enhances the performance of the factories). This is **capitalised and depreciated over 30 years** (the average useful life of the factories).

(2) Unwinding of the discount (see working) = £5,095,000 This is reported as a **finance cost**.

WORKING

	£'000
Provision at 1 October 20X7	63,765
Expenditure on 30 September 20X8	(20,000)
Unwinding of discount (balancing figure)	5,095
Provision at 30 September 20X8	48,860

Answer to Interactive question 5

The accounting entry to record the unwinding of the discount in 20X1 will be:

DEBIT	Finance costs	£13,660	
CREDIT	Provisions		£13,660

Answer to Interactive question 6

6.1 Detailed information was made available about who would be affected by Stage 1 and when the various steps in the first stage of the closure programme would take place.

The announcement about Stage 2 was more of an overview. It was not until 1 November 20X6 that information was announced in respect of Stage 2 in as much detail as that provided in December 20X5 about Stage 1. There is a constructive obligation in respect of Stage 1 on 2 December 20X5; no such obligation in respect of Stage 2 is made until 1 November 20X6.

Although the announcement is made as a single restructuring programme, there will be two entirely separate restructuring provisions.

The costs of this major programme will be recognised in profit or loss for the years ending 31 December 20X5–20X7 as follows:

	Reason	Stage 1	Stage 2
Termination payments to those taking voluntary redundancy	Restructuring provision	20X5	20X6
Termination payments to those being made compulsorily redundant	Restructuring provision	20X5	20X6
Employment costs during closing down activities and selling off inventory	Restructuring provision	20X5	20X6
One-off payments to employees agreeing to move to continuing parts of the business	Continuing activities	20X6	20X7
Cost of moving plant and equipment to continuing parts of the business	Continuing activities	20X6	20X7
Cost of moving saleable inventory to continuing parts of the business	Continuing activities	20X6	20X7
Impairment losses on non-current assets	See Note	20X5 & 20X6	20X5 to 20X7
Losses on disposal of non-current assets	Year when loss on disposal incurred	20X6	20X7
Revenue less expenses up to date of closure, other than itemised expenses	Year when operating losses incurred	20X6	20X7

Note: The announcement of a restructuring programme is an indicator of impairment under IAS 36, so an impairment test should be carried out at the time of the first announcement for all relevant non-current assets. Despite Stage 2 only being 'probable', its assets should still be tested for impairment in 20X5.

6.2 A provision should be recognised in respect of all contracts when they become onerous, regardless of whether this is associated with a restructuring programme. If the entity's production lines were loss-making before the restructuring announcement, then this contract may already have been classified as onerous.

If it had not already been identified as being onerous then, at a minimum, a provision should be made for the 300,000 tonnes per annum for the three Stage 1 production lines, for the period from when they cannot take any further supplies through to the end of the contract on 31 December 20X7.

A provision should be made for the remaining 400,000 tonnes per annum for the four Stage 2 production lines for the period from when they cannot take any further supplies through to the end of the contract on 31 December 20X7.

Note: This answer includes a comprehensive list of issues to be considered under restructuring programmes, included for learning purposes.

Answer to Interactive question 7

At 31 December 20X3

The discounted amount of the provision would be included in the initial measurement of the cost of the power station as at 31 December 20X3:

	£m
Cost	450.0
Provision (£50m × $1/1.08^{30}$)	5.0
	455.0

Year ended 31 December 20X4

The power plant would be depreciated over its 30-year life resulting in a charge of £455.0m/30 = £15.2m to profit or loss and a carrying amount of £455m – £15.2m = £439.8m.

The provision would begin to be compounded resulting in an interest charge of £5.0 × 8% = £0.4m and an outstanding provision of £5.0 + £0.4 = £5.4m in the statement of financial position.

Any change in the expected present value of the provision would be made as an adjustment to the provision and to the asset value (affecting future depreciation charges).

Answer to Interactive question 8

8.1 IAS 37 states that a provision should be recognised in the accounts if:

- an entity has a **present obligation** (legal or constructive) as a result of a past event;
- a **transfer** of **economic benefits** will **probably** be **required** to settle the obligation; and
- a **reliable estimate** can be **made** of the amount of the obligation.

Under IAS 37 contingent liabilities should not be recognised. However, they should be disclosed unless the prospect of settlement is remote. The entity should disclose:

- the **nature** of the liability;
- an estimate of its **financial effect**;
- the **uncertainties** relating to any possible payments; and
- the likelihood of any **reimbursement**.

8.2 The following procedures should be carried out to determine whether the company will have to pay damages and the amount to be included in the financial statements.

- **Review** the director's **service contract** and **ascertain** the **maximum amount** to which he would be entitled and the **provisions** in the service contract that would **prevent** him making a **claim**, in particular those relating to grounds for justifiable dismissal.
- **Review** the results of the **disciplinary hearing. Consider** whether the company has acted in accordance with **employment legislation** and its **internal rules**, the **evidence** presented by the **company** and the defence made by the **director**.
- **Review correspondence** relating to the case and **determine** whether the **company** has **acknowledged** any **liability** to the director that would mean that an amount for compensation should be accrued in accordance with IAS 37.
- **Review correspondence** with the company's **solicitors** and **obtain legal advice**, either from the company's solicitors or another firm, about the likelihood of the claim succeeding.
- **Review** correspondence and contact the company's solicitors about the likely **costs** of the case.
- **Consider** the **likelihood** of **costs** and **compensation** being **reimbursed** by **reviewing** the company's **insurance arrangements** and contacting the insurance company.

- **Consider** the **amounts** that should be **accrued** and the **disclosures** that should be made in the accounts. Legal costs should be accrued, but compensation payments should only be accrued if the company has admitted liability or legal advice indicates that the company's chances of success are very poor. However, the claim should be disclosed unless legal advice indicates that the director's chance of success appears to be remote.

Answers to Self-test questions

1 ABC International

(a) Details of the abnormal fluctuations in exchange rates should be disclosed as a non-adjusting event after the reporting period.

(b) The decline in the value of investment properties is a non-adjusting event, as it does not reflect the state of the market at the reporting date. The valuation should reflect the state of the market at the reporting date and should not be affected by hindsight or events at a later date.

(c) The improved product issued by the competitor is likely to have been developed over a period of time. The value of inventories should be reviewed and adjusted to their net realisable value where appropriate. Non-current assets may need to be reviewed for possible impairment. This is an adjusting event, as it reflects increased competitive conditions which existed at the reporting date even if the entity was not fully aware of them.

2 Saimaa

Contract 1 is a non-adjusting event. Contract 2 is an adjusting event.

Under IAS 10.3, events after the reporting period are those which occur after the reporting period but before the financial statements are authorised for issue. The planning permission decision is such an event, because it is to be made before the financial statements are to be authorised for issue on 28 March 20X8. Adjusting events are those providing evidence of conditions that existed at the reporting date and non-adjusting events are those indicative of conditions that arose after that date.

Under Contract 1, the uncertainty surrounding the contract at the reporting date would be such that no sale could be recognised as at that date. So there is no transaction for which the planning permission decision could provide evidence and there would not be an adjusting event.

Under Contract 2, there would be an unconditional sale recognised at the reporting date, with only the consideration needing to be confirmed after the reporting date. According to IAS 10.9(c) the planning permission decision would provide additional evidence of the proceeds and would be an adjusting event.

3 Quokka

£1,920,000

IAS 2.9 states that inventories should be stated at the lower of cost and NRV, and under IAS 10.9(b)(ii) the sale of inventories after the reporting date may give evidence of NRV at the reporting date.

The 3 January price reduction is a response to competitive conditions which would have existed at the reporting date. So even though it comes after the year end, it is an adjusting event. Similarly, the safety report received after the year end relates to conditions at the year end (as the balers in inventories were defective at this date) and is an adjusting event.

The carrying amount is 80 balers at the lower of cost (£36,000) and NRV £(38,000 – 5,000 – 9,000). So 80 × £24,000 = £1,920,000

4 Labeatis

Event 1 is a non-adjusting event. Event 2 happened after the statements were authorised, so does not constitute an event after the reporting period.

Applying IAS 10.3, events after the reporting period are those which occur after the 31 December 20X7 reporting date but before the financial statements are authorised for issue on 6 March 20X8.

Event 1 occurs before 6 March 20X8 but is a non-adjusting event, because in accordance with IAS 10.22(h) this change was not enacted before the reporting date. This is the case even though the announcement has a retrospective effect on the financial statements still being prepared.

Event 2, the discovery of fraud, would have been an adjusting event per IAS 10.9(e), had it occurred before the date of authorisation for issue. As it was not discovered until 19 March 20X8, it is not even an event after the reporting period, let alone an adjusting event.

5 Scioto

15 July is the correct answer.

IAS 10.7 states that the authorisation date is the date on which the financial statements are authorised for issue, even if this is after a public announcement of profit. IAS 10.5 confirms that it is not the date on which the shareholders approve the financial statements.

6 Fushia

£330,000

Provision must be made for estimated future claims by customers for goods already sold. The expected value (£5m × 3%) + (£3m × 6%) is the best estimate of this amount (IAS 37.39).

7 Wilcox

£20 million

At the year end a legal obligation exists – through the retrospective legislation – as a result of a past event (the environmental damage caused in the past) (IAS 37.14). The company should therefore create a provision for the damage that has already been caused.

It should not now set up a provision for the future damage, because that will be caused by a future event (the company could close down the mines and therefore not cause further damage to the environment).

Because the effect of discounting at 17% over two years is material, the cost should be discounted to present value (IAS 37.45).

So, the provision is $£27m/1.17^2$ = £20 million (to the nearest £m)

8 Noble

No provision is required for the fitting of the engines. This is because the present obligation as a result of the past event required by IAS 37.14 does not exist. The company can choose not to fit the engines and then not to operate the aircraft.

However, a provision of £1.0 million is required in relation to the fines, because at the reporting date there is a present obligation in respect of a past event (the non-compliance with legislation).

Chapter 14

Leases, government grants and borrowing costs

Introduction

Learning outcomes

- Determine and calculate how different bases for recognising, measuring and classifying financial assets and financial liabilities can impact upon reported performance and position
- Appraise and evaluate cash flow measures and disclosures in single entities and groups
- Explain and appraise accounting standards that relate to an entity's financing activities which include: financial instruments; leasing; cash flows; borrowing costs; and government grants
- Justify and conclude for a particular scenario what comprises sufficient, appropriate audit evidence
- Design and determine audit procedures in a range of circumstances and scenarios, for example identifying an appropriate mix of tests of controls, analytical procedures and tests of details
- Demonstrate and explain, in the application of audit procedures, how relevant ISAs affect audit risk and the evaluation of audit evidence

Chapter study guidance

Use this schedule and your study timetable to plan the dates on which you will complete your study of this chapter.

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
1	**Identifying a lease** Lease finance is a common route to acquiring assets. It is also topical, being the subject of a recent standard, IFRS 16, *Leases*. In a working context you may have to decide whether an arrangement constitutes a lease.	**Approach** Make sure you know the detailed definition of a lease by heart and are able to apply it to any scenario. **Stop and think** Do leases always need to be recognised in the statement of financial position?	'Is it a lease?' is a question that could well be asked in an exam, perhaps in the context of ethics, where a director wants to reduce gearing by claiming it isn't. Right of use is a key test in this respect.	**IQ2: Is it a lease?** This is an essential interactive question, covering a wide range of transactions that may or may not be leases.
2	**Lessee accounting** For lessees, all leases other than short leases and leases of low value assets must be	**Approach** As this is a recent, topical standard and ripe for examination, it is necessary to go	Once it is established that it is a lease, any aspect of IFRS 16 could be tested. A regular way of	**IQ3: Payments in arrears** This is a relatively straightforward question and should be done in

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
	recognised in the statement of financial position. 'Creative' accountants may try to argue that an arrangement is not a lease in order to avoid showing it in the SOFP and thereby reducing gearing.	through all worked examples and interactive questions very carefully. **Stop and think** How is the right-of-use asset made up?	testing this is a scenario in which the lease has been incorrectly treated, for example by just showing the lease payments as an expense in the SPL, rather than an asset in the SOFP. You would need to explain why this is wrong, calculate the correct figures and often adjust the financial statements for this and other errors.	conjunction with the rather trickier next question. **IQ4: Payments in advance** Doing these questions together will show clearly how the treatment differs.
3	**Sale and leaseback transactions** Sale and leaseback arrangements can provide entities with capital funding by releasing capital caught up in the business for investment in other core opportunities. You will later encounter sale and leaseback transactions again in practical real life situations in later Chapters on financial analysis.	**Approach** Ensure you understand the different scenarios relating to sale and leaseback. And the formula to calculate the right-of-use asset and the gain on the sale. **Stop and think** Why is it important to consider whether an arrangement constitutes a lease?	Sale and leaseback is a regular topic for examination. IFRS 16 interacts with IFRS 15 as the sale has to meet the IFRS 15 criteria for a sale in order to be treated as a genuine sale and leaseback.	**IQ6: Sale and leaseback where the transfer is a sale** This is a comprehensive question on this topic and will prepare you for most exam scenarios.
4	**Lessor accounting** It is common for a company to rent out a building, as you saw earlier in your studies of IAS 40, *Investment Property*.	**Approach** The key point to note is that for lessors, a distinction is made between finance leases, which transfer the risks and rewards of ownership, and operating leases, which do not. Finance leases are	Lessor accounting is less commonly examined than lessee accounting, but it does come up occasionally. It is very important in an exam that you consider carefully whether the company is a lessee or a lessor, as the	N/A

	consolidated statements of cash flows in later Chapters.	**Stop and think** What are the benefits of a statement of cash flows?	analytical procedures question.	go at Self-test question 9 and practise questions from your earlier studies.
8	**Audit focus** This section is concerned with the audit of leases, following the structure of the financial reporting sections.	**Approach** Read and learn the table in Section 8.1, which takes you through the audit of lessees.	Exam questions could focus on the financial reporting of leases. Alternatively there could be an audit issue relating to leases which gives rise to a financial	N/A
		Stop and think With lessors, the main concern for the auditor will be establishing whether the arrangement is an operating lease or a finance lease.	reporting issue. In addition, an ethical issue may arise whereby a company claims that a transaction is not a lease, or, where the company is a lessor, that the lease is an operating lease rather than a finance lease.	

Once you have worked through this guidance you are ready to attempt the further question practice included at the end of this chapter.

1 Identifying a lease

Section overview

- A contract to obtain the use of an asset is within the scope of IFRS 16 if it meets the definition of a lease contract.
- IFRS 16 provides optional exemptions from the application of the standard lessee accounting model for short-term leases and leases of low-value assets.
- A contract may contain both a lease component and a non-lease component. IFRS 16 requires entities to account for the lease component of the contract separately from the non-lease component.

Tutorial note

You have studied leasing at Professional Level. If you feel confident in your knowledge, you may wish to skim-read the explanations and go straight to the examples and questions, coming back to the detail if you get stuck.

1.1 Leasing agreements and IFRS 16

As you learned in your Professional level studies, one way by which businesses can obtain the use of an asset is by a leasing agreement. A contract has to meet the definition of a lease contract to be in the scope of IFRS 16, *Leases*.

IFRS 16 was published in 2016. IFRS 16 takes the approach of a lessee measuring the 'right of use' of an asset, and recognising it on the statement of financial position.

Definitions

Lease: A contract, or part of a contract, that conveys the right to use an asset (the underlying asset) for a period of time, in exchange for consideration.

Underlying asset: An asset that is the subject of a lease, for which the right to use that asset has been provided by a lessor to a lessee.

In a leasing transaction, there is a contract between the lessor and the lessee for the hire of an asset.

- The **lessor** is owner and supplier of the underlying asset.
- The **lessee** is the entity who has the right to use the underlying asset.

The lessor retains legal ownership but transfers to the lessee the right to use the asset for an agreed period of time in return for specified payments.

Definition

Right-of-use asset: An asset that represents a lessee's right to use an underlying asset for the lease term.

Professional skills focus: Structuring problems and solutions

The below guidance provides a structure for identifying whether an arrangement is a lease. You should expect that at Advanced Level the issue may not be clear cut, so the guidance will provide a useful tool in making the decision.

1.2 Identifying a lease

Under IFRS 16, a contract is deemed to contain a lease if it conveys the right to control the use of an **identified asset** for a **period of time**, in return for consideration (usually cash, although this purposely doesn't restrict the definition).

The right to control the use of the underlying asset depends on the lessee having both:

- the right to obtain substantially all of the **economic benefits** from using the asset; and
- the **right to direct the use** of the identified asset.

Note: If the supplier can substitute the asset for an equivalent during the lease, the lessee is not deemed to have the right to use an identified asset.

Identified asset

- The asset must be specified in the lease.
- May be part of an asset (such as part of an office facility).
- If the supplier has the practical ability to substitute the asset for an equivalent during the lease, and would benefit economically from doing so (ie, they have a substantive substitution right), there is no identified asset and the contract is not a lease.

Period of time is either:

- a period of time, such as years; or
- the amount of use, based upon the production of the asset, such as number of units produced.

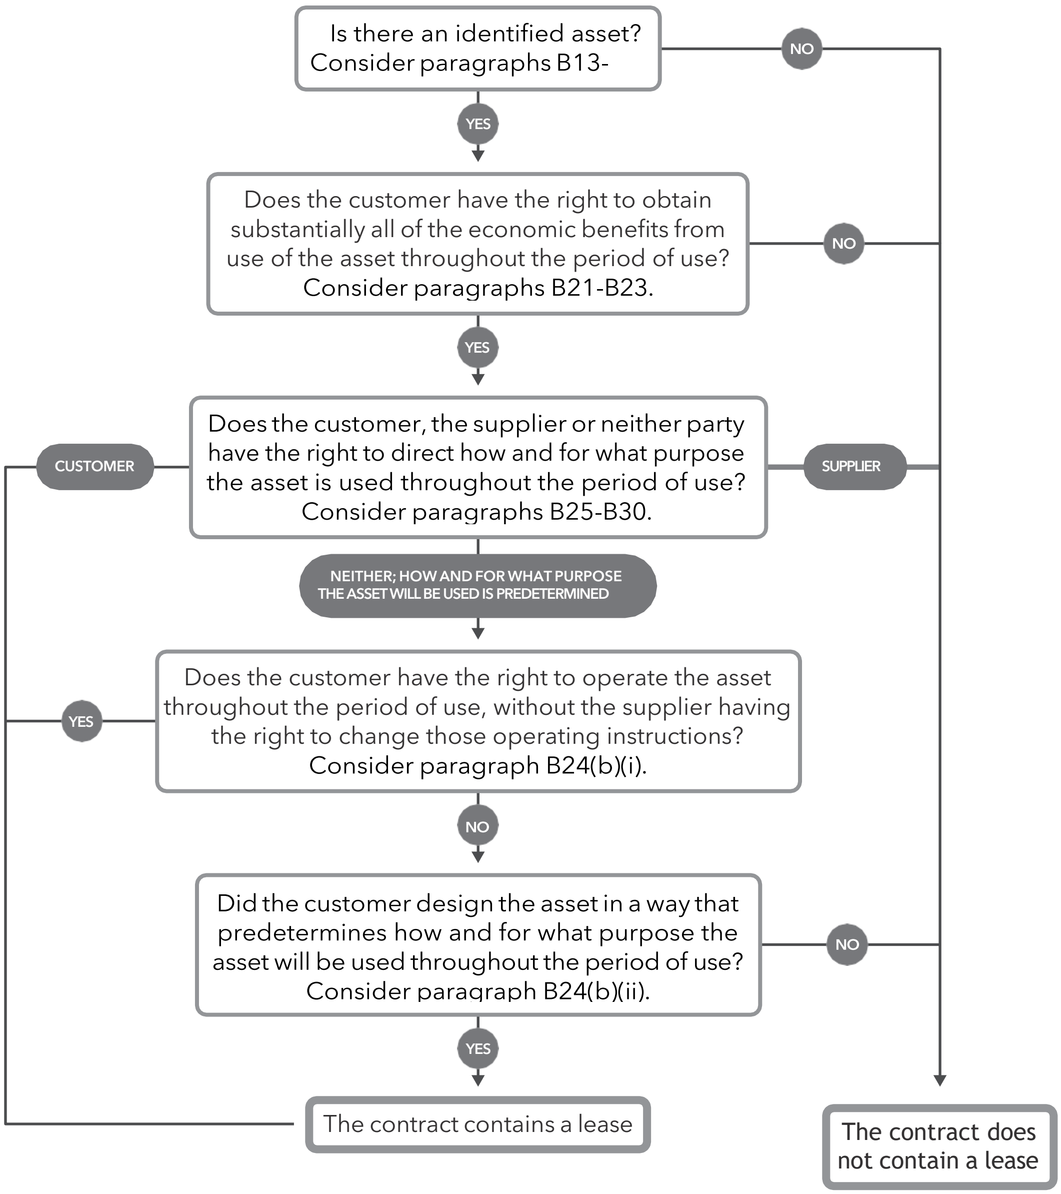
Right to obtain substantially all of the economic benefits

- Can be achieved through holding, using or sub-leasing the asset.
- Assessed only within the parameters of the contract eg, a lease contract for a car may restrict its use to within one country, in which case only economic benefits within that country are considered.

Right to direct the use of the asset (control)

- Lessee can direct how and for what purpose the asset is used throughout the period of use.
- Assessment is unaffected by protective rights within the terms of the contract that are designed to protect the asset eg, prohibiting a truck from being used to carry explosives.

The following flowchart, taken from IFRS 16, Appendix B, paragraph B31, may assist you in determining whether a lease should be identified in the examples that follow:



Worked example: Is it a lease 1?

Big Farm Ltd has three Fassey Mergason tractors under contract from Agrirental Ltd. The tractors are leased for five years, during which time Big Farm Ltd uses and keeps them on the farm, and they cannot be retrieved by Agrirental Ltd (except in the case of default of payment). Agrirental Ltd will supply a replacement tractor if any of the three requires servicing or repair. The tractors are returned to Agrirental Ltd after five years.

Requirement

Is this a lease?

Solution

This is a lease. There are **identifiable assets** (the three tractors), and Big Farm Ltd has the **right to direct their use** for the period of the contract in order to obtain **substantially all economic benefits** from them. Agrirental Ltd cannot substitute or swap one of the tractors, unless it requires a repair or servicing; this is not a substantive substitution right. Therefore, the contract is classified as a lease.

Worked example: Is it a lease 2?

Big Farm Ltd also has the use of two combine harvesters under contract from Agrirental Ltd. The contract agrees that Big Farm Ltd will have access to combine harvesters which have VARIO cutters, however, Agrirental Ltd can decide on the brand and specific machine supplied to Big Farm Ltd, albeit with VARIO cutters. As harvesting is not a year round activity, Agrirental Ltd retains the combine harvesters at its depot, but will supply them as requested within 24 hours.

Requirement

Is this a lease?

Solution

This is not a lease. There are **no identifiable assets** (the combine harvesters), and although Big Farm Ltd has the **right to use** the machines for the period of the contract, Agrirental Ltd can decide upon the actual combines (provided they have the VARIO cutters) provided to Big Farm Ltd.

Therefore the contract is not classified as a lease, and the rental payments should be expensed to profit or loss.

Professional skills focus: Assimilating and using information

In the above examples, the background is the same and some of the details are similar. Your task is to take account of all the information and focus on the differences.

Worked example: Is it a lease 3?

Outandabout Co provides tours round places of interest in the tourist city of Sightsee. While these tours are mainly within the city, it does the occasional day trip to visit tourist sites further away.

Outandabout Co has entered into a three-year contract with Fastcoach Co for the use of one of its coaches for this purpose. The coach must seat 50 people, but Fastcoach Co can use any of its 50- seater coaches when required.

Requirement

Is this arrangement a lease within the scope of IFRS 16, *Leases*?

Solution

This is not a lease. There is no identifiable asset. Fastcoach can substitute one coach for another, and would derive economic benefits from doing so in terms of convenience. Therefore Outandabout should account for the rental payments as an expense in profit or loss.

Worked example: Is it a lease 4?

Coketown Council has entered into a five-year contract with Carefleet Co, under which Carefleet Co supplies the council with 10 vehicles for the purposes of community transport. Carefleet Co owns the relevant vehicles, all 10 of which are specified in the contract. Coketown Council determines the routes taken for community transport and the charges and eligibility for discounts. The council can choose to use the vehicles for purposes other than community transport. When the vehicles are not being used, they are kept at the council's offices and cannot be retrieved by Carefleet unless Coketown Council defaults on payment. If a vehicle needs to be serviced or repaired, Carefleet is obliged to provide a temporary replacement vehicle of the same type.

Requirement

Is this a lease?

Solution

This is a lease. There is an identifiable asset, the 10 vehicles specified in the contract. The council has a right to use the vehicles for the period of the contract. Carefleet Co does not have the right to substitute any of the vehicles unless they are being serviced or repaired. Therefore Coketown Council would need to recognise an asset and liability in its statement of financial position.

Worked example: Is it a lease 5?

This example is taken from IFRS 16 illustrative example 3.

Kabal enters into a 10-year contract with a utilities company (Telenew) for the right to use three specified, physically distinct dark fibres within a larger cable connecting North Town to South Town. Kabal makes the decisions about the use of the fibres by connecting each end of the fibres to its electronic equipment (ie, Kabal 'lights' the fibres and decides what data, and how much data, those fibres will transport). If the fibres are damaged, Telenew is responsible for the repairs and maintenance. Telenew owns extra fibres, but can substitute those for Kabal's fibres only for reasons of repairs, maintenance or malfunction (and is obliged to substitute the fibres in these cases).

Requirement

Is this a lease?

Solution

This is a lease. The contract contains a lease of dark fibres. Kabal has the right to use the three dark fibres for 10 years.

There are three identified fibres. The fibres are explicitly specified in the contract and are physically distinct from other fibres within the cable. Telenew cannot substitute the fibres other than for reasons of repairs, maintenance or malfunction (IFRS 16: Para B18).

Kabal has the right to control the use of the fibres throughout the 10-year period of use because:

(1) Kabal has the right to obtain substantially all of the economic benefits from use of the fibres over the 10-year period of use and Kabal has exclusive use of the fibres throughout the period of use.

(2) Kabal has the right to direct the use of the fibres because IFRS 16: Para B24 applies:

   (a) The customer has the right to direct how and for what purpose the asset is used during the whole of its period of use, or

(b) The relevant decisions about use are pre-determined and the customer can operate the asset without the supplier having the right to change those operating instructions.

Kabal makes the relevant decisions about how and for what purpose the fibres are used by deciding

(a) when and whether to light the fibres and (b) when and how much output the fibres will produce (ie, what data, and how much data, those fibres will transport). Kabal has the right to change these decisions during the 10-year period of use.

Although Telenew's decisions about repairing and maintaining the fibres are essential to their efficient use, those decisions do not give Telenew the right to direct how and for what purpose the fibres are used. Consequently, Telenew does not control the use of the fibres during the period of use.

Professional skills focus: Concluding, recommending and communicating

The above example, taken from IFRS 16, analyses a complex situation and comes to a conclusion. In an exam, if you missed one of the details and came to a different conclusion, you would still gain credit for parts of your analysis that were correct.

1.3 Your exam

IFRS 16 was introduced because lease liabilities had been kept off the statement of financial position. There is still an incentive to do this, and preparers of financial statements who wish to do this may argue that a transaction is not a lease when in fact it is, and therefore should appear on the SOFP. An exam question could present an ethical dilemma, where the auditor or junior accounting staff member is under pressure to accept this incorrect financial reporting treatment.

1.4 Recognition exemptions

IFRS 16 provides optional exemptions from the application of the standard lessee accounting model. Instead of applying the recognition requirements of IFRS 16 described below, a lessee may **elect to** account for lease payments as an expense on a straight-line basis over the lease term or another systematic basis for the following two types of leases (IFRS 16: paras. 5, 6 and 8). These are available for:

- **Short term leases,** which are those for less than 12 months that do not contain a purchase option. The election to use the exemption must be made by asset class.
- **Leases for low value assets,** being assets with a low value when new (such as laptop computers, mobile phones or small items of office furniture). An asset can only be of low value if:
  - The lessee can benefit from using the underlying asset on its own or with other available resources; and
  - The underlying asset is not highly dependent on or interrelated with other assets, for example, a circuit board costing £200 but which is required to operate an item of plant worth £40,000.

This election may be made on a lease-by-lease basis.

Leases of low-value assets are leases of assets with a value, when new, of $5,000 or less (IFRS 16, Basis for Conclusions, para. 100).

Interactive question 1: Short lease

Oscar Co is preparing its financial statements for the year ended 30 June 20X6. On 1 May 20X6, Oscar made a payment of £32,000 for an eight-month lease of a milling machine.

Requirement

How should the transaction be recognised in the financial statements? See **Answer** at the end of this chapter.

Context example: Leases of low-value assets and portfolio application

IFRS 16 Illustrative Example 11 is of a lessee in the pharmaceutical manufacturing and distribution industry with leases including the following:

(a) Leases of IT equipment for use by individual employees (such as laptop computers, desktop computers, hand held computer devices, desktop printers and mobile phones)

(b) Leases of servers, including many individual modules that increase the storage capacity of those servers. The modules have been added to the mainframe servers over time as the lessee has needed to increase the storage capacity of the servers

(c) Leases of office equipment:

(1) Office furniture such as desks, chairs and partitions

(2) Water dispensers

The company determines that the leases of IT equipment to individual employees and the office furniture and water dispensers qualify as leases of low-value assets on the basis that the underlying assets, when new, are individually of low value.

However, although each module within the servers, if considered individually, might be an asset of low value, the leases of modules within the servers do not qualify as leases of low-value assets. This is because each module is highly interrelated with other parts of the servers. The lessee would not lease the modules without also leasing the servers. Accordingly, the company would apply the recognition and measurement requirements of IFRS 16 to the servers.

Interactive question 2: Is it a lease?

Consider whether the following meet the criteria to be classified as leases.

Question	Fill in your answer
A company leases a laptop computer for their financial controller over a three-year period.	
A company leases a photocopier. The copier will remain on the client site, and will only be returned to the lessor in the event of a major repair.	
A company leases cars for their team of sales representatives for a three-year period. The cars are required to be estate models, but from time to time, the car may be changed by the lessor.	
A company acquires three architect's drawing desks which are paid for over 10 months. The company already has four of these desks, and no elections have been made.	

See **Answer** at the end of this chapter.

1.5 Separating components of a contract

A contract may contain both a lease component and a non-lease component. In other words, it may include an amount payable by the lessee for activities and costs that do not transfer goods or services to the lessee (IFRS 16: Para B33). These activities and costs might, for example, include maintenance, repairs or cleaning.

IFRS 16 requires entities to **account for the lease component of the contract separately from the non-lease component.** The entity must split the rental or lease payment and:

- account for the lease component under IFRS 16; and
- account for the service element separately, generally as an expense in profit or loss.

The consideration in the contract is **allocated on the basis of the stand-alone prices** of the lease component(s) and the non-lease component(s).

Context example: Separating components of a contract

Livery Co leases a delivery van from Bettalease Co for three years at £12,000 per year. This payment includes servicing costs.

Livery could lease the same make and model of van for £11,000 per year and would need to pay £2,000 a year for servicing.

Livery Co would allocate £10,154 (£12,000 × £11,000 ÷ £(11,000 + 2,000)) to the lease component and account for that as a lease under IFRS 16.

Livery Co would allocate £1,846 (£12,000 × £2,000 ÷ £(11,000 + 2,000)) to the servicing component and recognise it in profit or loss as an expense.

2 Lessee accounting

Section overview

- IFRS 16 recognises an asset and corresponding liability for all leases (unless the lease is for less than 12 months, or the underlying asset is of low value).
- A lease liability is initially recognised at the present value of future lease payments; interest accrues subsequently.
- A right-of-use asset is initially recognised at the amount of the lease liability, subject to some adjustments; it is subsequently depreciated.
- In the statement of financial position, a right-of-use asset and lease liability are recognised in respect of leased assets.
- Lease payments reduce the lease liability and cover any accrued interest.
- Interest accrues on the outstanding liability in each period of the lease.
- The finance charge is recognised in profit or loss.
- Where a contract is a lease, a right-of-use asset and a lease liability are recognised at the commencement date.

2.1 Initial measurement of the right-of-use asset

The right-of-use asset is measured at cost, which includes:

- the amount of the initial measurement of the lease liability;

- any lease payments made at or before the commencement date, less any lease incentives received;
- any initial direct costs incurred by the lessee related to the asset; and
- an estimation of any costs or penalties to be incurred by the lessee at the end of the lease term, such as dismantling costs or removal costs.

Worked example: Initial measurement of the right-of-use asset

Beta Ltd commenced a five-year lease to acquire plant on 1 January 20X8. Beta Ltd has paid an initial deposit of £800, and received lease incentives of £250. At the commencement date, the present value of the future lease payments was £12,500. Beta Ltd has incurred legal costs of acquiring the lease of £1,200. The plant will produce a new product, the XR3, and marketing costs for the new product have been incurred of £300.

At the end of the lease, Beta Ltd will have to pay £750 (at present value) to remove the plant.

Requirement

What is the initial measurement of the right-of-use asset?

Solution

Right-of-use asset

	£
PVFLP	12,500
Initial deposit	800
Direct costs	1,200
End of term costs to remove the plant	750
Less: lease incentives	(250)
Right-of-use asset	15,000

Note: The marketing costs for the new product to be made by the plant are not included as these costs are not directly attributable to the lease. This is consistent with IAS 16 (s.19(b)), where marketing costs cannot be capitalised as part of the non-current asset.

2.2 Subsequent measurement of the right-of-use asset

Subsequently, the right-of-use asset will be measured at cost less accumulated depreciation and impairment losses in line with IAS 16, *Property, Plant and Equipment*.

The right-of-use asset will be depreciated from the commencement date to the **earlier** of the end of its useful life or the end of the lease term **unless** the asset is expected to be transferred to the lessee at the end of the lease term. In that case, the asset will be depreciated over the useful life of the asset.

Worked example: Subsequent measurement of the right-of-use asset

Taking the information from the previous example, Beta has estimated that the useful life of the plant will be six years. There is no option to purchase at the end of the lease term.

Requirement

What is the carrying amount of the right-of-use asset at 31 December 20X8?

Solution

Right-of-use asset is initially measured at £15,000.

The depreciation period is the shorter of the useful life (six years) or the lease term (five years).

£15,000/5 years = £3,000 depreciation charge.

Carrying amount of the right-of-use asset at 31 December 20X8 is £12,000 (£15,000 – £3,000).

2.3 Depreciating the asset

DEBIT	Depreciation expense	The asset should be depreciated over the shorter of
CREDIT	Accumulated depreciation	the lease term or the asset's useful life

The asset should be depreciated over the shorter of the lease term or the asset's useful life.

Points to note

- Depreciation policies adopted should be consistent with other non-current assets of the same class.
- If any impairment reviews are required, these must be conducted in accordance with IAS 36, *Impairment of Assets*.
- If there is reasonable certainty that the lessee will eventually own the asset, then it should be depreciated over its estimated useful life.
- The lease term comprises the period for which the lessee has contracted to lease the asset and any further terms for which there is reasonable certainty at the inception of the lease that the lessee will exercise the option.

2.4 Initial measurement of the lease liability

At the commencement of the lease, the lease liability is measured at the **present value** of **future lease payments** including any payments expected at the end of the lease.

Lease liability will include:

- fixed payments less any lease incentives receivable;
- variable lease payments that depend on an index (eg, the consumer price index) or rate (eg, market rental rates);
- amounts expected to be payable by the lessee under residual value guarantees;
- purchase options (if reasonably certain to be exercised); and
- penalties for early termination.

The discount rate used is the interest rate implicit in the lease, or if this is not available, the lessee's incremental borrowing rate.

Definition

Lease payments: Payments made by a lessee to a lessor in order to use an underlying asset during the lease term, less any lease incentives.

IFRS 16 requires lease payments to also include the exercise price of a purchase option if the lessee is reasonably certain to exercise that option, and any penalty payments for terminating the lease.

Context example: Present value of future lease payments

Alpha Ltd has commenced a four-year lease on 1 January 20X8. Payments are £10,000 p.a. in arrears and the interest rate implicit in the lease is 10%. The present value of the future lease payments can be calculated using the PV function in excel. The PV excel function is used to calculate the present value (PV) of a series of equal cash flows (annuities). Type **=PV(** to begin the function entry then insert the rate of return required (this is the interest rate implicit in the lease), the number of periods and the payment made in each period, finally insert a closed bracket).

B4 =PV(B1,B2,B3)

	A	B
1	Rate	0.10
2	Number	4
3	payment	10,000
4	Present value of future lease payments	31,698

Therefore, at 1 January 20X8, the lease liability is measured at £31,698.

Professional skills focus: Structuring problems and solutions

Once an excel file like the one in the above example has been set up, it can be used repeatedly with different rates, lease periods and payment amounts. The structure is there and just needs to be populated with details.

2.5 Interest rate implicit in the lease

You can also use an excel file to calculate the interest rate implicit in the lease from a given payments schedule and the present value of the future lease payments.

2.6 Subsequent measurement of the lease liability

In future periods, the lease liability is amortised.

- Interest will accrue on the outstanding lease, at the rate stated in the lease contract.
- Payments made in respect of the lease by the lessee will reduce the outstanding liability.

Context example: Context example: Year 2 lease liability

Taking the example of Alpha Ltd in the previous example.

In the previous example, Alpha Ltd had calculated the initial lease liability to be £31,698 on 1 January 20X8.

Year	**£**
1.1.X8: Lease liability (PVFLP)	31,698
31.12.X8: Interest 10%	3,170
31.12.X8: Instalment in arrears	(10,000)
Liability at 31.12.X8	24,868

Therefore, at 1 January 20X9, the lease liability will be £24,868.

2.7 Setting up accounts in the statement of financial position

IFRS 16 requires that, when an asset is leased, the accounting treatment should reflect the **substance of the transaction**. In the lessee's books therefore:

DEBIT	Right-of-use asset account	The amount to be recorded in this way is the present
CREDIT	Payables: Lease liabilities	value of the future lease payments

The **initial** deposit, if any, counts as one of the lease payments and hence is included in the cost of the asset.

Points to note

- The entries are made at the **commencement** of the lease term, with the **values** determined at the start of the lease (see sections above).
- The present value of the future lease payments is derived by discounting them at the **interest rate implicit in the lease**. If it is not practicable to determine the interest rate implied in the lease, then the lessee's **incremental borrowing rate** can be used.
- Initial direct costs can be treated as part of the cost of the asset – provided they are directly attributable to activities performed by the lessee to obtain the lease.
- Although interest is payable under the lease, this is accrued over time. The justification is that the capital could, in theory, be paid off at any time, with cancellation charges. These charges could be avoided, so they are not a 'true' long term liability. **Interest is therefore recognised as it accrues**.

2.8 Making the Payment

Every period, the payments are accounted for as follows.

DEBIT Payables: Lease liabilities Each lease payment is comprised partly of a repayment of capital and partly of an interest charge
CREDIT Cash for the period.

2.9 Finance charge

The finance charge is dealt with as follows.

DEBIT	Profit or loss: Finance cost	With the amount of the interest accrued over the
CREDIT	Payables: Lease liabilities	period

2.10 Allocating the interest charge to accounting periods

IFRS 16 requires the total finance charge to be allocated to each period during the lease term so as to produce a **constant periodic rate of interest** on the outstanding lease obligation.

As the lessee pays off the capital sum, the total capital owed falls from period to period. You would therefore also expect a reduction in the total interest payable too, on the outstanding balance.

For example, if you owe £10,000 and pay 15%, the interest will be £1,500. After you have paid off, say, £8,000 of the capital, interest would be £300 (on £2,000). The monthly payments remain the same, but the mix of interest and capital changes over the life of the loan.

Therefore, in the earlier years, the finance charge (interest) is a higher proportion of the annual lease payments. Towards the end of the lease, the finance charge will be smaller as the outstanding lease liability is smaller.

2.11 Instalments in arrears

Worked example: Lease payments in arrears

A Ltd has a year-end of 31 December.

A lease commences on 1 January 20X1. Lease payments comprise three payments of £10,000 annually, commencing on 31 December 20X1.

There is no transfer of asset at the end of the lease and no purchase option. The implicit interest rate is 10%.

Requirement

You are required to calculate the interest charge and the year-end liability for each year of the lease. Round your discounted amounts to the nearest £10.

Solution

The lease liability is measured at the present value of the three payments:

B4 =PV(B1,B2,B3)

	A	B
1	Rate	0.10
2	Number	3
3	Payment	10,000
4	Present value of future lease payments	24,869

	£
20X1 balance b/f	24,869
Interest 10%	2,487
Payment 31/12/X1	(10,000)
20X2 balance b/d	17,356
Interest 10%	1,736
Payment 31/12/X2	(10,000)
20X3 balance b/d	9,092
Interest 10%	909
Payment 31/12/X3	(10,000)
	–

Note: The balance doesn't come down to exactly the outstanding amount due to rounding.

2.12 Instalments in advance

As we have seen in the examples above, interest accrues over time and is included in the payment at the end of each period of borrowing. However, where instalments are **paid in advance**:

- The first instalment **repays capital only** as no time has yet elapsed for interest to accrue.

- At the end of each accounting period the year-end liability will include **capital and interest** that has accrued to date but which has not been paid.
- The initial payment in advance (and/or any deposit) is **not included in the calculation of the lease liability. It is added to the right-of-use asset.**

Worked example: Lease payments in advance

[This is based on IFRS 16 Illustrative example 13.]

A lessee enters into a five-year lease of a building which has a remaining useful life of 10 years. Lease payments are £50,000 per annum, payable at the beginning of each year.

The lessee incurs initial direct costs of £20,000 and receives lease incentives of £5,000. There is no transfer of the asset at the end of the lease and no purchase option.

The interest rate implicit in the lease is not immediately determinable but the lessee's incremental borrowing rate is 5%.

Requirement

Calculate the initial lease liability and calculate the value of the right-of-use asset.

Solution

At the commencement date the lessee pays the initial £50,000, incurs the direct costs and receives the lease incentives. The lease liability is measured at the present value of the **remaining four payments**, ie, the **future lease payments**:

B4 =PV(B1,B2,B3)

	A	B
1	Rate	0.05
2	Number	4
3	Payment	50,000
4	Present value of future lease payments	177,297

Assets and liabilities will initially be recognised as follows:

		Debit £	Credit £
Right-of-use asset:			
Initial payment	50,000		
Discounted liability	177,297		
Initial direct costs	20,000		
Incentives received	(5,000)		
		242,297	
Lease liability			177,297
Cash	(50,000 + 20,000 – 5,000)		65,000
		242,297	242,297

C H A P T E R 14

2.13 Disclosure: lease liability

IFRS 16 requires that there is presentation in the statement of financial position for the following items:

- the **right-of-use asset**
- the **lease liability**.

Right-of-use assets may be presented as a separate line item in the statement of financial position under the heading non-current assets. Alternatively, they may be included in the total of the relevant class of assets, and in this case the carrying amount of right-of-use assets is disclosed in the notes to the financial statements.

IFRS 16 makes no specific requirement to split lease liabilities between non-current and current liabilities. However, in accordance with the *Conceptual Framework's* fundamental principle of faithful representation, they should be presented in this way as best practice, so that the users of the financial statements can understand the impact of the lease liability in future years.

Interactive question 3: Payments in arrears

Using the facts from the Worked Example: Lease payments in arrears, show the presentation of the lease liability at the end of 20X1.

The lease liability working from the Worked example was as follows:

	£
20X1 balance b/f	24,869
Interest 10%	2,487
Payment 31/12/X1	(10,000)
20X2 balance b/d (current period)	17,356
Interest 10%	1,736
Payment 31/12/X2	(10,000)
20X3 balance b/d (future periods)	9,092
Interest 10%	909
Payment 31/12/X3	(10,000)

Total lease liability at 31 December 20X1 = £ [ ]

Capital > 1 year = £ [ ]

< 1 year (β) = £ [ ]

3.2 Prepare journals to show accounting entries in respect of the lease during 20X1. See

Answer at the end of this chapter.

Interactive question 4: Payments in advance

Using the facts from the Worked Example: Lease payments in advance, show the split of the lease liability at the end of year 1.

See **Answer** at the end of this chapter.

2.14 Other disclosures

Note: The leased assets and lease liabilities should not be netted off against each other.

Non-current assets

- Disclosure must be made of the carrying amount of right-of-use assets, by class of underlying asset, either on the face of the statement of financial position, or in a note.
- Depreciation charge for right-of-use assets
- Additions to right-of-use assets
- Carrying amount of right-of-use assets at the end of the reporting period by class of underlying asset
- Gains/losses resulting from any sale and leaseback transactions (see section 3)

Liabilities

- Interest expense on lease liabilities

Other disclosures

- In the case of most entities, the IAS 1, *Presentation of Financial Statements* requirement to disclose significant accounting policies would result in the disclosure of the policy in respect of leases.
- Expenses relating to short-term and low-value leases
- Total cash outflow for leases

CHAPTER 14

Interactive question 5: Summary

Summer Ltd leases an asset on 1 January 20X1. The terms of the lease are to pay a non-refundable deposit of £575 followed by seven annual instalments of £2,000 payable in arrears. The asset is expected to have a useful life of seven years.

The present value of the future lease payments (excluding the deposit) is £11,164. There is no option to purchase the asset at the end of the lease term.

The interest rate implicit in the lease is 6%.

Requirement

Calculate the value of the lease liability and the right-of-use asset at 31 December 20X1 and 31 December 20X2.

Note: (Round your answers to the nearest pound)

See **Answer** at the end of this chapter.

Professional skills focus: Applying judgement

IFRS 16 has tightened the rules on leasing to the extent that there is limited scope for judgement. The standard was brought in to remedy abuses and loopholes. However, there remains some scope, for example in electing to show potentially exempt leases in the statement of financial position, or in the estimation of the useful economic life of the underlying asset.

3 Sale and leaseback transactions

Section overview

- A sale and leaseback transaction involves the sale of an asset and the subsequent leasing back of the same asset.
- The treatment of a sale and leaseback transaction will depend on whether the transfer is a sale as defined by IFRS 15, *Revenue from Contracts with Customers*.

3.1 Introduction

Companies can raise finance in a number of different ways. These include short-term measures such as a bank overdraft, medium-term measures such as loans or leases and longer-term measures including secured loans.

Another option is a **sale and leaseback transaction**. This is a common feature of certain industries, including retailing and hotels. It involves **the original owner of the asset selling it**, typically to a finance house or bank, **and immediately leasing it back**, thereby raising cash and retaining the use of the asset. Such arrangements provide entities with the opportunity to release capital caught up in the business for investment in other opportunities or to return it to shareholders. In essence, an entity acquires cash in exchange for a commitment to make regular lease payments without losing use of the asset.

Under IFRS 16, the key initial assessment is whether or not the transfer of the asset constitutes a genuine sale. For this to be the case, the requirements of IFRS 15, *Revenue from Contracts with Customers* for determining when a performance obligation is satisfied must be met.

3.2 IFRS 15 criteria for a sale

The transfer of an asset qualifies as a sale if the customer obtains **control** of the asset. In determining this, the following should be considered (IFRS 15, para. 38):

(a) Whether the selling entity has a present right to payment for the asset

(b) Whether the selling entity has transferred legal title to the asset

(c) Whether the selling entity has transferred physical possession of the asset

(d) Whether the selling entity has transferred the risks and rewards of ownership of the asset to the customer

(e) Whether the purchaser has accepted the asset

Criterion 4, relating to the risks and rewards of ownership, is likely to be the most important of the above criteria in considering whether control has passed to the customer and therefore whether the IFRS 15 criteria for a sale have been satisfied.

Context example: Transfer is a sale (1)

[This is based on IFRS 16 Illustrative example 13.]

A lessee enters into a five-year lease of a building which has a remaining useful life of 10 years. Lease payments are £50,000 per annum, payable at the beginning of each year.

If the transfer of the asset is a sale:

Stage 1

The seller/lessee measures the **right-of-use asset arising from the leaseback** as a proportion of the previous carrying amount of the asset that relates to the right of use retained by the seller/lessee:

Carrying amount × (PV of future lease payments at transfer date ÷ Fair value of asset at transfer date)

Stage 2

The seller/lessee only recognises the **amount of any gain or loss** on the sale that relates to the **rights transferred to the buyer**.

Calculating the gain or loss on sale:

WORKINGS

Calculate the total gain on the sale:

	£
Fair value	X
Less: carrying amount	(X)
Total gain/(loss) on the sale	X/(X)

Then **determine the gain** that relates to the rights retained

Gain × (PV of future lease payments ÷ Fair value of asset at transfer date) = Gain related to rights retained

Stage 3

The gain relating to the rights transferred is the balancing figure:

Gain on rights transferred = total gain (W1) – gain on rights retained (W2)

The right-of-use asset continues to be depreciated as normal, although there may be a revision of the useful life required (see 2.3).

Worked example: Transfer is a sale (2)

Hill plc owned a machine with a carrying amount of £5,040,000 on 1 July 20X5. On this date Hill plc sold the property to Dale plc for £7,920,000, which was the fair value of the machine, and then undertook to lease it back under a 20-year lease. Annual lease payments were £240,000 in arrears and the present value of future lease payments at the 6% interest rate implicit in the lease was £2,752,800 at 1 July 20X5.

The machine was transferred to Dale plc's premises, but Hill plc has the right to use it. Hill plc has no option to repurchase the machine at the end of the lease period.

Requirement

How should the transaction be accounted for by Hill plc in the year ended 30 June 20X6?

Solution

The fact that the machine has been transferred to the new lessor's premises, and the fact that Hill plc has no right to repurchase the machine both indicate that control has transferred to Dale plc, and that this qualifies as a sale under IFRS 15.

Part of the carrying amount of the asset is allocated to be a right-of-use asset retained. This is calculated based on the right-of-use asset (lease liability) as a proportion of fair value:

Right of use asset = £5,040,000 × (2,752,800 ÷ 7,920,000) = £1,751782

The remaining carrying amount of £3,288,218 (5,040,000 – 1,751,782) represents the transferred asset.

The overall gain on disposal is £2,880,000 (£7,920,000 – 5,040,000); only that part of the gain relating to the transferred asset is recognised:

CHAPTER 14

Gain relating to retained rights = £2,880,000 × (2,752,800 ÷ 7,920,000) = £1,001,018

Therefore the recognised gain relating to the transferred rights is £1,878,982 (2,880,000 – 1,001,018).

At 1 July 20X5, the following entries are required:

DEBIT	Right-of-use asset	£1,751,782	
DEBIT	Bank	£7,920,000	
CREDIT	PPE		£5,040,000
CREDIT	Gain on disposal		£1,878,982
CREDIT	Lease liability		£2,752,800

The right-of-use asset is subsequently depreciated over the lease term of 20 years; therefore in the year ended 30 June 20X6:

DEBIT	Depreciation expense (1,751,782/20)	£87,589	
CREDIT	Right-of-use asset		£87,589

The lease liability is amortised:

	£
1 July 20X5	2,752,800
Interest at 6%	165,168
Lease payment	(240,000)
28 June 20X6	2,677,968

Amortisation for the year ended 30 June 20X6 is recognised by: £87,589

DEBIT	Finance charge	£165,168	
DEBIT	Lease liability	£74,832	
CREDIT	Bank		£240,000

Interactive question 6: Sale and leaseback where the transfer is a sale

Frayn plc sold an asset (with a carrying amount at 31 December 20X0 of £70,000) and entered into a sale and leaseback arrangement on 1 January 20X1, when:

- the sale proceeds were at fair value of £120,000
- the remaining useful life of the asset was four years

The lease provided for five annual rentals of £25,000 payable in arrears on 31 December of each year. The interest rate implicit in the lease was 5% and the present value of the future lease payments was £108,225.

Requirement

Set out the journal entries at the date of disposal and calculate the amounts to be recognised in profit or loss in the year to 31 December 20X1 and in the statement of financial position at that date.

See **Answer** at the end of this chapter.

Professional skills focus: Structuring problems and solutions

Sale and leaseback is a clear illustration of the importance of structuring your approach. Use the three-stage process above to focus your answer.

3.3 Transfer is not a sale

If the transfer is not a sale under IFRS 15, *Revenue from Contracts with Customers*, ie, the performance obligation is not satisfied, then the seller/lessee will continue to recognise the transferred asset and also recognises a financial liability equal to the transfer proceeds, accounting for it using IFRS 9, *Financial Instruments*.

The treatment is reversed in the books of the buyer/lessor:

Seller/lessee	Buyer/lessor
Continue to recognise the transferred asset	No physical asset recognised
Recognise a financial liability measured at transfer proceeds	Recognise a financial asset measured at transfer proceeds

Worked example: Transfer is a not a sale

Green plc has a year end of 31 December. The company owned a machine with a carrying amount of £720,000 on 1 January 20X3. On this date Green plc sold the machine to Blue Bank plc for £480,000, and then undertook to lease it back under a five-year lease. The asset is retained at Green plc's premises and the company continues to use it. Green plc is also responsible for insuring the machine.

The annual rental is £120,000 payable in arrears and the interest rate implicit in the lease is 8%.

Requirements

1 Show how this transaction should be accounted for by Green plc.

2 Show the journal entries in relation to this transaction for the year ended 31 December 20X3.

Solution

1 Green plc retains the machine at its premises and continues to use it. Green plc also insures the machine, which means that the risks and rewards of ownership have not been transferred to the customer. Both these matters indicate that the buyer has not obtained control of the machine and therefore that the transfer is not a sale in accordance with IFRS 15.

Therefore on 1 January 20X3 the sale proceeds are recognised as a financial liability as follows:

At the date of sale/inception of the lease

DEBIT	Cash	£480,000	
CREDIT	Financial liability		£480,000

CHAPTER 14

The liability is accounted for in line with IFRS 9 at amortised cost (because it is not held for trading):

Year ended	B/f	Interest at 8%	Payment	C/f
	£	£	£	£
31 December 20X3	480,000	38,400	(120,000)	398,400
31 December 20X4	398,400	31,872	(120,000)	310,272
31 December 20X5	310,272	24,822	(120,000)	215,222
31 December 20X6	215,222	17,218	(120,000)	112,439
31 December 20X7	112,439	8,995*	(120,000)	–

* rounding difference £1,434

2 In the year ended 31 December 20X3, the amortisation of the liability is recognised as follows:

At the date of sale/inception of the lease

DEBIT	Financial liability	£81,600	
DEBIT	Finance charge	£38,400	
CREDIT	Bank		£120,000

3.4 Transfer is a sale not on market terms

If the fair value of the consideration for the sale does not equal the fair value of the asset, or if the lease payments are not at market rates, adjustments should be made to the accounting entries as this is deemed to be a method of additional financing:

Below market terms	Above market terms
Treat as a prepayment of lease payments	Treat as additional financing by the lessor/buyer
	Adjust the PVFLP by the excess of consideration over the fair value of the asset

In practice the consideration for the sale is much more likely to be above market terms, and this is the scenario that will be tested in the exam. IFRS 16 gives detailed guidance on this situation. A sale below market price is unlikely to happen, and may even be an indicator of fraud.

Worked example: Sale and leaseback not at market rates

Sydney plc has a year end of 31 December.

The company sold a building on 1 January 20X5 for £1.2 million. The fair value of the building was £1 million.

The carrying amount of the building at 31 December 20X4 was £900,000.

Sydney plc arranges to leaseback the building for a period of six years, and the remaining useful life of the building is 20 years.

The lease payments will be made in arrears starting 31 December 20X5 of £180,000 p.a. The implicit interest rate of the lease is 5%.

Requirement

Produce the journal entries for the financial statements as at 31 December 20X5 reflecting the above transactions.

Solution **Step 1**

Calculate the value of the lease liability

The present value of future lease payments is £913,625 (W1).

However, the consideration (£1,200,000) was in excess of the fair value (£1,000,000). This excess of
£200,000 is considered as additional financing, therefore:

PVFLP = £913,625

Consideration > FV of asset

Lease liability £713,625

Step 2

Calculate the right-of-use asset

Carrying amount × (PVFLP ÷ FV) (adjusted for excess consideration)

£900,000 × (£713,625 ÷ £1,000,000) = £642,262

Initial measurement of the right-of-use asset is £642,262.

Depreciation will be charged over six years as this is the shorter of the useful life (20 years) and the lease term (six years).

Therefore, charge for year ended 31 December 20X5 is £642,262/6 = £107,044.

Step 3

Calculate the gain on sale and leaseback

The gain is calculated based on the fair value of the transferred asset rather than full proceeds. Sydney plc can only recognise the amount of gain relating to the rights transferred.

- Stage 1 (calculate the gain): £1,000,000 – £900,000 = £100,000
- Stage 2 (gain relating to rights retained): £100,000 × £713,625/£1,000,000 = £71,363
- Stage 3 (gain on the rights transferred): £100,000 – £71,363 = £28,637

Journal entry

		£	£
DEBIT	Cash	1,200,000	
DEBIT	Depreciation expense	107,044	
DEBIT	Right-of-use asset	642,262	
CREDIT	Building (carrying amount)		900,000
CREDIT	Accumulated depreciation		107,044
CREDIT	Lease liability		913,625
CREDIT	Gain on rights transferred		28,637
		1,949,306	1,949,306

WORKING

Lease payment	Discount	£
180,000	1.05^1	171,429
180,000	1.05^2	163,265
180,000	1.05^3	155,491
180,000	1.05^4	148,086
180,000	1.05^5	141,035
180,000	1.05^6	134,319
Total PVFLP		913,625

Interactive question 7: Sale and leaseback

On 1 April 20X2, Wigton Co bought an injection moulding machine for £600,000. The carrying amount of the machine as at 31 March 20X3 was £500,000. On 1 April 20X3, Wigton Co sold it to Whitehaven Co for £740,000, its fair value. Wigton Co immediately leased the machine back for five years, the remainder of its useful life, at £160,000 per annum payable in arrears. The present value of the annual lease payments is £700,000 and the transaction satisfies the IFRS 15 criteria to be recognised as a sale.

Requirement

What gain or loss should Wigton Co recognise for the year ended 31 March 20X4 as a result of the sale and leaseback?

See **Answer** at the end of this chapter.

4 Lessor accounting

Section overview

- For **lessor accounting**, IFRS 16 **makes a distinction between finance leases and operating leases**.
- **Finance leases:** record the amount due to the lessor in the statement of financial position at the net investment in the lease, recognise finance income to give a constant periodic rate of return.
- **Operating leases:** record the asset as a non-current asset and depreciate over useful life, record income on a straight-line basis over the lease term.

Tutorial Note

You have not studied lessor accounting at Professional Level, so all the material in this section must be studied carefully.

4.1 Introduction

Several definitions are relevant to lessor accounting in particular, all from IFRS 16 Appendix A.

Definitions

Finance lease: A lease that transfers substantially all the risks and rewards incidental to ownership of an underlying asset.

Operating lease: A lease that does not transfer substantially all the risks and rewards incidental to ownership of an underlying asset.

Unguaranteed residual value: That portion of the residual value of the underlying asset, the realisation of which by the lessor is not assured or is guaranteed solely by a party related to the lessor.

Gross investment in the lease: The sum of:

(a) the lease payments receivable by the lessor under a finance lease; and

(b) any unguaranteed residual value accruing to the lessor.

Net investment in the lease: The gross investment in the lease discounted at the interest rate implicit in the lease.

Unearned finance income: The difference between:

(a) the gross investment in the lease; and

(b) the net investment in the lease.

4.2 Risks and rewards

The classification of leases is based on the extent to which risks and rewards incidental to ownership of a leased asset lie with the lessee or the lessor. When we talk of **risks** here, we specifically mean the risks of ownership, not other types of risk. Risks of **ownership** include the possibility of losses from idle capacity or technological obsolescence, or variations in return due to changing economic conditions. The **rewards** are represented by the expectation of profitable operation over the asset's economic life, and also any gain from appreciation in value or realisation of a residual value.

There are some specific examples that suggest a finance lease such as the lessee receives ownership of the asset at the end of the lease term, the lessee is expected to exercise the option to purchase, the lease term forms the majority of the asset's economic life, the asset is substantially loaned whereby the present value of lease payments is almost all of the fair value of the asset and/or the asset is specialised for use by the lessee or entities authorised by the lessee.

When a lease includes both **land and building** elements, the classification of each element as an operating or finance lease should be made separately. In determining whether the land element is an operating or finance lease, an important consideration is that land normally has an indefinite economic life.

4.3 Operating leases

A lessor continues to recognise an asset that is leased out by way of an operating lease, and charges depreciation over the useful life of the asset. Lease income from the operating lease is recognised on a straight-line basis over the lease term, unless another systematic and rational basis is more representative of the time pattern in which the benefit from the leased asset is receivable.

The cost of incentives provided to the lessee is recognised as a reduction of the rental income over the lease term, generally on a straight-line basis.

If a lessor incurs costs to negotiate and arrange an operating lease, these costs are capitalised within the carrying amount of the underlying asset that is the subject of the lease. They are amortised over the lease term on the same basis as lease income.

Worked example: Operating lease

At 1 April 20X3, SupaTruck plc owns a tow truck costing £75,000 with an economic life of 10 years. The company entered into a two years lease agreement to lease the truck to Dimble Recovery plc for £10,000 per year. SupaTruck continues to retain ownership of the tow truck and charges depreciation on a straight line basis, with no residual value.

Requirement

What journal entries should SupaTruck record in the year ended 31 March 20X4?

Solution

SupaTruck recognises a non-current asset at historical cost less depreciation at year-end. The depreciation charge is £75,000/10 years = £7,500 and rental income of £10,000 is also recognised with appropriate disclosures.

The required journal entries in the year ended 31 March 20X4 are (£):

		£	£
DEBIT	Depreciation expense	7,500	
CREDIT	PPE (accumulated depreciation)		7,500
and			
DEBIT	Cash/receivable	10,000	
CREDIT	Rental income		10,000

4.4 Finance leases

Although a lessor is the legal owner of an asset leased to another party under a finance lease, it has passed the risks and rewards of ownership to the lessee in return for a cash flow stream. As a result, the lessor derecognises the asset and instead recognises a receivable equal to the net investment in the lease. This is the present value of the aggregate of:

(a) the lease payments receivable by the lessor; and

(b) any unguaranteed residual amount accruing to the lessor.

An unguaranteed residual amount is that part of the residual value of a leased asset that is not assured or is guaranteed only by a party related to the lessor.

Initial direct costs incurred in negotiating and arranging the lease are added to the receivable.

Upon receipt of cash payments from the lessee, the amount received is allocated between the repayment of principal and finance income. The finance income should be recognised so as to generate a constant periodic rate of return on the outstanding net investment.

Worked example: Finance lease

Leighton Machinery plc leased a machine to a customer with effect from 1 January 20X4. The fair value of the machine at this date (equal to the net investment in the lease) was £14,875 and arrangement fees amounted to £125. The lease term was eight years and rentals of £2,750 are payable annually in advance. The interest rate implicit in the lease is 12.8%.

Requirement

What amounts are recognised in Leighton Machinery's financial statements in the year ended 31 December 20X4 in respect of the lease?

Solution

The receivable is initially recognised at £14,875 + £125 = £15,000.

Interest accrues to the receivable and payments reduce it as follows over the first two years of the term:

y/e	Balance b/f	Repayment	Balance c/f	Finance income	Balance c/f
	£	£	£	£	£
31.12.X4	15,000	(2,750)	12,250	1,568	13,818
31.12.X5	13,818	(2,750)	11,068	1,417	12,485

Therefore in the statement of financial position of Leighton Machinery, a current and non-current asset are recognised.

Non-current asset: Net investment in finance lease: £11,068 Current asset: Net investment in finance lease: £2,750

Interest receivable of £1,568 is recognised in the statement of profit or loss and other comprehensive income.

4.4.1 Summary

For lessor accounting, IFRS 16 makes a distinction between finance leases and operating leases.

5 IAS 20, *Accounting for Government Grants and Disclosure of Government Assistance*

Section overview

This section gives a very brief overview of the material covered in earlier studies.

Definitions

Government assistance: Action by government designed to provide an economic benefit specific to an entity or range of entities qualifying under certain criteria.

Government grants: Assistance by government in the form of transfers of resources to an entity in return for past or future compliance with certain conditions relating to the operating activities of the entity. They exclude those forms of government assistance which cannot reasonably have a value placed upon them and transactions with government which cannot be distinguished from the normal trading transactions of the entity.

Grants related to assets: Government grants whose primary condition is that an entity qualifying for them should purchase, construct or otherwise acquire long-term assets.

Subsidiary conditions may also be attached restricting the type or location of the assets or the periods during which they are to be acquired or held.

Grants related to income: Government grants other than those related to assets.

Forgivable loans: Loans which the lender undertakes to waive repayment of under certain prescribed conditions.

Accounting treatment

- **Recognise government grants and forgivable loans** once conditions complied with and receipt/waiver is assured.
- Grants are recognised under the **income approach**: recognise grants as income to match them with related costs that they have been received to compensate.
- Use a **systematic basis** of matching over the relevant periods.
- Grants for **depreciable assets** should be recognised as income on the same basis as the asset is depreciated.
- Grants for **non-depreciable assets** should be recognised as income over the periods in which the cost of meeting the obligation is incurred.
- A grant may be **split into parts** and allocated on different bases where there are a series of conditions attached.
- Where **related costs have already been incurred**, the grant may be recognised as income in full immediately.
- A grant in the form of a **non-monetary asset** may be valued at fair value or a nominal value.
- **Grants related to assets** may be presented in the statement of financial position **either** as **deferred incomeor** deducted in arriving at the carrying value of the asset.
- **Grants related to income** may be presented in the statement of profit or loss and other comprehensive income (in profit or loss) **either** as a **separate creditordeducted** from the related expense.
- Repayment of government grants should be accounted for as a **revision of an accounting estimate**.

Disclosure

- **Accounting policy** note
- **Nature and extent** of government grants and other forms of assistance received
- **Unfulfilled conditions** and other contingencies attached to recognised government assistance

Interactive question 8: Government grants

IAS 20 suggests that there are two approaches to recognising government grants: a capital approach (credit directly to shareholders' interests) and an income approach. IAS 20 requires the use of the income approach.

Requirement

What are the arguments in support of each method? See **Answer** at the end of this chapter.

---

6 IAS 23, *Borrowing Costs*

Section overview

- This section gives a very brief overview of the material covered in earlier studies.
- IAS 23 deals with the treatment of borrowing costs, often associated with the construction of **self- constructed assets**, but which can also be applied to an asset purchased that takes time to get ready for use/sale.

Definitions

Borrowing costs: Interest and other costs incurred by an entity in connection with the borrowing of funds.

Qualifying asset: An asset that necessarily takes a substantial period of time to get ready for its intended use or sale.

6.1 Accounting treatment

Note the following key points, which should be familiar from your earlier studies.

- Borrowing costs must be **capitalised** as part of the cost of the asset if they are directly attributable to acquisition/construction/production. Other borrowing costs must be expensed.
- **Borrowing costs eligible for capitalisation** are those that would have been avoided otherwise. Use judgement where a range of debt instruments is held for general finance.
- **Amount of borrowing costs available for capitalisation** is actual borrowing costs incurred less any investment income from temporary investment of those borrowings.
- For borrowings obtained generally, apply the **capitalisation rate** to the expenditure on the asset (weighted average borrowing cost). It must not exceed actual borrowing costs.
- **Capitalisation is suspended** if active development is interrupted for extended periods. (Temporary delays or technical/administrative work will not cause suspension.)
- **Capitalisation ceases** (normally) when physical construction of the asset is completed. When an asset is comprised of separate stages, capitalisation should cease when each stage or part is completed.
- Where the recoverable amount of the asset falls below carrying amount, it must be **written down/off**.

6.2 Disclosure

- Amount of **borrowing costs capitalised** during the period
- **Capitalisation rate** used to determine borrowing costs eligible for capitalisation

Interactive question 9: Borrowing costs 1

On 1 January 20X8, Rechno Co borrowed £15 million to finance the production of two assets, both of which were expected to take a year to build. Production started during 20X8. The loan facility was drawn down on 1 January 20X8 and was used as follows, with the remaining funds invested temporarily.

	Asset X	Asset Y
	£m	£m
1 January 20X8	2.5	5.0
1 July 20X8	2.5	5.0

The loan rate was 10% and Rechno Co can invest surplus funds at 8%.

Requirement

Ignoring compound interest, calculate the borrowing costs which must be capitalised for each of the assets and consequently the cost of each asset as at 31 December 20X8.

See **Answer** at the end of this chapter.

Interactive question 10: Borrowing costs 2

Zenzi Co had the following loans in place at the beginning and end of 20X8.

	1 January 20X8	31 December 20X8
	£m	£m
10.0% bank loan repayable 20Y3	120	120
9.5% bank loan repayable 20Y1	80	80
8.9% debenture repayable 20Y8	–	150

The 8.9% debenture was issued to fund the construction of a qualifying asset (a piece of mining equipment), construction of which began on 1 July 20X8.

On 1 January 20X8, Zenzi Co began construction of a qualifying asset, a piece of machinery for a hydroelectric plant, using existing borrowings. Expenditure drawn down for the construction was:
£30 million on 1 January 20X8, £20 million on 1 October 20X8.

Requirement

Calculate the borrowing costs to be capitalised for the hydroelectric plant machine. See

Answer at the end of this chapter.

7 Statements of cash flows

Section overview

This section briefly revises single company statements of cash flows, which was covered at Professional Level. Try the interactive questions here to make sure you are comfortable with this topic before revising consolidated statements of cash flows in later Chapters.

7.1 Basic statements of cash flows – revision

(a) A statement of cash flows prepared in accordance with IAS 7, *Statement of Cash Flows* provides information about the historical changes in an entity's cash and cash equivalents. This information is presented in a statement that classifies cash flows between operating activities, investing activities and financing activities.

(b) Cash, as defined in IAS 7, includes not only cash itself but also any instrument that can be converted into cash so quickly that it is in effect equivalent to cash.

(c) 'Operating activities' are the principal revenue-generating activities of an entity, together with any other activities which are not identified as being investing or financing in nature.

(d) The cash flows from an entity's operating activities can be presented using two methods:

(1) The **direct method**, which discloses the major classes of gross cash receipts and payments; or

(2) The **indirect method**, where the entity starts with the net profit or loss for the period and adjusts it for non-cash transactions, deferrals or accruals of income and expenditure and items that will form part of the entity's investing and financing activities.

(e) 'Investing activities' are acquisitions and disposals of long-term assets and investments, other than cash and cash equivalents. Examples include: cash paid or received to acquire or sell an item of property, plant or equipment, a receipt of cash from the sale of a business, and cash advanced as a loan to another entity.

(f) 'Financing activities' are activities that change the amount and composition of an entity's equity capital and borrowings. Examples include: cash proceeds from issuing shares, cash paid to repay debt instruments, and the capital element in a finance lease payment.

(g) Investing and financing activities that do not impact on cash, for example the conversion of debt to equity, should not be included in the statement of cash flows.

Interactive question 11: Single company statement of cash flows

Elida is a publicly listed company. The following financial statements of Elida are available:

Statement of profit or loss and other comprehensive income for year ended 31 March 20X8

	£'000
Revenue	5,740
Cost of sales	(4,840)
Gross profit	900
Income from and gains on investment property	60
Distribution costs	(120)
Administrative expenses (Note (ii))	(350)
Finance costs	(50)
Profit before tax	440
Income tax expense	(160)
Profit for the year	280
Other comprehensive income	
Gains on property revaluation	100
Total comprehensive income	380

Statements of financial position as at:

	31 March 20X8		31 March 20X7	
	£'000	£'000	£'000	£'000
ASSETS				
Non-current assets (Note (1))				
Property, plant and equipment		2,880		1,860
Investment property		420		400
		3,300		2,260
Current assets				
Inventory	1,210		810	
Trade receivables	480		540	
Income tax asset	nil		50	
Bank	10	1,700	nil	1,400
Total assets		5,000		3,660
EQUITY AND LIABILITIES				
Equity				
Equity shares of 20p each (Note (3))		1,000		600
Share premium	600		nil	
Revaluation reserve	150		50	
Retained earnings	1,440	2,190	1,310	1,360
		3,190		1,960
Non-current liabilities				
6% loan notes (Note (2))	nil		400	
Deferred tax	50	50	30	430
Current liabilities				
Trade payables	1,410		1,050	
Bank overdraft	nil		120	
Warranty provision (Note (4))	200		100	
Current tax payable	150	1,760	nil	1,270
Total equity and liabilities		5,000		3,660

The following supporting information is available:

(1) An item of plant with a carrying amount of £240,000 was sold at a loss of £90,000 during the year. Depreciation of £280,000 was charged (to cost of sales) for property, plant and equipment in the year ended 31 March 20X8.

Elida uses the fair value model in IAS 40, *Investment Property*. There were no purchases or sales of investment property during the year.

(2) The 6% loan notes were redeemed early incurring a penalty payment of £20,000 which has been charged as an administrative expense in the statement of profit or loss.

(3) There was an issue of shares for cash on 1 October 20X7. There were no bonus issues of shares during the year.

(4) Elida gives a 12-month warranty on some of the products it sells. The amounts shown in current liabilities as warranty provision are an accurate assessment, based on past

experience, of the amount of claims likely to be made in respect of warranties outstanding at each year end. Warranty costs are included in cost of sales.

(5) A dividend of 3p per share was paid on 1 January 20X8.

Requirement

Prepare a statement of cash flows for Elida for the year to 31 March 20X8 in accordance with IAS 7, *Statement of Cash Flows*.

See **Answer** at the end of this chapter.

8 Audit focus

Section overview

Matters that the auditor should consider when auditing leases for lessees include:

- correctly identifying whether a lease exists;
- confirming the amounts to be included in the financial statements; and
- whether the disclosure is in line with applicable accounting standards.

Auditing issues for lessors require the distinction between operating and finance leases.

8.1 Auditing leases for lessees

In auditing leases recognised at fair value (eg, investment properties), the auditor must evaluate whether the fair value is appropriate. We will cover the auditing of fair value in further detail in the Audit Focus Sections in later Chapters.

The table below summarises the areas of audit focus when auditing leases in accordance with IFRS 16, and provides some examples of audit evidence required.

Issue	Evidence
Identifying right-of-use assets	As the key test here is correctly identifying an asset as a right-of-use asset, the auditor should consider the following: • Obtain contract for relevant assets and determine whether lessee has control (via evidence of receiving economic benefits and the ability to direct the use of the asset concerned) • Review assets for any below the threshold (eg, $5,000 or 12 months in duration) to determine any exemptions • Review contracts for any separate components (such as maintenance contracts) and confirm each component is separately identified and the correct costs are used
Confirming the **correct accounting treatment** of right-of-use assets	Obtain details of the costs of any leased right-of-use assets and confirm they include attributable costs (such as incentives or advance payments) by reference to terms of contract and any supporting transactions Confirm correct treatment of recognition throughout the asset's life by challenging management on the depreciation policy used (for example, is the asset life appropriate?)

Lease **liabilities**	Amounts recognised as liabilities should be confirmed by reference to the contract and challenged for attributable amounts (such as amounts paid in advance or arrears)
Sale and leaseback arrangements	As these are likely to be complex, auditors should obtain an understanding of the sale and leaseback arrangements via the contract and the client to ensure they reflect the reality of the transaction (for example, does it satisfy the IFRS 15 conditions required to be recognised as a sale?)
Disclosure in the financial statements	Review the IFRS 16 disclosures in the financial statements to determine whether they are consistent and complete

8.2 Auditing leases for lessors

Central to the work of the auditor for a lessor is being able to confirm whether any leases are finance or operating leases. The key procedure here is to obtain a copy of the contract in place for any such lease and to confirm who bears the ultimate risk and reward (the contract will not specify this, so the auditor will need to consider this by analysing the terms stated).

8.3 Further auditing issues

- Financial statements may be deliberately misstated to present short term or low value assets inappropriately to avoid the need to show lease liabilities.
- Sale and leaseback arrangements require an accounting treatment that supports IFRS 15 and auditors will need to ensure their clients have followed this treatment in such cases.

Summary

Leases (IFRS 16)

A contract, or part of a contract, that conveys the right to use an asset, the underlying asset, for a period of time in exchange for consideration.

Identifying a lease

- Identified asset
- Period of time
- In exchange for consideration
- Right to control:
  - substantially all economic benefits from use
  - direct the use

Exemptions from standard lessee accounting model

- Low value assets (election by class of asset)
- Lease <12 months (election lease by lease basis)

Lease liability

Lease liability includes

- Fixed payments
- Variable payments (related to index/rate)
- Amounts paid under residual value guarantee
- Purchase options (if reasonably certain to exercise)
  LESS
- Lease incentives

Discount at rate implicit in the lease (lessee's incremental borrowing rate) to give PVFLP

Right-of-use asset

Initial measurement PVFLP +/- adjustments = RoU asset

Subsequent periods:

- Cost less depreciation less impairment
- IAS 16 applies (revaluation model); OR
- IAS 40 (fair value model)

Sale and leaseback

Sale under IFRS 15

Derecognise rights transferred and recognise associated gain/loss.
Transfer retained rights to be right-of-use asset and recognise liability.

Not a sale (IFRS 15)

Financing arrangement (IFRS 9)

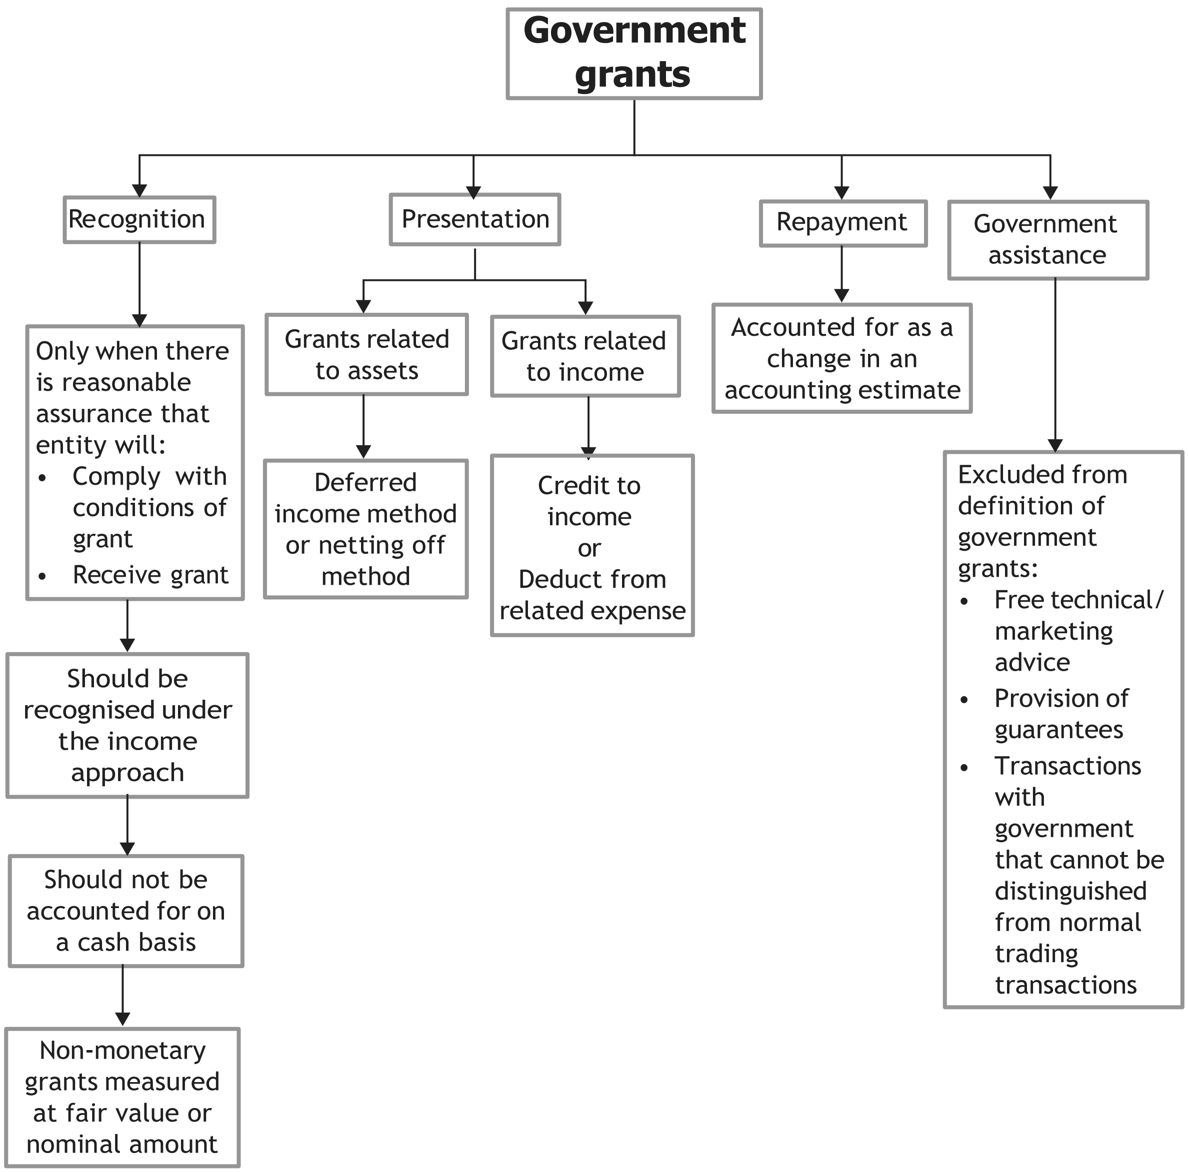
Lessor accounting

Finance lease

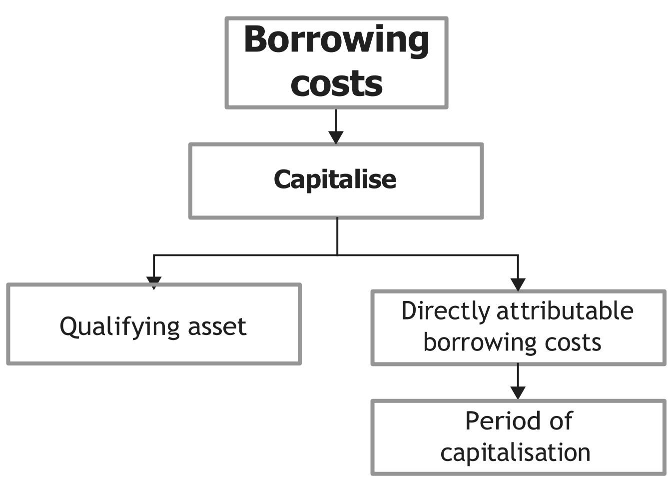
- Lease that transfers substantially all the risks and rewards of ownership
- Derecognise asset
- Set up a receivable at the net investment in the lease
- Receipts - split between finance income and capital

Operating lease

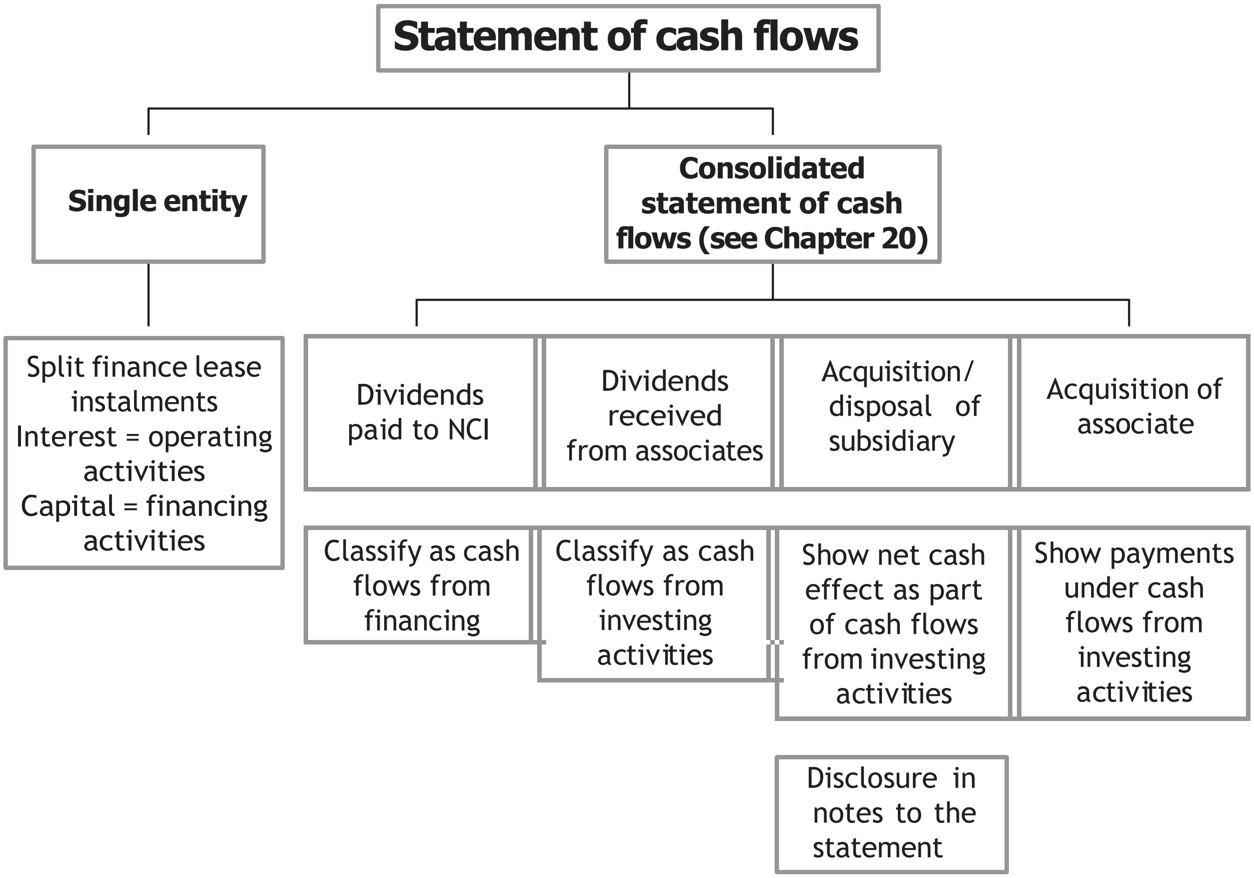
- A lease that does not transfer substantially all the risks and rewards of ownership
- Retain asset in the books of the lessor
- Credit rentals to P/L straight line over lease term or other systematic basis



Government grants
Recognition
Presentation
Repayment
Government assistance
Only when there is reasonable assurance that entity will:
• Comply with conditions of grant
• Receive grant
Grants related to assets
Grants related to income
Accounted for as a change in an accounting estimate
Deferred income method or netting off method
Credit to income or Deduct from related expense
Excluded from definition of government grants:
• Free technical/ marketing advice
• Provision of guarantees
• Transactions with government that cannot be distinguished from normal trading transactions
Should be recognised under the income approach
Should not be accounted for on a cash basis
Non-monetary grants measured at fair value or nominal amount



Borrowing costs
Capitalise
Qualifying asset
Directly attributable borrowing costs
Period of capitalisation



Statement of cash flows
Single entity
Consolidated statement of cash flows (see Chapter 20)
Split finance lease instalments Interest = operating activities Capital = financing activities
Dividends paid to NCI
Dividends received from associates
Acquisition/ disposal of subsidiary
Acquisition of associate
Classify as cash flows from financing
Classify as cash flows from investing activities
Show net cash effect as part of cash flows from investing activities
Show payments under cash flows from investing activities
Disclosure in notes to the statement

Further question practice

1 Knowledge diagnostic

Before you move on to question practice, confirm you are able to answer the following questions having studied this chapter. If not, you are advised to revisit the relevant learning from the topic indicated.

	Confirm your learning
1.	What is meant by 'control' in the context of IFRS 16, *Leases?* (Topic 1)
2.	Can you identify a lease as defined in IFRS 16? (Topic 1)
3.	How should the right-of-use asset be measured on initial recognition and subsequently? (Topic 2)
4.	How should the lease liability be measured on initial recognition and subsequently? (Topic 2)
5.	Can you account for sale and leaseback transactions? (Topic 3)
6.	How does lessor accounting differ from lessee accounting? (Topic 4)

2 Question practice

Aim to complete all self-test questions at the end of this chapter. The following self-test questions are particularly helpful to further topic understanding and guide skills application before you proceed to the next chapter.

Question	Learning benefit from attempting this question
Isaac	This is a useful leasing question, because you are asked for the total charge to profit or loss without being told how this is made up.
Snow	Here you are tested on two aspects of leasing that regularly come up: the carrying amount of the right-of-use asset and sale and leaseback.
Noname	This recaps provisions and emphasises that the treatment of onerous leases falls under IFRS 16, rather than IAS 37.
Tonto	The single company statement of cash flows is revised from your earlier studies, in preparation for consolidated statements of cash flows introduced in a later chapter.

Once you have completed these self-test questions, it is beneficial to attempt the following questions from the Question Bank for this module. These questions have been selected to introduce exam style scenarios to help you improve knowledge application and professional skills development before you start the next chapter.

Question	Learning benefit from attempting this question
Telo (note 3 issue only)	This deals with lessor accounting, which is less commonly tested than lessee accounting.
Solvit (sale and leaseback only)	You have answered other parts of this question in earlier chapters. The issue of sale and leaseback gets tested regularly and the calculations will get easy with practice.
UHN (issue 1 only)	This tests a more complicated sale and leaseback. Note that you are later required to show the impact of this and other adjustments on the gearing and interest cover ratio, but you can't do this just from one adjustment.

Refer back to the learning in this chapter for any questions which you did not answer correctly or where the suggested solution has not provided sufficient explanation to answer all your queries. Once you have attempted these questions, you can continue your studies by moving onto the next chapter.

Technical references

1 IFRS 16, *Leases*

(1) **Identification of a lease**

- An assessment of whether the contract contains a lease by considering the following elements: – **IFRS 16 (9)**
  - A right to control an asset – **IFRS 16 (B24)**
  - Use of an identified asset – **IFRS 16 (B13)**
  - Use for a period of time in exchange for consideration – **IFRS 16 (10)**
  - At the commencement date, the lessee shall recognise a 'right-of-use' asset – **IFRS 16 (23)**

(2) **Measurement**

- Initial measurement of the right-of-use asset includes: – **IFRS 16 (24), IAS 16 (18–19)**
  - Initial measurement of the lease liability
  - Lease payments made before the commencement date
  - Less any lease incentives received
  - Any initial direct costs incurred by the lessee
  - Estimate of costs required to dismantle and remove the asset at the end of the lease term to be incurred by the lessee
  - Depreciate asset over its useful life, or the lease term if shorter and no reasonable certainty that lessee will obtain ownership at end of lease – **IFRS 16 (30)**
  - Consider whether IAS 36 impairment procedures are needed – **IFRS 16 (33)**
  - Disclosures:
  - Disclose information about the leases either in a single note or in a separate section of the financial statements – **IFRS 16 (52)**
  - Disclosure is required of the following: – **IFRS 16 (53)**
    - Depreciation charge for the right-of-use assets – **IFRS 16 (53)(a)**
    - Interest expense on lease liabilities – **IFRS 16 (53)(b)**
    - Additions to right-of-use assets – **IFRS 16 (53)(h)**
    - Gains or losses arising from sale and leaseback transactions – **IFRS 16 (53)(i)**
    - Carrying amount of right-of-use assets at the end of the reporting period by class of underlying asset – **IFRS 16 (53)(j)**
    - Details of low value and short-term transactions – **IFRS 16 (53)(c)(d)**

(3) **Sale and leaseback**

- If the fair value of the consideration for the sale of an asset does not equal the fair value, below market terms are accounted for as a prepayment of lease payments and any above market terms are accounted for as additional financing provided by the buyer – **IFRS 16 (101)**
- Any potential adjustment is calculated on the difference between the fair value of the consideration and the fair value of the asset – **IFRS 16 (102)**

(4) **Lessor accounting**

Finance lease:

- A lease that transfers substantially all the risks and rewards incidental to ownership of an underlying asset – **IFRS 16 AppA**
- Recognise a receivable measured at an amount equal to the net investment in the lease – **IFRS 16.67**
- Net investment in the lease is the present value of the payments receivable by the lessor plus the value of any unguaranteed residual value accruing to the lessor – **IFRS 16 AppA**
- Include initial direct costs incurred – **IFRS 16.69**
- Recognition of finance income should be based on a pattern reflecting a constant periodic rate of return on the lessor's net investment – **IFRS 16.75**
- Finance income should be allocated on a systematic and rational basis – **IFRS 16.76**

Operating lease:

- A lease that does not transfer substantially all the risks and rewards incidental to ownership of an underlying asset – **IFRS 16 AppA**
- The asset should be recorded in the statement of financial position according to its nature – **IFRS 16.71**
- Operating lease income should be recognised on a straight-line basis over the lease term, unless another basis is more appropriate – **IFRS 16.81**
- Asset should be depreciated as per other similar assets – **IFRS 16.84**
- IAS 36 should be applied to determine whether the asset is impaired – **IFRS 16.85**
- Disclosures – **IFRS 16.89**

2 IAS 20, *Accounting for Government Grants and Disclosure of Government Assistance*

(1) **Treatment**

- Should only be recognised if reasonable assurance that: – **IAS 20.7**
  - Entity will comply with conditions
  - Grant will be received
- Manner in which received does not affect accounting method adopted – **IAS 20.9**
- Should be recognised as income over periods necessary to match with related costs – **IAS 20.12**
- Income approach, where grant is taken to income over one or more periods should be adopted – **IAS 20.13**
- Grants should not be accounted for on a cash basis – **IAS 20.16**
- Grants in recognition of specific expenses are recognised as income in same period as expense – **IAS 20.17**
- Grants related to depreciable assets usually recognised in proportion to depreciation – **IAS 20.17**
- Grants related to non-depreciable assets requiring fulfilment of certain obligations should be recognised as income over periods which bear the cost of meeting obligations – **IAS 20.18**
- Grant received as compensation for expenses already incurred recognised in period in which receivable – **IAS 20.20**
- Non-monetary grants should be measured at fair value or a nominal amount – **IAS 20.23**

(2) **Presentation of grants related to assets**

- Can be presented in the statement of financial position by: – **IAS 20.24**
  - Setting up the grant as deferred income or
  - Netting it off against the carrying amount of the asset

(3) **Presentation of grants related to income – IAS 20.29**

- Either:
  - Recognised in profit or loss as income separately or under a general heading or
  - Deducted in arriving at the amount of the related expense recognised in profit or loss

(4) **Repayment of government grants**

- Accounted for as a revision to an accounting estimate – **IAS 20.32**

(5) **Government assistance**

- The following forms of government assistance are excluded from the definition of government grants: – **IAS 20.34–35**
  - Assistance which cannot reasonably have a value placed on it
  - Transactions with government which cannot be distinguished from the normal trading transactions of the entity

(6) **Disclosures**

- Required disclosures – **IAS 20.39**

3 IAS 23, *Borrowing Costs*

- Core principle – **IAS 23.1 and 8**
- Qualifying asset – **IAS 23.5 and 7**
- Directly attributable borrowing costs – **IAS 23.10–11**
- Eligible borrowing costs – **IAS 23.12–15**
- Excess of carrying amount over recoverable amount of asset – **IAS 23.16**
- Commencement of capitalisation – **IAS 23.17–19**
- Suspension of capitalisation – **IAS 23.20–21**
- Cessation of capitalisation – **IAS 23.22–25**
- Disclosure – **IAS 23.26**

4 IAS 7, *Statement of Cash Flows*

- Objective of the statement of cash flows
  - The statement of cash flows should show the historical changes in cash and cash equivalents
  - Cash comprises cash on hand and demand deposits – **IAS 7.6**
  - Cash equivalents are short-term, highly liquid investments that are readily convertible to known amounts of cash and which are subject to an insignificant risk of changes in value – **IAS 7.6**
- Presentation of a statement of cash flows – **Appendix A**
  - Cash flows should be classified by operating, investing and financing activities – **IAS 7.10**
  - Cash flows from operating activities are primarily derived from the principal revenue-producing activities of the entity – **IAS 7.13–14**

  - Cash flows from investing activities are those related to the acquisition or disposal of any non- current assets, or trade investments together with returns received in cash from investments (ie, dividends and interest) – **IAS 7.16**
- Financing activities include: – **IAS 7.17**
  - Cash proceeds from issuing shares
  - Cash proceeds from issuing debentures, loans, notes, bonds, mortgages and other short- or long-term borrowings
  - Cash repayments of amounts borrowed
  - Dividends paid to shareholders / the non-controlling interest
  - Principal receipts of amounts advanced under leases
  - Cash flows from operating activities
  - There are two methods of presentation allowed:
    - Direct method – **IAS 7.19**
    - Indirect method – **IAS 7.20**

Self-test questions

Answer the following questions

1 Henry

Henry acquired an asset on a lease. The details were as follows.

Date of acquisition	1 January 20X1
Present value of future lease payments	£7,210
Annual lease payments in arrears	£2,000

The interest rate implicit in the lease is 12% p.a. The payments are made on the last day of each year. There is no option to purchase the asset at the end of the lease.

Requirement

In accordance with IFRS 16, *Leases* what is the lease liability at 31 December 20X2? Round your answer to the nearest pound.

2 Sam plc

Sam plc acquired a machine on a lease. The details were as follows.

Date of commencement	1 July 20X6
Present value of future lease payments	£24,300
Deposit (including the first payment)	£8,000
Remaining annual lease payments (in advance)	4 @£8,000
Interest rate implicit in the lease	12%

The useful life of the machine is eight years. There is no option to purchase the machine at the end of the lease.

Requirement

What is the carrying amount of the right-of-use asset as at 30 June 20X7 in accordance with IFRS 16,
Leases?

3 Isaac Co

Isaac Co acquired an item of plant under a lease on 1 January 20X7. The present value of the future lease payments at the commencement date was £7,731,000 and three lease payments of £3 million p.a. are due to be paid in arrears on 31 December each year.

The useful life of the plant is deemed to be six years. There is no option to buy the asset at the end of the lease term.

The interest rate implicit in the lease is 8% p.a.

Requirement

What is the total charge to the statement of profit or loss in respect of this lease for the year ended 31 December 20X7?

4 Alpha plc

Alpha plc enters into a lease with Omega Ltd for a plastics moulding machine.

The terms of the 10 year lease require Alpha plc to make 10 annual lease payments of £36,000 in arrears. The discounted value of the lease payments at the implicit rate within the lease of 6% is £264,960.

There is an option to buy the machine on the final date of the lease for £25,000 (discounted value of £13,950), which Alpha plc is expected to exercise. The useful life of the machine is 15 years.

Requirements

Calculate the following values:

(a) The initial measurement of the right-of-use asset at the commencement of the lease on 1 January 20X1.

(b) The carrying amount of the machine at 31 December 20X1.

(c) The lease liability brought forward at 1 January 20X2.

5 Snow plc

On 1 January 20X1 Snow plc entered into the following lease agreements.

(1) **Snow machine**

To lease a snow machine for five years from Slush plc. The snow machine is estimated to have a useful life of eight years.

Snow plc has agreed to make five annual payments of £35,000, payable in arrears, commencing on 31 December 20X1. The present value of future discounted lease payments is £151,515. There is no option to purchase the machine at the end of the lease. Lease incentives of £3,000 were received by Snow plc in respect of this asset.

The interest rate implicit in the lease is 5%.

(2) **Head office and warehouse**

Snow plc has agreed to sell its Head Office and warehouse to Slush plc on 1 January 20X1 for £6 million. Slush plc is to lease the building back to Snow plc over a period of 10 years.

The carrying amount of the building in Snow plc's books on the date of the sale was £5.2 million, and its fair value was £6 million.

The present value of the lease payments was calculated to be £4.2 million, with the remaining useful life of the building being 15 years.

The transaction constitutes a sale in accordance with IFRS 15.

Requirements

5.1 Calculate the carrying amount of the right-of-use asset at 31 December 20X1 in respect of the snow machine.

5.2 What is the initial measurement of the right-of-use asset in respect of the leased building?

5.3 What is the gain on the sale that should be recognised on 1 January 20X1 in the financial statements of Snow plc?

6 Sidcup plc

On 1 January 20X6, Sidcup plc sold its head office building to Eltham Co for £3 million and immediately leased it back on a 10-year lease. On that date, the carrying value of the building was £2.6 million and its fair value was £3 million. The present value of the lease payments was calculated as £2.1 million. The remaining useful life of the building at 1 January 20X6 was 15 years. The transaction constituted a sale in accordance with IFRS 15.

Requirements

6.1 A right-of-use asset must be recognised in respect of the leased building. At what value should this right-of-use asset be recognised on 1 January 20X6 in the financial statements of Sidcup plc?

6.2 What is the gain on the sale that may be recognised on 1 January 20X6 in the financial statements of Sidcup plc?

7 Noname

The Noname Company decided to carry out a fundamental restructuring of its papermaking division which operates in Hyberia. The effect was that most activities carried out in this location would cease with a number of employees being made redundant, whereas other activities and employees would relocate to Sidonia where there was unused capacity. Negotiations with landlords and employee representatives were concluded on 30 December 20X7 and a formal announcement was made to all employees on 31 December 20X7.

The restructuring budget approved by the board of directors in November 20X7 included the following amounts:

	£
Payments to employees:	
Termination payments to those taking voluntary redundancy	90,000
Termination payments to those being made compulsorily redundant	180,000
One-off payments to employees agreeing to move to Sidonia	37,000
Employment cost for closing down activities in Hyberia in preparation for the move to Sidonia	50,000
Lease costs:	
5 years remaining of a lease which can immediately be sublet for £70,000 per annum	45,000 per annum
7 years remaining of a lease which can immediately be sublet for £35,000 per annum	90,000 per annum
Cost of moving plant and equipment from Hyberia to Sidonia26,000 Impairment losses on non-current assets under IAS 36, *Impairment of Assets*	110,000
Trading transactions in Hyberia up to date of closure, other than those itemised above:	
Revenue	850,000
Expenses	1,150,000

None of these amounts has yet been recognised in Noname's financial statements. The effect of the time value of money is immaterial.

Requirement

Determine the amounts to be included in the financial statements for the Noname Company for the year ending 31 December 20X7 according to IAS 37, *Provisions, Contingent Liabilities and Contingent Assets*.

8 Tonto

The following information relates to the draft financial statements of Tonto.

Summarised statements of financial position as at:

31 March 20X1 31 March 20X0

	£'000	**£'000**	**£'000**	**£'000**
ASSETS				
Non-current assets				
Property, plant and equipment (Note (1))		19,000		25,500
Current assets				
Inventory		12,500		4,600
Trade receivables		4,500		2,000
Tax refund due		500		nil
Bank		nil		1,500
Total assets		36,500		33,600
EQUITY AND LIABILITIES				
Equity				
Equity shares of £1 each (Note (2))		10,000		8,000
Share premium (Note (2))	3,200		4,000	
Retained earnings	4,500	7,700	6,300	10,300
		17,700		18,300
Non-current liabilities				
10% loan note (Note (3))	nil		5,000	
Lease obligations	4,800		2,000	
Deferred tax	1,200	6,000	800	7,800
Current liabilities				
10% loan note (Note (3))	5,000		nil	
Tax	nil		2,500	
Bank overdraft	1,400		nil	
Lease obligations	1,700		800	
Trade payables	4,700	12,800	4,200	7,500
Total equity and liabilities		36,500		33,600

CHAPTER 14

Summarised statements of profit or loss for the years ended:

	31 March 20X1	31 March 20X0
	£'000	£'000
Revenue	55,000	40,000
Cost of sales	(43,800)	(25,000)
Gross profit	11,200	15,000
Operating expenses	(12,000)	(6,000)
Finance costs (Note (4))	(1,000)	(600)
Profit (loss) before tax	(1,800)	8,400

	31 March 20X1	31 March 20X0
	£'000	£'000
Income tax relief (expense)	700	(2,800)
Profit (loss) for the year	(1,100)	5,600

The following additional information is available:

(1) Property, plant and equipment is made up of:

As at:	31 March 20X1	31 March 20X0
	£'000	£'000
Leasehold property	nil	8,800
Owned plant	12,500	14,200
Leased plant	6,500	
	19,000	25,500

During the year Tonto sold its leasehold property for £8.5 million and entered into an arrangement to rent it back from the purchaser. There were no additions to or disposals of owned plant during the year. The depreciation charges (to cost of sales) for the year ended 31 March 20X1 were:

	£'000
Leasehold property	200
Owned plant	1,700
Leased plant	1,800
	3,700

(2) On 1 July 20X0 there was a bonus issue of shares from share premium of one new share for every 10 held. On 1 October 20X0 there was a fully subscribed cash issue of shares at par.

(3) The 10% loan note is due for repayment on 30 June 20X1. Tonto is in negotiations with the loan provider to refinance the same amount for another five years.

(4) The finance costs are made up of:

For year ended:	**31 March 20X1**	**31 March 20X0**
	£'000	**£'000**
Lease charges	300	100
Overdraft interest	200	nil
Loan note interest	500	500
	1,000	600

Requirement

Prepare a statement of cash flows for Tonto for the year ended 31 March 20X1 in accordance with IAS 7, *Statement of Cash Flows*, using the indirect method.

Now go back to the Introduction and ensure that you have achieved the Learning outcomes listed for this chapter.

Answers to Interactive questions

Answer to Interactive question 1

The lease is for eight months, which counts as a short-term lease, and so it does not need to be recognised in the statement of financial position. If the short-term lease exemption is adopted, then the amount charged to profit or loss for the year ended 30 June 20X6 is £32,000 × 2/8 = £8,000.

If the short-term lease exemption is not adopted, then the standard IFRS 16 model must be applied; an asset and liability will be recognised for the leased asset at 30 June 20X6.

Answer to Interactive question 2

Question	Fill in your answer
A company leases a laptop computer for their financial controller over a three-year period.	This can be classified as a lease, or the company may make an election for this lease to be classified as a low value item, and therefore exempt from the IFRS 16 standard model.
A company leases a photocopier. The copier will remain on the client site, and will only be returned to the lessor in the event of a major repair.	Lease: The arrangement involves an identified asset which the customer has the right to control. Substitution rights are not substantive.
A company leases cars for their team of sales representatives for a three-year period. The cars are required to be estate models, but from time to time, the car may be changed by the lessor.	Not a lease: The lease is not for identified assets, as the lessor can change the exact model of car provided during the lease.
A company acquires three architect's drawing desks which are paid for over 10 months. The company already has four of these desks, and no elections have been made.	These would qualify as a short-term lease, however, IFRS 16 requires the election to be made for the whole class of assets, and this has not been done, so the full standard should be applied.

Answer to Interactive question 3

3.1 Total lease liability at 31 December 20X1 = £ **17,356**

Capital > 1 year = £ **9,092**

< 1 year (β) = £ 8,264

3.2 Journals

		£	£
DEBIT	Right-of-use asset	24,869	
CREDIT	Lease liability		24,869
	Being recognition of right-of-use asset and lease liability at commencement of lease.		
DEBIT	Finance charge (profit or loss)	2,487	
CREDIT	Lease liability		2,487
	Being interest on lease		

		£	£
DEBIT	Lease liability	10,000	
CREDIT	Cash		10,000
	Being payment in respect of lease		

Answer to Interactive question 4

At the end of year 1 the liability will be measured as:

	£
Opening balance	177,297
Interest 5%	8,865
	186,162
Current liability	50,000
Non-current liability (bal. fig).	136,162
	186,162

Answer to Interactive question 5

Calculations

(1) **Calculation of the right-of-use asset**

	£
PVFLP	11,164
Deposit	575
	11,739

Depreciate the asset over seven years

11,739/7 = £1,677 per annum

Carrying amount at 31 December 20X1: £11,739 – £1,677 = £10,062

Carrying amount at 31 December 20X2: £10,062 – £1,677 = £8,385

(2) **Calculation of the lease liability**

Balance of the lease liability at 31 December 20X1: £9,834

Balance of the lease liability at 31 December 20X2: £8,424

CHAPTER 14

	Cr	Cr	Dr	Cr
	Bal b/f 1 Jan	Interest accrued at 6%	Payment 31 Dec	Bal c/f 31 Dec
	£	£	£	£
20X1	11,164	670	(2,000)	9,834
20X2	9,834	590	(2,000)	8,424

Note: You can do these calculations in vertical format (as in the chapter body) or horizontal, whichever is easiest. The principles are the same.

Answer to Interactive question 6

Journal entries at date of disposal

		£	£
DEBIT	Cash	120,000	
CREDIT	Non-current asset (carrying amount)		70,000
CREDIT	Gain on rights transferred (W2)		4,906
DEBIT	Right-of-use asset (W1)	63,131	
CREDIT	Lease liability (PVFLP)		108,225

WORKINGS

(1) **Calculate the right-of-use asset**

Carrying amount × (PVFLP ÷ FV) = £70,000 × (£108,225 ÷ £120,000) = £63,131

(2) **Calculate the gain on rights transferred**

As follows:

a. Calculate the gain on the sale:

Fair value – carrying amount = £120,000–£70,000 = £50,000

b. Calculate the gain relating to the rights retained by the seller/lessee:

Gain × PVFLP/fair value = £50,000 × £108,225/£120,000 = £45,094

c. Calculate the gain relating to the rights transferred:

Total gain (1) – Gain relating to the rights retained (2) = £50,000 – £45,094 = £4,906

(3) **Lease liability and interest accrued**

		£
1.1.X1	Lease liability (PVFLP)	108,225
31.12.X1	Interest accrued 108,225 × 5%	5,411
31.12.X1	Instalment paid	(25,000)
Lease liability carried down at 31.12.X1		88,636
31.12.X2	Interest accrued 88,636 × 5%	4,432
31.12.X2	Instalment paid	(25,000)
Lease liability carried down at 31.12.X2		68,068

Therefore, current liabilities (<12 months) at 31.12.X1 would be £88,636 – £68,068 = £20,568, of which £4,432 is the finance charge (interest payable).

Alternative presentation:

	Balance	Finance cost at 5%	Lease payment	Balance
	£	£	£	£
20X1	108,225	5,411	(25,000)	88,636
20X2	88,636	4,432	(25,000)	68,068

Statement of profit or loss

	£
Depreciation (63,131/4)	(15,783)
Interest (108,225 × 5%) (W3)	(5,411)

Statement of financial position

	£
Non-current assets	
Carrying amount at 1 January 20X1 (W1)	63,131
Depreciation (W3)	(15,783)
Carrying amount at 31 December 20X1	47,348
Non-current liabilities	
Obligations under leases (W3)	68,068
Current liabilities	
Obligations under leases (88,636 – 68,068)	20,568

Answer to Interactive question 7

The answer is £12,973

Stage 1: Gain on sale: £740,000 – £500,000 = £240,000

Stage 2: Gain relating to rights retained = £(240,000 × 700,000/740,000) = £227,027 Stage 3:

Gain relating to rights transferred = £240,000 – £227,027 = £12,973

Answer to Interactive question 8

IAS 20 gives the following arguments in support of each method.

Capital approach

(1) The grants are a **financing device**, so should go through the statement of financial position. In the statement of profit or loss and other comprehensive income they would simply offset the expenses which they are financing. No repayment is expected by the Government, so the grants should be credited directly to shareholders' interests.

(2) Grants are **not earned**, they are incentives without related costs, so it would be wrong to record them in profit or loss.

Income approach

(1) The grants are **not received from shareholders** so should not be credited directly to shareholders' interests.

(2) Grants are **not given or received for nothing**. They are earned by compliance with conditions and by meeting obligations. There are therefore associated costs with which the grant can be matched in the statement of profit or loss and other comprehensive income, as these costs are being compensated by the grant.

(3) Grants are an extension of **fiscal policies** and so, as income and other taxes are charged against income, grants should be credited to income.

Answer to Interactive question 9

Cost of each asset as at 31 December 20X8

	Asset X	Asset Y
Borrowing costs	**£'000**	**£'000**
£5.0m/£10m × 10%	500	1,000
Less investment income		
To 30 June 20X8: £2.5m/£5.0m × 8% × 6/12	(100)	(200)
	400	800
Cost of assets		
Expenditure incurred	5,000	10,000
Borrowing costs	400	800
	5,400	10,800

Answer to Interactive question 10

Capitalisation rate = weighted average rate = (10% × (120 ÷ (120 + 80))) + (9.5% × (80 ÷ (120 +80))) = 9.8%

Borrowing costs = (£30m × 9.8%) + (£20m × 9.8% × 3/12) = £3.43m

Answer to Interactive question 11

Answers to Self-test questions

1 Henry

Liability at 31.12.X2 is £4,804

Date	B/f	Interest 12%	Payment	C/f
	£	£	£	£
31.12.X1	7,210	865	(2,000)	6,075
31.12.X2	6,075	729	(2,000)	4,804

2 Sam plc

The carrying amount of the machine is 32,300 – 6,460 = £25,840

	£
Lease liability (PVFLP)	24,300
Deposit payments at the start of the lease (deposit)	8,000
Right-of-use asset	32,300

Depreciate the machine over the shorter of the lease term (5 years) and the useful life (8 years)

Depreciation charge for the year £32,300/5 = £6,460

3 Isaac Co

Total lease liability

	£	Finance charge
Initial liability (PV of future lease payments)	7,731,000	
Interest 8% (£7,731,000 × 8%)	618,480	618,480
Payment	(3,000,000)	
Total lease liability at 31.12.X8	5,349,480	

Depreciation is charged based on the shorter of the lease term (three years) and the useful life (six years) as there is no option to purchase the asset the end of the lease period.

		Depreciation charge
Right-of-use asset	7,731,000	
Depreciation charge 7,731,000/3	(2,577,000)	2,577,000
Carrying amount	5,154,000	

Charge to the profit and loss is £618,480 + £2,577,000 = £3,195,480

4 Alpha plc

(a) **Right-of-use asset**

	£
Discounted future lease payments	264,960
Option to purchase (discounted)	13,950
Lease liability and right-of-use asset	278,910

(b) **Carrying amount at 31 December 20X1**

	£
Right-of-use asset	278,910
Less Depreciation (W1)	(18,594)
Carrying amount	260,316

WORKING

278,910/15 years = £18,594

The asset is depreciated over 15 years as there is an option to purchase the asset which Alpha plc is expected to exercise.

(c) **Lease liability brought forward at 1 January 20X2**

	£
Lease liability	278,910
Interest at 6%	16,735
Less payment	(36,000)
Liability	259,645

5 Snow plc

5.1 **Right-of-use asset at 31 December 20X1**

Lease liability

	B/f	Interest @ 5%	Payment	C/f
	£	£	£	£
31 December 20X1	151,515	7,576	(35,000)	124,091

	£
Right-of-use asset	
Present value of future lease payments	151,515
Less lease incentive	(3,000)
Right-of-use asset	148,515
Less depreciation 148,515/5 years	(29,703)
Carrying amount 31 December	118,812

5.2 Calculation of the right-of-use asset

Building

Calculation of the right-of-use asset:

Carrying amount × (present value of lease payments ÷ fair value of asset)

£5.2m × (£4.2m ÷ £6m) = £3.64m

5.3 **Stage 1:** Gain on sale: £6m – £5.2m = £0.8m

Stage 2: Gain that relates to rights retained = £0.8m × (£4.2m ÷ £6m) = £0.56m

Stage 3: Gain relating to rights transferred = £0.8m – £0.56m = £0.24m

6 Sidcup plc

6.1 £1,820,000

IFRS 16 requires that, at the start of the lease, Sidcup should measure the right-of-use asset arising from the leaseback of the building at the proportion of the previous carrying amount of the building that relates to the right of use retained. This is calculated as carrying amount × discounted lease payments/fair value. The discounted lease payments were given in the question as £2.1 million.

The right-of-use asset is therefore: £2.6m × £2.1m/£3m = £1,820,000.

6.2 £120,000

Sidcup only recognises the amount of gain that relates to the rights transferred.

Stage 1: Gain is £3,000,000 – £2,600,000 = £400,000

Stage 2: Gain relating to rights retained £(400,000 × 2,100,000/3,000,000) = £280,000

Stage 3: Gain relating to rights transferred £(400,000 – 280,000) = £120,000

7 Noname

The total amount recognised in profit or loss under IAS 37 is the £270,000 restructuring provision + the £110,000 impairment losses = £380,000.

The five-year lease is not onerous because the premises can be sublet at profit. The seven-year lease is onerous and under IFRS 16 will lead to an impairment review of the right-of-use asset for the premises; however following IFRS 16 there is no longer a provision to be recognised under IAS 37.

Under IAS 37.80 all the payments to employees should be included in the restructuring provision, with the exception of the employment costs of £50,000 in preparation for the move to Sidonia and £37,000 payable to those moving to Sidonia – this relates to the ongoing activities of the business, so is disallowed by IAS 37.80(b). For the same reason the costs of moving plant and equipment is disallowed. Impairment losses reduce the carrying amount of the relevant assets rather than increasing the restructuring provision and revenue less expenses are trading losses which are disallowed by IAS 37.63. So provision = £270,000.

8 Tonto

Tonto statement of cash flows for the year ended 31.3.20X1

	£'000	£'000

Answers to Self-test questions

Introduction

Learning outcomes

- Identify and explain current and emerging issues in corporate reporting
- Determine and calculate how different bases for recognising, measuring and classifying financial assets and financial liabilities can impact upon reported performance and position
- Explain and appraise accounting standards that relate to an entity's financing activities which include: financial instruments; leasing; cash flows; borrowing costs; and government grants

Chapter study guidance

Use this schedule and your study timetable to plan the dates on which you will complete your study of this chapter.

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
1	**Overview of material from earlier studies** The use of financial instruments by business for funding, investment and risk management purposes is an essential part of operations. You will need to prepare detailed disclosures for financial instruments and establish the correct presentation of preference shares and convertible instruments between debt and equity.	**Approach** Although you will have a detailed knowledge of IAS 32 from earlier studies, the importance of this topic cannot be overestimated. Make sure you understand the issues relating to the accounting of compound financial instruments. **Stop and think** When might a contract require delivery of the entity's own equity instruments but be classified as a financial liability?	At Advanced Level, you will be concerned with more complex issues than at Professional Level, for example the sometimes difficult distinction between debt and equity. An ethical dilemma may arise whereby a company wishes to reduce gearing by claiming that an instrument is equity rather than a liability.	**IQ7: Purchase of own equity instruments** This question has the finance director of a company claiming that an instrument is equity rather than a liability, and you have to discuss whether they are correct.
2	**Objective and scope** This is a short section on the objective and scope	**Approach** The key point to remember from this short section is that the objective of IFRS	An exam question would not ask for a list of instruments that IFRS 7 does not apply to. However,	N/A

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
	of the standard that will take up the rest of the chapter: IFRS 7, *Financial Instruments: Disclosures*	7 is for the user to evaluate: • the **significance** of financial instruments for the entity's **financial position and performance**; and • the **nature and extent of risks** arising from financial instruments. **Stop and think** IFRS 7 applies to recognised and unrecognised financial instruments.	you would be expected to know that disclosures relating to certain instruments are covered by other standards, for example IFRS 2, *Share-based payment*.	
3	**Disclosures in financial statements** The detailed qualitative and quantitative disclosures required by IFRS 7 are intended to provide to the users of financial statements an understanding of the significance of financial instruments for the entity's position and performance, and an analysis of the risks to which the entity is exposed and how it manages them.	**Approach** There is no short cut to reading through and understanding these disclosures. Rather than learn them by heart, it is best to know where to find them in the open books. **Stop and think** The individual classes of financial instruments will mean more to you once you have studied recognition and measurement in Chapter 16.	As part of an audit question you may need to mention procedures to check whether financial instruments have been disclosed in the financial statements in accordance with IFRS 7.	N/A
4	**Other disclosures** This section contains summaries of and references to quantitative and qualitative	**Approach** Skim through **Stop and think** IFRS 13, *Fair Value Measurement* affects	This section will not be examined specifically; it is for awareness only to link to other material.	N/A

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
	disclosures in the financial statements which are covered elsewhere.	a large number of areas, particularly financial instruments.		
5	**Financial instruments risk disclosure** IFRS 7 also provides an analysis of the risks to which the entity is exposed and how it manages them.	**Approach** Study the table in Section 5.1. You should focus on credit risk, liquidity risk and market risk. **Stop and think** What qualitative disclosures are required by IFRS 7 in relation to risk?	Risk disclosures are likely to be examined in the context of audit risks and procedures.	N/A However, you can try Self-test questions 2 and 3, which deal with risk and sensitivity analysis.

Once you have worked through this guidance you are ready to attempt the further question practice included at the end of this chapter.

1 Overview of material from earlier studies

Section overview

- IAS 32 applies to all entities and all types of financial instruments except where explicitly covered by another standard, such as IFRS 10 for subsidiaries and IAS 28 for associates and joint ventures.
- A financial instrument should be classified as either equity, financial liability or financial asset. This classification is made at the time the financial instrument is issued and not changed subsequently.
- Compound financial instruments, ie, instruments that contain both a liability and an equity component, should be split into their component parts at the date they are issued.
- Interest, dividends, losses and gains arising from financial instruments classified as financial liabilities are recognised in the profit or loss for the year. Dividends paid to holders of a financial instrument classified as equity are charged directly against equity.
- Financial assets and financial liabilities are presented as separate items in the statement of financial position with offset being allowed only in limited cases.
- Treasury shares are deducted from equity with the consideration paid or received recognised directly in equity. Gains or losses on the purchase, sale, issue or cancellation of equity instruments are not recognised in profit or loss.

1.1 Refresh your memory

The definition of a financial instrument is consistent throughout the accounting standards covering financial instruments. It is introduced in IAS 32.

Definition

Financial instrument: Any contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity.

Note that a financial instrument has **two parties**. It should be recognised as an **asset** by one party and either a **liability or equity** by the other. The classification of a financial instrument as a financial liability or equity is particularly important as it will have an effect on gearing.

1.2 Test your memory

Try these questions to see how well you remember the material covered in your earlier studies.

Interactive question 1: Financial instruments

Why do you think that physical assets and prepaid expenses do not qualify as financial instruments?

See **Answer** at the end of this chapter.

Interactive question 2: Liability or equity?

During the financial year ended 31 December 20X5, Kim issued the financial instrument described below. Identify whether it should be classified as liability or equity, giving reasons for your choice.

Redeemable preference shares with a coupon rate 5%. The shares are redeemable on 31 December 20X9 at premium of 20%.

See **Answer** at the end of this chapter.

Interactive question 3: Convertible bond 1

An entity issues a convertible bond for £1,000. The bond is convertible into equity shares of the issuer at the discretion of the holder at any time in the next 10 years. The bond converts into a variable number of shares equal to the value of the liability.

The entity also issues £7,000 of 8% convertible redeemable preference shares. In five years' time the preference shares will either be redeemed or converted into 5,000 equity shares of the issuer, at the option of either the holder or issuer.

Requirement

How should the entity account for the instruments according to IAS 32?

See **Answer** at the end of this chapter.

Interactive question 4: Convertible bond 2

An entity issued 5,000 8% convertible bonds at par value of £10 on 1 January 20X5. Each bond is convertible into three ordinary shares on 31 December 20X6. Interest is payable annually in arrears. The entity incurred transaction costs of £1,000. On the date of issue the market interest rate for similar debt without the conversion option was 10%.

Requirement

Calculate the liability and equity component of the convertible bond on issue. See **Answer** at the end of this chapter.

Interactive question 5: Options contract

An entity enters into an options contract to acquire 100 ounces of platinum in 90 days' time. The entity will settle the contract by delivering as many of its own shares as are equal to the cash value of
£1,000 on the purchase date.

Requirement

Explain whether the options contract should be classified as a financial asset, financial liability or equity.

See **Answer** at the end of this chapter.

Interactive question 6: Offsetting

An entity issues debt with a variable rate of interest linked to SONIA. SONIA (Sterling Overnight Index Average) is a benchmark rate that replaced LIBOR in 2021. It enters into a corresponding, receive floating, pay fixed interest rate swap for the period of the debt. The effect of the two instruments is to synthesise a fixed-rate long-term loan.

Requirement

Explain whether the two instruments should be presented separately or whether they should be offset.

See **Answer** at the end of this chapter.

Professional skills focus: Assimilating and using information

This section was for revision from earlier studies. At Advanced Level, the scenarios will be much more complex and you will need to sift through detail and pick out the important principles that you need to apply. So if you're at all shaky on the above examples, it is a good idea to practise questions on this area from your earlier studies.

1.3 More complex issues

1.3.1 Debt/equity distinction

The separation of debt and equity components of a financial instrument should be familiar to you from your Professional Level studies, and you should not have had any serious difficulty with the convertible bond question above. However, at Advanced Level you will need to consider more complex, 'real world' issues. In practice, the debt/equity distinction may not be clear cut. Classification of financial instruments as debt or equity can have a significant effect on the financial statements. Guidance is provided in IAS 32, *Financial Instruments: Presentation* (and other standards for items outside IAS 32's scope), but there are sometimes areas where it is difficult to determine whether a transaction is debt or equity.

A contract is not an equity instrument solely because it may result in the receipt or delivery of the entity's own equity instruments. It is necessary to consider whether the settlement results in receipt or delivery of variable or fixed number of the entity's own equity instruments.

If the contract results in delivery of variable number of equity instruments, the fair value of the equity instruments equals to the amount of the fixed contractual right or obligation. Such a contract does not evidence a residual interest in the entity's assets after deducting all of its liabilities.

The following contracts require delivery of the entity's own equity instruments but are **classified as financial liability**:

- A contract to deliver as many of the entity's own equity instruments as are equal in value to £6,000
- A contract to deliver as many of the entity's own equity instruments as are equal in value to 200 ounces of gold

Contingent settlement provisions

A financial instrument may require the entity to deliver cash or another financial asset in the event of **occurrence or non-occurrence of uncertain future events** that are beyond the control of both the issuer and holder of the instrument. These are known **as contingent settlement provisions** and could relate to changes in stock market index, consumer price index, interest rate, issuer's future profits or revenues. Such instruments are classified as financial liability. This is because the issuer **does not have an unconditional right to avoid** delivering cash or another financial asset.

The financial instrument would be an equity instrument if it has equity-like features, for example, obligation arises only in the event of liquidation of the issuer.

Context example: Redemption of preference shares

High Growth Bank issues 7% fixed preference shares. The dividends on the preference shares are cumulative. The terms and conditions of the issue of preference shares indicate that they will be redeemed if the net profit of the bank increases by more than 50% in the next three years.

In this case, the contingent event is outside the control of both the bank and the holder. If the net profit of the bank increases by more than 50% in the next three years, it does not have the unconditional right to avoid delivering cash. The preference shares also pay a fixed cumulative dividend and hence are classified as financial liability.

Context example: Contingent convertible bonds (CoCos)

Contingent convertible bonds issued by Stable Bank give it the right to convert the debt to equity in the event of its capital ratio falling below a pre-set level. To offset the risk the holder is undertaking, the yields that Stable Bank offers on its CoCos are 6.6% compared to an average yield to maturity on other medium-term bonds of 3.5%.

Stable Bank must classify the bonds as a hybrid instrument with both debt and equity features.

1.3.2 Practical implications

The classification of financial instruments as debt versus equity is particularly important with items that are financial liabilities or equity as the presentation of the two items and associated financial effects are very different.

Consider the following examples.

Worked example: Debt or equity?

1 Acquittie issued 40 million non-redeemable £1 preference shares at par value. Under the terms attaching to the preference shares, a dividend is payable on the preference shares only if Acquittie also pays a dividend on its ordinary shares relating to the same period.

2 Acquittie entered into a contract with a supplier to buy a significant item of equipment. Under the terms of the agreement the supplier will receive ordinary shares with an equivalent value of £5 million one year after the equipment is delivered.

3 The directors of Acquittie, on becoming directors, are required to invest a fixed agreed sum of money in a special class of £1 ordinary shares that only directors hold. Dividend payments on the shares are discretionary and are ratified at the annual general meeting (AGM) of the company. When a director's service contract expires, Acquittie is required to repurchase the shares at their nominal value.

Solution

1 IAS 32 requires a financial instrument to be classified as a liability if there is **a contractual obligation** to deliver cash or another financial asset to another entity.

In the case of the preference shares, as they are **non-redeemable**, there is **no obligation to repay the principal**.

In the case of the **dividends**, because of the condition that preference dividends will only be paid if ordinary dividends are paid in relation to the same period, the **preference shareholder has no contractual right** to a dividend. Instead, the distributions to holders of the preference shares are at the discretion of the issuer as **Acquittie can choose** whether or not to pay an ordinary dividend and therefore a preference dividend. Therefore, there is **no contractual obligation** in relation to the dividend.

As there is no contractual obligation in relation to either the dividends or principal, the **definition of a financial liability has not been met** and the preference shares should be treated as **equity** and initially recorded at **fair value** ie, their par value of £40 million.

The treatment of **dividends** should be consistent with the classification of the shares and should therefore be charged directly to **retained earnings**.

2 The price of the equipment is fixed at £5 million one year after delivery. In terms of recognition and measurement of the equipment, the £5 million price would be discounted back one year to its present value.

The company is paying for the equipment by issuing shares. However, this is **outside the scope of IFRS 2**, *Share-based Payment* because the payment is not dependent on the value of the shares, it is fixed at £5 million.

This is an example of a contract that "will or may be settled in an entity's own equity instruments and is a non-derivative for which the entity is or may be obliged to deliver a **variable** number of the entity's own equity instruments" (IAS 32.11) ie, a financial liability.

It is the number of shares rather than the amount paid that will vary, depending on share price. Therefore it should be classed as a **financial liability** and initially measured at the **present value** of the £5 million.

Subsequently, as it is not measured at fair value through profit or loss (as it is not held for short- term profit-taking or a derivative), it should be measured at **amortised cost**.

As a result, **interest** will be applied to the discounted amount over the period until payment and recognised in **profit or loss** with a corresponding increase in the financial liability.

3 Most ordinary shares are treated as equity as they do not contain a contractual obligation to deliver cash.

However, in the case of the directors' shares, a **contractual obligation to deliver cash exists** on a specific date as the shares are **redeemable** at the end of the service contract.

The redemption is **not discretionary**, and Acquittie has no right to avoid it. The mandatory nature of the repayment makes this capital a financial liability. The financial liability will initially be recognised at its fair value ie, the present value of the payment at the end of the service contract. It will be subsequently measured at amortised cost and effective interest will be applied over the period of the service contract.

Dividend payments on the shares are **discretionary** as they must be ratified at the AGM. Therefore, no liability should be recognised for any dividend until it is ratified. When recognised, the classification of the **dividend** should be consistent with the classification of the shares and therefore any dividends are classified as a **finance cost** rather than as a deduction from retained earnings.

Professional skills focus: Applying judgement

The classification of a financial instrument as debt or equity is an area where judgement must be applied. This area is still under consideration by the IASB in the form of a Discussion Paper.

Professional skills focus: Structuring problems and solutions

The debt/equity distinction also exercises the student/practitioner's ability to structure problems and approach them logically. For example, just because it may result in the receipt or delivery of the entity's own equity instruments does not necessarily follow it is an equity instrument.

Interactive question 7: Purchase of own equity instruments

Emporium is a listed retail group, and has a year end of 31 October. On 21 October 20X8, Emporium carried out a bonus issue where the shareholders of Emporium received certain rights. The shareholders are able to choose between the following:

- receiving newly issued shares of Emporium, which could be traded on 30 November 20X8; or
- transferring their rights back to Emporium by 10 November 20X8 for a fixed cash price which would be paid on 20 November 20X8.

While preparing the financial statements at 31 October 20X8, the finance director of Emporium argued that the criteria for the recognition of a financial liability as regards the second option were not met at 31 October 20X8 because it was impossible to reliably determine the full amount to be paid until 10 November 20X8.

Requirement

Discuss whether the finance director is correct regarding the recognition of a financial liability.

See **Answer** at the end of this chapter.

2 Objective and scope

Section overview

This section discusses the objectives and sets out the scope of IFRS 7, *Financial Instruments: Disclosures*.

2.1 Objective

The principles of IFRS 7 complement the principles for recognising, measuring and presenting financial assets and financial liabilities in IAS 32, *Financial Instruments: Presentation* and IFRS 9, *Financial Instruments*.

IFRS 7 requires entities to provide **disclosures** in their financial statements that enable users to **evaluate**:

- the **significance** of financial instruments for the entity's **financial position and performance**; and
- the **nature and extent of risks** arising from financial instruments to which the entity is exposed during the period and at the reporting date, and how the entity manages those risks.

The main presentation and disclosure requirements as detailed in IFRS 7 and IAS 32 together with certain aspects of recognition and measurement of IFRS 9 have already been covered at Professional Level. This chapter extends the coverage of the disclosure requirements of IFRS 7 and the presentation requirements.

2.2 Scope

IFRS 7 applies to all entities and to **all types** of financial instruments**, except instruments that are specifically covered by other standards**. Examples of financial instruments not covered by IFRS 7 include the following:

- Interests in subsidiaries, associates and joint ventures that are accounted for in accordance with IFRS 10, *Consolidated Financial Statements* or IAS 28, *Investments in Associates and Joint Ventures*
- Employers' rights and obligations arising from employee benefit plans, to which IAS 19, *Employee Benefits* applies
- Insurance contracts as defined in IFRS 4, *Insurance Contracts*
- Financial instruments, contracts and obligations under share-based payment transactions to which IFRS 2, *Share-based Payment* applies

IFRS 7 applies to recognised and unrecognised financial instruments. Recognised financial instruments include financial assets and financial liabilities that are within the scope of IFRS 9. Unrecognised financial instruments include some financial instruments that, although outside the scope of IFRS 9, are within the scope of IFRS 7 (such as some loan commitments).

IFRS 7 also applies to contracts to buy or sell a non-financial item that are within the scope of IFRS 9 because they can be settled net and there is not the expectation of delivery, receipt or use in the ordinary course of business.

2.3 General considerations

2.3.1 Classes of financial instruments and level of disclosures

IFRS 7 requires that certain disclosures should be given by class of financial instruments. The classes of financial instruments that will be disclosed should be appropriate to the nature of the information disclosed and should take into account the characteristics of those financial instruments. An entity should provide sufficient information to permit reconciliation to the line items presented in the statement of financial position.

In deciding how to disclose the classes of financial instruments, an entity should not necessarily adopt the classification of IFRS 9. The classes should be determined by the entity, but at the minimum it should:

- provide distinctive classes for financial instruments at amortised cost and financial instruments at fair value; and
- provide a separate class or classes for financial instruments outside the scope of IFRS 7.

Note: A 'class' is not the same as a classification under IFRS 9 (investment in equity instruments, financial assets held at amortised cost, financial assets at fair value through profit or loss and financial assets at fair value through other comprehensive income).

2.3.2 Significance of financial instruments for financial position and performance

An entity must disclose information that enables users of its financial statements to evaluate the significance of financial instruments for its financial position and performance.

2.3.3 Risks from financial instruments

IFRS 7 requires qualitative and quantitative disclosure about the following risks associated with financial instruments:

- **Market risk**. This is the risk of changes in the market value of a financial instrument. When changes in the market value can be attributed to changes in interest rates then the market risk is normally called interest rate risk, and when it can be attributed to changes in exchange rates, market risk is called currency risk.
- **Credit risk**. This is the risk that one party to a financial instrument will fail to fulfil the obligations that arise for the financial instrument causing loss to the other party.
- **Liquidity risk**. This is the risk that an entity will encounter difficulty in meeting obligations associated with financial liabilities.

3 Disclosures in financial statements

Section overview

This section discusses the basic disclosures required by IFRS 7 in the financial statements.

3.1 Statement of financial position

3.1.1 Categories of financial assets and financial liabilities

The carrying amounts of each of the following categories, as defined in IFRS 9, must be disclosed either in the statement of financial position or in the notes:

- Financial assets at fair value through profit or loss, showing separately:
  - those designated as such on initial recognition; and
  - those classified as held for trading in accordance with IFRS 9.
- Financial assets at fair value through other comprehensive income
- Financial assets held at amortised cost
- Investments in equity instruments
- Financial liabilities at fair value through profit or loss, showing separately:
  - those designated as such on initial recognition; and
  - those classified as held for trading in accordance with IFRS 9.
- Financial liabilities measured at amortised cost

3.1.2 Loans and receivables at fair value through profit or loss

(a) **Disclosures**

If the entity has designated a loan or receivable (or group of loans or receivables) as at fair value through profit or loss, it should disclose the following:

(1) The maximum exposure to credit risk of the loan or receivable (or group of loans or receivables) at the reporting date

(2) The amount by which any related credit derivatives or similar instruments mitigate that maximum exposure to credit risk

(3) The amount of change, during the period and cumulatively, in the fair value of the loan or receivable (or group of loans or receivables) that is attributable to changes in the credit risk of the financial asset

(4) The amount of the change in the fair value of any related credit derivatives or similar instruments that has occurred during the period and cumulatively since the loan or receivable was designated

(b) **Calculation**

The amount of any change in the fair value attributable to credit risk can be calculated as the amount of the change not attributed to market risk. That is:

[Amount of change in fair value attributed to credit risk] = [Total amount of change in fair value] – [Amount of change in fair value attributed to market risk]

(c) **Alternative method**

The standard allows the employment of an alternative method to calculate the amount of change in the fair value attributed to credit risk if the entity believes that such a method more faithfully represents the amount of change in its fair value that is attributable to changes in the credit risk of the asset.

(d) **Market risk**

Changes in market conditions that give rise to market risk include changes in an observed (benchmark) interest rate, commodity price, foreign exchange rate or index of prices or rates.

3.1.3 Financial liabilities at fair value through profit or loss

(a) **Disclosures**

If the entity has designated a financial liability as at fair value through profit or loss it should disclose the following:

(1) The amount of change, during the period and cumulatively, in the fair value of the financial liability that is attributable to changes in the credit risk of that liability

(2) The difference between the financial liability's carrying amount and the amount the entity would be contractually required to pay at maturity to the holder of the obligation

(b) **Calculation**

The amount of any change in the fair value attributable to credit risk can be calculated as the amount of the change not attributed to market risk. That is:

[Amount of change in fair value attributed to credit risk] = [Total amount of change in fair value] – [Amount of change in fair value attributed to market risk]

(c) **Alternative method**

The standard allows the employment of an alternative method to calculate the amount of change in the fair value attributed to credit risk if the entity believes that such a method is more accurate.

(d) **Market risk**

Changes in market conditions that give rise to market risk include changes in a benchmark interest rate, the price of another entity's financial instrument, a commodity price, a foreign exchange rate or an index of prices or rates. For contracts that include a unit-linking feature, changes in market conditions include changes in the performance of the related internal or external investment fund.

The example below illustrates how an entity can arrive at the change in fair value attributable to credit risk by estimating the amount of change in fair value attributable to risks other than credit risk.

Context example: Credit risk and change in value

On 1 January 20X6, an entity issues a five-year bond with a par value of £200,000, and an annual fixed coupon rate of 7%. The coupon rate reflects the market SONIA rate and the credit spread associated with the bond at the time of the issue. At the time of the issue SONIA was 5%, implying a credit spread of 2%.

The price of the bond will subsequently change either due to change in SONIA (market risk) or due to a change in the credit spread (credit risk).

Thus a change in the fair value of the bond attributed to credit risk can be calculated by subtracting from the total change in the fair value the changes due to market risk (ie, due to changes in SONIA).

Suppose that on 31 December 20X6, the value of the bond has decreased to £196,651, as the SONIA has increased to 5.25%. The yield to maturity for the bond has now risen to 7.50%. The credit spread has now increased to 2.25% implying deterioration in the credit quality of the bond.

In order to calculate the change in the value of the bond due to changes in SONIA alone, we shall calculate the fair value of the bond, at the new SONIA of 5.25% assuming that the credit spread has remained at 2%. This means that we need to discount the remaining four payments using a discount rate of 7.25%.

Using this discount factor produces:

$(14{,}000/1.0725) + (14{,}000/1.0725^2) + (14{,}000/1.0725^3) + (14{,}000 + 200{,}000/1.0725^4) =$ £198,316

Total change in market value (£200,000 – £196,651)		£3,349
Change in market value due to market risk (£200,000 – £198,316)		£1,684
Difference in value due to credit risk (£198,316 – £196,651)	£1,665	

3.1.4 Reclassification

If an entity has reclassified a financial asset, previously measured at fair value as measured at cost or amortised cost or vice versa, it should **disclose the amount reclassified** into and out of each category and the **reason for that reclassification**.

3.1.5 Derecognition

An entity may have transferred financial assets in such a way that **part or all of the financial assets do not qualify for** derecognition. In such a case, the entity should **disclose** the following for each class of financial assets:

- The **nature** of the assets
- The nature of the **risksand rewards of ownership** to which the entity remains exposed
- When the entity continues to recognise all of the assets, the **carrying amounts** of the assets and of the associated liabilities
- When the entity continues to recognise the assets to the extent of its continuing involvement, the **total carrying amount of the original assets**, the **amount** of the assets that the entity **continues** to recognise, and the carrying amount of the **associated liabilities**

3.1.6 Collateral

An entity should disclose the following:

- The **carrying amount** of financial assets it has pledged as collateral for liabilities or contingent liabilities, including amounts that have been reclassified
- The **terms and conditions** relating to its pledge

When an entity holds collateral (of financial or non-financial assets) and is permitted to sell or re-pledge the collateral in the absence of default by the owner of the collateral, it shall disclose the following:

- The fair value of the collateral **held**
- The fair value of any such collateral **sold or re-pledged**, and whether the entity has an obligation to return it
- The **terms and conditions** associated with its use of the collateral

3.2 Profit or loss for the year

Items of income, expense, gains or losses

An entity should disclose the following items of income, expense, gains or losses either in the statement of profit or loss and other comprehensive income or in the notes:

(a) **Net gains or net losses** on:

(1) Financial assets or financial liabilities at fair value through profit or loss, showing separately those on financial assets or financial liabilities designated as such on initial recognition, and those on financial assets or financial liabilities that are classified as held for trading in accordance with IFRS 9

(2) Investments in equity instruments where gains are recognised in profit or loss for the period

(3) Held-to-maturity investments

(4) Loans and receivables

(5) Financial liabilities measured at amortised cost

(b) **Total interest income and total interest expense** (calculated using the effective interest method) for financial assets or financial liabilities that are not at fair value through profit or loss

(c) **Fee income and expense** (other than amounts included in determining the effective interest rate) arising from:

- financial assets or financial liabilities that are not at fair value through profit or loss; and
- trust and other fiduciary activities that result in the holding or investing of assets on behalf of individuals, trusts, retirement benefit plans and other institutions.

(d) **Interest income on impaired financial assets**

(e) **The amount of any impairment** loss for each class of financial asset

4 Other disclosures

Section overview

This section discusses additional quantitative and qualitative disclosures in the financial statements.

4.1 Accounting policies

An entity should disclose, in the summary of significant accounting policies, the measurement basis (or bases) used in preparing the financial statements and the other accounting policies used that are relevant to an understanding of the financial statements.

4.2 Hedge accounting

Hedge accounting is covered in later Chapters. The disclosures are dealt with in later Chapters.

4.3 Fair value

IFRS 7 retains the following general requirements in relation to the disclosure of fair value for those financial instruments **measured at amortised cost**:

- For each class of financial assets and financial liabilities an entity should disclose the **fair value of that class of assets and liabilities** in a way that permits it to be compared with its carrying amount.
- In disclosing fair values, an entity should group financial assets and financial liabilities into classes, but should **offset them only to the extent that their carrying amounts are offset in the statement of financial position**.

It also states that disclosure of fair value is not required where carrying amount is a reasonable approximation of fair value.

IFRS 13 provides disclosure requirements in respect of the fair value of financial instruments measured at fair values. It requires that information is disclosed to help users assess:

- For assets and liabilities measured at **fair value after initial recognition**, **the valuation techniques and inputs used to develop those measurements**
- For **recurring fair value measurements** (ie, those measured at each period end) using significant unobservable (Level 3) inputs, the **effect of the measurements on profit or loss** or other comprehensive income for the period

In order to achieve this, the following should be **disclosed as a minimum** for each class of financial assets and liabilities measured at fair value:

- The fair value measurement at the end of the period
- The level of the fair value hierarchy within which the fair value measurements are categorised in their entirety
- For assets and liabilities measured at fair value at each reporting date (recurring fair value measurements), the amounts of any transfers between Level 1 and Level 2 of the fair value hierarchy and reasons for the transfers
- For fair value measurements categorised within Levels 2 and 3 of the hierarchy, a description of the valuation techniques and inputs used in the fair value measurement, plus details of any changes in valuation techniques
- For recurring fair value measurements categorised within Level 3 of the fair value hierarchy:
  - A reconciliation from the opening to closing balances
  - The amount of unrealised gains or losses recognised in profit or loss in the period and the line item in which they are recognised
  - A narrative description of the sensitivity of the fair value measurement to changes in unobservable inputs
- For recurring and non-recurring fair value measurements categorised within Level 3 of the fair value hierarchy, a description of the valuation processes used by the entity

An entity should also disclose its policy for determining when transfers between levels of the fair value hierarchy are deemed to have occurred.

Context example: Fair value disclosures

For financial assets and liabilities measured at fair value at the end of the reporting period, IFRS 13 requires quantitative disclosures about the fair value measurements for each class of financial assets and liabilities.

An entity might disclose the following for financial assets and financial liabilities (excludes comparatives and further quantitative disclosures in relation to fair value hierarchy):

Description	31.12.X5	Fair value measurements at the end of the reporting period using Level 1 inputs	Level 2 inputs	Level 3 inputs
	£'000	£'000	£'000	£'000
Trading portfolio assets	95	95		
Non-trading equity securities	73			73
Corporate bonds	175	25	150	
Designated at fair value	33		31	2
Investments in equity instruments	41	11	25	5
Derivatives – interest rate swaps	55		55	
Financial assets at fair value	472	131	261	80
Trading portfolio liabilities	60	40	20	
Designated at fair value	12		9	3
Derivatives – interest rate swaps	55		55	
Financial liabilities at fair value	127	40	84	3

5 Financial instruments risk disclosure

Section overview

An entity should disclose information that enables users of its financial statements to evaluate the nature and extent of risks arising from financial instruments to which the entity is exposed at the reporting date. These risks include, but are not limited to, credit risk, liquidity risk and market risk.

5.1 Types of risk

In undertaking transactions in financial instruments, an entity may assume or transfer to another party one or more different types of financial risk as defined below. The disclosures required by the standard show the extent to which an entity is exposed to these different types of risk, relating to both recognised and unrecognised financial instruments.

Credit risk	The risk that one party to a financial instrument will cause a financial loss for the other party by failing to discharge an obligation.
Currency risk	The risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in foreign exchange rates.
Interest rate risk	The risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates.

Liquidity risk	The risk that an entity will encounter difficulty in meeting obligations associated with financial liabilities.
Loans payable	Loans payable are financial liabilities, other than short-term trade payables on normal credit terms.
Market risk	The risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises three types of risk: currency risk, interest rate risk and other price risk.
Other price risk	The risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices (other than those arising from interest rate risk or currency risk), whether those changes are caused by factors specific to the individual financial instrument or its issuer, or factors affecting all similar financial instruments traded in the market.
Past due	A financial asset is past due when a counterparty has failed to make a payment when contractually due.

5.2 Qualitative disclosures

For each type of risk arising from financial instruments, an entity must disclose the following:

(a) The **exposures** to risk and how they arise

(b) Its **objectives**, policies and processes for managing the risk and the methods used to measure the risk

(c) **Any changes** in (a) or (b) from the previous period

5.3 Quantitative disclosures

For each financial instrument risk, summary quantitative data about risk exposure must be disclosed. This should be based on the information provided internally to key management personnel. More information should be provided if this is unrepresentative.

Information about credit risk must be disclosed by class of financial instrument:

(a) **Maximum exposure** at the year end

(b) Any **collateral** pledged as security

(c) In respect of the amount disclosed in (b), a **description** of collateral held as security and other credit enhancements

(d) Information about the **credit quality** of financial assets that are neither past due nor impaired

(e) Financial assets that are **past due or impaired**, giving an age analysis and a description of collateral held by the entity as security

(f) **Collateral and other credit enhancements** obtained, including the nature and carrying amount of the assets and policy for disposing of assets not readily convertible into cash

For **liquidity risk**, entities must disclose the following:

- A **maturity analysis** of financial liabilities
- A **description** of the way risk is managed

Disclosures required in connection with **market risk**:

- **Sensitivity analysis**, showing the effects on profit or loss of changes in each market risk
- If the sensitivity analysis reflects interdependencies between risk variables, such as interest rates and exchange rates, the method, **assumptions and limitations** must be disclosed

5.3.1 Credit risk disclosures in more detail

Information about credit risk must be disclosed by class of financial instrument:

(a) **Maximum exposure** at the year end, which for a financial asset is the gross carrying amount, net of:

- any amounts offset in accordance with IAS 32; and
- any impairment losses recognised in accordance with IFRS 9.

The maximum exposure to credit risk at the reporting date should be without taking account of any collateral held or other credit enhancements (eg, netting agreements that do not qualify for offset in accordance with IAS 32).

(b) In respect of the amount disclosed in (a), a **description** of collateral held as security and other credit enhancements.

(c) Information about the **credit quality** of financial assets that are neither past due nor impaired.

(d) Financial assets that are **past due or impaired**, giving an age analysis and a description of collateral held by the entity as security.

(e) **Collateral and other credit enhancements** obtained, including the nature and carrying amount of the assets and policy for disposing of assets not readily convertible into cash.

(f) **Analysis of financial assets** that are **individually determined to be impaired** as at the reporting date, including the factors the entity considered in determining that they are impaired.

The **activities that give rise to credit risk** and the associated maximum exposure to credit risk include, but are not limited to the following:

- **Grant of loans** to customers and placing deposits with other entities: Maximum exposure to credit risk is the carrying amount of related financial assets.
- **Derivative contracts**: When the resulting financial asset is measured at fair value, the maximum exposure to credit risk at the end of the reporting period will equal the carrying amount.
- **Grant of financial guarantees**: Maximum exposure to credit risk is the maximum amount the entity could have to pay if the guarantee is called on, which may be significantly greater than the amount recognised as a liability.
- **Making a loan commitment** that is irrevocable over the life of the facility or is revocable only in response to a material adverse change: If the issuer cannot settle the loan commitment net in cash or another financial instrument, the maximum credit exposure is the full amount of the commitment.

Additional disclosures

These include disclosures such as the following:

- Reconciliation of loss allowances
- Explanation of how significant changes in the gross carrying amount of financial instruments during the period contributed to changes in loss allowance
- Inputs, assumptions and techniques in estimating 12-month and lifetime expected credit losses including how forward looking information has been incorporated into the determination of expected credit losses
- Separate disaggregation by credit risk rating grades of the gross carrying amount
- Information about collateral, modified financial assets and write offs still subject to enforcement activity

5.4 Sensitivity analysis: more detail

The standard requires that an entity should disclose a sensitivity analysis for each type of market risk to which the entity is exposed.

The standard gives **two options** regarding disclosure of the sensitivity analysis.

Option 1

An entity should disclose the following:

(a) Sensitivity analysis for each type of market risk to which the entity is exposed at the reporting date, showing how profit or loss and equity would have been affected by changes in the relevant risk variable that were reasonably possible at that date. Risk variables that are relevant to disclosing market risk include, but are not limited to:

- the yield curve of market interest rates, for example the SONIA rate. It may be necessary to consider both parallel and non-parallel shifts in the yield curve;
- foreign exchange rates;
- prices of equity instruments; and
- market prices of commodities.

(b) The methods and assumptions used in preparing the sensitivity analysis

(c) Changes from the previous period in the methods and assumptions used, and the reasons for such changes

The effect on profit or loss and equity of reasonably possible changes in the relevant risk variables may include changes in the prevailing interest rates for interest-sensitive instruments, and/or changes in currency rates for foreign currency financial instruments.

For interest rate risk, the sensitivity analysis might show separately the effect of a change in market interest rates on interest income and expenditure, on other items of profits and on equity.

Option 2

Alternatively, if an entity prepares a sensitivity analysis, such as value at risk, that reflects interdependencies between risk variables (eg, interest rates and exchange rates) **and uses it to manage financial risks**, it may use that sensitivity analysis in place of the analysis specified in the previous paragraph. In this case the entity should also disclose:

- an explanation of the method used in preparing such a sensitivity analysis, and of the main parameters and assumptions underlying the data provided; and
- an explanation of the objective of the method used and of limitations that may result in the information not fully reflecting the fair value of the assets and liabilities involved.

It is important for auditors to test this sensitivity analysis and document this on their files. For example, they should document how they gained comfort over the underlying assumptions and sensitivity analysis methodology. Auditing financial instruments is covered in later Chapters.

5.5 Other market risk disclosures

Other market risk is **any market risk which is not currency or interest rate risk**. When the disclosure of sensitivity analyses discussed above are unrepresentative of a risk inherent in a financial instrument (for example because the year-end exposure does not reflect the exposure during the year), the entity shall disclose that fact and the reason it believes the sensitivity analyses are unrepresentative.

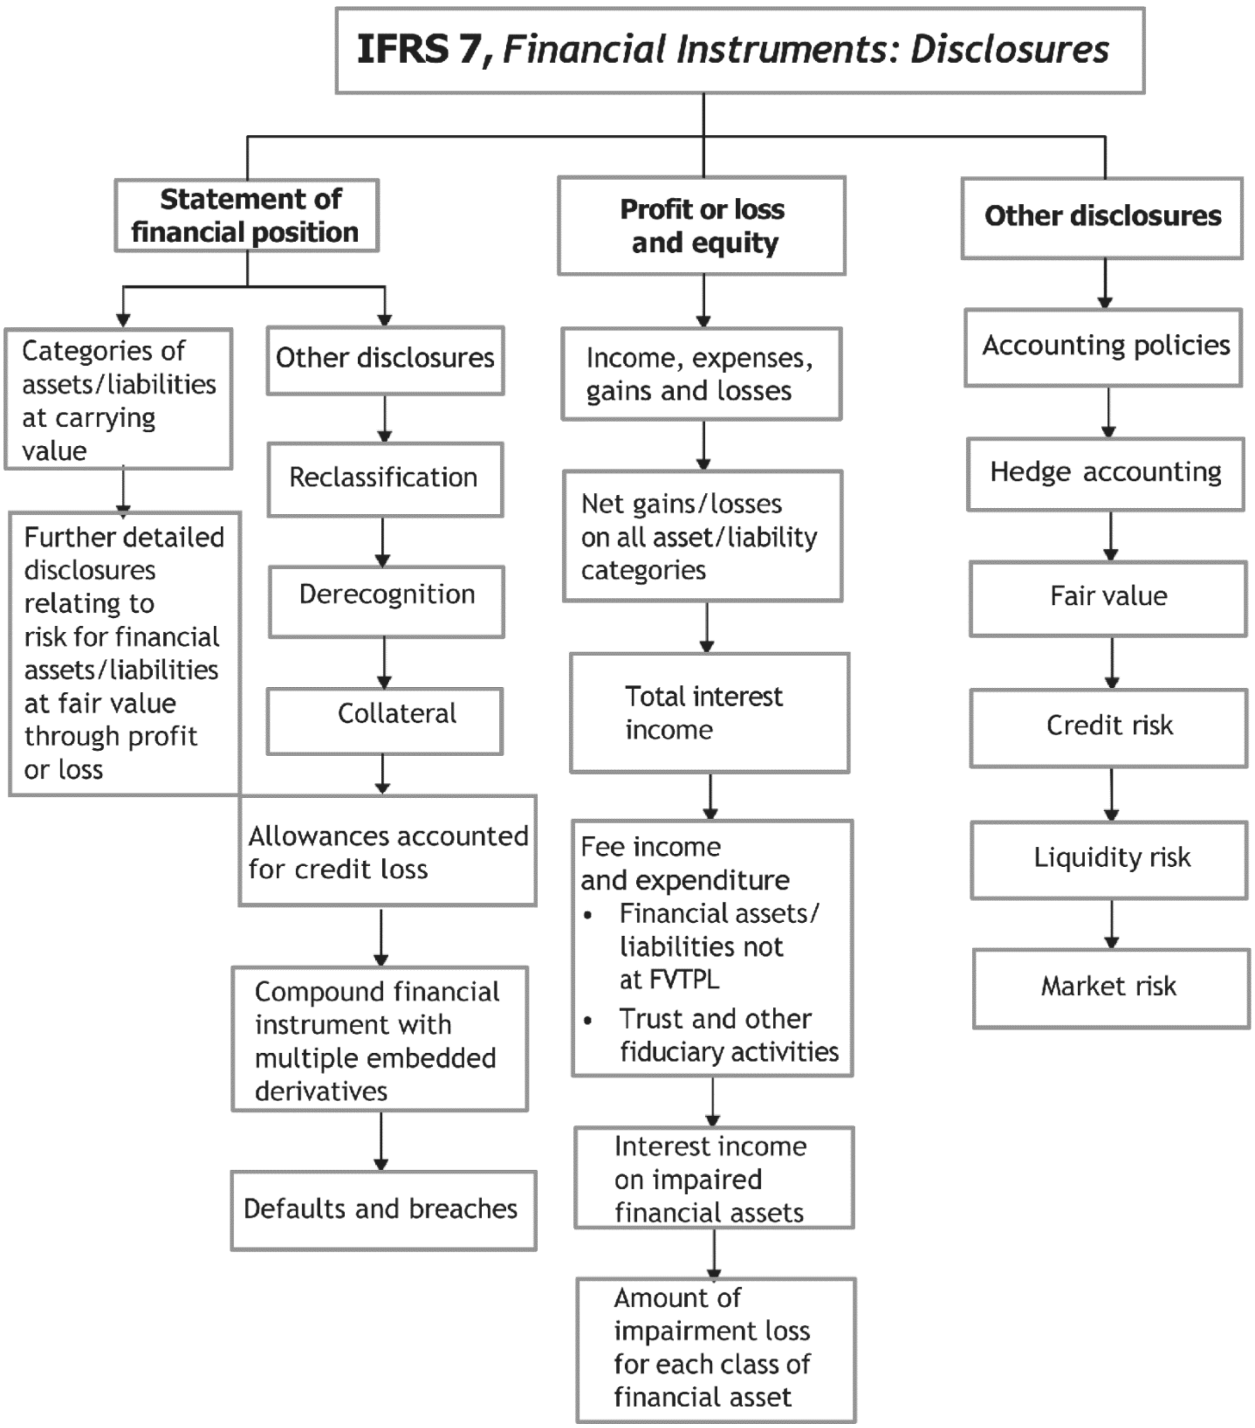
Professional skills focus: Assimilating and using information

It can be seen that a great deal of information needs to be assimilated and applied in order to carry out a sensitivity analysis.

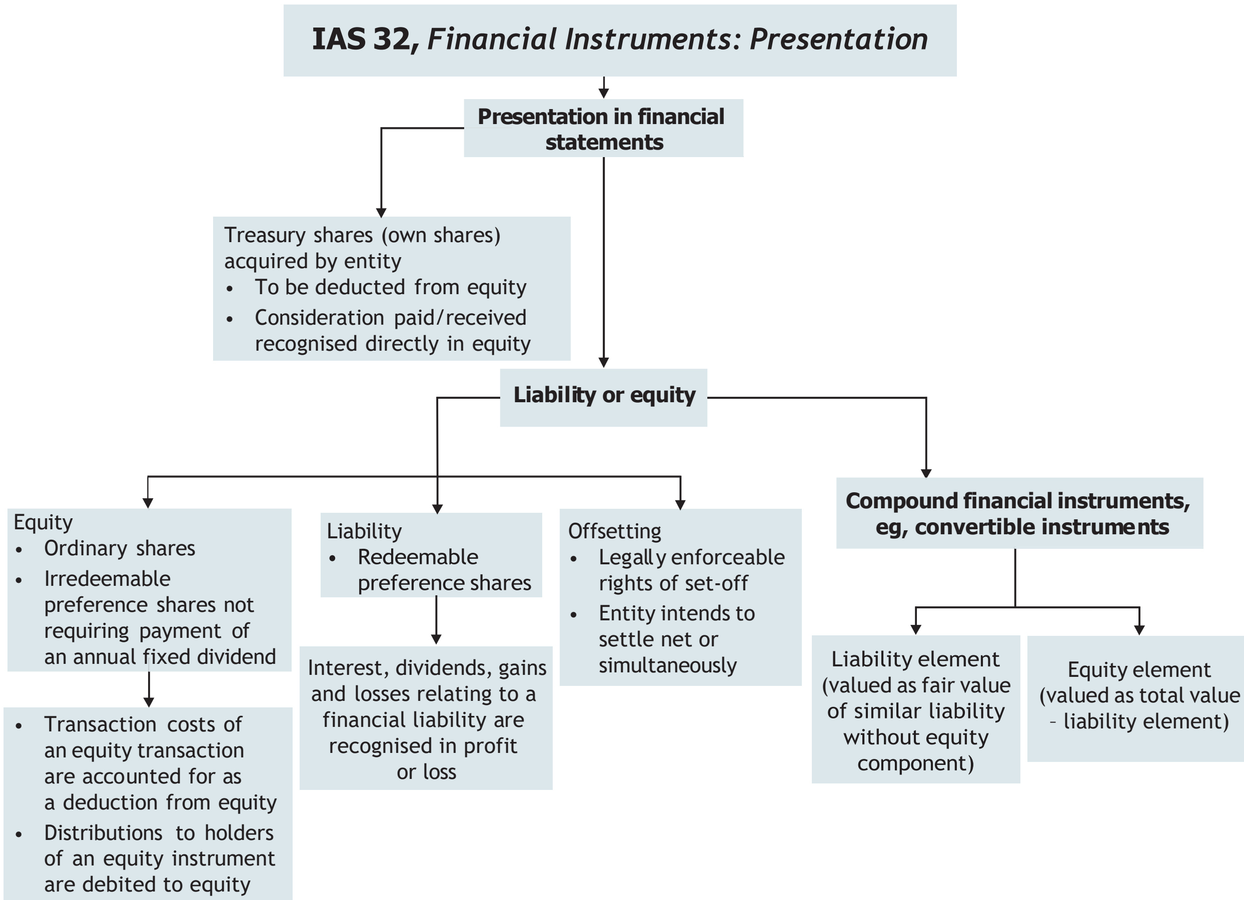
Professional skills focus: Concluding, recommending and communicating

Many financial instruments, particularly those held at fair value, are risky. Risk is not necessarily a negative, provided it is communicated to users and disclosures are transparent.

Summary



IFRS 7, *Financial Instruments: Disclosures*
Statement of financial position
Profit or loss and equity
Other disclosures
Categories of assets/liabilities at carrying value
Further detailed disclosures relating to risk for financial assets/liabilities at fair value through profit or loss
Other disclosures
Reclassification
Derecognition
Collateral
Allowances accounted for credit loss
Compound financial instrument with multiple embedded derivatives
Defaults and breaches
Income, expenses, gains and losses
Net gains/losses on all asset/liability categories
Total interest income
Fee income and expenditure
• Financial assets/ liabilities not at FVTPL
• Trust and other fiduciary activities
Interest income on impaired financial assets
Amount of impairment loss for each class of financial asset
Accounting policies
Hedge accounting
Fair value
Credit risk
Liquidity risk
Market risk



IAS 32, *Financial Instruments: Presentation*
Presentation in financial statements
Treasury shares (own shares) acquired by entity
• To be deducted from equity
• Consideration paid/received recognised directly in equity
Liability or equity
Equity
• Ordinary shares
• Irredeemable preference shares not requiring payment of an annual fixed dividend
• Transaction costs of an equity transaction are accounted for as a deduction from equity
• Distributions to holders of an equity instrument are debited to equity
Liability
• Redeemable preference shares
Interest, dividends, gains and losses relating to a financial liability are recognised in profit or loss
Offsetting
• Legally enforceable rights of set-off
• Entity intends to settle net or simultaneously
Compound financial instruments, eg, convertible instruments
Liability element (valued as fair value of similar liability without equity component)
Equity element (valued as total value - liability element)

Further question practice

1 Knowledge diagnostic

Before you move on to question practice, confirm you are able to answer the following questions having studied this chapter. If not, you are advised to revisit the relevant learning from the topic indicated.

	Confirm your learning
1.	What issues arise when distinguishing debt and equity? (Topic 1)
2.	IFRS 7 requires certain disclosures relating to risk. What are the three main types of risk identified by the standard? (Topic 2)
3.	What disclosures does IFRS 7 require in relation to loans and receivables at fair value through profit or loss? (Topic 3)
4.	What are IFRS 7's minimum disclosure requirements in respect of the fair value of financial instruments measured at fair value, on recognition and subsequently? (Topic 4)
5.	In relation to risk, can you distinguish qualitative disclosures and quantitative disclosures? (Topic 5)

2 Question practice

Aim to complete all self-test questions at the end of this chapter. The following self-test questions are particularly helpful to further topic understanding and guide skills application before you proceed to the next chapter.

Question	Learning benefit from attempting this question
Short-answer question	This is a quick test of knowledge of IFRS 7 disclosures.
Warburton	This is revision of the IAS 32 requirement regarding convertible bonds.
Erubus	This is a further exercise in separating the liability and equity components, but slightly more complex.

Refer back to the learning in this chapter for any questions which you did not answer correctly or where the suggested solution has not provided sufficient explanation to answer all your queries. Once you have attempted the self-test questions, you can continue your studies by moving onto the next chapter. In later chapters, we will recommend questions from the Question Bank for you to attempt.

1 IAS 32, *Financial Instruments: Presentation*

Presentation of equity and liabilities

- Classification as financial asset, financial liability or equity instrument – **IAS 32.15–16**
- Definitions – **IAS 32.11**

- Contractual obligation and substance of instrument – **IAS 32.17–18**
- Settlement options – **IAS 32.26–27**
- Treasury shares – **IAS 32.33–34**
- Interest, dividends, losses and gains – **IAS 32.35–36**
- Offsetting – **IAS 32.42**

Compound instruments

- Recognising liability and equity elements – **IAS 32.28**
- Example of convertible bonds – **IAS 32.29–30**
- Calculation of liability and equity elements – **IAS 32.31–32**

2 IFRS 7, *Financial Instruments: Disclosures*

- Statement of financial position disclosures – **IFRS 7.8–19**
- Statement of profit or loss and other comprehensive income and statement of changes in equity disclosures – **IFRS 7.20**
- Nature and extent of risks arising from financial instruments
  - Purpose of disclosures – **IFRS 7.31–32**
  - Qualitative disclosures – **IFRS 7.33**

Answer the following questions.

1 Disclosure

What is the main objective of the disclosure requirements of IFRS 7?

2 IFRS 7

How does IFRS 7 define the following?

2.1 Liquidity risk

2.2 Market risk

3 Sensitivity analysis

Why does IFRS 7 require entities to disclose sensitivity analysis to market risk?

4 Warburton

The Warburton Company issued £10 million of convertible bonds at par on 31 December 20X7. Interest is payable annually in arrears at a rate of 7%. The bonds are redeemable on 31 December 20X9. The bonds can be converted at any time up to maturity into 12.5 million ordinary shares.

At the time of issue, the market interest rate on debt with a similar credit status and the same cash flows, but without conversion rights, was 10% per annum.

Requirement

What carrying amount should be recognised for the liability in the statement of financial position of Warburton at 31 December 20X7 in respect of the convertible bond, in accordance with IAS 32, *Financial Instruments: Presentation*?

5 Erubus

The Erubus Company issued £15 million of 6% convertible bonds at par on 31 December 20X7. The bonds are redeemable at 31 December 20Y1. The bonds can be converted by their holders any time up to maturity into ordinary shares of Erubus.

At 31 December 20X7 the present value of the future capital and interest payments discounted at the prevailing market interest rate for similar bonds without the conversion rights is £13 million.

The transaction costs directly attributable to the issue of the convertible bonds were £400,000. These costs are deductible against Erubus's taxable profits. Erubus's tax rate is 25%.

Requirement

What increase in equity should be recognised in the statement of financial position of Erubus at 31 December 20X7 as a result of the issue of the convertible bonds, in accordance with IAS 32, *Financial Instruments: Presentation*?

Note: Some of the requirements of IAS 32 relate to derivatives and embedded derivatives. These will be tested after you have covered those topics in Chapter 16.

Now go back to the Introduction and ensure that you have achieved the Learning outcomes listed for this chapter.

Answers to Interactive questions

Answer to Interactive question 1

Refer to the definitions of financial assets and liabilities.

- **Physical assets**: Control of these creates an opportunity to generate an inflow of cash or other assets, but it does not give rise to a present right to receive cash or other financial assets.
- **Prepaid expenses, etc**: The future economic benefit is the receipt of goods/services rather than the right to receive cash or other financial assets.

Answer to Interactive question 2

Liability. The preference shares require regular distributions to the holders but more importantly have the debt characteristic of being redeemable. Therefore, according to **IAS 32**, *Financial Instruments: Presentation* they must be classified as liability.

Answer to Interactive question 3

The convertible bond is not a compound financial instrument, as it is not settled in a fixed amount of shares. It should instead be wholly classified as a liability.

The convertible redeemable preference shares are compound instruments. They have a financial liability component, as there is an obligation to deliver cash through dividends and on redemption in five years' time to deliver either cash or equity instruments (through the holder's right to convert into equity).

Answer to Interactive question 4

The liability component is computed as the present value of the maximum potential cash flows discounted at 10%.

Time	Cash flow	Discount factor @ 10%	PV
	£		£
1	4,000	0.909	3,636
2	54,000	0.826	44,604
			48,240

The equity component of the gross proceeds is therefore (£50,000 – £48,240) £1,760.

The issue costs of £1,000 are split in the ratio 48,240:1,760 ie, £965 is netted against the liability and £35 is netted against the equity.

The entries are therefore:

		£	£
DEBIT	Cash	50,000	
CREDIT	Liability		48,240
CREDIT	Equity		1,760

CHAPTER 15

and

CREDIT	Cash		1,000
DEBIT	Liability	965	
DEBIT	Equity	35	

The net liability initially recognised is £47,275. This is then amortised to £50,000 over the next 2 years at an effective interest rate of 11.19% (the IRR of the cash flows of £47,275, –£4,000 and –£54,000) as follows:

Year	B/fwd £	Interest expense at 11.19% £	Cash flow £	C/fwd £
1	47,275	5,290	(4,000)	48,565
2	48,565	5,435	(4,000)	50,000

Answer to Interactive question 5

The contract is a financial asset or financial liability, even though the entity must settle it by issuing its own equity. It is not an equity instrument, as it is settled using a variable number of the entity's own equity instruments.

Answer to Interactive question 6

Offsetting is not appropriate.

Each of the financial instruments has its own terms and conditions and may be transferred or settled separately. The risks of the financial instruments are different.

They should not be offset unless they meet the criteria in IAS 32 (legal right of set-off and intention to settle net), which is unlikely. However, disclosure of the relationship between the two financial instruments would provide useful information to users of the financial statements.

Answer to Interactive question 7

Emporium's finance director is incorrect. A financial liability for the present value of the maximum amount payable to shareholders should be recognised in the financial statements as of 31 October 20X8. At 31 October 20X8, the rights are equivalent to a written put option because they represent for Emporium a purchase obligation which gives shareholders the right to sell the entity's own equity instruments for a fixed price. The fundamental principle of IAS 32 *Financial Instruments: Presentation* is that a financial instrument should be classified as either a financial liability or an equity instrument according to the substance of the contract, not its legal form, and the definitions of financial liability and equity instrument. IAS 32 states that a contract which contains an entity's obligation to purchase its own equity instruments gives rise to a financial liability, which should be recognised at the present value of its redemption amount. IAS 32 also states that a contractual obligation for an entity to purchase its own equity instruments gives rise to a financial liability for the present value of the redemption amount even if the obligation is conditional on the counterparty exercising a right to redeem, as is the case with the bonus issue of Emporium.

Answers to Self-test questions

1 Disclosure

The main objective of the disclosure requirements of IFRS 7 is to show the significance of financial instruments for an entity's financial position and financial performance and qualitative and quantitative information about exposure to risks arising from financial instruments.

2 IFRS 7

2.1 **Liquidity risk** is defined as the risk that an entity will encounter difficulty in meeting the obligations associated with its financial liabilities.

2.2 **Market risk** is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices.

3 Sensitivity analysis

Sensitivity analysis helps users of financial statements to evaluate the effect of possible changes in the entity's financial position and financial performance due to changes in market risk factors.

4 Warburton

£9,479,339

IAS 32.28 requires the separation of the compound instrument into its liability and equity elements. IAS 32.31 and .32 explain how this separation should be made. IAS 32.AG30 – AG35 explain the application of this principle.

Thus the liability is (£0.7m/1.10) + (£10.7m/1.10^2) = £9,479,339.

5 Erubus

£1,960,000

IAS 32.28 requires the separation of a compound instrument into liability and equity elements where this is appropriate.

IAS 32.35 and 32.37 require that transaction costs of an equity transaction shall be deducted from equity net of tax.

IAS 32.38 requires that transaction costs directly attributable to a compound financial instrument should be allocated to the liability and equity components in proportion to the allocation of the proceeds.

Liability component of gross proceeds: £13m Equity component of gross proceeds: £2m Issue costs are £400,000, allocated:

Liability component (13/15) £346,667 Equity component (2/15) £53,333

The initial liability recognised is therefore (£13m – £346,667) £12,653,333.

The equity component is (£2m – (£53,333 – 25% tax relief on £53,333) £1,960,000

Note that tax relief on the issue costs allocated to the liability component will be given, as they are amortised against profit or loss. Initially they attract no relief and so there is no tax adjustment for them in the original allocation of the issue costs.

Requires the separation of a compound instrument into liability and equity elements where this is appropriate.

IAS 32.35 and 32.37 require that transaction costs of an equity transaction shall be deducted from equity net of tax.

IAS 32.38 requires that transaction costs directly attributable to a compound financial instrument should be allocated to the liability and equity components in proportion to the allocation of the proceeds.

Liability component of gross proceeds: £13m Equity component of gross proceeds: £2m Issue costs are £400,000, allocated:

Liability component (13/15) £346,667 Equity component (2/15) £53,333

The initial liability recognised is therefore (£13m – £346,667) £12,653,333.

The equity component is (£2m – (£53,333 – 25% tax relief on £53,333) £1,960,000

Note: Tax relief on the issue costs allocated to the liability component will be given, as they are amortised against profit or loss. Initially they attract no relief and so there is no tax adjustment for them in the original allocation of the issue costs.

Chapter 16

Financial instruments: recognition and measurement

Introduction

Learning outcomes

- Identify and explain current and emerging issues in corporate reporting
- Determine and calculate how different bases for recognising, measuring and classifying financial assets and financial liabilities can impact upon reported performance and position
- Evaluate the impact of accounting policies and choice in respect of financing decisions for example hedge accounting and fair values
- Explain and appraise accounting standards that relate to an entity's financing activities which include: financial instruments; leasing; cash flows; borrowing costs; and government grants

Chapter study guidance

Use this schedule and your study timetable to plan the dates on which you will complete your study of this chapter.

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
1	**Introduction and overview of earlier studies** Financial instruments, especially derivatives, can significantly change the risk profile of organisations. The IASB has therefore paid a great deal of attention to developing IFRS 9, *Financial Instruments*	**Approach** Although you have studied IFRS 9 at Professional Level, the subject is treated in much more depth and complexity. It is essential, therefore that you have a clear grasp of the basics, so do not skip or skim read this section. **Stop and think** Section 1.2 is a 'stop and think' section, stepping back before looking at the detail.	All the topics covered in this section are assumed knowledge and can be tested in the exam.	**IQ3: Loan** This is a very straightforward question. If you struggle with it, you need to go back to your material from earlier studies and revise.
2	**Recognition, classification and derecognition** This section builds on your previous studies, which only	**Approach** Note that IFRS 9 requires that financial assets are classified as	This is a key area and frequently tested. You could get a financial reporting	**IQ4: Contractual cash flows and selling financial assets** While this question is only short it is

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
	dealt with financial assets and liabilities at amortised cost.	measured at either: • amortised cost; or • fair value through other comprehensive income; or • fair value through profit or loss. Your earlier studies only dealt with amortised cost. **Stop and think** What is the basis for classification?	question requiring adjustments to the financial statements with a substantial number of adjustments based around financial instruments. You must know the business model test in detail, as it could easily come up.	essential you do it as it does test whether you have understood the issue.
3	**Measurement** This section deals with initial measurement (cost = fair value), the treatment of transaction costs and subsequent measurement. Subsequent measurement depends on how the instrument has been classified on initial recognition (amortised cost, FVTPL or FVTOCI).	**Approach** Work through this section very carefully, paying particular attention to the worked examples, especially the debt instrument and FVTOCI. With liabilities make sure you fully understand section 3.9.2 on credit risk, which may seem counterintuitive. **Stop and think** How are transaction costs recognised?	Any of the topics in the worked examples could come up in the exam and will be of the same level of difficulty.	**IQ8: Investment in listed shares** Use the summary table in paragraph 3.6 to help you with this and other questions. This table will be useful in revising for your exam.
4	**Credit losses (impairment)** This deals with the complex area of credit losses (impairment). IFRS 9 uses an expected loss model, which is a change from the earlier incurred loss model.	**Approach** Make sure you understand what is meant by: • credit loss • expected credit loss • lifetime expected credit loss • 12 month expected credit loss	This area could be examined within the context of a scenario question requiring adjustments to the financial statements.	**IQ12: Modification** This deals with a situation where the terms of the loan are modified and credit risk increases.

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
		Stop and think What is meant by Stages 1, 2 and 3?		
5	**Application of IFRS 13 to financial instruments** IFRS 13 works its way into many standards, particularly IFRS 9, because so many financial instruments are measured at fair value.	**Approach** Skim quickly through para. 5.1, which should be familiar to you. Focus more on fair value of financial assets (5.2 and financial liabilities). **Stop and think** The approach to fair valuing financial liabilities and own equity shares may differ from financial assets.	The interaction of IFRS 9 and IFRS 13 has been tested in depth, for example, the valuation of unquoted shares, and also in the context of quoted shares, for example in July 2020.	**IQ13: Fair value of liability** This question requires fair valuing a liability in the books of two companies with different credit ratings.
6	**Derivatives and embedded derivatives** Derivatives are financial instruments whose value changes in response to a change in the value of an underlying security, commodity, currency, index or other financial instrument(s). They normally require a zero, or small, initial net investment and are settled at a future date.	**Approach** Work carefully through section 6 on derivatives including all the worked examples, interactive questions and illustrations. Note in particular the need to separate the host instrument from the embedded derivative, unless the host contract is a financial asset within the scope of IFRS 9, in which case the whole contract is measured at fair value through profit or loss. **Stop and think** What instruments qualify as	Derivatives commonly examined include swaps and options.	**IQ15: Embedded derivatives** This question has two embedded derivatives, one which needs to be separated from the host contract and one that doesn't. There is a useful summary diagram in paragraph 6.6 that will guide you with this.

Topic	Practical significance	Study approach	Exam approach	Interactive Questions
		derivatives for accounting purposes? What is the accounting treatment of derivatives?		
7	**Current developments** Now that IFRS 9 is fully examinable, there is less going on in the area of current developments, the main one being financial instruments with the characteristics of equity.	**Approach** Skim read this for background only. **Stop and think** Why is the debt/equity distinction important?	This will not be examined in detail as it is only at the Discussion Paper stage.	N/A

Once you have worked through this guidance you are ready to attempt the further question practice included at the end of this chapter.

1 Introduction and overview of earlier studies

Section overview

This section gives a chapter overview and summarises the material covered at Professional Level in order to consolidate student knowledge before more advanced issues are covered.

- **IFRS 9, *Financial Instruments***
  - Financial assets and financial liabilities are classified on initial recognition. This classification drives subsequent measurement of the instruments.
  - Financial assets are classified as either measured at amortised cost, fair value through other comprehensive income or fair value through profit or loss.
  - Reclassifications are permitted only if there is a change in the entity's business model for holding the financial asset.
  - The financial statements should reflect the general pattern of deterioration or improvement in the credit quality of financial instruments within the scope of IFRS 9. The impairment model in IFRS 9 is based on the premise of providing for expected losses.
- **IAS 39, *Financial Instruments: Recognition and Measurement***

- The IAS 39 rules on hedging may still be applied, and are therefore covered in next Chapter.

1.1 Introduction

The purpose of this chapter is to provide thorough coverage of the accounting treatment of financial instruments. The main presentation and disclosure requirements as detailed in IAS 32, *Financial Instruments: Presentation* and IFRS 7, *Financial Instruments: Disclosures* together with certain aspects of recognition and measurement were covered at Professional Level and revisited in earlier chapter. This chapter extends the coverage of recognition and derecognition of financial assets and liabilities, and their initial and subsequent measurement and impairment, and finally discusses particular issues relating to the definition of derivatives and the accounting treatment of derivatives and embedded derivatives.

1.2 What are financial instruments?

Before looking at formal definitions and technical details, it is worth stepping back and thinking clearly about what financial instruments are and what they are for. We can start by demystifying some of the definitions:

Financial asset: an asset can be defined in simple terms as something you own or a favour that you can call in; similarly a financial asset can be defined as money that you own, or are owed. You can also own shares in a company. You have paid for the shares, and the company you have invested in owes you something of monetary value in return.

Financial liability: the party who owes you the money has a liability equal to your financial asset.

Equity investment: if the company is solvent, this is your share of the amount left over after deducting the liabilities from the assets.

It follows from the above that a **financial asset of one entity** is **either** a **financial liability or equity of another entity.** This is reflected in the formal definition of a financial instrument: "**A financial instrument** is any **contract** that gives rise to a **financial asset of one entity and a financial liability or equity instrument of another entity**" (IAS 32: para. 11). The new word in the formal definition is **contract:** this is what distinguishes financial instruments from other assets and liabilities.

Types of financial instruments: financial instruments can be divided into three basic types according to the rights and obligations they carry:

- Debt instruments (including receivables)
- Equities (for example shares)
- **Derivatives:** these are contracts with negligible or zero initial net value and subsequent fair value changes depending on the value of the underlying assets. Derivatives can be **either assets or liabilities** depending on whether there is a gain or loss on the contract.

Two further terms are worth introducing at this stage, as they are not particularly intuitive.

Bond holder = Lender (Imagine, if it helps, holding in your hand the contract in which the debtor agrees to pay you back.)

Bond issuer = Borrower (As with shares, a bond is issued to raise cash. You owe this to the lender, who is holding your contract.)

Finally, a term that comes up in many definitions concerning financial instruments is **accounting mismatch.** This is a measurement or recognition inconsistency that would otherwise arise from measuring assets or liabilities or recognising gains or losses on them on different bases. IFRS® Standards occasionally have rules which enable an accounting mismatch to be eliminated, for example hedging, or designating a financial asset at fair value through profit or loss if this would eliminate the mismatch.

1.2.1 Summary: features of financial instruments

Category	Rights or obligations	Asset or (liability) for:	Example
Debt	Defined amount and timing	Lender/holder (Borrower/payer)	Bond Receivable
Equity	Residual rights (in assets less liabilities), obligation only while solvent	Investor/shareholder (No liability within scope of IFRS 9)	Share
Derivative	Fair value of underlying	Gain (Loss)	Options, swaps, futures

1.2.2 Summary: recognition of financial assets and liabilities

The category of financial instrument and the rights and/or obligations associated with it, determine how it is measured on recognition and subsequently. We will look at recognition and measurement in detail below. For now, here are summaries to relate to the above table. As we have seen, debt instruments and derivatives can be financial assets or financial liabilities, but an equity instrument can only be a financial asset:

Financial assets

		Initial measurement (IFRS 9: para. 5.1.1)	Subsequent measurement (IFRS 9: paras. 4.1.2–4.1.5, 5.7.5)
1	**Investments in debt instruments** Business model approach: (a) Held to collect contractual cash flows; and cash flows are solely principal and interest	Fair value + transaction costs	Amortised cost
	(b) Held to collect contractual cash flows and to sell; and cash flows are solely principal and interest	Fair value + transaction costs	Fair value through other comprehensive income (with reclassification to profit or loss (P/L) on derecognition) NB: interest revenue calculated on amortised cost basis recognised in P/L
2	**Investments in equity instruments not 'held for trading'** (optional irrevocable election on initial recognition)	Fair value + transaction costs	Fair value through other comprehensive income (no reclassification to P/L on derecognition) NB: dividend income recognised in P/L
3	**All other financial assets** (and any financial asset if this would eliminate or significantly reduce an ' accounting mismatch')	Fair value (transaction costs expensed in P/L)	Fair value through profit or loss

Financial liabilities

		Initial measurement (IFRS 9: para. 5.1.1)	Subsequent measurement (IFRS 9: para. 4.2.1)
1	**Most financial liabilities** (eg, trade payables, loans, preference shares classified as a liability)	Fair value less transaction costs	Amortised cost
2	**Financial liabilities at fair value through profit or loss** • 'Held for trading' (short-term profit making) • Derivatives that are liabilities • Designated on initial recognition at 'fair value through profit or loss' to eliminate/significantly reduce an 'accounting mismatch'	Fair value (transaction costs expensed in P/L)	Fair value through profit or loss

	• A group of financial liabilities (or financial assets and financial liabilities) managed and performance evaluated on a fair value basis in accordance with a documented risk management or investment strategy		

Professional skills focus: Assimilating and using information

In exam questions on financial instruments at Advanced Level, you will often be presented with a great deal of seemingly complex information, which you must analyse. It helps to have the principles in the above summary in mind or to hand in order to avoid getting lost or overwhelmed.

Professional skills focus: Structuring problems and solutions

The above summary may also play a useful role in structuring problems. What is the nature and purpose of the financial instrument? How is it valued?

1.2.3 Further points forward from Professional Level

(a) A **compound financial instrument** (that is, one that has features of both debt and equity) should be **split into its component parts** according to their substance at the date that it is issued.

(b) **Interest, dividends, losses or gains** relating to a financial instrument (or a component) that is a financial liability should be **recognised** as income or expense **in profit or loss**.

(c) **Dividend distributions** paid to holders of an equity instrument should be debited **directly to equity, net of any related income tax benefit**. These should be presented in the statement of changes in equity.

(d) **Financial assets and financial liabilities** should generally be **presented as separate items** in the statement of financial position. No offsetting is allowed except where it is required because an entity has a legally enforceable right to set off recognised amounts and the entity intends to settle on a net basis, or to realise the asset and settle the liability simultaneously.

1.3 Practical implications for key ratios

The type of financial instrument, how it is measured and where changes in value are measured have important effects on key ratios. The classification of financial instruments as debt versus equity is particularly important with items that are financial liabilities or equity as the presentation of the two items and associated financial effects are very different.

If a financial instrument is classified as a financial liability (debt) it will be reported within current or non-current liabilities. Non-current liabilities are relevant in determining an entity's gearing ie, the proportion of debt finance versus equity finance of a business, and therefore risk to ordinary equity holders.

Distributions relating to instruments classified as financial liabilities are categorised as finance cost, having an impact on reported profitability.

If a financial instrument is classified as equity, reported gearing will be lower than if it were classified as a financial liability. However, classification as equity is sometimes viewed negatively as it can be seen as a dilution of existing equity interests.

Distributions on instruments classified as equity are charged to equity and therefore do not affect reported profit.

If a company elects for changes in value on an equity instrument to be recorded in other comprehensive income, rather than profit or loss, this will affect key profitability ratios. The requirement for such an election to be irrevocable prevents manipulation by booking gains to profit or loss one year and losses to other comprehensive income in the following year.

Classification of instruments can also have financial implications for businesses. For example, debt covenants on loans from financial institutions often contain clauses that reported gearing cannot exceed a stated figure, with penalties or call-in clauses if it does. Companies with high gearing may also find it harder to get financing or financing may be at a higher interest rate.

High gearing is particularly unpopular in the current economic climate and there have been high profile cases of companies that have been pressed to sell off parts of their business to reduce their 'debt mountains' eg, Telefónica SA, the Spanish telecoms provider, selling O_2 Ireland to Hutchison Whampoa (the owner of the '3' telephone network).

Interactive question 1: Classification

For each of the below instruments, identify whether it should be classified as a financial liability or as part of equity, explaining the reason for your choice.

1.1 Redeemable preference shares with a coupon rate of 8%. The shares are redeemable on 28 February 20X9 at a premium of 10%.

1.2 A grant of share options to senior executives. The options may be exercised from 28 February 20X8.

See **Answer** at the end of this chapter.

Interactive question 2: Transactions covered by IFRS 9

Should the following be recognised under IFRS 9?

1.1 A guarantee to replace or repair goods sold by a business in the normal course of business

1.2 A firm commitment (order) to purchase a specific quantity of cocoa beans for use in manufacturing

1.3 A forward contract to purchase cocoa beans at a specified price and quantity on a specified date

See **Answer** at the end of this chapter.

1.4 Amortised cost: revision

The **amortised cost** category applies to an asset held within a business model whose objective is to hold financial assets in order to collect contractual cash flows and where the contractual terms of the asset give rise to cash receipts of interest and capital on specific dates. This applies to most debt instruments. Such assets are measured at **amortised cost** using the **effective interest method**.

Amortised cost is:

- the initial amount recognised for the financial asset

- less any repayments of the principal sum
- plus any amortisation
